I have long wished to give my testimony for Christian Science, and I am now very glad to do so. My healing was not instantaneous, as in some cases, but I am very thankful that it was not, for I feel that the lasting benefit I derived from the study and work is more to me than the physical healing. I was healed of rheumatic trouble and nervousness, besides liver and bladder trouble of long standing. I was told by many physicians that I could never be well, but I am very thankful to say that I am perfectly well, and through the understanding of this blessed truth I have been able to help others. I am gaining more and more every day, and my heart goes out with deep, heartfelt gratitude to God, and to our dear Leader for her loving kindness to us in teaching us how to reflect God.—BESSIE R. WALKER, Chicago, Ill.

Christian Science came to me when all the world seemed dark. I had been for several years losing strength and vitality, until I was on the verge of invalidism. Several doctors had tried to help me, all differing as to the cause of the trouble, but I continued to fail, and an operation which was performed only left me in a weaker condition. This state of health, together with the loss of my mother, so depressed me that I turned to Christian Science, not knowing anything about it, except I had been much attracted to a neighbor, into whose life this truth had brought something that was beautiful and uplifting, something I had never known, although I had been an earnest seeker after Truth from a child. I had experienced what it was in times of sorrow and distress to reach out and receive spiritual help, and this convinced me there must be some great intelligence beyond the human; but the teachings I had been given in an orthodox church, while I shall never cease to be grateful for them, could not give me entire satisfaction. I could not account for all the suffering, discord, sin, disease, and death, which seem to hold mankind in such abject slavery.

Now I know, through my slight understanding of Christian Science, that God is not responsible for these evils, and that in just the proportion that I seek divine Truth understandingly and turn from my false beliefs of God and of man's relation to Him, in that proportion am I being made free. From the time I turned to Christian Science—over five years ago—I have been constantly gaining, until now I am enjoying excellent health. I have used no medicines or other material remedies during this time. But what is of much greater value to me is the earnest desire, gained through the study of Christian Science, to know more of God and of this truth which heals mankind mentally and physically.

My heart goes out in gratitude to Mrs. Eddy for what she has done and is still doing for tired humanity; and I want my life to speak louder than my words. I want to be worthy the name of Christian Scientist.

MRS. FLORENCE S. CROSIER, New Rochelle, N. Y.

When our physician and a New York specialist decided that our little girl had a serious lung trouble, I decided to call a Christian Science practitioner. We had never had any experience with Christian Science treatment before, and the conditions seemed very alarming. Nothing could rouse the child; she seemed insensible to touch or sound. Our regular physician still called, but did nothing,—indeed he seemed to be in doubt what to do; so after the Scientist had called several times, she advised me to dismiss the doctor. We did so, and the next morning the child opened her eyes and recognized her father. From that time she gradually manifested more and more intelligence, but the senses all seemed impaired. She did not see or hear right, and the sense of touch, and also of taste, was imperfect. Slowly but surely, however, she responded to the power of ever-present Love. When she was up and dressed she had to learn to walk and talk and laugh, but the treatment was continued until health was manifested.

CORINNE M. SAFFORD, New York, N. Y.

About the middle of May, 1906, I went to Portland, Ore., afflicted with a complication of diseases of long standing. I was examined by one of the most noted physicians and surgeons in the city, who said that no power on earth could remove these diseases without an operation, and that in my weak state this would be dangerous. It was then I turned to Christian Science. (I may state that on leaving home my wife had asked me, if all else failed, to try this treatment.) Through some misunderstanding I was not treated in Portland, but was told to get a copy of Science and Health; which I did, and studied it. About the 12th of June I received a letter from a practitioner in Denver, Col., stating that at my wife's request she had begun treating me on the 8th of June, and I remembered that on that very day, when the pain had seemed almost unendurable, right then a change for the better had come. In two weeks I was a well man, in better health than for thirty-five years. I returned home early in July, and have been gaining strength every day since.

My wife's attention was called to this practitioner in Denver by her having successfully treated a lady in Burns, Ore., who was afflicted with an abnormal growth. I was surprised to notice that I had no desire to smoke, that it required no power or exertion on my part to quit, although I had been an inveterate smoker for forty-five years. I am now sixty. My wife, too, has been healed by Christian Science, and we both find that the healing of the body is only a small portion of the benefits which we are receiving every day from the careful study of the Bible and Science and Health. God bless Mrs. Eddy for pointing the way to salvation and health.—HENRY A. SMITH, Beulah, Ore.

[Written for the *Sentinel*.]

HEAVEN HERE.

JOHN CHICK MURRAY.

WHEN, upward turned our longing eyes,
We pray that God be near,—
E'en then, while soaring to the skies,
Our God is pleading here.

While in pursuit of angels blest,
Thought treads the heavenly track,
Those angels gather in our breast
And, smiling, call us back.

We think their heaven is above,
But lives diviner show
That when our hearts are full of love,
Their dwelling is below.

All may of Christ the virtue share,
As helpers of the race;
And all his glorious mantle wear,
Who wear his love and grace.

How lonely, weary, with our load,
When carried for reward!
But when true service marks our road,
God is our guide and guard.

'Tis they who toil, all wages spurned,
Receive the richest pay;
And they the brightest crown have earned
Who cast all crowns away.

FROM OUR EXCHANGES.

[Rev. Charles Roper, B. A., in *The Christian Life*, London, England.]

Let me tell you what I think religion truly is. It is a felt dependence upon a higher power than one's own; a recognition that the power behind all and in all must be infinite; that it is not blind and unconscious, but works intelligently; that Love is the dominant Principle, and not hate, otherwise there would be hell established everywhere to-morrow, and devils stalking the earth to curse it instead of angels to bless it; that this power is the source of all that is, matrix, Father; that though the human finite mind cannot conceive of this perfectly, yet imagination and reason working in conjunction raise up ideals of love and truth and mercy and goodness which are approximately as attributes of that power which, for the want of a better name, we call God. Immediately a whole scheme of duties opens out. As soon as a man pictures an ideal, dreams of a good higher than his own, his duty is to strive to attain it. Hence you have man's constant search for God.

[*The Christian Register.*]

Good will between classes, good will of the heartiest and truest kind may be established; but it will rest on justice rather than on sentiment. It will not take money from the poor man's pocket to build him an opera house. For there is only one ground of exact equality in this curiously devised world: that is, by doing to others as we would that others should do to us. Here we find the great bill of human rights and obligations where the richest and the poorest may meet heart to heart. No difference of culture, training, association, or habits can change this level. Slowly, painfully, the world is working toward this ideal. In the struggle it involves human beings are shaped to be instruments in the evolution of the race.

[*The Universalist Leader.*]

Truth never gets on the side of error nor error on the side of truth. Truth is mixed up with error in the minds of men as good is with evil in their lives, but they never change places nor fight each other's battles. God sometimes overrules error, to the furtherance of His truth, but He never evolves truth from error or converts error into truth, and those who embrace error suffer none the less on that account. They suffer none the less because God defeats their purposes and makes their labors subserve the cause of righteousness. Truth and error, right and wrong, good and evil never change sides. They are separated by the fiat of the Almighty. This must be accepted as a self-evident truth, as one of the fundamental principles of the moral universe.

[*The Chicago Journal.*]

Sin exacts the penalty soon or late. Though a man have wealth, genius, fame, everything that life can give, but have not a clear conscience, he is wretched and pitiable, for one day his sin will find him out. Despite all the sayings of the cynics, this is a world of law. Whenever that law is violated the criminal is punished, in one way or another. There is no escape, for within every man is a tribunal whose judgments are unavoidable. If he escape the world's justice he yet must suffer, and his family with him.

[*The* (London) *Christian World.*]

There is one thing which no combination can resist, and that is the law of life. It is just this law, lying directly underneath theology, which compels its movement. Consider, for instance, the working on any system of the mere lapse of time. No vested interests, no accumulated force of feeling can prevent the years from rolling.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Changes in the local government on the Canal Zone, which will result in the harmonizing of various parts of the Zone, are to become effective April 15. The five municipal governments will be replaced by four administrative districts, which will be under the direct control of the Canal Commissioners. It is estimated that the total saving to the United States under the reorganized government will be about $100,000 a year.

The universities and colleges in the North Atlantic States enjoy an income of $11,000,000 a year, those of the South Atlantic $2,620,000. The North Central division colleges have $11,469,000 a year, those of the Southern Central division $2,333,000, those of the Western division, aside from California, $1,416,000. The whole country yearly spends $376,000,000 on public schools.

The seventh inter-collegiate chess match by cable between picked teams from three American universities, Columbia, Harvard, and Yale, on one side, and Oxford and Cambridge on the other side, resulted after a hard contest in a draw, each side winning two games, the other two games being drawn.

The investigation of the feasibility and benefits of national forests in the Southern Appalachians and White Mountains, which Congress provided at its last session should be made by the Secretary of Agriculture, has just been assigned to the Forest Service by the Secretary.

Meats, dairy products, and food animals sent out of the United States last year aggregated over $250,000,000 in value. More than sixty per cent of this total went to the United Kingdom.

A total of one hundred and ninety-nine lives and fifty-four ships have been sacrificed to the storms on the coasts of New England and the Maritime Provinces for the winter just ended.

Exports of manufactures from the United States now exceed $700,000,000 per annum and have doubled in value in a single decade.

The wealth of the United States in 1904 was $107,104,192,410.

Foreign.

The French Government has lately made a successful trial of a plan for the use of the Roentgen ray in detecting smuggled articles, whether in packages or on the person of the smuggler. The plan is to have every passenger on board a vessel from a foreign port pass in front of the X-ray apparatus and subject himself to a thorough examination. In this way smuggled articles concealed anywhere about the person can be instantly detected. As it is not necessary to remove any of the clothing, the passengers are caused absolutely no annoyance, and as all are treated alike they can take no offense. The process is quick. One man can examine all the ships that come to port in a day. In the trial mentioned one hundred and sixty-seven persons were examined in forty-five minutes, and on them were found jewels and merchandise hidden for the experiment. Every means of baffling it was tried at the test, and not a single hidden article escaped detection.

The Council of Ministers for Egypt has adopted the proposition to increase the height of the Assuan dam sufficiently to raise the water stored in that reservoir by nearly twenty feet above the present maximum. It is calculated that this will give sufficient new water to irrigate another million acres of northern Egypt, which, it is estimated, would yield an increased cotton crop to the value of $17,500,000 to $20,000,000 annually. It is stated that the work will take six years to complete and that it will cost $7,500,000. This would mean the destruction of the Island of Philæ with its historic remains.

The project of tunneling the English Channel has been doomed, at least for a long time to come, by the recent announcement in Parliament of the Government's well-considered decision against the enterprise. The Premier said: "Even if the military dangers could be completely guarded against, there would be a feeling of insecurity, leading to constant demands for increased naval and military expenditure and creating a feeling of alarm injurious to the country's commercial and political interests, which would not be compensated for by the advantages of the tunnel."

The trustees of the Carnegie fund for the construction of the Palace of Peace at The Hague, have appointed M. Cordonnier of Lille, France, to superintend the construction of the palace on a plan somewhat modified since M. Cordonnier's plan was originally accepted. The work will be under the general supervision of a committee of five, of which three will be trustees of the Carnegie fund.

In the annual Oxford-Cambridge field sports, which took place at the Queens Club March 22, there were seven Rhodes' scholars among the Oxonian competitors. Oxford won the contest by 8½ to 1½ points. The "Rhodesters" took three firsts, the long and high jumps, and the hammer throw, and third in the half-mile run.

At th close of a two-days debate, the lower House of Parliament at St. Petersburg adopted the preliminary Constitutional-Democratic resolution providing for the abolition of drumhead courts-martial, and instructing the committee to draw up and present a bill to this effect with as little delay as possible.

It has been announced at Cape Town that a proclamation will be issued about the end of April opening the Madibi gold fields to public digging. Official assays show an average of over one ounce of pure gold to a ton. This step is considered of great public importance.

French troops to enforce a demand for redress on the part of Morocco in the case of the murder of a French citizen have occupied Oudja. The German Foreign Office is reported to believe this a proper and inevitable step. Two French cruisers are at Tangier.

Count Arco, in his wireless telephone experiments in Berlin, has succeeded in obtaining distinct exchanges of words in a tolerably natural voice, at a distance of two miles, by using poles thirty feet high.

It is rumored that Prince Oscar, Emperor William's fifth son, and next to the youngest, will probably enter Harvard College as a student this fall.

Industrial and Commercial.

It is expected that the new Gary steel rail mill of the Indiana Steel Company of the United States Steel Corporation will be making rails in March next. Even at this the plant will be constructed in record-breaking time as ground was first broken July 15, 1905. At this plant open-hearth steel rails will be made exclusively. It is expected that the mill will start out with a tonnage of about five hundred thousand tons.

Westinghouse Electric and Manufacturing Company has awarded a contract for an eight-story, fire-proof extension to its works at East Pittsburg, Pa. The new shop will be used for making machinery of the smaller class and for all kinds of assembling. It will cost $500,000 and will employ fifteen hundred hands, making three thousand employed at East Pittsburg.

The contract for const ucting the first portion of the $161,000,000 aqueduct work to bring water from the Catskills to New York City has been awarded. The bid was $4,126,000. It is believed that in three years a connection can be had with the new Croton aqueduct and water from the Peekskill Valley turned into the city, adding fifty million gallons a day to the present supply.

The Canadian Pacific Railway has in hand extensions amounting to nearly a thousand miles of new lines, while the double tracking that is to be carried out comprises another five hundred miles. A thousand miles are under construction on the Grand Trunk Pacific, and fifteen hundred on the Canadian Northern.

Just one bid was offered for the building of the proposed Cape Cod Canal. That was for $11,900,000, and came from a newly organized company, understood to be the same people who compose the Boston, Cape Cod and New York Canal Company.

The Walter Baker and Company, Ltd., of Dorchester, Mass., on a recent pay-day distributed to its employes an additional amount of about $30,000, which figures about ten per cent on the amount of wages received during the year.

General.

The excavations at Metapontum, on the Gulf of Taranto, Southern Italy, have resulted in the discovery of many Greek tombs, some covered with enormous tiles, others with cylinders, and still others with stones. The tombs belong to the fourth century before Christ. Interest in the discovery has been heightened because the great Greek philosopher, Pythagoras, was buried at Metapontum about 500 B. C., and as his tomb still existed at the time of Cicero, it is hoped that it may be found.

Both branches of the Connecticut General Assembly have passed a bill making the mountain laurel, which grows in great abundance in the State, the official flower of Connecticut.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE SUIT IN CONCORD.

THROUGH the courtesy of *The Concord Patriot* we are able to print below a copy of the intervening petition filed by Streeter & Hollis in the Superior Court for Merrimack County, at Concord, N. H., Tuesday, April 2, in the proceedings commenced about a month ago by the so-called "next friends" of Rev. Mary Baker G. Eddy. The purpose of this petition is to carry into effect the wishes of Mrs. Eddy in regard to her property, and to substitute the trustees appointed by her in place of the self-constituted "next friends" who entered the suit in her name, but without her consent.

Hon. Henry M. Baker, Chairman of the Trustees appointed by Mrs. Eddy, is a lawyer, ex-member of Congress, and at present a member of the New Hampshire Legislature. He is a cousin of Mrs. Eddy. Mr. McLellan is Editor of the *Christian Science Sentinel*, *The Christian Science Journal*, and *Der Herold der Christian Science*. Mr. Fernald is President of The National State Capital Bank of Concord.

The full text of the petition is as follows:—

STATE OF NEW HAMPSHIRE.
SUPERIOR COURT.

MERRIMACK, ss. April Term, 1907.

MARY BAKER G. EDDY, By her next friends, GEORGE W. GLOVER, MARY BAKER GLOVER, GEORGE W. BAKER, *vs.* CALVIN A. FRYE, ALFRED FARLOW, IRVING C. TOMLINSON, IRA O. KNAPP, WILLIAM B. JOHNSON, STEPHEN A. CHASE, JOSEPH ARMSTRONG, EDWARD A. KIMBALL, HERMANN S. HERING, LEWIS C. STRANG.

Motion for Leave to Intervene and be Substituted as Plaintiffs in Place of said "Next Friends."

(Filed April 2, 1907.)

Henry M. Baker of Bow, New Hampshire, Archibald McLellan of Boston, Massachusetts, and Josiah E. Fernald of Concord, New Hampshire, respectfully represent that,

(1) Said Mary Baker G. Eddy, by deed duly executed and delivered on the sixth day of March, 1907, conveyed and transferred to said Baker, McLellan, and Fernald, subject to certain reservations therein named, all her interest of every kind and description in and to any real estate wherever situated; also all her interest of every kind and description in and to any estate, personal or mixed, which she then owned or possessed, including stocks, bonds, interests in copyrights, contracts, actions, and causes of action at law or in equity against any person, in trust for the purposes and upon the conditions fully set forth in said trust deed, a copy of which is hereto annexed and made part hereof.

(2) Upon the execution of the deed, they severally accepted the trust and agreed to perform the same according to the conditions and the terms thereof, and thereafterwards, on the eighteenth day of March, executed and delivered to the grantor the bond required by the eighth article of the deed. A copy of said bond is hereto annexed and made part hereof.

(3) Pending the execution of the bond, at the request of the grantor, they took delivery and possession, on said March 6, 1907, of the securities, cash bank balances, documents, books of account, and other personal estate conveyed by said Trustees, and, since said March 6, have received further formal assignment of all copyrights, contracts, and securities requiring the personal signature of the grantor; and they are now holding and managing all the same in accordance with the provisions of said trust deed and will continue so to do; and in due course they will cause said trust deed to be recorded in the various registries of deeds so that the record title of all the real estate so conveyed will be in the Trustees.

(4) This suit in equity, as appears by the record, was brought by said "next friends" as volunteers, purporting to act in behalf of Mary Baker G. Eddy, against the ten defendants, for the purpose, as is alleged in the bill, of recovering money and property alleged to have been misappropriated and unlawfully diverted by the defendants from Mrs. Eddy's estate, and for the purpose of protecting said property from further misappropriations. But, under the terms of said trust deed, it is the duty of said Trustees to protect and preserve the entire estate of their grantor, and their further duty, if the allegations of the bill are true, to prosecute said defendants in behalf of the trust estate for the recovery of all money and property misappropriated or diverted as alleged, and to prosecute all other actions and causes of action against said defendants or any other person against whom the grantor, prior to said March 6, 1907, or the trust estate since that date, has any claim at law or in equity; and, with the permission and subject to the direction of the court, said Trustees will prosecute for the benefit of the trust estate this and all other actions and causes of action now existing or hereafter arising in the premises.

Wherefore the said Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, as such Trustees, pray that they may be substituted as "next friends" or as plaintiffs in lieu of the "next friends" now of record, and that they be permitted, under the supervision and advice of the court, to prosecute said suit according to its merits and as the

protection of the trust property and estate may seem to require.

STREETER & HOLLIS, *Solicitors.*

HENRY M. BAKER,
ARCHIBALD MCLELLAN,
JOSIAH E. FERNALD.

MERRIMACK, ss. April 1, 1907.

Personally appearing, the said Henry M. Baker, Archibald McLellan, and Josiah E. Fernald made oath that the facts stated in the foregoing motion are true.

Before me: FRED C. DEMOND, *Justice of the Peace.*

COPY OF TRUST DEED EXECUTED, DELIVERED, AND ACCEPTED MARCH 6, 1907.

MARY BAKER G. EDDY to HENRY M. BAKER, ARCHIBALD MCLELLAN, JOSIAH E. FERNALD.

KNOW ALL MEN BY THESE PRESENTS:

That I, Mary Baker G. Eddy of Concord, New Hampshire, in consideration of one dollar to me paid by Henry M. Baker of Bow, New Hampshire, Archibald McLellan of Boston, Massachusetts, and Josiah E. Fernald of Concord, New Hampshire, who are hereby constituted trustees and attorneys in fact for the purposes hereinafter set forth, do hereby grant, convey, assign, and transfer unto the said Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, their heirs, successors, and assigns, all my interest of every kind and description in and to any real estate whereever situated; also all my interest of every kind and description in and to any estate, personal or mixed, which I now own or possess, including stocks, bonds, interests in copyrights, contracts, actions, and causes of action at law or in equity against any person.

TO HAVE AND TO HOLD the above granted and assigned premises, with all the privileges and appurtenances thereto belonging, unto said Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, trustees, to them and their heirs, successors, and assigns; *but, in trust, nevertheless,* for the following purposes and upon the following conditions, viz.:

First: To manage, care for, and control all the above granted real estate and interest therein during my earthly life and, at the termination thereof, to dispose of the same in accordance with the provisions of my last will and the codicils thereto; but I hereby reserve for myself the right of occupancy and use of my homestead, "Pleasant View," in Concord, New Hampshire. I hereby also reserve all household furniture, my printed library, and all horses, carriages, tools, and other articles of use or adornment now being or in use in or about my home premises at "Pleasant View." I hereby also reserve the right to occupy and to rent for my own benefit my two houses at 385 and 387 Commonwealth Avenue, Boston, Mass.

Second: I give unto my trustees full power to manage, care for, control, invest, and reinvest all said trust property and the income thereof, with all powers necessary or convenient for such purpose, desiring, however, that investments of income and reinvestments of principal shall always be made in bonds or other securities of a conservative character, having regard for the safety of the principal. It is my wish that, in the making of investments, preference shall be given to state, government, city, and municipal bonds; but I leave this to the judgment and discretion of said trustees, relying upon said discretion being conservatively exercised.

Third: Said trustees shall pay to me, from time to time, out of the net income of said trust property, (1) such sums as I may need or desire for the purpose of keeping up the homestead "Pleasant View," and paying the expenses thereof and of my household, in the same general way as heretofore; (2) such sums as I may desire for my own personal expenses and for charitable purposes; and (3) such sums as I may personally desire to use for the advancement of the cause and doctrines of Christian Science as taught by me. Said trustees shall also pay and discharge whatever claims and accounts may be outstanding against me at this date.

Fourth: At the termination of my earthly life, this trust shall terminate, and all the personal estate then held by my said trustees shall pass to the executor of my last will and the codicils thereto, to be disposed of in accordance with the provisions thereof.

Fifth: Said trustees are hereby appointed my attorneys in fact and, as such, are hereby vested with full power and authority for me and in my behalf and in behalf of the trust estate hereby created, either in their own names as trustees or in my name, as they shall decide, to bring, appear in, prosecute, defend, and dispose of as in their judgment shall seem best for the protection and preservation of the trust estate, any actions, causes of action, suits at law or in equity, whether now pending or hereafter brought, with reference to any matter in which I may be personally interested or the trust estate hereby created in any way affected. And I hereby give to my trustees and attorneys in fact full power and authority to employ attorneys-at-law and other agents in such matters and in all other matters pertaining to the trust estate.

Sixth: In case of a vacancy in said board of trustees, caused by death, refusal to act, or resignation of any of them, or for any reason, a new trustee or trustees shall be appointed by me, and in case I fail to act, said new trustee shall be appointed by the chief justice of the Supreme Court of New Hampshire for the time being, preference being given to the nomination of the remaining trustee or trustees.

Seventh: I direct that my trustees shall be liable only for their own acts in the management of this trust and that no trustee shall be answerable for loss or damage which may happen to the trust property without his own wilful fault or misfeasance.

Eighth: I desire said trustees and their successors to furnish a surety bond or bonds to the amount of five hundred thousand dollars, and the expense thereof shall be paid from the trust fund.

Ninth: The trustees shall receive a reasonable payment from the trust fund for their personal services as such, and shall also be reimbursed for all expenses incurred by them in the management of the trust estate.

Tenth: The trustees shall render to me personally, semi-annual accounts of the trust property and the income and expense thereof.

IN WITNESS WHEREOF, I have hereunto set my hand and seal this sixth day of March, A.D. 1907.

MARY BAKER G. EDDY. [SEAL.]

Signed, sealed, and delivered in the presence of:
FRANK S. STREETER.
FRED N. LADD.

STATE OF NEW HAMPSHIRE, MERRIMACK, SS.

On this sixth day of March, personally appeared the above named Mary Baker G. Eddy and acknowledged the foregoing instrument to be her free act and deed.

Before me: FRANK S. STREETER,
[NOTARIAL SEAL.] *Notary Public.*

Digitized by Google

Concord, N. H., March 6, 1907.

We, Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, severally accept the foregoing trust and agree to perform the same according to the conditions and terms thereof; but we severally reserve the right to resign said trust.

HENRY M. BAKER,
ARCHIBALD MCLELLAN,
JOSIAH E. FERNALD,
Trustees.

COPY OF BOND EXECUTED MARCH 18, 1907, AND DELIVERED MARCH 19, 1907.

KNOW ALL MEN BY THESE PRESENTS,

That we, Henry M. Baker of Bow, New Hampshire, Archibald McLellan of Boston, Massachusetts, and Josiah E. Fernald of Concord, New Hampshire, as principals, and the United States Fidelity & Guaranty Company of Baltimore, Maryland, as surety, are held and firmly bound to Mary Baker G. Eddy of Concord, New Hampshire, and her executors in the sum of five hundred thousand dollars, to be paid to said Mary Baker G. Eddy or her executors, to the payment whereof we bind ourselves and our heirs, firmly by these presents.

Sealed with our seals and dated the eighteenth day of March, A.D. 1907.

THE CONDITION OF THIS OBLIGATION IS, that

WHEREAS, the said Mary Baker G. Eddy, by deed duly executed and delivered on the sixth day of March, 1907, subject to certain reservations therein named, granted, conveyed, assigned, and transferred unto the said Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, their heirs, successors, and assigns, all the grantor's interest of every kind and description in and to any real estate wherever situated, also all the grantor's interest of every kind and description in and to any estate, personal or mixed, which the grantor then owned or possessed, including stocks, bonds, interest in copyrights, contracts, actions, and causes of action at law or in equity against any person, but, in trust, nevertheless, for the purposes and upon the conditions fully set forth in said trust deed; now, if said Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, as such trustees, shall well and truly carry out and perform all the obligations imposed upon them and each of them by and according to the terms, conditions, and stipulations set forth in said trust deed, then this obligation shall be void.

HENRY M. BAKER. [SEAL.]
ARCHIBALD MCLELLAN. [SEAL.]
JOSIAH E. FERNALD. [SEAL.]

THE UNITED STATES FIDELITY & GUARANTY CO. [SEAL.]

[Seal of U. S. Fidelity & Guaranty Co.] By ARTHUR P. MORRILL, *Its Attorney-in-Fact.*

Signed, sealed, and delivered in the presence of:

FRED N. LADD.
FRANK S. STREETER.

We are also indebted to the *Patriot* for the following interviews with counsel and the trustees since the intervening petition was filed. It is not expected that any further statements will be made by counsel or their clients:—

Gen. Frank S. Streeter, personal counsel for Mrs. Eddy, and also counsel for the trustees to whom Mrs. Eddy has conveyed all her property, made the following statement:—

"The trust deed and motion of the trustees for leave to intervene and become plaintiffs, speak for themselves. They are now court documents, and as counsel I may not properly discuss them except before the court.

"The creation of a trust to take charge of and care for all her property and business affairs was contemplated by Mrs. Eddy before she had any knowledge that these proceedings were begun or contemplated, and she had consulted me with reference thereto.

"As to the suit itself, if, as is claimed, it was begun for the sole purpose of protecting Mrs. Eddy's property interests, the 'next friends' should feel relieved from any anxiety. The high business character and standing of the trustees, as well as their legal obligations under their bond to Mrs. Eddy, insure the faithful performance of their duty under the terms of the trust deed to conserve all property interests involved, and they will protect her personally to the extent of their ability.

"If the 'powerful interests' said to be behind these proceedings have any ulterior or unfriendly purpose against Mrs. Eddy, her personal rights in this respect will undoubtedly receive the protection of the court.

"The great majority of good men and women in the world, whatever their religious beliefs, would never give approval or tolerance to an unfriendly assault by indirection upon this venerated woman of eighty-six years, whose life has been given to the betterment of mankind, and who has the unqualified respect and devotion of all privileged to know her personally. Her good citizenship and her charities have won for her widespread and deep affection in this community. Manly sentiment or chivalry is not yet extinct."

Hon. Henry M. Baker, chairman of the trustees, in behalf of himself and his associates, Messrs. Archibald McLellan and Josiah E. Fernald, gave out the following:—

"The trustees can add nothing of importance to the official documents filed in court. Those papers cannot be misunderstood. They are plain and conclusive and represent nothing which has not been carefully and for a long time considered by Mrs. Eddy, and carry out in simple form her instructions to her counsel, General Streeter.

"Mrs. Eddy has relieved herself of the care of her estate that she may devote her time and thought without interruption to the advancing Cause she represents. Her trustees accepted the trust several weeks ago and are actively engaged in the details and responsibilities they have assumed. The authority vested in them is broad and inclusive. They will not hesitate to protect and defend the estate entrusted to them, if need be, against both plaintiffs and defendants in the pending suit. They will initiate and prosecute all needed investigations and proceedings to that end, in accordance with the terms of the trust deed, with the permission, and subject to the supervision, of the court."

The firm of Eastman, Scammon & Gardiner appear for the following-named defendants, residents of New Hampshire: Calvin A. Frye, Irving C. Tomlinson, Hermann S. Hering, and Lewis C. Strang. Attorney-General Eastman of this firm was seen to-day and made the following statement:—

"Our clients have been charged with a very serious breach of confidence, in connection with their alleged relations with Mrs. Eddy, and among other things, that they have misappropriated funds and wrongfully diverted moneys from her estate for their own benefit. We have no reason to doubt that these charges are wholly without foundation, and the defendants will ask and demand that these charges shall be fully investigated by the court, and to that end we shall do what we reasonably can to bring about that result at the earliest practicable time."

Digitized by Google

Samuel J. Elder and William A. Morse, counsel for the following-named defendants: namely, Ira O. Knapp, William B. Johnson, Stephen A. Chase, Joseph Armstrong, all living in Massachusetts, and Edward A. Kimball, a resident of Chicago, in the State of Illinois, made the following statement:—

"That although our clients are not bound to appear and make answer in this case, nevertheless such serious, unfounded, and unwarranted charges have been made concerning them that they decided voluntarily to appear and submit to the jurisdiction of this court and to meet and make answer to such charges, that there might be no unnecessary delay in obtaining a judicial determination and finding with reference to the accusation against them."

CHRISTIAN SCIENCE OPPOSED TO HYPNOTISM AND SUGGESTION.

JUDGE JOHN D. WORKS.

ONE of the most common beliefs about Christian Science on the part of the uninformed, and the charge most frequently made against it by its critics, is that its work of healing from sin and disease is nothing but the action of one human mind upon another. In earlier times these critics did not concern themselves about how it healed; they denied that it healed at all; but now the proof of its healing of all manner of diseases is so conclusive that all are compelled to admit that it heals. They, however, seek to degrade it by charging, without reason, that its influence is hypnotic.

This position was taken in a late newspaper article in Los Angeles, Cal., and showed how little our critic knew of the true teachings of Christian Science, and consequently how certain he was to be utterly wrong as to its practice and its effects. Christian Scientists do not deny the existence of sin, pain, or death, in the sense that he asserts. On the contrary, these evils are recognized as errors to be overcome, and their overcoming is constantly insisted upon. They do not deny that Jesus suffered for our sins, was crucified, and rose from the grave on the third day, as all other Christian churches teach; but Christian Scientists maintain that Jesus overcame sin and death, and thus he gave conclusive evidence of the unreality of these evils by showing that they could be overcome by the law of Spirit, or Divine power. It is true that Christian Scientists recognize matter only as a product of false belief,—as a counterfeit of substance,—hence, opposed to Spirit, and unreal in the sense that it is destructible and fluctuating. Christian Scientists admit that to the material senses all things seem to be material and not spiritual, hence the prevalence of sin, disease, and death. Mrs. Eddy says, "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction" (Science and Health, p. 460).

It is part of the mission of Christian Science to overcome pain, but Scientists believe that sin and pain are the effects of mortal belief, or what Paul calls the carnal mind, which is enmity against God, and equally at enmity against man. It is needless to say that the statement, "All science is based upon the existence of matter," is erroneous. It is not surprising that one having so little knowledge or conception of what Christian Science really is and what it teaches, should be equally in error in his conclusions as to what it does and how it is done. If Christian Science is right in maintaining that sin and disease are the offspring of mortal mind, or wrong thought, as distinguished from the divine Mind and right thought; that one is error, or evil, and the other is Truth, or good, then what follows? Obviously the remedy for evil thoughts, or sin, and their results, sickness, disease, and death, is the restoration of the sufferer therefrom to right thoughts; it is to substitute the truth for error, and a sense of love for hate, revenge, jealousy, or other evil thoughts; in other words, to have that Mind which was also in Christ Jesus, instead of the carnal mind; the thought of God, good, rather than the thought of evil.

Here we have a clearly marked distinction between hypnotism or suggestion and Christian Science. The action of hypnotism or suggestion is but the asserted action of the so-called human mind, or will. It can have no regenerating or healing power, because no such power exists in mortal man or mortal mind. It is not claimed by educated and conscientious hypnotists that the influence which they exercise is effective to heal organic diseases of any kind, much less what are known as incurable diseases, but only such diseases as they consider imaginary or functional. They class some diseases as real, or organic, and others as unreal. Christian Science knows no such distinction, but classes all diseases as unreal to divine Mind, or law, and therefore curable.

It will be seen that hypnotism is nothing but the supposed action of one mortal mind upon another. If this mind is evil, or opposed to the divine Mind, then it is the action of one evil upon another, and could not by any possibility regenerate or heal. What do Christian Scientists mean when they say the mortal mind is evil? They mean that the human or mortal mind is at enmity with God, and therefore evil, because all its conceptions of God and man are erroneous and illusory. It believes that man is material, and not spiritual; that being material, he is sinful, depraved, and subject to pain, sickness, and death. It is this false belief of the materiality, and consequent weakness and sinfulness, of man that is at enmity with God, or the divine law which teaches us that man is spiritual and immortal, created in the image and likeness of God. And why should our critics be so skeptical about Divine healing, and seek to belittle the work being done by Christian Science by classing it as hypnotism?

All Christians believe that God can heal the sick, and their prayers for Divine interposition, in some cases of sickness, are constant and sincere. In this age when the healing is being done and can no longer be denied, some are saying, and saying publicly, "We believe in Divine healing, and that this work of healing can be done by our Church;" but in most cases they say they can do the work, while in fact they are not doing it. All Christians surely believe that Jesus healed the sick, and that the healing he did extended to organic diseases, and none will presume to say that he healed by hypnotism. Some of them, however, do say that his healing was miraculous; but no one who believes the Bible can deny that others besides Jesus healed the sick; healed all manner of diseases, long after Jesus' resurrection and ascension. They surely do not presume to assert that the good men who did this beneficent work were hypnotists. Some of them do say that such men were specially and divinely endowed with the power to heal, and this is an admission that God does heal the sick, and that He endows men as instruments of healing. If this is so, has God's arm been shortened, that He cannot heal now as He did then, and by the same means and through the same instrumentality, or is He less willing to heal now than He was then? Who has the right to say that it is not true, as Christian Scientists claim, that this power to heal was not given alone to particular individuals of olden times, but that it belongs of divine right and by divine law to every one who believes on God, who is spiritually fitted to exercise this beneficent power, and who is possessed of sufficient understanding to so apply the divine law as to bring the sufferer into harmony with the divine Mind and thus bring him peace, harmony, and surcease from pain. If not, what did Jesus mean when he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father"? What did he mean by his

Digitized by Google

command to his disciples to heal the sick, as well as to preach the gospel, if this work of healing the sick was not and is not a Christian duty commanded of God?

There were skeptics in Jesus' time, just as there are now. They charged his work to be the work of the devil; but good Christian people of to-day believe that he healed the sick by Divine power. His mission on earth was to prove by his works that sin, sickness, and death could be overcome, and to point out the way to overcome these evils. He was not a teacher of hypnotism. He attributed his work to God, and declared that he could do nothing of himself. The laws of God are immutable and unchangeable. If He healed sickness then, He will and does heal sickness now. And He does not heal by interposing in the individual case as the result of prayer, or otherwise. The healing comes to one the same as to another, by conforming to His laws. It is not the work of the Christian Scientist to appeal to God to interpose on behalf of the sufferer, but to conform the patient to the divine law; and this is the true "healing of the nations" which is open to all. Christian Scientists do not claim to heal, but to assist the sufferer to obtain the Divine healing.

It is difficult to understand the motive that prompts mankind, and especially Christian people, to deny the efficacy of this mode of healing in the face of the evidence of the works that are being done for the regeneration of mankind and the alleviation of suffering. One might expect that all good people would rejoice that the healing power has again been revived, and seek to advance and assist in the good work; but the perversity of mortal mind is proverbial. Christian Scientists are not dismayed at the unbelief of others, or such criticism as the above, which is the result, it may be assumed, not of malice but of misunderstanding. Their own benefits are too real and substantial to leave room for doubt, and their peace and tranquillity of mind too profound to allow them to attribute their healing and spiritual regeneration to any mere human power. They can afford to wait, and watch and pray that they may remain steadfast and seek for greater spiritualization and power to help their fellow-men to obtain the blessings of sinlessness and freedom from sickness and disease.

PROTECTION AND SUPPLY.

JOHN S. CRELLIN.

He shall cover thee with his feathers, and under his wings shalt thou trust.—PSALMS.

THE protecting watchfulness and unselfish tenderness of divine Love was touchingly illustrated to the writer in the early part of last summer, by two robins. At the top of a vine, ornamenting the side veranda of a neighboring cottage, they had builded their nest and hatched out their young. The vine had not climbed rapidly enough, nor high enough—as no doubt the birds had hoped it would—to shelter the nest; not near so rapidly as the summer sun had climbed northward to overlook it; while the slightly projecting eaves barely kept off the rain, but not the burning sun. Before the fledglings had feathered sufficiently to be protected from its rays, there came on a heated spell, during which it seemed as if the big luminary was bent upon destroying the little birds; and for nearly two hours in the middle of the day it appeared to stand still and glare down fiercely on this particular nest.

The parent birds seemed to know just when the big, impudent disk would try to stare into the privacy of their home, and shortly before would place securely at the edge of the nest a plentiful supply of squirming provender. As the grateful shadows fled, and the first fierce rays of the sun began to creep over the sacred confines of her home, the mother-bird, encouraged by the melody of her mate flitting about in a near-by tree, and the twittering of her featherless brood, with wings outspread took up her vigil at the edge of the nest like a living canopy. Thus she formed a perfect shelter from the heat; and thus, for nearly two hours, tirelessly she stood above her peeping children. Stood that the air might circulate freely between them and her protecting wings; stood until the sun, disappointed of his quest, arched over toward the west and left the nest in shade. Then what feasting! and what a joyous chorus of congratulations, as if to say, "It's all right! Love has driven him away, the little ones are safe!" During the interval of protection necessary for their safety and comfort, the little birds were conscious of but one requirement,—supply; while unknown to them, the supply was just at hand, like the very kingdom of heaven, and the protecting wings of the mother-love, most necessary to their safety, were outspread above them.

Like those tiny fledglings, how many times do we cry out impatiently for supply,—when it is just at hand,—and will not be quieted to know that God is Love, whose feathers shade us from the destroyer; whose outspread wings protect us from the storm; beneath whose ceaseless care we rest and may be satisfied. As for our supply, we can all demonstrate the exactness of mathematics with more or less aptitude and understanding, enough to enable us to know that no mathematician is sparing of the figures necessary to his sum, for fear his neighbor mathematician may not have enough or that he may exhaust their source. No; he knows that a million men could use the figures, all or one, the livelong day and still the supply would be untouched and undisturbed.

So shall we all, from the least unto the greatest, demonstrate with the absolute certainty of metaphysical Science the limitless supply of all good,—as Jesus did so long ago on the shore of the sea of Galilee,—when we have with us the Master-thought of him who said, "When I sent you without purse, and scrip, and shoes, lacked ye anything?" They say unto him, "Nothing." He also said, "Lo, I am with you alway, even unto the end of the world." Our revered Leader tells us that "creation is ever appearing, and must ever continue to appear from the nature of its inexhaustible source" (Science and Health, p. 507). That source is the Love that clothes the field with grass, and this Love has fed the hungry for all these centuries from its exhaustless storehouse without diminishing one iota of its infinite possibilities. Christian Science teaches us how it was that long ago "he that gathered much had nothing over, and he that gathered little had no lack." It teaches us that Christ, Truth, is "the same yesterday, and to day, and for ever."

Our debt, the debt we owe to Christian Science for the assurance of this knowledge, is infinite; its payment, like its accomplishment, requires an equally great consecration. We grow to be like God only in proportion as we love and understand Him. This, we are taught, can be done as we put off the old man with his deeds, and put on the new man which, in meekness and humility, is renewed in the image and likeness of the Christ. We owe this debt to God, to our Leader, and to Christian Science; and with grateful hearts and loving trust in our beneficent Father, who giveth us not the Spirit by measure, we trudge joyfully along "the rugged way." For surely "he shall cover thee with his feathers, and under his wings shalt thou trust."

NOTICE.

The Publishing Society announces that it has arranged to make the foreign subscriptions to the *Sentinel* $2.50 per year instead of $3.00 as already announced. Quantity prices will be given later.

SELECTED ARTICLES.

[From the inaugural address of His Excellency, Governor Guild, of Massachusetts, Jan. 3, 1907.]

I commend to your attention the abolition of the so-called bucket-shop, or in other words, of the misuse of market quotations as a basis for public gambling. Any statute on this subject needs to be framed with conservatism and care. Means can, however, and should at once be found, as means have been found in other States, to discriminate between legitimate and honorable trading in securities and a form of mere gambling whose existence is a fruitful source of embezzlement and larceny.

[Editorial in *The Topeka* (Kan.) *Herald*.]

As Pastor Emeritus of The First Church of Christ, Scientist, Boston, Mrs. Eddy has exercised unlimited power of initiation and veto in the management of the Christian Science work. It was conferred upon her by the Manual of the Church, and with the approval of all those connected with the Church organization, not as a bestowal of honor or even in recognition of her right to prominence as the Founder of the Christian Science religion, but as a matter of practical Church policy. The results have more than demonstrated the wisdom of this course. The creation and development of a religious denomination numbering more than one million followers, and owning some of the finest church property in the world, in a period of less than thirty-five years, is one of the greatest achievements of the last century. It is all Mrs. Eddy's work. She has been the originator and the director of this remarkable movement, which has spread to all quarters of the globe and which has among its adherents many of the most intelligent and influential people everywhere. No church organization known to-day is more harmoniously managed and freer from personal bickerings and jealousies than that of which Mrs. Eddy is the head. This fact is due to the wonderful tact and wisdom with which she has guided and directed it through the trials and tribulations which beset all new movements.

[W. S. Montgomery Smith in *The Onlooker*, London, England.]

While it is true that the treatment of disease by Christian Science is radically opposed to the methods of the orthodox medical practitioner, it would be very far from the truth to assume that Christian Scientists entertain towards the members of the medical profession feelings that are in any way hostile or disrespectful. On the contrary, they regard with the kindliest sympathy the devoted efforts of those many doctors who are unselfishly striving to alleviate the mass of suffering which weighs down humanity, and who are sacrificing ease, pleasure, sometimes even life itself in the struggle. The writer, who pursued the practice of medicine for many years, before an acceptance of the truth of Christian Science compelled him to abandon it, is acquainted from personal experience with many instances of such devotion. The pity is that the results are too often so little commensurate with the desire to serve.

It would be equally incorrect to suppose that Christian Scientists have any wish to dissuade the sick, anxious for medical treatment, from employing the means which these sufferers imagine will give them the best chance of relief. Such a course would be entirely opposed to the rules of Christian Science, which teaches the doctrine of doing to others as one would be done by, and refraining from anything that infringes the rights of the individual. Christian Scientists are striving to overcome the evils that beset human existence in the manner directed by our great pattern, Jesus of Nazareth, who proclaimed himself "the way." Whereas medical practice is little else but a tinkering of effects, Christian Science concerns itself with the removal of the cause. Teaching that all physical effects are merely externalized thoughts, it devotes itself to the healing of the mind, in the knowledge that when once right thinking is established in the consciousness of the individual, discord, whether manifested as sin or disease, can find no foothold.

The doctrines of Christian Science are strictly derived from the authority of the Bible. The statement that disease and death are the result of wrong thinking is in exact accord with the teaching of St. Paul, who said, "To be carnally minded [or, as the marginal version has it, "the minding of the flesh"] is death; but to be spiritually minded is life and peace;" and "he that soweth to his flesh shall of the flesh reap corruption; but he that soweth to the Spirit shall of the Spirit reap life everlasting." St. James said: "When lust hath conceived, it bringeth forth sin: and sin, when it is finished, bringeth forth death." A greater than either Paul or James declared: "If a man keep my saying, he shall never see death."

The logical deduction from these and scores of similar passages is the one drawn by Christian Science, that in proportion as thoughts that are unlike God disappear from the individual consciousness, and a state of righteousness or right thinking is established therein, in just that proportion will disease, sorrow, and all other discord be eliminated from experience, and the kingdom of God, which the apostle defines as "righteousness, and peace, and joy in the Holy Ghost," be a present reality. It will thus be seen that the healing of sickness is very far from being, as is sometimes assumed, the sole work of Christian Science. Sickness, indeed, needs to be healed; but its healing by Christian Science treatment means much more than the mere change from physical discomfort to physical health. It means the disappearance from the patient's consciousness of so much sin, of so much ignorance of God; it means the acquisition of a greater peace, of a fuller love, of nobler aims and desires; in short, it means a step towards the realization of "new heavens and a new earth, wherein dwelleth righteousness," where "old things are passed away," and "all things are become new."

A striking contrast between the methods of the medical practitioner and the Christian Scientist is to be seen in the different attitude which each expects his patient to adopt. It is the general rule in medical practice for the doctor to do all the work, and for the patient to be little else than the passive subject of his ministrations. In Christian Science, however, while no effort is spared on the part of the practitioner, the patient is encouraged to do his utmost to understand the Principle that is healing him, and to put into practice on his own behalf such understanding as he gains. In short, it is the object of a Christian Scientist, not only to heal his patient, but to send him away fortified with such a knowledge of God and of God's laws as will enable him, when assailed by sin, sickness, or sorrow, to be his own practitioner, and to realize for himself the ever-presence of the healing Christ.

[The above article was accompanied by the following editorial note.—EDITOR.]

"FROM MEDICINE TO 'SCIENCE.'"

Mr. Montgomery Smith, who contributes the article on Christian Science in our issue of to-day, is one of the doctors who have given up the practice of medicine to work as Christian Scientists. He was educated at Winchester and Balliol, and walked the hospital at Guy's, but after several years' practice he removed his name from the Medical Register to work as a Christian Scientist.

[From *The Springfield* (Mass.) *News*.]

"The good there is in Christian Science," was the subject of Rev. Mark A. Denman's address in the Memorial Church last evening [March 10]. Mr. Denman said in part: "Their enthusiasm and loyalty to their Church is an inspiration. Some call this fanaticism. The people who never felt the thrill of religious enthusiasm condemn it. An indifferent orthodoxy is in need of a stirring up. The enthusiasm of Pentecost would frighten it out of its wits, or incur its bitterest opposition. It is this enthusiasm and loyalty of Christian Science that puts to shame our dry-rot orthodox respectability. In line with this is the atmosphere of social sympathy developed. Passing from some of our ecclesiastical refrigerators called prayer meetings into a Christian Science service is to some people like going from a Springfield winter to a Palm Beach June. Let our churches warm up and we shall hear less of Christian Science. It makes appeal to the hopeless. It tells the discouraged of hope, and actually arouses the forces of life to such an extent that many a winter has given place to spring; and I care not what you call it, it is good.

"Speaking briefly on the theme announced, I disclaim the purpose of criticism of Christian Science. I confess my inability to do so, whether we view it as a religious cult or as a philosophy. I assume on general principles that there is good in it, as there is good in all things. It is the good and not the evil of such that marks the strength, and that measures it in Christian Science as in all else. That Christian Science appeals to and wins so many thousands of sane and good people, must be accounted for on the rational ground of good. It must be truth and not error that can change life from a tragedy to a song. It is our duty to discover this good, this truth, this emphasis, and to use it. It is not the patented property of Christian Scientists. Truth belongs to all who can appropriate it, and it is far better to seek and find this truth, this strength of Christian Science, and use it, than to seek to find and denounce the error."

[Editorial in the *Houston* (Tex.) *Post*.]

The *Post* knows very little of the doctrinal beliefs and practices of the sect known as Christian Scientists, beyond the fact that some of the most intelligent and representative men and women of the State believe in Christian Science and that it is their business and their right to believe in it without the slightest interference from the doctors or the Legislature. For this reason, any legislation seeking to restrict or suppress this sect is mischievous in the extreme and utterly violates the spirit of our institutions.

In the judgment of the *Post*, the doctors of Texas are utterly wrong in invoking the power of the State to suppress a religious sect which includes healing among its doctrines. The doctors can get along very well by attending to their own business and letting the religion of other people alone. . . . It may be perfectly true that Christian Science fails; we know nothing about that. It is true that medical science also fails at times, and that the doctors have buried their mistakes by the hundreds of millions, but it would be a monstrous error to suppress medicine and surgery because of such failures. The merits of medicine and the merits of "Science" are not the question as the *Post* sees it. It is the question of the constitutional right of the individual to embrace whatever religion he may choose or employ whatever system of healing he may choose. This, in the judgment of the *Post*, is a matter with which the Legislature has nothing to do.

The schools of medicine are in continuous warfare. The allopaths would like very well to see the other schools out of business; they would even like to see doctors of their own school who advertise put out of business. Likewise, the other schools rarely speak well of the old-school doctors. It is clearly not within the province of the Legislature to adjust all these differences of opinion. Granting that certain regulations with respect to the practice of medicine are necessary, it is certainly not proper for an unscientific body like a State Legislature to undertake to adjust differences of opinion about which it is not informed.

[Charles K. Skinner in the *Detroit* (Mich.) *News*.]

Our critic has never manifested much love for Christian Science, and his statements regarding it have always had a ring of sarcasm mingled with his misunderstanding of the subject. He, however, spoke better than he knew at the Congregational church last Sunday, when he said, "Christian Science is an example of pure atavism." The mistake made by the doctor is that he has endeavored to measure the spiritual universe and the teachings of Christian Science concerning it by his experiences along material research. The opponents of this religion usually fall into this error. As well expect to produce the strains of Beethoven from a kettle-drum as to harmonize the teachings of the spiritual with the results from matter.

According to Century and Standard dictionaries, "atavism" means recurrence or reversion to past conditions. Mrs. Eddy has never taught that Christian Science is a new religion; on the contrary, she has always said that it is a return to the teachings and practice of Jesus Christ, and the proofs of this statement are its fruits. The doctor's statement that he "did not know whether or not there is a future existence," shows the lack of acquaintance with the spiritual teaching of the Bible, and this also prevents his understanding Christian Science. Whether or not we believe in any truth does not alter the facts concerning that truth, and the only safe position for the critic to take is to have proved his criticism by a previous demonstration.

If "Christian Science is an epidemic of backsliding," as the doctor says, and we can backslide into the fundamentals of true, demonstrable religion, producing the "signs" that prove its authenticity, let us have more of this kind of backsliding. The world will never reach the true sense of life and harmony until it reverts to the Christ-teaching and practice.

[Editorial in *The Daily Tribune*, Maryville, Mo.]

No legislation is needed in Missouri for the persecuting of any person or class, so long as that individual or assemblage of individuals is not threatening the peace and safety nor interfering with the rights of any other citizen or legitimate interest of the State. There is a movement on foot in some quarters to persuade the Missouri Legislature to pass a law aimed, whether innocently or not may never be known, at believers in the Christian Science method of dealing with disease.

So far as this legislative action is concerned it does not matter particularly as to what one's individual opinion may be touching the religious teachings of the sect known as Christian Scientists. These people may or may not be wholly wrong in their course, just as the adherents of any other teaching may be at fault in their interpretation of things in which they are interested. The matter of real importance is that the Scientists should not be persecuted under the guise of statute-enforcement by those who differ with them, and who may chance to possess the power to pass laws intended to serve such ends, so long as no person is made to accept any Christian Science teaching unwillingly. The members of this sect, we notice, do not force their belief upon any person. And surely in this land we cannot deny a citizen the right to accept the teachings of Christian Science if he chooses to do so.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

[From the *Concord* (N.H.) *Evening Monitor.*]

MRS. EDDY'S LETTER TO THE MOTHER CHURCH.

Pleasant View, Concord, N. H., April 2, 1907.

The First Church of Christ, Scientist, Boston, Mass.

My Beloved Church:—Your love and fidelity cheer my advancing years. As Christian Scientists you understand the Scripture, "Fret not thyself because of evildoers;" also you spiritually and scientifically understand that God is divine Love, omnipotent, omnipresent, infinite, hence it is enough for you and me to know "that our Redeemer liveth and intercedeth for us."

At this period my demonstration of Christian Science cannot be fully understood, theoretically, therefore it is best explained by its fruits, and by the life of our Lord as depicted in the chapter "Atonement and Eucharist," Science and Health with Key to the Scriptures.

MARY BAKER G. EDDY.

[From the *Concord* (N.H.) *Daily Patriot.*]

CARD.

I AM pleased to say that the following members constitute the Board of Trustees who own my property:—

1. Hon. Henry M. Baker, who won a suit at law in Washington, D. C., for which it is alleged he was paid the highest fee ever before received by a native of New Hampshire.

2. Archibald McLellan, editor-in-chief of the Christian Science periodicals, circulating in the five grand divisions of our globe; also in Canada, Australia, etc.

3. Josiah E. Fernald, Justice of the Peace and President of the National State Capital Bank, Concord, New Hampshire.

To my aforesaid Trustees I have committed the hard earnings of my pen,—the fruits of honest toil, the labor that is known by its fruits,—benefiting the human race: and I have so done that I may have more peace, and time for spiritual thought and the higher criticism.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., April 3, 1907.

[From the *Concord* (N.H.) *Evening Monitor.*]

A LETTER FROM MRS. EDDY.

AT the Wednesday evening meeting of April 3, in The First Church of Christ, Scientist, in Boston, the First Reader, Mr. W. D. McCrackan, read the following letter from Mrs. Eddy. In announcing this letter, he said,—

"Permission has been secured from our beloved Leader to read you a letter from her to me. This letter is in Mrs. Eddy's own handwriting, with which I have been familiar for several years, and it shows her usual mental and physical vigor."

MRS. EDDY'S LETTER.

Pleasant View, Concord, N. H., March 22, 1907.

Mr. W. D. McCrackan.

Beloved Student:—The wise man has said, "When I was a child, I spake as a child, I understood as a child, I thought as a child: but when I became a man, I put away childish things." That this passage of Scripture and its concluding declaration may be applied to old age, is a solace.

Perhaps you already know that I have heretofore personally attended to my secular affairs,—to my income, investments, deposits, expenditures, and to my employees. But the increasing demands upon my time and labor, and my yearning for more peace in my advancing years, have caused me to select a Board of Trustees to take the charge of my property; namely, Hon. Henry M. Baker, Mr. Archibald McLellan, and Mr. Josiah E. Fernald.

As you are the First Reader of my Church in Boston, of about forty thousand members, I inform you of this, the aforesaid transaction.

Lovingly yours in Christ,

MARY BAKER G. EDDY.

"CONTENT TO LET GOD RULE."

[THE following letter from one at present in Mrs. Eddy's home is so good that we know it will be appreciated by all Christian Scientists quite as much as it has been by the Editor.]

Pleasant View, Concord, N. H., April 1, 1907.

Archibald McLellan, C.S.B., Editor, Boston, Mass.

Dear Brother:—The matters of which I wrote you in my last personal letter have adjusted themselves and are now running smoothly, and you will need give no further thought to them. Let me thank you for what you have done. I wish that you and every worker in the field of Christian Science, and indeed the whole world, might have such an opportunity as I am now having; namely, a visit to our dear Leader's home, in order that you might see, as I am seeing, with what equanimity and serene calmness she is passing through what to almost anybody else would be a great and trying ordeal; whereas she, on this the very eve of the trial, is as sweetly content to let God rule as if there were nothing to disturb the waters, as in reality there is not. But one needs to be at her side to realize how great is her spiritual understanding, for she literally trusts God, and this is the secret of her wonderful career.

We shall all appreciate her better, "when these clouds have rolled away," and the scenes now being enacted will serve to send Christianity farther along the way, as Christians of the present epoch note how good a God our God is by their observation of a remarkable instance of entire reliance upon His goodness to His children. A signal feature of the hour is that she has no word of hate or unkindness for those among the people who would do her injustice, but is demonstrating what she teaches, and has ever taught, namely, that Love alone overcomes evil with good, that hate, revenge, or malice have no place in Christian Science.

This home is as quiet and as lacking in any sort of excitement as a church service.

Fraternally yours,

GEORGE H. KINTER.

GOD ALONE GIVES PEACE AND POWER.

WE have given considerable space in this issue to the papers filed in the court in Concord on April 2, and to the statements issued by counsel and the trustees appointed by Mrs. Eddy, for we feel sure that our readers will be glad to have this reliable and authentic information. Beyond this, it is neither proper for us to discuss the pending suit, nor to pass an opinion upon it; the court is the only place for such discussion, and this is a point which cannot be too greatly emphasized. We may say, however, that the great Cause for which our beloved Leader has given forty years of Christian labor is undisturbed; that

Digitized by Google

this noble woman, to whom humanity is so deeply indebted, has again shown herself to be above all else a follower of him who said, "Father, forgive them; for they know not what they do."

And what a beautiful picture of the spiritual poise of a great yet humble woman, is shown in Mr. Kinter's letter from Pleasant View, in which he gives us just a glimpse of Mrs. Eddy's serene and undisturbed trust in God at a time when the world is wrought up with excitement about her affairs. Mrs. Eddy has proved in this matter, as in all others, that her firm reliance is in God, and that He alone gives peace and power. The example of this truly Christian woman at this time is such that it may well be emulated not only by Christian Scientists, but by the whole world. ARCHIBALD MCLELLAN.

THE ADVANCE OF HUMAN OPINION.

No thoughtful person can fail to note the great change which is taking place in the world's thought—the advance from a physical to a metaphysical basis of reasoning. Mrs. Eddy has said that "all Science is of God, not of man," hence every earnest student who seeks the truth will sooner or later be drawn to the Principle revealed in Christian Science, for thus alone can the meaning of existence be correctly explained. When our Leader first announced her discovery of mental causation, the advocates of belief in physical law seemed to have a large majority on their side; but it is steadily lessening, because the reasonableness of Christian Science makes a strong appeal to all who are willing to investigate the subject without prejudice. As a result of this investigation, and also because of the healing accomplished in Christian Science, we find that thought now tends toward belief in the mental origin and cure of disease. A recent newspaper article, entitled "Signs of the Times," says,—

"Medical science has made some startling admissions recently. Nothing is more unique than the theory that bad tempers, unhealthy consciences, and so on, are the germs from which diseases spring. That cancers are often the outgrowth of violent tempers is professed by a number of broad-minded physicians. They will probably also find suitable diseases to accompany laziness, conceit, general demoralization, and all forms of sensualism. . . . A man who has great respect for his moral and physical welfare is always healthy. Free of the burden of dissipation, his clean body ever gains in strength. A clean mind, sustained by moral elevation, free from all petty worries, can mean nothing less than the healthiest of bodies."

It is axiomatic that there cannot be an effect without a cause; also that an effect cannot be unlike its cause. It should therefore be very clear that if we attribute causation to the mortal or "carnal" mind, which according to St. Paul is "enmity against God," we need not expect to find good results; but this is the very thing which some good people do, and then think that they have gotten hold of all that is important in Christian Science. Mortals have not risen very far above savagery until they see and admit that sensual pleasure on the one hand, and the indulgence of malice on the other, will result in suffering; but in the very face of this belief the greater number seem willing to take their chance.

While admissions such as those quoted show the advancing trend of thought, we need to understand the spiritual basis of true Christian healing. Christ Jesus often rebuked the fear of his followers, even when it seemed that they were about to be shipwrecked. Now some of the disciples were accustomed to the perils of the deep, and they must have known what their chances were, humanly speaking, when, as the evangelist tells us, "the ship was covered with the waves." What they believed, was evidenced by their terrified appeal to the Master, "Save us: we perish." And what was his response? "Why are ye fearful?" Why, indeed! Were they not at that moment facing death? No! to spiritual sense there was the eternal peace of Spirit, which tells ever of eternal Life, and when it rested upon their perturbed senses their fears were calmed and the waves were stilled. They were made to feel the majesty and might of the divine government which from age to age is ever the same; in which there is neither storm nor sin, disease nor death.

Christian Science has come to acquaint us with this divine government and its laws, which must be understood in order to be intelligently obeyed. The article above quoted says in closing, "Live right if you wish to share in the real pleasures of a heaven on earth." In order to do this we must know the truth of being, and a steady advance must be made in order to rise from the false to the true. Mrs. Eddy says, "The most just man can neither defend the innocent nor detect the guilty, unless he knows how to be just; and this knowledge demands our time and attention" (Miscellaneous Writings, p. 112). Those who honestly practise the teachings of Christian Science are ready to admit that the time and attention given to the study of this great subject bring not only health and harmony, but higher and holier views of God and man which enlighten and bless humanity at large. ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Atlanta, Ga., March 11, 1907.

Beloved Leader and Teacher:—Sunday morning I had such an uplifted sense of the splendor of your present position, of the moral courage that inspires and sustains you, that it gave me the baptismal of Spirit. I saw how it paled all other her standing for human rights. I saw you on the Rock,—the spiritual sense of man as the Son of God,—and for the divine inheritance you are holding aloft the banner of Life—harmony and immortality. Below you were the impotent seeming forces of the loosened occultism of the human mind, that has ever tried to drown the spiritual idea, but the Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea." About you was as the cloud of witnesses, chanting hymns of praise and gratitude for blessings received; around encamped the heavenly hosts, the angels of His presence; arching radiance above you was the rainbow of promise—speedy deliverance from the seeming powers of evil. I beheld "the Lion of the tribe of Judah," —the moral courage that stands high and firm for the spiritual freedom and divine heritage of man. I saw, as never before, the woman, and the earth helping the woman. Our Cause is prosperous beyond anything; the demands for your books and our literature are great. The human mind is stirred and interested as never before. This seems to me the most marvelous hour of history; God is with you, and our grateful and loving hearts bless you every moment. In tenderest love, your devoted student,

SUE MIMS.

Boston, Mass., March 12, 1907.

Mrs. Mary Baker Eddy, Concord, N. H.

Beloved Teacher and Leader:—It is possible that some one has told you of our grand, inspiring service on last Sunday. The attendance was larger, I think, than at any time since the dedication, and the service wonderfully impressive. I shall never forget the reading of Jesus' words to Thomas, "Blessed are they that have not seen, and yet have believed,"—in the Lesson-Sermon. I noticed both men and women who were deeply moved as these words of profound import were read by Mrs. Conant, and the preliminary Scripture reading by Mr. McCrackan—the feeding with the manna—thrilled every listener I am sure. Through you, beloved Leader, we have learned to expect

Digitized by Google

no less to-day than God's people realized in the olden time, but infinitely more, and for this we thank our Father and you.

With tender affection.

ANNIE M. KNOTT.

Boston, Mass., March 5, 1907.

Dearest Leader and Teacher:—I cannot refrain from writing you a few words at this time, and I have wanted to go right to you and tell you how much we love you. We are a strong band of students, united in our great love for you, and with deepest gratitude for all you have done and are doing for us and the world, which is more, oh, so much more, than anybody knows. We know "the eternal God is thy refuge, and underneath are the everlasting arms." He will sustain and comfort you, and truth and right will prevail. Dear Leader, we have the utmost confidence in your wise guidance in all the movements of this great Cause, and also in your ability to conduct all the affairs of life with which you have to do, of whatever nature. You are continually giving us every reason to have implicit confidence—any thought to the contrary is absurd.

Your latest revision of Science and Health is wonderful. I have not yet been able to secure a copy for myself, but hope to do so soon, and am looking forward to a careful reading of the same. The additions and changes I already know have brought great light, for which I thank you so much. God bless you, dear one, for this great work which means so much to us all. I wish you could know the love and appreciation I hear expressed for you every day, by those who have only a glimpse of Christian Science, and even many who know nothing of it have a good word for you and your followers. When I see the mighty work God is doing and has done through you, His Messenger to mankind, and how the world is awakening to a knowledge of the truth, I am filled with awe, and see in some degree where you are and what you are, and thank God I am here to-day with you, and your student.

Darling one, I know your strength is in God, "and as thy days, so shall thy strength be."

Most lovingly and tenderly,

Your grateful student,

JULIA S. BARTLETT.

Auburn, Me., March 25, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—First Church of Christ, Scientist, of Auburn, Me., wishes to send a few words of love and appreciation of you and your life-work in revealing to the world the Science of Being. In the midst of the turmoil of misunderstanding and misrepresentation at the present time, we wish to say that we have full confidence in your intellectual capacity and business ability. Your recent revision of "Science and Health with Key to the Scriptures" is sufficient proof of clear spiritual vision. We believe that now, even more than ever before, the students of Christian Science should work together in love and unity, silencing all differences of personal sense and human opinion that the great Cause may be established to the destruction of all evil.

Even after the children of Israel had been delivered from bondage to Pharaoh, had safely crossed the Red Sea, wandered those long years in the wilderness, had been fed with manna and guided by the cloud and the fire, had seen the Jordan waters divide, and had joyfully reached the promised land, they were then obliged to prove their right thereto by taking Jericho, whose walls fell down after they had all marched together, and when they had all shouted together. May we all march together, work, watch, and pray together, until the king of modern Jericho, mortal mind, gives place to the King of Israel, the Christ-mind, which is God.

We also desire to say that we believe in the honesty and fidelity of those who serve you in your home, and those whom you have selected to aid in carrying on the work throughout the world. We feel that great honor is due the noble Board of Directors, who were so steadfast in their duty all through the construction of the original and new buildings of The Mother Church; and we are grateful for the loyal workers in all departments.

In this solemn hour we pray that our hearts may be purged of all error, that we may in purity and humility follow you only as you are following Christ.

Lovingly and gratefully,

M. FANNIE WHITNEY, *Clerk.*
For the members.

Detroit, Mich., March 13, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—First Church of Christ, Scientist, of Detroit, desires to express to you an ever-increasing sense of gratitude for your constant and continuing labor of love for the uplifting of mankind; for your recent illuminating revision of our text-book, "Science and Health with Key to the Scriptures;" and for your Christian example of following in daily life, through a long series of years, the Golden Rule.

We would also convey to you our appreciation of those obedient servants,—the Publication Committee, the lecturers, and the editors of our periodicals,—whose work comes constantly in touch with ours, and who, keen to obey the dictates of your leadership, are enabled to present to the world clearly, simply, and effectually, your true teaching. Realizing the tremendous detail of your work and its importance, we are grateful that faithful students are raised up to serve you in the impersonal, self-obliterative office of secretaries.

It is our earnest, prayerful desire to prove, collectively and individually, by the demonstration of physical and moral healing, and by our readiness actively to serve or to "only stand and wait," our loyalty to your teaching and our worthiness to be called your followers.

By order of the church,

BENJAMIN F. FAY, *Clerk.*

Nassau, N. P., March 13, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved and Revered Leader:—At our meeting to-night, it was resolved that this branch of the Vine send to you an expression of confidence, love, and loyalty, assuring you of our intense devotion to you and the Cause you have so nobly and unselfishly led for nearly half a century. We know that the divine Love and Truth which have been so clearly reflected in you will absolutely banish the specter of persecution which seems so persistently to follow you, and that the Light will radiate round you and your work to such an extent that all will see your good works and glorify God.

Lovingly and faithfully,

On behalf of the Christian Scientists in Nassau, N. P.
T. H. C. LOFTHOUSE, *Secretary.*

Rochester, N. Y., March 13, 1907.

Dearest Leader:—Your followers know that this shall at this time be proven for you: "Commit thy way unto the Lord; . . . And he shall bring forth thy righteousness as the light, and thy judgment as the noonday." "And thine age shall be clearer than the noonday; thou shalt shine forth, thou shalt be as the morning."

In loving, loyal allegiance, your student in Christ, in Science,

ARTHUR REEVES VOSBURGH.

THE LECTURES.

ALBANY, N. Y.

Rev. Arthur Reeves Vosburgh spoke yesterday afternoon [Feb. 24] at Odd Fellows Temple before a large audience composed of the many Christian Scientists of the city and vicinity, and as many more interested in a secular way to hear so well known a visiting lecturer. The lecturer was introduced by the Rev. William H. Dodd, First Reader of Second Church of Christ, Scientist, of this city, who said in part,—

Christian Science offers that which satisfies the need of humanity. It is sometimes said that it is well enough for nervous troubles and for people who have nothing much the matter with them anyhow. But it claims the right to enter a larger field and comes to minister to the world's need. Jesus, the greatest healer in the world, united in his life-work healing and preaching. He preached few sermons, but healed many sick. Alas! to-day his disciples preach many sermons, but leave the ministry of healing to the schools that apparently do not recognize the validity of his healing. In view of this, is there not cause for a return to the method by which Jesus healed the sick?

The Albany Journal.

CHICAGO, ILL.

The six Churches of Christ, Scientist, of Chicago, recently united in providing a free public lecture on Christian Science in the great Auditorium. This lecture was given by Bicknell Young on the evenings of March 7 and 8. The Auditorium, which seats over four thousand persons, was more than filled on the first evening, and on the second evening over one thousand persons were turned away. The lecture was in addition to the regular semi-annual lectures given by the Christian Science churches in Chicago, and was arranged by a conference of these churches for the purpose of more adequately accommodating the large number of persons who always desire to attend these lectures. In order to make it as easy as possible for non-Scientists to obtain good seats, the members of the Christian Science churches were requested not to take seats on the main floor of the Auditorium until five minutes before eight o'clock. As the result of a quite general compliance with this request, it is probable that a larger number of non-Scientists were in attendance than at any previous lecture given in Chicago. To illustrate the growing desire for accurate knowledge concerning Christian Science, it may be of interest to say that on the second evening there were fully four thousand people seated inside of fifteen minutes after the doors were opened. Ten boxes were reserved on both evenings for the press, and were filled with representatives of the newspapers.

"At every reference to the Leader of the cult," says the *Chicago Tribune*, "those in the audience, many of whom, according to those in charge of the meeting, were not Christian Scientists, leaned forward eagerly, and a wave of enthusiastic applause swept over the house from the floor to the topmost gallery."

Mr. Young gave a most interesting, instructive, and helpful lecture. He was eloquently introduced on the first evening by former Judge William G. Ewing, a fellow-member of the Board of Lectureship, whose remarks were substantially as follows:—

Fellow-citizens of Chicago:—In all the world there are no people to whom I am under greater obligation than to this people. For many years you honored me with your confidence, with high places of trust and power. My sense of appreciation of your kindness is greater than I can say, but as my highest expression of it, I bring to you to-night the sweetest, tenderest, holiest thing that has ever come into my own life, as something that may bring a brighter hue to your lives. The longing of humanity, the world around, is to know something more of the measureless good of the infinite God. I have found rest, the rest to which the great Master invited the weary ones of earth, in Christian Science. It represents to my mind the vast difference between twenty-three years of healthful, helpful activity among my fellow-men, and the same decades of hopeless, fruitless struggle for breath. In my experience, Christian Science emphasizes the difference between then and now, between was and is, between sickness and health, between despair and hope; and yet my experience is by no means a unique one. I am but one among at least two thousand in this magnificent audience who are the recipients, the grateful beneficiaries of the revelation of Mrs. Eddy, that great, much belied, cruelly traduced, brutally assailed, but God-crowned American woman. I do not believe that I overestimate the number of persons in this splendid presence who have been healed under Christian Science practice of distressing human woes. And this, fellow-citizens, is a hope-inspiring testimonial to the therapeutic power of Truth, and is the flowering, the fruition in infinitesimal part, of the benediction with which Mrs. Eddy has wrapped the world.

Mr. Young, in speaking of Mrs. Eddy, said, "As the Discoverer and Founder of Christian Science Mrs. Eddy has been one of the greatest benefactors of the human race. She has maintained the fact that science is purely spiritual, in spite of all the opposition of material theories concerning both religion and science. She has met all criticism in the way that Jesus taught. She has practised the gospel which she teaches, the gospel of Christ, the gospel of love. She has been assailed, she has been unkindly treated by those who have misunderstood her, but never has she herself done anything in the way of unkindly criticism. She never had any great ambition to be considered wonderful or extraordinary; she merely wanted to do good. But see the result! To-day she is loved all over the world, even by those who do not accept her teachings. Standing alone through years of trial and persecution, naturally of a modest, shrinking disposition, not desiring the plaudits of the world, and yet impelled and supported by a power far beyond and above herself, Mrs. Eddy, among women, is a figure unique in history."—*Correspondence.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

TESTIMONIES OF HEALING.

Early in 1904 I was teaching in a private boarding-school. I was a very unhappy, discontented woman: I had kidney disease, besides sore eyes, and my general health was very bad. The doctor said that the climate did not suit me, and that I certainly should have a change. The best thing, he said, was to go back to France (my own country); but I did not like to leave the school, so I struggled on until July, when we went traveling for a month, but I came home worse than ever. I had a lot of worry, one disappointment after another, and I often thought that life was not worth living. In September, 1904, we heard for the first time of Christian Science through a girl who was attending our boarding-school, and who was healed through Christian Science treatment. We bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and what a revelation it was and is to us; it is indeed the fountain of Truth. I had read Science and Health but a very short time when I took off my glasses, began to sleep well, and soon found myself well in mind and body. Besides this, it has brought harmony into our school, where there had been discord, and everything is changed for the better. I cannot describe the happiness that has come to me through Christian Science; I can only exclaim with the psalmist: "Bless the Lord, O my soul;" and may God bless Mrs. Eddy.

My one aim now is to live Christian Science, not in words only, but in deeds; loving God more and my neighbor as myself, and following meekly and obediently all our Leader's teachings. Words cannot express my gratitude to Mrs. Eddy for Christian Science.

S. AIMEE KERN, Vancouver, B. C.

It is with gratitude to God, and to our Leader, that I give this testimony, hoping that it may be the means of bringing a cup of cold water in Christ's name to some one who is striving through material means to get relief from suffering, as I did for many years, but found no rest or ease until Truth, in Christian Science, freed me from my burden. Eleven years ago I was a sick, unhappy mortal, suffering from a very severe form of stomach trouble, experiencing at short intervals attacks of pain from which relief could only be had by morphine. I had been suffering in this way some eight or nine years, trying different physicians at different times, but had received no benefit; indeed I rather grew worse. I had become discouraged, hopeless of ever being any better, when at this time Christian Science was presented to me by one upon whom I had called in a business way. My appearance was such that she remarked upon it, and I told her that I did not feel well and never expected to be any better, as the doctor's treatment and the medicines I had taken did not seem to help me. I was asked if I had ever heard of Christian Science and was given some tracts to read. To me they seemed reasonable and beautiful, and the study of the text-book followed. Hope dawned upon me as I read this book; I could feel returning health, although I seemed to understand very little of what I read. I saw, however, that in order to be healed I must give up all material means and rely wholly on God. I determined to test this at once, and that noon I ate freely of almost everything that I had previously avoided. I returned to the place where I was employed, and everything seemed different. I was sure I was healed; and my appearance must have been changed, as my employer and fellow-clerks spoke to me in regard to it. When they asked what had done it, I could only tell them that it was Christian Science; that I did not know how it had been done, but I was very happy. I had found, through Christian Science, that God is an ever-present help.

I sincerely thank God, and also our dear Leader, through whom this blessed truth has come whereby we may know that all the manifestations of evil are unreal and untrue, and that the truth loved and lived annuls them,—makes them void. Christian Science is good at all times and in all places; it has given us an understanding that illumines the pages of our dear old Bible and shows us that its promises are true and real; that they are for our time, here and now, and that the continued study of the Bible and of "Science and Health with Key to the Scriptures" by Mrs. Eddy, will and does bring to our consciousness the truth of Jesus' words, "The kingdom of heaven is within you;" also of Moses' words, "That your days may be multiplied, and the days of your children, in the land which the Lord sware unto your fathers to give them, as the days of heaven upon the earth."

CHARLES E. TRYON, Hartford, Conn.

Christian Science has indeed made a different woman of me. The physical change is apparent to all those who knew me before I heard of Christian Science, but only I myself can know the mental bondage from which I have been freed. After having watched my mother battle with disease in its worst forms for six long years, the only reply received from physicians was, "We can do nothing for her, it is only a question of time." Following the loss of parents and home, sorrow, work, and worry developed in me a physical condition diagnosed by one physician as serious lung trouble, and by another as nervous exhaustion. Medicine and rest gave no relief, and I fain would have left this world. Temporary relief came through the determination that as long as I must live, apparently, I would cast aside all thoughts of sickness and do the best I could; and it was then that Christian Science came to me with its sweet message, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." As I look back upon the experience, I feel that the first reading of the text-book healed me, for it showed me plainly that turning to material means for help is idolatry. I had always had a blind faith in God, and love for Him, and my thought upon the question, What is God? was somewhat prepared for the incorporeal idea of Deity, so it was with pleasure that I read the statements defining Life as God, and that God is Mind; yet I wanted proof. On page 547 of Science and Health I read, "You can prove for yourself, dear reader, the Science of healing." I did; and then I knew that Christian Science is the truth which Jesus gave to this world, and that whatever sacrifice or cross-bearing might attend the following, follow we must. In my four years' experience any sacrifice has been so far outweighed by the peace and joy of Truth, that I can almost say there is no cross.

I feel that my love for our Leader is pure; it began with the reading of her book, and increases with the understanding and demonstration of its teachings. There is nothing more beautiful than the life of a good, noble woman, and that is what Mrs. Eddy has given to the world.

HARRIETTE S. MARSH, Springfield, Mass.

I desire to express my gratitude for what Christian Science has done for me. I cannot begin to enumerate all the blessings that have come to me through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the help of practitioners. I had been a sufferer for over ten years, and had given up all hope of ever being well again. I had four operations performed, but had been told by a number of physicians that I would never be well again. During the years of my sickness I had not been able to walk or do anything that required the least effort. I had always prayed to God to

Digitized by Google

help me, but my prayers never seemed to be answered. One day I was reading a book which spoke of all the healing that Jesus did when he was on earth, and the thought came to me that if Jesus healed all who came to him then, he would also heal me if I would leave all else and rely entirely on God for help. For several weeks I prayed daily that I might be led to that which was best for me. I had often said that I could not see why God made me suffer so much, but was always told that it was for my good in some way.

I kept on trusting in God, believing that He would surely help me to find a way out of my suffering; and He did, through one who came and told me of Christian Science. I went to a practitioner, commenced treatment, and felt the help at once. I cannot describe the joy and freedom that came to me when I was told that God never sent me this sickness. It seemed to me wonderful and beautiful; all my sadness was changed to gladness. Although my healing was slow, I am very thankful that after so many years of sickness I can now do my own housework and walk as much as I please. One of the many diseases from which I suffered was heart trouble, and we all expected it would end my life some day.

It is not the physical healing alone that makes me hold fast to the teaching of Christian Science, but it is the spiritual uplifting, that understanding of God which Christ Jesus promised we should have, with the peace that passeth all human understanding. I have had many hard struggles with error, and I have learned that we cannot reach heaven by merely asking, but that it is striving which enables us to enter. I feel very thankful to our Leader for bringing us this blessed truth, for I have been made healthier and happier by it. I trust that this feeble effort at acknowledgment of some of the benefits derived from Christian Science may be the means whereby others may be led to investigate the truth as taught in Science and Health.

MRS. ANDREA NELSON, Council Bluffs, Ia.

I first heard of Christian Science in 1887, but only in terms of ridicule from those whom I supposed had thoroughly investigated it and so should be in a position to know much better than I whether it was beneficial or pernicious in its results. Not until 1895, after suffering through the intervening years from several severe troubles, with complications, did I at last find a staunch and true Christian Scientist. I had been sickly from childhood, and from my earliest recollection I was always wondering why Jesus healed diseases only during so limited a time, while we of to-day seemed to need help fully as much. I became a teacher, and wherever I happened to be teaching was always an active worker in some church. I had long desired to be a Christian, but was never able to become one after the accepted modes of orthodox churches. I was always looking for special help in that direction from the many sermons to which I listened, and always was disappointed; until I finally became disheartened and remained away from church altogether.

In 1895, after a particularly trying year in school, mentally and physically, I went for my summer vacation to my sister's home in Harbor Springs, Mich., for a much-needed rest; but instead of resting I became more and more worn out, and on the day set for taking the steamer for Chicago to return to work, I found myself ill with what the physicians pronounced a fever which seemed to be epidemic. My patience with medicine was at an end, as I had been taking it all my life and had still continued ill, so to the consternation of my mother, brothers, and sisters, I positively refused to call a physician or to take medicine of any kind. When the fever had run for ten days without abating, and I was not able to sleep night or day, an aunt who was visiting us, a student of Christian Science under Mrs. Eddy, and who had tried to interest us in this teaching, came into my room and asked if I would like to have her treat me. I did not believe in it, but not wishing to be ungracious, I gave her permission. During the treatment I fell asleep, and when I awoke the fever was gone and did not return. I did not seem to be able at the time to appreciate this wonderful fact, but thought that if I could now only find some medicine to strengthen me quickly I would be able to get back to school in time to retain my position, so I sent for a tonic and took it, not asking my aunt for further treatment. Needless to say I did not go back to school, but remained weak and able only to sit about the house for six months or more. My brother-in-law was attacked with the same fever, and the best physicians there were not able to break it inside of six weeks.

I returned with my mother to Mt. Pleasant, Mich., where I began to attend the Christian Science services and slowly recovered my health; being much hindered, however, by having had so-called mental science brought to my attention and recommended as "far better" than Christian Science. Thanks to the kindly help of a member of the local church, I was led to see the error and to relinquish it. I had class instruction two years later, in 1895, but since that time I have not been where I could meet with Christian Scientists, as I came immediately to Mexico. I was able to gain sufficient understanding from reading Science and Health and from the study of the Lesson-Sermons to protect myself for a year. Then the universal belief in malaria proved too much for my understanding, and I battled with it unsuccessfully for an entire year; my husband also suffering from it. Suddenly it came to me that I should ask absent treatment, and I wrote to the dear Scientist who had so kindly led me at first. The day on which my letter had time to reach her the malarial condition ceased, and I have never had a return of it.

My health has continued good under most discouraging circumstances,—overwork, not being able to obtain efficient help, lack of many so-called necessities of life which are not obtainable here, etc. Two years ago I was attacked by a skin disease which extended continually, many others in the place being afflicted in like manner. Again I found it necessary to call for help, and in one month's treatment I was healed of this also. It seems to me more and more wonderful that Mrs. Eddy could have so freed her thought from the traditions of the elders as to have been able to see clearly this new-old truth, and live it for the benefit of all mankind. It surely blesses her who gives and her who takes.

JULIA A. LANCE ALDRICH, Metlaltoyuca, Puebla, Mexico.

It is now two years since I began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I have received so much help, physically, mentally, and spiritually, that I gladly give this testimony with the hope that it may lead others to seek the truth. Two years ago I was suffering from stomach trouble, which *materia medica* had failed to relieve. When I turned to Christian Science for help I at once commenced to eat heartily. I believe I was healed from the first treatment, but it took me six weeks to realize it and to overcome the fear that the pain would return. Then, how glorious it was to be free; to know that food could not hurt me. I have gained greatly in weight, and have had good health since learning that God, good, is the only power and that He is always at hand to help. I am most thankful for the spiritual awakening, and for freedom from needless worry. God bless Mrs. Eddy in her efforts to help suffering humanity.

MRS. GRACE L. TEETS, Flatbush, N. Y.

I am very grateful for Christian Science. Its truth has been demonstrated many times in my family. There is one demonstration in particular of which I would like to tell.

Digitized by Google

I have often been asked whether I should have Christian Science treatment if one of my family had a dangerous illness which must be met very quickly. One morning about ten o'clock, our little boy, four years old, was taken with severe pain in the bowels, and grew worse rapidly. We could not get word to a practitioner until about one o'clock. When he came the fear of the entire family was very great, as the child's cries could be heard outside. Doctors, hospital, etc., were continually suggested. I sent for my husband, as the child seemed but little better. I asked if he was satisfied with Christian Science treatment, and he replied that he was. For several hours the child had not been able to drink even water, but soon after his father came he drank some milk. The practitioner then went home, and when he returned, in about one hour, he found the child up and dressed and begging for supper, which we feared to give him; but the practitioner told us to feed him, and we did so without any bad results. Next day he was out of doors and grew better right along. How thankful I was that night for Christian Science, and to the one who gave it to the world at this period. To God my heart goes out in deepest gratitude, and my desire is to serve Him better.

MRS. JOHN WHITNEY, North Adams, Mass.

I am a member of First Church of Christ, Scientist, Sydney, New South Wales, Australia, and my age is sixty-nine. On the morning of Sunday, July 1, 1906, I found myself unable to get up, having become to a great extent helpless. This condition was accompanied by giddiness and faintness, and continued throughout the day. Having been interested in Christian Science for about two years, I tried hard during the day to help myself, but all unavailingly. By evening I looked on my condition as serious. On Monday morning I was no better, and I decided to ask for help from a practitioner, who kindly came over to me in the afternoon. My case was treated at once and I was then able without help to walk to my bed. I slept well that night, and in the morning I found myself well—healed! That day I went over to town and walked about for some three hours, doing business, and in a state of grateful wonder and amazement. All fear had gone from me; it was no longer belief with me, but knowledge. God had sent me the wisdom for which I had been asking. I had learned that "the muddy river-bed must be stirred in order to purify the stream" (Science and Health, p. 540). I am thankful to God, whose promises are always sure, and thankful to Mrs. Eddy, who is devoting her life for the salvation of all by her inspired writings, which interpret for us Christ's teaching, and I am thankful to the friend who plucked for me the leaf from the tree of healing which my materiality prevented me from reaching.

ARTHUR WILLIS, Neutral Bay, Sydney, Australia.

Christian Science is doing everything for me. I had lost my father, mother, and an only sister; had sacrificed my position to come West with my four little boys and their mother, who was seemingly in a precarious condition from lung trouble. I walked the streets of this great city, helpless, hopeless, Godless; wholly forsaken, as it seemed, and despairing; then I cried out in my agony, and my cry was heard. I was led to Christian Science, and saved; my wife was healed; a position secured, and I am working out my problem hourly. Surely God has been good to me; and as thought turns to the tireless workers in Boston, my gratitude to God, and to our Leader, seems inexpressible. As I watch the signs-posts to Truth and Love appearing from week to week, ever in a fresh "dress," I would that I might so live my gratitude that it should be felt by all.

B. O. GRIFFIN, Los Angeles, Cal.

A few years ago Christian Science was brought to my notice when I was just making an uncertain recovery from a long illness,—the result of heart trouble. I soon realized that the healing as practised by our Master, and discerned again for us in this age by Mrs. Eddy, is the only real healing. My cure was gradual, but complete and permanent. I am constantly kept in good health by the study of the Holy Scriptures and Mrs. Eddy's writings. After all this time reason and experience are proving to me on all sides that Christian Science is true, and I am beginning to grasp the fact that it is the only solid and practical foundation for our daily life, whether in business or otherwise. I give thanks to God, and to Mrs. Eddy, that I have come to know these things.

EDWIN SOUTHERST, Vancouver, B. C.

That I am here to-day to give this testimony is wonderful in itself, and I am impelled to bring a tithe of my heartfelt gratitude to our Father-Mother God for the blessings that have come to me through Christian Science. Five years ago it found me in the wilderness, hemmed in on all sides by mountains of error, manifested in nervous and rheumatic trouble, insomnia, etc. I had stomach trouble to the extent that my diet was reduced to liquid food, and for months I had been unable to retain solid food or to drink cold water. I had suffered from bowel trouble for seventeen years; had been through two surgical operations for abnormal growths; was reduced to ninety pounds, and was steadily growing worse. I had tried fourteen doctors, but found no relief from my suffering; then as a last resort I turned to Christian Science.

I was entirely dependent upon my own resources; unable to sit up all day but compelled to work, and burdened with debt. Every one of these ills has disappeared like a dream, and to-day I am a picture of health, weighing one hundred and fifty pounds. While I rejoice in the physical healing, it is nothing compared with the spiritual uplifting, which is by far the greatest blessing. Mrs. Eddy says, "For victory over a single sin, we give thanks and magnify the Lord of Hosts" (Science and Health, p. 568). I rejoice daily in the destruction of the sins of resentment, jealousy, selfishness, etc., and like Paul I can say, "This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." I thank God for His unspeakable gift,—Christian Science,—as revealed in Science and Health by God's chosen one, our beloved Leader.

ELIZABETH N. WALTERS, Olean, N. Y.

About three years ago, while adjusting a belt, my sleeve caught in the shaft-coupling, which was making two hundred and seventy revolutions per minute. My clothing was entirely torn off, including one shoe, before I was released. I was picked up unconscious, being badly bruised and unable to move any part of my body. My wife was telegraphed for, as she was away from home taking class instruction in Christian Science. On her return I requested Christian Science treatment from her teacher, and in three days I was able to walk; a week later to travel on the cars; and in three weeks there was no trace of the accident left.

ED. G. HARVEY, La Fox, Ill.

It is with a heart full of love and gratitude that I can say I have been entirely healed of a dreaded and supposedly incurable disease. It is now two years since I first came to Christian Science. At that time I had been operated on, and the doctor who accompanied me, and the two surgeons who performed the operation, told me that in case there should be any further manifestation of a growth I should have it removed at once. After I had been at home a

Digitized by Google

month or six weeks, the trouble reappeared in several places. I knew there was no use to think of another operation, so I took a quantity of medicine which a doctor had prescribed; but I daily grew worse, until I could not use my arm, nor sleep at night, the pain being so severe.

I had heard of Christian Science, but was very much opposed to it. When I could find no medical relief, however, I decided to try it, and had a talk with a Scientist. I asked her to go with me to see the First Reader here, which she did. That night, after talking with her, I could not sleep at first. I began to have terrible pain, but finally I thought of what this lady had said to me, and I went right to sleep and rested all night, something I had not done for weeks.

The next day I began taking treatment and continued for twelve weeks, at the end of which time I had not a pain or ache, and the growth had disappeared. I have had better health, and have been able to do more work, than ever before in my life. Words cannot express my gratitude to God, and to Mrs. Eddy, not only for my health, but for the spiritual uplifting which came with it.

MRS. REBECCA PRINGLE, Port Angeles, Wash.

I had been a sufferer from kidney and bowel trouble, for many years. The kidney trouble was finally pronounced very serious. I was examined for life insurance by a well-known physician and was refused. In 1895 I came to Little Rock, Ark., to live, and I began to have more complications, among others an enlargement in my left side. As ordinary drugs had no effect, the doctor prescribed morphine. After suffering from 1895 to 1898 I was induced by a gentleman of this city to try Christian Science. Twelve hours after the first treatment I had natural functional action, the first time in two years, and from that day to this conditions have been normal, and no drugs have passed my lips. All my other troubles disappeared as I advanced in my study of Christian Science.

C. E. BUTLER, Little Rock, Ark.

In June of 1902 I had an experience which proved what even a limited understanding of Christian Science will do in a case of a dreaded disease, supposedly contagious. The case was passed on by several, who had more or less experience with this disease, among whom was our city physician, who stands high in his profession, also the quarantine official, who said there was no doubt but that the physician's diagnosis of the case was correct. The patient, my little son, became very ill; had high fever and severe pains. We immediately had Christian Science treatment for him, and all sense of pain was overcome in two hours, all fever allayed in six hours, and the eruption was arrested from any further development and healed in one week. At no time, after the first symptoms above mentioned, did the child have any fever, pain, nausea, or distressing conditions such as usually accompany this disease. He ate as usual, slept well, was up every day, and was occupied at something all of the time. It seems needless to add no other cases were contracted from this one. One thing for which I am especially grateful, was the sense of peace that we all felt. It indeed was a season of thanksgiving for this demonstration of the supremacy of spiritual law over man-made material laws.

Gratitude and love fill my heart for our dear Leader, who has made it possible for us to understand and demonstrate the power of divine Principle, which meets every need.—MRS. LUCY CULBERTSON, Little Rock, Ark.

How often have I pondered these words from Science and Health (p. 573): "Take heart, dear sufferer, for this reality of being will surely appear sometime and in some way." They were the beacon-light which led me on, even when their meaning seemed vague, but they are now a blessed reality. Since girlhood I had suffered with female troubles, with all their varied complications. These were also attended with great mental depression; at times it seemed as though there was a pall over me. There was the usual history of time and money expended for medical treatment, during many years, with much suffering at the doctors' hands. One specialist told me I had an abnormal growth, to cure which would take a long time. From this sentence I went East to a sanitarium, and remained several months. After returning home, nothing bettered, another doctor was employed, and I had been under his care over a year when Christian Science found me. I was treated in Christian Science some six weeks, being benefited from the first, and was entirely healed, having no return of the trouble. The deliverance from physical bondage pales before the joy of having found that for which my heart longed,—a knowledge of God and that which stills every wrong desire. I return my heartfelt thanks to God, and express my loyalty to our revered Leader, Mrs. Eddy.

MRS. MARY ROSENBLATT, Beloit, Wis.

One evening, while crossing an avenue in East Denver, without any warning I was suddenly struck on the left side by a man riding rapidly on a bicycle. I did not see him, nor did he see me, until after the collision. I was thrown quite a distance, landing near the middle of the graveled avenue, and the rider fell alongside of me. My prayer had instantly gone up that neither of us should be hurt, and though for a time I was somewhat dazed, I finally succeeded in getting upon my feet and satisfied myself that there was no serious injury. The rider also expressed the same feeling. I continued my walk for nearly a quarter of a mile to a street-car line. When I reached it I had no feeling of lameness, pain, or bruise, but felt so buoyant and uplifted that I continued my walk to my rooms—a walk altogether of nearly three quarters of a mile. The most remarkable part of it was that after rolling on the gravel I could not find a scratch upon my hands or any part of my body, nor any tear or injury to my clothes. I slept perfectly the whole night through, and awoke in the morning with a heart full of thankfulness that God had completely protected me. The next day I was able to help a sufferer immediately, with this truth. My heart bounded with delight, and there burst from my very soul that "Gloria in Excelsis" of our dear Leader, used in her dedicatory message: "Glory be to Thee, Thou God most high and nigh." These two demonstrations coming so closely together gave me a great spiritual blessing, "the peace of God, which passeth all understanding."

J. E. DOWNEY, Denver, Col.

[Written for the *Sentinel.*]

THE PEACE OF GOD.

FRANCIS E. FALKENBURY.

UNDER gray skies the wind blows keen and cold—
The day is bleak, the world seems dead and old;
But all within me glows a soft, strong light,
For God is here and in Him is no night.
In Him there is no death, no slow decay,
No need to die that one might live alway.
Surely in Life there is no lack of life,
Surely in Love there is no hateful strife.

Let the loud blasts of the winter wind worry the sky,
Harry the cowering earth and the sea; there shall not die
Within my heart the glorious thoughts that sing and fly.
For the peace of God floodeth my heart to-day,
And the winter of my discontent is passed away.

FROM OUR EXCHANGES.

[*The Standard.*]

The difficulty of living the unselfish life is revealed not only as we examine our hearts and detect the presence of unworthy motives, but, as well, when we study the expressed life of the Christian world. The followers of Christ are divided into denominations. It is charitable to assume that these denominations came into existence because of sacred convictions; that each one is begotten of sincere desire to advance the interests of God's kingdom in the earth. Assuming this, does a calm examination of denominational life reveal the dominance of the same spirit now? We sincerely hope that this is the case, and have no inclination to deny it, at least here and now. But granting the dominance of this spirit of devotion to the things of God, we cannot refuse to recognize the existence of the spirit of selfishness to a degree that is more than a little distressing. Who has not listened to eloquent speakers as they descanted upon the glories of their respective denominations? That Christians should rejoice in the service that this or that sect has rendered the cause of Christ is natural. That they should boast of the bigness, the wealth, the prominence of a special division of the Christian Church, reveals something that is absolutely alien to the spirit of our Lord. That a denomination should seek to do all that lies in its power to evangelize, that it should be incessant in its labors to save that which is lost, is to be expected. That it should undertake to extend its borders simply for the sake of enlarging an ecclesiastical system, betrays a purpose that finds no warrant in our divine Teacher. Possibly some one will say that the mere suggestion of such a possibility is untrue to fact and dishonoring to the noble Christian men and women who make up our denominations. With humility we reply that there seems to be warrant in fact not only for the suggestion, but for the explicit statement that representatives of our denominations do sometimes forget the great end for which denominations exist, and devote themselves rather to the enhancement of denominational prestige than to the good of men.

[*The Universalist Leader.*]

The way to God is the path of love. Every prophet who has come into His presence has followed that clue. We have space to speak only of our Lord, but what is said of him is but a variation of what might be said of all. Turn the pages of the Gospels upon the beginning of his ministry. Is not this the heart of it? There lay in the soul of Israel an old dream, an ancient hope, often disappointed, and repeatedly in its form outgrown, but in its spirit vital and prophetic still. It was the vision of a holy Israel, a people who did God's will, a community of those who loved each other and worked out the problem of existence under God together. This is what they meant by that kingdom which was to come.

[*The* (London) *Christian World.*]

The difference between religion and theology is perhaps nowhere more strikingly exhibited than in the successive theories of the cross that have followed each other through the Christian centuries. When good men to-day are accused of tampering with the doctrine of the atonement we are inclined to ask, "Which doctrine?" The religion of the cross is one thing; the doctrine of it quite another. If men are saved or lost by their correct or incorrect theology of it, then whole ages of the Church—ages which numbered its noblest martyrs and confessors—are surely past praying for.

[*The Outlook.*]

There is no way by which we may walk humbly with God, unless we do justly and love mercy.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science.

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The chief result of the first Hague Conference, which met on the 18th of May, 1899, and was in session until the 20th of July, was the Convention which provided for the setting up of the "Permanent International Court of Arbitration." By April, 1901, a sufficient number of the signatory Powers had ratified the Convention to secure the establishment of the Court. The Minister of Foreign Affairs for The Netherlands, Dr. William H. de Beaufort, declared the Court organized and opened in April, 1901. Since that time all the rest of the twenty-six signatory Powers, except Turkey and Montenegro, have ratified the Convention and appointed representatives in the Court, which now has seventy-six members. Norway, after her separation from Sweden, being a party to the Convention, appointed members of the Court, so that at the present time twenty-five nations are represented in it.

Four controversies have been settled by the Court: The Pious Fund Case, between the United States and Mexico; the Japanese House Tax Case, between Japan on one side and Great Britain, France, and Germany on the other; the Venezuelan Preferential Payment Case, between the three Powers which blockaded the ports of Venezuela and seven pacific Powers having claims against the Venezuelan Government; and the Muscat controversy between Great Britain and France over their respective treaty rights in that country.

One of the most important measures which will come before the second Hague Conference will be to extend the Hague Court to all the governments of the world, and by a general arbitration treaty to insure the reference to it of controversies which may hereafter arise among the nations.

The *Scientific American* is to offer a cup to be competed for annually by American-built flying machines. It will be confided to the care of the Æro Club, under whose management the competitions for its custody will be held. The cup will cost not less than $1,000 and it will first be competed for on Sept. 14 next, at the Jamestown Exposition. Only machines heavier than air will be eligible and they must all be self-propelled, without any gas-bag attachment whatever, even for lifting purposes. The cup will not be awarded unless one of the competing machines travels at least one thousand feet in the air. At least three entries already are assured. These will be the machines of Alexander Graham Bell, Peter Cooper Hewitt, and Israel Ludlow. They are the æroplanes.

It is more than a coincidence, says the *Outlook*, that in England, where university sport is clean, public life is comparatively free from corruption. The standards of fair play which the English youth imbibes in his public school and in his university remain with him as standards in political procedure and commercial transactions. The contrast between England and the United States in this respect is not to our credit.

The report of the chief prosecuting agent of the Massachusetts Society for the Prevention of Cruelty to Animals, states that for the year ending March 1, the number of animals examined in the investigation of complaints was 41,713; horses taken from work, 1,079; horses and smaller animals humanely killed, 2,688.

Anthony Fiala, who went with the Baldwin-Zeigler expedition, is planning a quest of the North Pole, and he has announced to his friends that he has the backing of two capitalists. Such an expedition, making due allowances for extra supplies and relief, would cost, it is stated, in the neighborhood of $200,000.

The chief promoter of the American School Furniture Company, against whom an indictment was brought by the Federal Grand Jury at Chicago of an unlawful combination in school and church furniture, said to be operating in restraint of trade, has entered a plea of guilty.

A committee of independent watch manufacturers from Ohio and Pennsylvania has laid before the President a petition affecting the operations of the so-called watch trust. The President sent the petition to the Attorney General.

Judge Landis, in the United States District Court last week, overruled the motion of the Standard Oil Company that the case brought against them charging the illegal taking of rebates be dismissed.

The Rhodes scholarship at Oxford allotted to Pennsylvania this year was won, over four competitors, by Allan Le Roy Locke (colored), of Philadelphia, now a senior in Harvard College.

A legal technicality by which Pennsylvania may recover at least $2,000,000 of the $9,000,000 expended for furnishing the State capitol, has been unearthed by the Senate investigating committee.

James J. Hill has resigned as president of the Great Northern Railroad, and is succeeded by his son, L. W. Hill. Mr. Hill becomes chairman of the board of directors.

Foreign.

The Russian Government has submitted to the principal Powers, confidentially, a revised program of the subjects to be discussed at the approaching Peace Conference at The Hague. Correspondence continues between the Russian Foreign Office and the Foreign Offices of the Powers, the object being to reach an agreement in advance of communicating with the minor governments. It is considered most probable that a discussion of the limitation of armaments will find a place in the program, owing to Great Britain's insistence. Germany, Austria, and Russia are practically the only Powers which oppose a discussion of limitation of armament.

The first cruiser squadron, under the command of Rear Admiral Neville, has sailed from the West Indies on its way to Hampton Roads, where the British warships will participate in the international review in honor of the inauguration of the Jamestown Exposition.

On the liner Siberia, due at San Francisco about May 3, are coming a number of Chinese military officers who have been detailed by their Government to attend the Jamestown Exposition for the purpose of studying military and naval affairs.

News comes from China that the native press is attacking idolatry. In some cases the idols have been removed from the temples and burned or thrown into the river, and the people cheered the desecration.

The two Japanese warships bound for Hampton Roads and the Jamestown Exposition, passed through the Red Sea last week.

The total first cost of the ships which compose the British navy as it stands today amounts to $670,000,000.

Industrial and Commercial.

The Missouri Cannel Coal Company of Versailles, Mo., has sold to the Ouichita Pottery Company about one-half of its land and its railroad for $500,000. The pottery company will manufacture brick, tiling, and similar products from the fire-brick clay deposit contained on its half of the land, while the Missouri Cannel Coal Company will continue the development of the remainder of the tract, which has immense deposits of coal.

A sawmill to be built at Vancouver, B. C., for E. H. Heaps & Co. will be the largest and finest in the Provinces and one of the largest in the world. It will be seventy-five feet wide and six hundred and fifty feet long and will be able to handle logs ten feet in diameter and one hundred and ten feet lon ;.

The United States Steel Corporation has authorized the construction of a new steel plant at Duluth, Minn. It is expected that it will cost about $10,000,000. Work will be begun at once. The plant will manufacture steel rails, structural shapes, and bars.

Reports at St. Johns, N. F., from the sealing fleet indicate that about two hundred and thirty thousand seals, an average catch, will be captured. Operations will continue throughout April.

The New England Cranberry Sales Company has been organized and directors were chosen at a meeting of about sixty of the biggest growers.

Representatives of the Standard Oil Company are going to Japan for the purpose of conducting oil drilling operations in that country.

American exports to Japan showed a drop of $21,000,000 for the year ending Dec. 31, 1906, and those to China showed a fall of $28,500,000.

General.

Professor Huxley says: "The wonderful noonday silence of a tropical forest is, after all, due only to the deafness of our hearing; and could our ears catch the murmurs of these tiny maelstroms as they whirl in the countless myriads of living cells which constitute each tree, we should be stunned as with the rattle and roar of a great city."

In the past ten years there has been, according to an English "blue book," a total increase in the population of the principal countries of the world of over sixty-three million persons. The total population is now given as five hundred and seventy million.

Manchuria now has fifty thousand Japanese settlers.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[Charles Eugene Banks in the *Chicago Sunday Examiner*.]

SEVENTH CHRISTIAN SCIENCE CHURCH IN CHICAGO.

THE Seventh Church of the Christian Scientists of Chicago will be opened this morning [March 31] at 10.45 o'clock, at Hollywood and Winthrop Avenues in Edgewater. This church commences its teachings with a charter membership of one hundred and seventy-six members, most of them from Second Church, Wrightwood and Pine Grove Avenues, on the North Side, the overcrowding of which made another organization necessary. The members think it a happy omen that they can hold their first service on Easter morning, and that the continued growth of the Christian Science faith makes the establishment of a Seventh Church in the city necessary.

The following officers have been elected: First Reader, Ernest C. Moses; Second Reader, Mrs. Ida M. Stephens; Directors, Mrs. Ida N. Higley, Mrs. Emma Bush, Mrs. Lillie Kohlhammer, Mrs. Harriet R. White, and Mrs. Ida A. Warner; Trustees, Lansing B. Warner, Mortimer J. Higley, Charles G. Hawley, B. F. Bush, and LeNoir White.

"While the accounts of the growth and development of the Church of Christ, Scientist, are often exaggerated, and impossible figures given as to the present membership," said George Shaw Cook, of the Christian Science Publication Committee in Chicago, "the simple truth is of itself a demonstration of the truth of Mrs. Eddy's teachings. The book which is the corner-stone of Christian Science doctrine, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, was first published in 1875. Then the few who believed in the discovery of Mrs. Eddy were looked upon as fanatics. Now there is hardly a city of consequence in the world that has not a Church of Christ, Scientist, and the greatest thinkers of the world acknowledge the power of this discovery for good.

"The annual report for 1906 of the Central Christian Science Reading Room in Chicago gives some hint of the rapid growth of the work in this city. It shows the total sales of literature during the year amounted to $31,209.84, an increase of nearly $4,000. The sales of Science and Health reached a total of 4,512 copies, an increase of 449 for the year, while the other principal items were 714 copies 'Miscellaneous Writings,' 5,678 *Journals*, 17,003 *Sentinels*, 23,183 *Quarterlies*—an increase of 6,691, and 6,483 pamphlets. Fifty thousand copies of local daily newspapers, containing lectures by Judge Hanna, Mrs. Sue Harper Mims, Bicknell Young, and Bliss Knapp, were distributed under the auspices of the Reading Room, and 10,000 copies of the *Sentinel*. During the year the Reading Room at No. 6 Madison Street became so crowded that an enlargement was necessary. This we were able to do in the same quarters. Where formerly two tables were sufficient to accommodate those who came to read, now four large tables are required."

A visit to any of the Christian Science churches in the city, either at the Sunday services or on Wednesday evenings, when those who have been helped by Christian Science are privileged to give testimony of the facts, show that big and roomy as these churches are they are always comfortably filled and generally crowded.

The actual membership of the different Chicago churches taken from the records kept by Mr. Cook is as follows: First Church, 1,100; Second Church, 650; Third Church, 650; Fourth Church, 475; Fifth Church, 600; Sixth Church, 60; Seventh Church, 176; total, 3,735. The congregations of all the Chicago churches aggregate 8,000, which shows that approximately one half the attendance is pronounced Scientist.

The Science churches of Evanston, Highland Park, La Grange, and Wilmette are not included in the above figures. The Evanston church is one of the most successful anywhere. The beautiful edifice there is crowded at each service, and there is talk of organizing another church, there being enough members who cannot well be accommodated to make the nucleus of another congregation there. The number of people who attend Christian Science churches in Chicago and its environs is thus seen to be at least 10,000, half of whom are regular communicants.

When it is considered that out of this number probably ninety per cent have been physically healed of some trouble that could not be cured by material means, and that all of these have not only a healthy, but happy appearance, and that they generally profess themselves to be far more successful in a material way than they have ever before been, the work being done by Christian Science in Chicago must of necessity be taken into consideration whenever the future of the city is concerned. Five thousand invalids would add greatly to the burden of the rest of the population. And these five thousand made not only strong and well, but happy and hopeful, must be a great help in bearing the remainder of the city's natural burdens, which are always large enough, and which are not likely to be abolished in any great degree for some time to come, even with the most strenuous efforts of all the religious and ethical societies combined.

The history of Mrs. Eddy's teaching in Chicago reads like a romance. When she came to Chicago early in 1884 to teach a class in Christian Science, she found only enough material for a class of twenty-eight, and some of these students came from other points in the West. This was her first visit to Chicago. Her lectures were given in a small hall opposite McVicker's Theater. Four years later she returned to Chicago to attend a convention of the National Christian Scientist Association, and to that body, on June 13, 1888, she delivered an address entitled "Science and the Senses," an utterance so radical at that time as to astonish the world. It was during this lecture that she referred to Chicago as "the miracle of the Occident." This lecture was delivered in Central Music Hall, since demolished, before an audience which completely filled that beautiful and historic building. So rapid had been the growth of her teaching during the four years that more than one hundred of her students were seated with her on the

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

platform, and she afterwards was given a large public reception in the parlors of the Palmer House.

From that time the following of Mrs. Eddy in Chicago has grown steadily. Those early students, grateful to their teacher for being healed of some bodily ill, as well as for the religious light, and anxious to assist others in acquiring a practical knowledge of the Science which they found so precious, met in the Sherman House in 1886 to organize a church and hold regular services. Such an organization was speedily formed, and regular services commenced in Weber Hall, and later in the old Methodist Church block. Later they moved to Kimball Hall, which was soon crowded beyond its capacity, and it was decided to rent the Auditorium. This change meant an increase of expenses that would have disheartened a less zealous body. Their numbers were not large, and none of them were rich, as the world goes; but the transition was made, just how none of those immediately concerned pretended to explain, except by saying that Christian Science knows no obstacles and recognizes none.

With enlarged material environment the congregation enjoyed greater spiritual freedom. In the Bible, together with its interpretation as given by Mrs. Eddy in her book "Science and Health with Key to the Scriptures," they found sufficient spiritual food and mental stimulus. Lesson-Sermons prepared by a committee in Boston, composed of citations from the Bible and the Christian Science text-book, read by two appointed Readers, proved a novel and interesting method of preaching the gospel. A hymnal, containing hymns whose sentiments accentuated the spirit of Mrs. Eddy's teachings, was published. The congregation grew rapidly and might soon have filled the great Auditorium had not Mrs. Eddy advised building a church edifice.

Again the faith of the congregation was shown to be supreme. A building committee was appointed. Grounds were bought on Drexel Boulevard near Forty-first Street, and First Church of Christ, Scientist, Chicago, was built at a cost of $108,000, and in November, 1897, it was dedicated, free of debt. Even while First Church was building it was agreed among the members that a second church should be established from the First Church membership, and a year after its completion certain members withdrew and organized Second Church of Christ, Scientist, of Chicago. The church held its first service in a Jewish synagogue on the North Side.

A month later another body of Scientists formed Third Church of Christ, Scientist, and found a temporary home in a Jewish synagogue on the West Side. A building fund was started in the three churches for the purpose of giving the two later organizations permanent homes. These churches, as beautiful and chaste in architecture and construction as that of First Church, which would have been an ornament to Greece itself in its palmiest days, were built. Second and Third churches cost together $220,000, were finished simultaneously, and dedicated, one in April, the other in July, 1901.

Previous to this, in 1900, one hundred and eleven First Church members had organized Fourth Church of Christ, Scientist, meeting in Marlowe Theater, Englewood. Again, in the autumn of 1902, First Church became overcrowded, and two hundred and seventy-three members withdrew and formed Fifth Church of Christ, Scientist, in Chicago, holding meetings in Rosalie Hall. Once more by a co-operative effort edifices were constructed for these congregations, at a total cost of $217,000, and both of these edifices have recently been dedicated.

The Sixth Christian Science Church in Chicago is in West Pullman, and while the congregation is yet small a building lot has been purchased, and a building will soon be commenced. Seventh Church of Christ, Scientist, and the latest to be formed in this city, which opens this morning, was made necessary by the overcrowding of Second Church. It was organized March 9, 1907, with a charter membership of one hundred and seventy-six, but will open this morning with probably two hundred members.

The five Christian Science churches already built in Chicago contribute no small part to the architectural beauty of the city. Like the religion out of which they have sprung, they are light, cheerful, beautiful, homelike, and inviting. There is nothing of the austerity that still clings to the most modern of the churches of other denominations. The entrances are like those to some beautiful temple of art, and within is a wide, high-arched reception hall, where members meet and converse before and after services as one happy family.

The whole atmosphere of the churches is democratic in the extreme. One hears no complaints, either of business worries or bodily ills, among these people, who seem to have banished worldly fears altogether and to be living and moving in a world of quiet certainty, not only for the time being, but for the future. They seem to be superior to late hours, weather conditions, and all mundane trials, and to come trooping to service through heat and cold, storm and sunshine, with the same air of pleasant security. If, as the old philosophers declared, man's chief end is happiness, Mrs. Eddy might well be crowned chief of philosophers, for she has a following of ten thousand in Chicago, who are, so far as human observation can discover, almost serenely happy, and that too in an environment which the other sages of our day declare to be inimical to even comparative happiness.

Mr. Cook estimates that there are in America something like two hundred and fifty thousand members of the Christian Science churches. The statements that there are more than a million acknowledged followers of Mrs. Eddy on this side of the Atlantic he declares to be erroneous. "Such statements do not emanate from Christian Scientists," said Mr. Cook. "It may be that a half million people attend services at the different Christian Science churches in this country and Canada—all the churches together would hold about that number—but not more than half so many are members.

"It is true that Mrs. Eddy's book, 'Science and Health with Key to the Scriptures,' is read largely by people who make no open avowal of faith. There are a number of copies in the Public Library of Chicago, but I am frequently informed that patrons find it impossible to obtain a copy, so they must be read. Several railroads running out of Chicago have Science and Health and Mrs. Eddy's 'Miscellaneous Writings' in their circulating libraries. The Union League Club has our literature on its tables, as do many other similar organizations.

"The sale of literature from the Reading Rooms shows a large increase every year, and readers increase with each month at the tables. The Sunday Schools of all the churches are crowded, and this means a great deal to the future growth of Christian Science, because until the present time it has had no young people being born naturally into the church, as in the older churches."

THE VALUE OF SUFFERING.

WILLARD S. MATTOX.

SOME one has said that many persons are like the Pool of Siloam,—they require to be troubled before they can display their virtues. This is another way of stating a very widespread doctrine, that suffering is necessary to man's improvement. Many believe that evil comes by divine procurement, because God sees that we have need of correction and He devises various methods of torment in order to aid His children properly to develop themselves. This doctrine is especially repugnant to Christian Science, because it involves Deity in a despicable and altogether unnecessary plot against His own offspring, besides including the admission that the effect of a per-

Digitized by Google

fect Cause has somehow become imperfect, and that pain and evil are divinely employed agents to restore perfection. This philosophy also assumes the inconsistent theory that God knows evil, that He takes cognizance of that which is the very opposite of His own nature and selfhood, and not only fraternizes with evil, but makes use of it, that good may eventuate. No more illogical or morally impossible philosophy was ever devised or offered for acceptance to mortal man.

Christian Science teaches that sin brings suffering and that we shall cease to suffer when we cease to sin. If mortals could indulge unspiritual thoughts and gratify unspiritual desires without consequent suffering, they would lack the universal impulse to seek man's spiritual estate outside of matter. From this it should not be understood that Christian Science teaches suffering to be a divine instrument. God does not employ pain to induce His creation to love Him. All suffering is mortal, or materially mental, and temporal. It will pass away when we awake "in his likeness," when we discover that man is the image and likeness of God. In this sense suffering is unnecessary, and has no place in the economy of God's universe. It is unnecessary as an experience to the real or spiritual man, because at best it is a corrective, and man in God's likeness needs no correction.

Christian Science declares that evil is not necessary, and it divorces mortal man from his fleshly thoughts and draws him nearer to God. It obtains this result by inculcating in mankind a love of God, a love of spiritual things, an all-absorbing, all-compelling desire for righteousness and purity. To forsake evil because we suffer for doing wrong may accomplish a species of reform, but to forsake evil because we no longer love it, but love good, is the better way, and this is the way of Christian Science.

The world gives evidence of a very general dissent from the theory of evil's necessity, in practice at least, though perhaps still holding to it theoretically; for is not all the world dosing and drugging itself continually, in a vain effort to escape the experience of pain? If suffering be a means of improvement, it were unwise to avoid it. If it be sent by God, it is insubordination to make any attempt to escape it. Again, if it be true that suffering is a divinely appointed means of developing the human race, then it is reasonable to inquire why the world is not better to-day. If it is really true that divine and infinite wisdom has planned this means for improving men, then it is inconceivable that it should fail of its purpose. But as a scheme of salvation it has failed. After centuries of suffering the carnal mind and human disposition are just the same. The very same motives actuate mortals to-day as governed them thousands of years ago, at the dawn of the world's history. There is no perceptible abatement of the various forms of an evil nature. Then what are we to conclude? We are forced to believe either that God has failed, that He blundered when He decided to employ suffering as a means of drawing His children back to Him, or that He has never utilized such methods and does not need to. This latter conclusion is the teaching of Christian Science.

The dogma that suffering is good for us, that it is a blessing in disguise, that God sends it for our good, dates back to the garden of Eden. It was first propounded by the serpent, and it is included in the argument, "I will make you as gods! I will enable you to know good, —and evil! It is necessary to know evil in order to appreciate good." Mortals have believed this more or less ever since. Rousseau, for example, said: "*Pour sentir les grands biens, il faut qu'il connaisse les petits maux.*" (In order to realize any great good, it is necessary to know something of evil.) This is the natural argument of evil, and Christian Science discloses its origin and nature. Evil, being called upon to account for itself, endeavors from the beginning to attach itself to God, to make Deity responsible for it, and Christian Science is destined to rescue men from this belief in the necessity of evil. It is doing this to-day to a marked degree by educating them as to God's true nature. When we understand God as He is portrayed in Christian Science, as Principle, we find it impossible to associate with our thought of Him any inconsistency, fickleness, or cruelty. We cannot believe Him capable of a policy which the average human father would condemn with indignation, if it were suggested to him.

Fear of sickness and death is fostered by this doctrine of evil's necessity, on the ground that it is an aid to goodness, and the mission of Christian Science is to destroy fear, and so undermine the foundations of disease and dissolution. Evil is always evil. It is never good, it is never like good, it never verges on good, it is never the vestibule to good. God has no consciousness of evil, according to Christian Science. He does not use it to whip refractory children into the kingdom. Such teaching is the effort of evil to get itself believed. Mortals will be healthier and live longer when they begin to see that evil, pain, suffering, disease, and death are not needful parts of the divine economy, and are non-existent from the Divine view-point.

A DISPENSATION OF PROVIDENCE.

M. G. KAINS, M.S.

IN popular parlance the phrase "a dispensation of Providence" is quite frequently used in commenting on a narrow escape from some apparently impending evil; indeed its use is restricted to such things, as if God suddenly became aware that one or more of His creatures was about to suffer under His law and therefore He must temporarily set this law aside in order to avert a disaster. This interpretation of the phrase is due far less to the meaning of the word "dispense" in the sense of a bestowal of mercy or kindness, than it is to a totally erroneous conception of God by the people who use the phrase. If God were to nullify His law for a short time or for certain individuals He would be both mutable and partial; but Malachi voices God as saying, "I am the Lord, I change not," and Peter in the book of the Acts declares, "God is no respecter of persons." As these Biblical statements are accepted by all professing Christians, it is apparent that the discrepancy cannot be found in the nature of Deity; for an unchangeable, impartial God could not "dispense" in the way popularly supposed.

In his First Epistle John gives humanity the highest conception of the essential nature of God when he declares, "God is love." This is a definition which people in general have for centuries contemplated in a more or less uncertain and abstract way. Doubtless many fancy the so-called dispensations of Providence to be concrete manifestations of this abstract essence; but in so doing they are viewing God from a human standpoint and unconsciously accepting human conclusions concerning Him. The fact becomes evident, with even a little thought, that because God is Love, unchangeable, impartial, the creator and sustainer of all, therefore His very nature is manifested to every one of His creatures, and were it not for the overwhelming weight of untruth accepted by even professing Christians, this would be manifested as a continuous dispensation of good; for God is "of purer eyes than to behold evil."

LEGISLATION IN TEXAS.

THE passage of Senate Bill No. 26 by the Texas Legislature has caused a number of citizens of the State to request the Governor to veto this bill, and the following letter from an Episcopal clergyman is one of a number of

Digitized by Google

such requests published in the Houston *Post*. This clergyman, whose broad sense of right and justice is not limited to his own church, writes,—

Christ Church Rectory, Houston, Texas, March 18, 1907.
Hon. Thomas M. Campbell,
Governor of Texas, Austin, Texas.

Dear Governor Campbell:—After a careful consideration of Senate Bill No. 26, I venture to express to you my earnest hope that you will withhold your approval of the same. In seeking to regulate the practice of medicine and surgery in the State, the bill contains provisions altogether admirable and of unquestionable merit, of such merit as ought to enable them to stand of themselves and commend their wisdom to all thoughtful people; but when it has injected into it the definitions and provisions of section 13, plainly intended to strike directly against the religious belief and practice of no small number of our very best and most kindly and intelligent people, known as Christian Scientists, who do not practise medicine or surgery at all, by that fact the whole measure becomes vitiated, it seems to me, and should not be permitted to become a law.

I believe it is not possible to assert wisdom or justice of any legislation which under reasonable construction partakes, however remotely, of the motive and spirit of religious antagonism and persecution, though avowedly enacted through honest zeal for the public welfare. The world has long since learned that such zeal, no matter how honest or sincere, is wholly unwise, and such legislation is essentially unjust and vicious.

Very respectfully yours,
P. G. SEARS,
Rector of Christ Church.

Another letter to the Governor, which has not been published heretofore, is from a physician who has learned through experience that Christian Science heals the sick even after medical methods have failed. This letter follows:—

Greenville, Miss., April 2, 1907.

Hon. Thomas M. Campbell,
Governor of Texas, Austin, Texas.

My Dear Governor:—I notice that the Christian Scientists of Texas have petitioned you to veto Senate Bill No. 26, recently passed by the Legislature of your State. The object of this letter is to join with the Scientists in asking you to veto it. It must be plain to you, as a lawyer, that the bill conflicts with the Constitution of the United States. It must also be seen by you that while the apparent object of it is to protect the dear people, yet it was, I doubt not, gotten up by the doctors, whose only motive was to protect their own pockets and give them a monopoly.

I am heartily in favor of requiring all who practise medicine to undergo an examination before a competent medical board, to ascertain their qualifications, but I cannot see by what stretch of the imagination Christian Scientists can be placed among that class, for they never use or give medicine in any form, do not resort to hypnotism or suggestive therapeutics in the treatment of the sick; but, like Christ Jesus, they resort simply to prayer, and rely absolutely upon their faith and understanding of God and man's relation to Him. They are simply trying to carry out our Master's command to "preach the kingdom of God, and to heal the sick," and they are doing it in the same way he did. If Christian Scientists are violating the law in their method of treating the sick, then every minister of the gospel when he goes to the bedside of the sick and dying, and prays for their recovery, is equally guilty, since the method is similar.

This statement is not the result of what Christian Scientists have told me, but the result of my own honest and careful study of Christian Science for the last four years. Up to six years ago my wife had been a confirmed invalid for twenty years or more. After exhausting my own system of allopathy, and every other system, and trying various climates and springs, none of which did her any good, she, as a last resort, like a drowning person catching at a straw, went to Christian Science, and in three weeks returned home well,—not only physically healed, but spiritually; in a word, she was "transformed" by the renewing of the mind.

Knowing you personally as I do, I make this appeal in behalf of the Christian Scientists, and feel assured your sense of justice will prompt you to veto the bill. I have personally received so many benefits from Christian Science that, while still in the active practice of medicine, I expect to give it up and devote my life to the carrying out of our Master's command to preach the gospel and heal the sick; and knowing from personal observation, as well as by actual demonstration, that Christian Science is the most effective method, I shall join its followers. Permit me to congratulate you upon your election to the highest office in the gift of the people of Texas.

With kindest regards from wife and me to yourself and family,
Sincerely yours,
C. H. JONES, M.D.

We understand that the bill has been recalled from the Governor by the Legislature, and that it is not likely to be heard of again.

SELECTED ARTICLES.

[Selections from an article by Lillian "Mac" in *The Busy Man's Magazine*.]

Any one attempting to touch upon any phase of the subject of Christian Science and its influence on the world to-day will find himself treading upon ground where many others have walked before; for the question is of vital and compelling interest, as we daily come in contact with its adherents and are forced to doff the hat of respect before the sweeping demonstrations of good over evil; of right, clean living over a false sense of pleasure in sin and its attendant miseries.

Macdonald says, "There is no poetry in that which is not true." The truth about anything is all there is to it anyway, but as Goethe states: "It nettles men that truth should be so simple." Fuerbach also adds a home thrust to the quota when he remarks: "The plainer truths are those precisely upon which men hit last of all." The only thing there is to know about Christian Science is the truth about it, and that certainly will not hurt anybody. Striving to find relief from the effects of sin in lifeless concoctions of mortal mind, instead of looking to the one Mind which rules the universe, is only to sink deeper in the mire of ignorance and to nip in the bud the flower of progress.

An unbiased perusal of Mrs. Mary Baker Eddy's remarkable book, "Science and Health with Key to the Scriptures," and the privilege of being an eye-witness and a receiver of the benefits conferred upon those who test its merits, has amply proven the efficacy of Christian Science treatment where, in nine cases out of ten, other remedial means have failed. This is convincing proof that the "power behind the throne" of scientific Christianity is God.

Frankly speaking, one reads and hears so much adverse criticism and erroneous upheavals of diabolical denunciation of Christian Science, that it is with a sigh of satisfaction and relief one reaches the conclusion, by personal investigation, that we have not got such a bugbear of unconventional heathenism in our midst after all.

Right into his office and to his desk; right up the dizzy heights of a new building with a hod of mortar on his shoulder; right down in the bowels of the earth with his pick and shovel; right out on the vast ocean where the seamen toil; the Christian Scientist carries his religion with him, and puts into daily practice his understanding of the teachings of the great Galilean Master, who taught the gospel of "faith by works." Verily a sun-kissed flower, rich and warm and fragrantly healthy, vibrating with wholesome energy, has more potent charms than its puny brother struggling along under the eaves of the gloomy structure of doubt and fear, erected by the hands of man. Honest, clean, upright men and women, permeating their surroundings with an atmosphere of love and sympathetic understanding, one is led to remember Pope's Universal Prayer:—

Thou great First Cause, least understood, . . .
Teach me to feel another's woe,
To hide the fault I see:
That mercy I to others show,
That mercy show to me.

Into our cosmopolitan era there has come a revelation called the Science of Christianity, maintaining that divine Mind is the soul, that Mind rules the universe, and all is Love, Life, Truth, because God is All in all, omnipotent, omniscient, omnipresent. A doctrine with such sweeping claims, such unprecedented getting away from antediluvian apron-strings, if promulgated in other ages would have been survived by current literature if not by disciples. That this is its initial entrance in the arena of this scene of action since the days when Jesus fed the hungry and healed the

Digitized by Google

sick is evident, and the term of authentic revival of Christ's mode of teaching is applicable.

In an age when turmoil, avariciousness, and a desire for personal supremacy reigns, comes a bugle-call to arms, to rouse ourselves from the lethargy of sensual satiation and apathy, and be about our Father's business. To many, the call of the bugle awakens old memories freighted with that dewy freshness of youth's soul-awakening which the majority of us have at some time experienced; but, alas, the world and its affairs stepped in, and we became walking nonentities amidst the seething vortex of spiritually indifferent men and women. The instinctive desire for freedom from physical and mental ailments, from bondage to sin and disease, is aroused by this bugle-call, and we are led to investigate. Some join the army of seekers and march forward in the rank and file of those searching for truth, while others turn away to sneer and jeer because the uniform is not the one worn by their esteemed ancestors, and others because the battle to be fought is the battle of self-renunciation. Hand-to-hand encounters with error are daily being waged by thousands of brave warriors who are manipulating the sword of Truth as directed by divine Love, and they are not only gaining a victory for themselves, but are helping others by freeing them from the chains of a belief in sickness and sin.

The teaching of Mrs. Eddy is simple, conclusive, and practical. In "Retrospection and Introspection" (p. 79), she says, "If the religion of to-day is constituted of such elements as of old ruled Christ out of the synagogues, it will continue to avoid whatever follows the example of our Lord, and prefers Christ to creed;" and again she writes: "It [Christian Science] raises men from a material sense, into the spiritual understanding and Scientific demonstration of God" (*Ibid.*, p. 80). "Error is unreal because untrue. It is that which seemeth to be and is not" (Science and Health, p. 472).

If Christian Science has done nothing else for humanity, it deserves an honored place, for it has lifted the lodestone of fear from off the shoulders of thousands of people. This monarch of ill has at last received a shaking on his stronghold of man's ignorant credulity, and, with some at least, his fiery darts enter not, but glance off on the shield of Truth. What do we not fear? Every little draft, wet feet —when we do not hesitate to bathe them every morning, —we are slaves to fear, when we are told in 2 Timothy, 1 : 7, "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." Science teaches that there is nothing to fear to those who walk uprightly. Certain it is that Christian Scientists appear to be a most self-reliant, fearless people, because they rely wholly on the Originator of all.

Noticeable among true Scientists is the lack of any attempt at proselytizing. They possess a knowledge, an understanding of man's unity with the Father that means more than all the world to them. It is a vital and sacred subject, and derisive curiosity they will not cater to. On the other hand, when one approaches them from the standpoint of earnest desire to know, they do not hesitate to patiently and gently point out the way, teaching others what they themselves have found to be true, that there is a practical redemption from the evils that afflict mankind right here and now. It is significant to note what Browning says in his "An Epistle":—

> So here—we call the treasure knowledge, say,
> Increa ed beyond the fleshly faculty,
> Heaven opened to a soul while yet on earth.

To attend a Christian Science service and witness hundreds of heads bowed in silent prayer is impressive, and when the Lord's Prayer rises spontaneously from the serious hearts of these thinking and intelligent men and women, it would seem to make the deepest-dyed atheist pause in his self-satisfied passage through life. Arrested by the novelty of Truth, he may stay to learn a new lesson of what a scientific understanding of, and a radical reliance on, divine Principle can reveal.

Through the medium of a woman this revolutionizing Science of Christianity has attained a position amongst the religions of the world that must be acclaimed phenomenal, considering its recent inception, and quickly and inclusively its truth-dealing effects are reaching out and touching the four corners of the realm.

The dignified and patient silence of this remarkable woman, Mrs. Eddy, while false statements are published broadcast in some of our newspapers and periodicals, surely affords ample proof of the possibility of seeing only the good, the true, in everything. The future years will ring with her praises, and her followers will assuredly realize the truth of Browning's

> As by each new obeisance in spirit,
> I climb to his feet.

MRS. EDDY'S ENGLISH.

[THE following interesting article by Jessie B. Cooper appeared in the *Kansas City Journal* of June 26, 1899, and we feel sure that our readers will be glad to see it reproduced in the *Sentinel*.—EDITOR.]

I have been questioned in regard to a criticism offered on the English of the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science. So far as her grammar is concerned, I do not remember to have given it any thought. Of course, generally speaking, it is good. Farther than this, grammatical construction is of no importance.

It is a well-known fact that our greatest English writers break the rules of grammar. It is said that Browning stands the test of grammar better than any writer in the English language. Among American writers, Lowell is regarded as almost a purist in English and yet he breaks the rules of grammatical and rhetorical construction in vogue at the present day. Hawthorne's grammatical errors are proverbial and yet his English is classical, and Dr. Knowlton, when teacher of rhetoric in the Wisconsin University, used to say that if any one would study this author faithfully, he would become a master of English style. A young girl in one of our local high schools was told to read Washington Irving for instruction in prose composition, and replied that she could not enjoy Irving because he was so grammatically incorrect. Another, given certain writings of Addison to read for the same purpose, inquired why the class was compelled to read an author who wrote the English language so incorrectly. These pupils had learned the rules of grammar, but they were far from knowing what constitutes good English.

Genius is original and partakes of absolute truth; grammar is man-made and concerns the pedant and those who are without the guidings of an inspired Soul sense. Genius makes its own style and the world grows gradually up to its leadings. "In the beginning God created the heaven and the earth" might be grammatically correct if written "God created the heaven and the earth in the beginning," yet the simple change destroys at once the grandeur, sublimity, and poetry of the Hebrew bard. A criticism of an author's style must be made from the intelligent standpoint of one who understands his thought. Without an understanding of music and its terminology, it would be impossible for any one to judge of the English of a musical critic.

I have no hesitation in saying that Mary Baker Eddy has written the finest English prose in existence. The chapter on "Atonement and Eucharist" in "Science and Health with Key to the Scriptures," is unparalleled in English prose composition. It is a deep philosophical discourse on a subject never before scientifically explained. It states scientific facts with the clear purpose of furnishing

Digitized by Google

a rule or guide for demonstration, yet throughout it combines with this logic a deep pathos and tenderness to be found nowhere but in Jesus' discourses. There is not an ordinary sentence from the beginning of this marvelous chapter to its ending. There is simplicity, strength, dignity, and even severity, combined with the pathos of a deep understanding of the spirit of Calvary. Nowhere else in the English language is such a combination to be found.

No one can criticise Mrs. Eddy's English who does not understand her teachings. As a great religious reformer and Leader, the world even now recognizes her as the foremost of the age. Her place in literature will be conceded as her teachings are better and more widely understood. When the professors of *belles-lettres* in our colleges and universities come to understand the Science which her writings have given to the world, she will be cited as an example of an original and masterful English prose style. There is nothing to indicate that she has been influenced by the English of any other author. There is no trace of any other great litterateur in either her vocabulary, phraseology, or sentence construction. Her style is wholly original and yet she is a master of English prose. In the choice of words to express her thought she has command of a remarkable vocabulary, in which the finest shades of meaning are brought out. A careful study of her writings will prove the truth of all I say.

[Editorial in *The Keweenaw Miner*, Mohawk, Mich.]

Mrs. Eddy is a remarkably wide-awake woman, of the brightest intelligence and amply capable of attending to her own financial affairs, even at the age of eighty-six years. This was recently attested to by the Mayor of Concord and by some of the officials of the largest banking institutions in New Hampshire. Mrs. Eddy has undoubtedly been greatly misunderstood, grossly misrepresented, and cruelly maligned, but it has been done by those who were jealous, by those who do not know her or who could not appreciate the credit, the gratitude, and the love to which her worthy motives entitle her from all who desire a better and grander humanity, and who believe it possible to establish the kingdom of heaven upon earth, in accordance with the prayer and teachings of the Son of Man. They cannot possibly know what her devotion and consecration to God and humanity have made possible here below. Midst all this persecution, Mrs. Eddy herself has borne it with a self-sacrificing disposition that will, of itself, entitle her to the glory due her noble name. Mrs. Eddy has earned peace and quiet through devotion and self-sacrifice, her spiritual understanding and teachings, but the vampire of materialism, like the great red dragon that it is, is swollen and inflamed, spitting its venomous poison at her every footstep, "because he knoweth that he hath but a short time."

[Editorial in *The Star*, Ft. Worth, Tex.]

It is difficult to reconcile the treatment accorded by the Legislature to the Christian Scientists with the letter and spirit of the Federal Constitution, or with the fundamental theories of government that live in a republic.

[Editorial in the *Houston* (Tex.) *Chronicle*.]

If it reaches him, Governor Campbell should veto Senate Bill No. 26. This is the anti-Christian Science bill. It is not so entitled, but while it purports to be "An act to repeal chapter 12 of the General Laws of Texas, passed by the Twenty-seventh Legislature, page 12, Laws of 1901, and to pass in lieu thereof this act, to create a board of medical examiners for the examination and licensing of all physicians, surgeons, and obstetricians; to prescribe their qualifications; to provide for their proper registration, the revocation of their licenses for flagrant offenses; and to fix suitable penalties for illegal practice," the meat in the cocoanut is in section 13, reading: "Any person shall be regarded as practising medicine within the meaning of this act who shall publicly profess to be a physician or surgeon; shall treat or offer to treat any disease, deformity, or injury by any system or method, and charge therefor, directly or indirectly, money or other compensation." The "system" aimed at is that of Christian Science.

Now the State has the right to regulate the practice of medicine and surgery. As to physical treatment of disease it has full jurisdiction, supervision, and control, and can properly make any regulatory laws deemed proper by the Legislature. But spiritual cures and treatment are a matter of religion, the perfect freedom of which is guaranteed by the Constitution. An attempt has been made against Christian Science in Texas before, and unsuccessfully. It has also been attacked in many other States with the same result. In 1904 Congress, in the bill regulating the practice of medicine in Indian Territory, specifically exempted Christian Science after investigation.

Christian Scientists are free American citizens. They are entitled to have Christian Science treatment if they want it. It is undemocratic, un-American, and contrary to the genius of Texas law to interfere with individual liberty. Particularly to be reprehended is the endeavor to prohibit Christian Science practice indirectly. If any legislators believe such legislation wise, let it be direct. Our laws should be so plain that he who runs may read, since ignorance of the law excuses no one. The indirect law is always a bad one.

["Episcopalian" in the *Baltimore* (Md.) *News*.]

All denominations which profess the faith of Christ crucified are supposed to keep the unity of the Spirit in the bond of peace and in righteousness of life. There are, and always will be, "diversities of operation," but there should be the same spirit of righteousness, peace, and good will. Why, then, should any man, clergy or layman, feel called upon to attack savagely a form of Christianity differing in particulars from his own?

The Christian Scientists believe in the existence of God, in the divinity of Christ, in moral responsibility, and in strict uprightness of life. These are cardinal Christian doctrines common to all Christian bodies, and so believing, the Christian Scientists should receive the right hand of fellowship. That they have no ritual or sacraments, that they interpret all things symbolically, is much their own affair; it is their way of looking at things, of conceiving of things. Absence of ritual, together with symbolic interpretation, do not by any means presuppose absence of spiritual grace and truth, as is witnessed by our brethren the Quakers.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

CHICAGO, ILL.

Former Judge Septimus J. Hanna, of Colorado Springs, lectured on "Christian Science, the Religion of the Bible," in Second Church of Christ, Scientist, last evening [March 11]. The large auditorium of the church, seating fifteen hundred persons, was crowded, and several hundred were unable to gain admission. Judge Hanna was introduced by Walter H. Vanzwoll, First Reader of the church, who spoke in part as follows:—

If all the noble thoughts and higher aims of mankind were successfully realized, if all the lofty aspirations of humanity were achieved and satisfied, how much room, think you, would be left for evil? How much of an opportunity would it have to inflict upon the race the sin and suffering which would hinder us from the enjoyment of the happiness and peace which are God-bestowed upon man? A comprehensive view of the world to-day would show us a vast arena where all are striving for that which they deem to be success, but even the very ones comprising this great army of aspirants feel, in a greater or less degree, the handicap of an uncertain sense of life's purpose—the loss of power and inspiration arising from a probable ignorance and misconception of the facts of being.

Our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, tells us that we "can never succeed in the Science and demonstration of spiritual Life through ignorance or hypocrisy," and it is because many are ready and eager to replace ignorance and hypocrisy with actual knowledge and sincerity of purpose, that the world is witnessing to-day the remarkable growth of what is known as Christian Science.

Christian Science enables each one to put into actual practice every high aspiration, every good tendency, every wholesome desire. It gives a definite knowledge of God and man that is positive and sure; that shows us how to use our opportunities, and better still, how to create these very opportunities. An English statesman has well said that "men are not creatures of circumstances, but circumstances are the creatures of men," and when one has learned this, has he not taken a long stride up that highway which is called the road to success?

It should not be said that our struggles and endeavors are seldom fruitful, that all the voyage of life "is bound in shallows and in miseries," and you have gathered here to-night to hear the message of hope and confidence which Christian Science brings, inspiring humanity to join with the angels in the glad refrain, "Glory to God in the highest, and on earth peace, good will toward men," and lifting the world to higher, clearer, and new views of man in the image and likeness of his creator. The human mind, ignorant that it causes its own troubles, and endeavoring to maintain and save itself on its own false basis of material, mortal thought, reminds one of the anomalous picture of a boy trying to escape from his own shadow. Is it any wonder that the world welcomes the great truths of Christian Science—truths which enable humanity to change its base from the standpoint of erroneous thought to the platform of scientific Christianity immovably fixed upon the eternal rock of a certain knowledge of God and man.—*The Chicago Post.*

Judge Hanna also spoke at the same place the following evening [March 12], and was introduced by Charles G. Hawley, who said in part,—

Without unfriendly comment or criticism upon the older churches, and with a sincere and loving desire to put into practice what they have preached during the centuries past, Mrs. Eddy and her followers join with them in every good motive and intention, and wish them Godspeed in the fruition of their hopes. You are not only welcome here, but you will learn of peace. No cherished hope or opinion needs aught to defend it where the peace of true brotherhood abounds. As you wait upon the words of the speaker, quiet and assurance will be yours.

The welcome extended to you is free from insistence upon your return, unless some truth heard, or some benefit received and clearly recognized, calls you to listen again to this new-old gospel, the right preaching and the right practice of which heals the sick, reforms the sinner, and blesses the whole world. Each year has brought, not the birth of a new truth, for truth is eternally old, but rather the turning away from wrong ideas and the destruction of some untruth.

The evil things which men believed in years gone by, which they feared, and some also which they loved, have been since recognized as untrue, non-existent, and unreal. In this we see that the awakening of mankind involves a process which may be defined in two ways. It is the learning and realization of the things which are true about God and man, and coincidently the unlearning and the rejection of the errors of human thought. Through the unlearning of untruths and your awakening to truth, many of you will go away from here contemplating truth. You will depart in quiet thought, and some will be healed and from many the burdens will be lifted.

RACINE, WIS.

On Sunday afternoon [March 10] Bicknell Young of Chicago delivered a lecture on the subject of Christian Science [under the auspices of First Church of Christ, Scientist] at the Universalist church, before the largest audience the little house of worship ever held. Rev. A. C. Grier, pastor of the Universalist church, introduced the speaker, saying in part,—

To some it seems that a pulpit is a place for the pleading of a case already made up. I do not so understand mine. It is the arena for the search for truth. And I have wished to make my life a search for truth. I want to know the truth, and I welcome every messenger who brings me a message. I owe a debt of gratitude to the Christian Science Church, for it has contributed to my faith a great element. You have taught the world what it means to interpret the universe in terms of Spirit and not of matter. You have taught the world absolute trust in God, the trust that abides though all things go to decay. And because you have done this I esteem it a pleasure to welcome you to this church and your speaker to this platform.—*Racine Journal.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

THE NATIONAL ARBITRATION AND PEACE CONGRESS.

New York, April 14 to 17, 1907.

ANDREW CARNEGIE, President.

PROVISIONAL PROGRAM.

Sunday evening, April 14, at Carnegie Hall: *Musical Service.* Choral and instrumental music in charge of Dr. Frank Damrosch. Responsive Reading, led by Rev. Lyman Abbott, D.D. Brief addresses by Archbishop Farley, Bishop Potter, Rabbi Hirsch of Chicago.

Monday afternoon, April 15, at Carnegie Hall: *Opening Meeting.* Mr. Carnegie presiding. Addresses by Hon. Elihu Root, Secretary of State; Hon. Charles E. Hughes, Governor of New York State; Hon. George B. McClellan, Mayor of New York City.

Monday evening, April 15, at Carnegie Hall: *International Views of the Peace Movement.* Mr. Carnegie presiding. Addresses by Baron d'Estournelles de Constant (France); Mr. W. T. Stead (Great Britain); Baron Descamps (Belgium); "Maarten Maartens" (Holland); a representative of Germany; Hon. Oscar S. Straus, Secretary of Commerce and Labor.

Tuesday morning, April 16, at Carnegie Hall: *Women's Relation to the Peace Movement.* Mrs. Anna Garlin Spencer presiding. Addresses by Miss Jane Addams, Miss Mary E. Woolley, President Mt. Holyoke College; Mrs. Ellen M. Henrotin of Chicago; Mrs. Lucia Ames Mead of Boston; Mrs. Frederick Nathan; Dr. John Rhys (Oxford University); Sir Robert Cranston (Edinburgh). Music by the St. Cecelia Society and the Wednesday Morning Singing Club, Victor Harris, Conductor.

Tuesday afternoon, April 16, at Carnegie Hall: *Young People's Meeting.* Dr. William H. Maxwell, Superintendent of Schools, New York, presiding. Addresses by Baron d'Estournelles de Constant; Señorita Huidobro; Mr. W. T. Stead; Dr. Nathan C. Schaeffer (Pennsylvania); Prof. Henry Turner Bailey (Massachusetts); Rabbi Stephen S. Wise; Dr. James J. Walsh. Music by school choruses.

Tuesday afternoon, April 16, at Hotel Astor: *The Commercial and Industrial Aspects of the Peace Movement.* Mr. Carnegie presiding. Addresses by Hon. Oscar S. Straus, Secretary of Commerce and Labor; Hon. N. J. Bachelder, ex-Governor of New Hampshire, Master National Grange; Hon. John Barrett, Director International Bureau of American Republics; James W. Van Cleave, President National Association of Manufacturers, St. Louis; Edwin Ginn, Boston; Marcus M. Marks; August Belmont; William McCarroll, President New York Board of Trade and Transportation, and others.

Tuesday evening, April 16, at Carnegie Hall: *University Meeting.* President Nicholas Murray Butler presiding. Addresses by President Charles W. Eliot, Harvard University; President Edmund J. James, University of Illinois; President M. Carey Thomas, Bryn Mawr College; Edwin D. Mead, Boston; Miss Jane Addams, Head of Hull House, Chicago, and others. Music by the Glee Clubs of Yale and Columbia Universities.

Tuesday evening, April 16, at Cooper Union: *Wage-earners in Relation to the Peace Movement.* Prof. Charles Sprague Smith presiding. (In co-operation with the People's Institute.) Addresses by Dr. F. S. Archenhold (Germany), Vice-Chancellor Roberts (Cambridge University), Mr. W. T. Stead (Editor *Review of Reviews*, London), Mrs. Anna Garlin Spencer, Mr. John F. Tobin, President Boot and Shoe Workers' Union, and other representatives of the American Federation of Labor.

Wednesday afternoon, April 17, at Carnegie Hall: *Legislative and Judicial Aspects of the Peace Movement.* Hon. Seth Low presiding. Addresses by Judge George Gray, Hon. Richard Bartholdt, M. C.; Hon. John Sharp Williams, M. C.; Hon. Samuel W. McCall, M. C.; Hon. William Jennings Bryan; Hon. John W. Foster, and others.

Wednesday evening, April 17: *Public Dinner.* Addresses by President Roosevelt; Earl Grey, Governor-General of Canada; Rt. Hon. James Bryce; President Eliot; Samuel Gompers; Rev. Edward Everett Hale, D.D.; Sir Edward Elgar, and others.

PEACE.

THE objects of the National Arbitration and Peace Congress, which are expressed in its name, should appeal to all Christian people, and we are sure that they do appeal to Christian Scientists. The meetings to be held in New York from April 14 to 17 are auxiliary to the approaching meeting of the International Peace Conference at The Hague, which is announced for June 15 of this year, and they will do much toward intensifying the rapidly growing public sentiment in this country, which is entirely out of sympathy with war as the court of last resort for the settlement of international differences.

The program of the Congress, as above given, shows the world-wide scope of the movement, and the great array of distinguished men and women of this and other countries who will take part. This is as it should be, for the world is thoroughly awake to the wholly unchristian, unethical, and wasteful character of war, and is determined to abolish it forever.

In 1894 the Interparliamentary Union, a voluntary association of members of the national legislative bodies of the countries of the world, adopted a resolution in favor of an International Court of Arbitration, and from that year until 1898, when the International Peace Conference assembled at The Hague, in response to the call of Czar Nicholas II. of Russia, the question of forming such a court received much attention. In 1899 the committee appointed by the Conference reported a Convention for the Peaceful Adjustment of International Differences, which provided for a Court of Arbitration, and this Court has since done much effective work.

The United States has twice been before The Hague Court, first in 1902, for the settlement of a dispute with Mexico, and again in 1903 in connection with the difficulties of Venezuela with this and several European nations. In both cases justice was done to the countries involved, and the weak did not become the prey of the strong. Thus was proved the practical utility of such a tribunal. It is hoped that the proceedings of the National Arbitration and Peace Congress in New York, preceding as it does another session of the International Peace Conference at The Hague, will do much toward showing the world that the sentiment of the ninety million people of the United States is overwhelmingly in favor of peace; and that this will be the result of the Congress we have no doubt.

The great nations of the world are the Christian nations, and the leavening of Christian thought is bringing about more harmonious conditions than heretofore have been manifested in the world's affairs. The gospel of love which Jesus taught by precept and example, must become the

Digitized by Google

ruling passion of all mankind before universal and permanent peace is established, and to this end Christian Science is contributing in large measure.

Our beloved Leader, Mrs. Eddy, has been deeply interested in this subject, and she has pointed to obedience to the First Commandment, "Thou shalt have no other gods before me," as the means for universal peace and salvation. Of this commandment she says, "The First Commandment is my favorite text. It demonstrates Christian Science. It inculcates the tri-unity of God, Spirit, Mind; it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind. The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed" (Science and Health, p. 340).

Mr. W. D. McCrackan, First Reader of The First Church of Christ, Scientist, in Boston, will officially represent *The Christian Science Journal*, the *Christian Science Sentinel*, and *Der Herold der Christian Science* at the Congress.

ARCHIBALD MCLELLAN.

NOT EASE, BUT EFFORT.

THERE is nothing truer respecting human progress than this, that "things do not accomplish themselves." Every good that mankind has gained, every advance and betterment of life, has resulted from somebody's hard work and self-sacrifice. Our simple, every-day comforts and utilities, no less than the luxuries of our more elaborate living and of travel, all tell the story of struggle in mines and mills and work-rooms, where, directly or indirectly, thousands perchance have made their contribution to our possession of the things which we have enjoyed, mayhap without a thought.

And what is true of these things is yet more true of those spiritual gifts which contribute to the satisfaction and growth of our better selves. All the way from that gentle mother-love which watches over its cradle, to that divine affection which triumphs on its Calvary, the attainment of good for men means, and has ever meant, vicarious effort, a choosing not of the thing that is the one most easily done, but of the thing that most needs to be done; and true Christian Scientists are learning thus to make their choice of the highest good, though it involve the severest and most continuous labor. More than this, they are rejoicing that they can and do thus choose. They are being healed of one of earth's most contagious and baneful ills, namely, laziness, the disposition to consider personal preference and peace when their highest privilege and destiny call them to personal sacrifice and perennial struggle. They are remembering him who said, "If any man will come after me, let him deny himself, and take up his cross, and follow me;" and they are seeking to emulate the example of her who saw before her "the awful conflict, the Red Sea and the wilderness," but who unswervingly and unhesitatingly "pressed on through faith in God" (Science and Health, p. 226); who, in that supreme moment, as in the long years of her struggle, has sought not comfort, but spiritual consummations; not ease, but the end of evil for herself and for all humanity.

Men are indebted to divine Love for both the possibility and the means of overcoming, but only earnest and continuous personal effort will enable them to profit by the grace divine, and the stimulus to this effort is found, as nowhere else, in Christian Science. JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., April 3, 1907.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—In behalf of your Church, The First Church of Christ, Scientist, in Boston, we wish to thank you profoundly for your letter of April 2, which was read to-night to about four thousand persons. We are deeply appreciative of your assurance that our love and fidelity are a source of cheer to you, and we are encouraged by your loving exhortations and admonitions.

Our gratitude for your life and achievement grows as we learn more of their true meaning. We are daily praying to be enabled to follow obediently and faithfully in the way you are making practical through your daily example. We are striving to gain that true obedience which comes from self-surrender.

It is through the study of "Science and Health with Key to the Scriptures," of which you are the author, and through the practice of Christian Science, which you have discovered and founded, that we are enabled to heal sin and sickness in ourselves and others. This study and this practice alone can unfold the proper understanding of your life-work.

Lovingly yours in Christ,

W. D. MCCRACKAN,
ARCHIBALD MCLELLAN,
JOSEPH ARMSTRONG,
Committee.

Boston, Mass., March 30, 1907.

Beloved Leader:—Mr. McCrackan has informed me of your letter appointing him to attend the Peace Conference as the representative of our periodicals, and I am very glad that you have selected him for this work. You already know of my high estimate of Mr. McCrackan's ability, loyalty, and trustworthiness, and I think he will make an ideal representative. I shall ascertain what credentials he needs and supply him.

Lovingly yours,

ARCHIBALD MCLELLAN.

[Telegram.]

Chicago, Ill., March 5, 1907.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

We, the members of Second Church of Christ, Scientist, of Chicago, in meeting assembled, joyously announce to you, our beloved Leader, that the present crowded condition of our church edifice has led us to adopt unanimously a resolution providing for the withdrawal of about two hundred of our members and the immediate organization of Seventh Church of Christ, Scientist, of Chicago. Realizing with you that progress is the law of Love, we are obediently pressing forward in the work of healing the sick and reforming the sinful.

Second Church of Christ, Scientist.
ABBIE DEARBORN WEEKS, *Clerk.*

St. Louis, Mo., March 25, 1907.

Dear Mrs. Eddy:—Prompted by gratitude, we would write you "love letters" every day; but we do this in our hearts at each clearer realization of the truth that makes free, of which you have taught us in Science and Health, and in the example of your own beautiful life. I thought you would be interested in hearing of an instance, which recently came to my notice, that your blessed "gospel of right-thinking" gives evidence of its divine impulsion in that it is being carried everywhere. At a meeting of the

Digitized by Google

largest chapter in St. Louis of the Daughters of the American Revolution, whose over four hundred members are representative of the best in culture, socially, and as pioneers in movements of educational development and endeavor, the paper for the day was "The Old Patriotism and the New." You can imagine my glad surprise that the new patriotism was the teaching of Christian Science. Nothing was said in the paper, of course, of Christian Science, but the writer was known to be a Christian Scientist, and naturally the inference was that the beautiful uplifting thought was the doctrine of Christian Science. Surely divine Love gave the opportunity to voice the "love message" of the New England Daughter, to us, her Missouri sisters, to become daughters of the new Republic, of which the law is love. In the social hour afterwards, the writer was thanked for her fine paper; and later a friend heard the doctrine of the new patriotism discussed among some non-Scientists, and all were one in praise of the beautiful thought, "Love is the liberator" (Science and Health, p. 225). All Americans, and especially American women, of whatever creed, should honor you, who above all others have carried the message of freedom to all kinds of bondage.

Yours in gratitude,

ELIZABETH M. ANDREWS.

San Jose, Cal., March 6, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Beloved Leader:—We are told that "out of the abundance of the heart the mouth speaketh," and surely this is doubly true when we tell you how much we love, honor, and appreciate your inestimable labors for mankind. We of the far West, like all your students, long to let you know how much you have done and are doing for us continually. This natural longing found spontaneous utterance with the San Jose church this evening, when at a special meeting a committee was unanimously appointed to draft a letter to you, our revered Leader, the Discoverer and Founder of Christian Science and the loved author of that book which has raised countless thousands to health and happiness, our text-book, Science and Health, expressing the unbounded love of this church for your life and work, its appreciation and admiration of your masterly leadership, and its unswerving loyalty to all that you have taught us as to man's true relation to his Maker.

This true relationship, exemplified in our human affairs, is daily being manifested in a kindlier spirit, less judging and criticising, a better sense of our neighbor's right to think as he chooses, and a more determined effort to follow your loving behest—"Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them" [*Sentinel*, Feb. 9, 1899]. We know that only by so doing can we follow the Christ-way and be true Christian Scientists. Your life, with its marvelous spirit of love and charity to all men, and your unselfish devotion to God and His Christ, fill us with humility and an earnest desire to do likewise.

What can we say to convey our thanks for your last rich blessing to mankind—the revised Science and Health? Perhaps the simple "Thank you" that wells up from the depths of our hearts will be understood by you as meaning what we wish to convey. We do thank you a thousand times, and shall never cease to do so, for its added help in our upward progress keeps our gratitude ever fresh and "running over." May Love's richest blessings be with you and abide with you forever, is the prayer of your sincere followers,

First Church of Christ, Scientist, San Jose, Cal.
HERBERT W. EUSTACE, JUDSON L. STULL,
MARY F. MCCULLOCH, HARRY A. LOOMIS,
PHEBE M. WISE,
Committee.

Topeka, Kan., March 17, 1907.

Our Dear Leader:—At a church meeting to-day, we, the members of Second Church of Christ, Scientist, wish to assure you—in this hour of unjust persecution and criticism—of our love and loyalty to you, and our faith and trust in you as one appointed by our heavenly Father to watch, guard, and guide His faithful ones through the Red Sea of error, and to express our faith in the final overwhelming victory for right and justice in this, as in all former trials that you have been called upon to pass through. We know that when error strikes at you personally, it is aimed at Christian Science, and that God demands of each one who loves our Cause, renewed consecration and greater self-abnegation; and we individually promise anew "to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus."

MRS. C. S. WHITTAKER, *President.*
MRS. JOSEPHINE SIMS, *Clerk.*

Boston, Mass., March 12, 1907.

Beloved Teacher:—When this last cruel attack was made upon you my first thought was that infinite good gave you to us as a grand, brave Leader, and that He would sustain and strengthen you in this hour of your marvelous work for all humanity. The prophecy, "The earth will help the woman," has been proved at this time, for many kind, intelligent, and refined people, who are not yet Christian Scientists, have spoken so strongly and kindly of your gentleness and truly Christlike spirit in meeting this malice and hate. Loving gratitude goes surging through my thought for the greatest of all privileges, that of sitting at your feet and receiving your sacred teaching, and for the living example of your life "hid with Christ in God." To be worthy of all this is my daily prayer, which is to be made manifest in proving the healing power of Truth and Love.

Lovingly your student,

MARY E. DUNBAR.

Colorado Springs, Col., March 23, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—I wish I could express what I owe you. For two weeks I have tried to tell you briefly, but my letter ran into so many pages, that I felt I had no right to send it. I am only a plain, middle-aged business man; but I owe literally all I have and am, spiritually and materially, to your teachings. May I say, I know you are entirely competent; never so competent. I know this because of the present uproar all over these United States. Had you stood still during the past year, error would be satisfied and silent. You must have reached heights unknown to us, that this seeming turmoil seeks to overwhelm. You have God about you, and hundreds of thousands of loyal followers at your side,—undismayed,—of whom I humbly and gratefully subscribe myself one.

WM. LLOYD.

Concord, N. H., March 29, 1907.

Mrs. Mary B. G. Eddy,
Pleasant View, City.

My Dear Mrs. Eddy:—As the day approaches which celebrates the glorious resurrection of our Lord, I want to drop you this little line of Easter greeting. May the sweet consciousness of the peace of our Lord and Saviour, Jesus Christ, be yours, is the wish of one who in the five years of his work for the men and boys of New Hampshire has appreciated your generous sympathy and aid.

Respectfully yours,

A. H. WARDLE, *State Sec'y Y. M. C. A.*

AMONG THE CHURCHES.

BERKELEY, CAL.

The Christian Scientist students in the University of California have recently formed a Christian Science Society in the University, in accordance with The Mother Church By-law, "Privilege of Members." The object of the society is to promote the general welfare of the Cause of Christian Science in the University, to welcome Scientists newly arrived at the college, and to distribute literature where desired. Meetings will be held on the first Friday of each month, at which all University people are invited to be present. The Society will be pleased to hear from the alumni who are members of The First Church of Christ, Scientist, in Boston, Mass., they too being eligible to membership in the society.

JERITA VERENA BLAIR, *Secretary.*

ALDERSHOT, ENGLAND.

The main feature of the thanksgiving service held in connection with the Christian Science movement on Wednesday afternoon was the spirit of gladness that prevailed. One might almost suppose that the chief aim of Christian Science was the cultivation of happiness, were it not that, even to the uninitiated, there seemed some serious significance in the readings from the Bible and the writings of Mrs. Eddy, and in the general tone of the testimonies,—something more subtly spiritual than can be accounted for in the desire for mere human joyousness. So far as an outside observer can gather, the gospel preached by Christian Science is the understanding of the divine Spirit, or Soul, in man, till it dominates and transcends pain and sorrow; and the consciousness of evil, emanating from poverty, wrong-doing, and all mortal ills, is superseded by a perception of that only which is good and productive of happiness and peace. It seems strange that amongst men whose chief work is the science and practice of war such a gospel should find ready acceptance, but the fact remains that it is in military circles in Aldershot that most of the adherents to Christian Science may be found. The movement has made rapid strides since the first local service was held a little more than a year ago, and its ranks have been mainly recruited from the cultured classes.

Aldershot News.

Following the first thanksgiving service of the Christian Scientists, some remarkable testimonies to the efficacy of this faith as a healer were given. The assembly was perhaps the largest of this new denomination that has yet gathered in Aldershot, and the cultured tones of the speakers evidenced that they were not unlearned, unlettered enthusiasts, carried away by a sudden fervor that might evaporate almost as speedily as it was generated. The calm, measured tones of the educated witnesses carried conviction, at least of the sincerity and good faith of the speakers, far more readily than wordy rhetoric or passionate assertion would have done.

The first testimony came from a well-dressed and evidently cultured woman, who said that those coming from a larger field of work were filled with joy when looking upon an assembly like that, where the seed that had been sown had blossomed into the flower of wisdom. For fourteen years she had wintered abroad in order to avoid the rigors of an English winter, and some six years ago had been doomed by a London specialist to die of consumption, but two years ago she heard of Christian Science, just as she was preparing to start for the continent. A book on the subject was taken by the speaker to Paris, and after studying it for two months she decided to return, and did so in December, without the slightest fear of consequences. During the remainder of that winter she remained in London, as she did through the following winter, without any sign of her old complaint. Before resuming her seat the speaker expressed her deep gratitude to Mrs. Eddy, who had given this wonderful teaching, and also to the others who had so lovingly helped her along the path.

Another testimony was a written document from a hospital nurse, who said that as a trained nurse she had worked in the medical world for twenty years. On first reading Mrs. Eddy's book she rejected it as "too deep," but a year later, after attending a Christian Science meeting, she found the book easily comprehensible. First cured of a trouble of over twenty years' standing, two and a half years back she had a tumor in her breast which the doctors called malignant. Until six months ago it increased in size, and then she asked a practitioner to treat her. After that it completely disappeared. She had never found the comfort as a member of an orthodox church that she now found in Christian Science.

Another witness was a youngster in Eton suit, who spoke plainly and almost eloquently, albeit with some self-consciousness. Four years ago, he said, the doctors told his parents he would probably never go to a public school, and would certainly be ailing all his life, and before going into Christian Science he had spent about two terms of every year at home, and three parts of that time in the sick-room. He made little reference to his present health, but a glance at the boy showed that at all events he was no invalid now. The remainder of his testimony bore reference to his spiritual uplifting, and he asserted that an understanding of Christian Science was alone responsible for a moral and physical revolution in himself. Without Christian Science he felt that he should be utterly lost.

A speaker with an obvious public-school accent spoke of the wonderful benefits that had come to himself and to many of those with whom he was closely associated, benefits that were first of all spiritual. . . . In this connection the speaker mentioned that he was a schoolmaster at one of the great public schools. He had made a special study of how to win the confidence of the boys under his charge, that they might come to him in any time of emergency or trouble, and he had found Christian Science helped him enormously in that direction. Now, without any invitation on his own part, any boy in trouble came to him and said, "May I speak to you, sir?" and there and then disclosed his sorrow. The speaker told of a boy of extraordinary mathematical attainments who came to him and wanted information as to the various ways of drawing an ellipse. Something mysterious seemed to the boyish mind to be involved in that little problem, and from drawing they got to talking of matters outside mathematics. Finally, noticing that the boy was in great trouble, the master urged, "Tell me all about it." The boy did so, and owing to the simple directness and unity of feeling associated with Christian Science, he was able to help the lad. This made such an impression upon the boy that it revolutionized his life and changed it from darkness to joy, so that, speaking of a holiday since the conversation, the boy said to his master, "What you said to me at the end of the term has taken me out of hell, and I think I have almost tasted heaven since."—*Aldershot Military Gazette.*

A CORRECTION.

The newspaper article copied from the *Berlin* (Wis.) *Journal*, on p. 535 of the *Sentinel* for March 23, stated that "Elkhorn . . . has recently dedicated a pretty church building." We are informed that this applies to Delavan instead of Elkhorn.

TESTIMONIES OF HEALING.

In May, 1891, when it was thought that I must soon leave this world, I was quickly healed through Christian Science of several diseases, including severe kidney trouble. These diseases had come upon me during the fifteen years just previous. At first I did not dare to hope that this healing would prove permanent, but I was very happy over the unexpected relief with a kind of uplifting joy that I had long since forgotten. I bought a copy of Science and Health and a new Bagster's Teachers' Bible, determined to find out from the Scriptures, as explained by Mrs. Eddy, whether or not there really is a power to heal disease and benefit mankind, as some new-made friends claimed. During all that summer I could "run, and not be weary: . . . . walk, and not faint;" but some of my skeptic friends would suggest that perhaps it would be as well to delay my praise of Christian Science somewhat until cold weather should come and we could see if the old troubles would not return also, for I had some old wounds that had troubled me for many years, especially in the winter.

Now for the benefit of any who may still be in doubt as I had been, I would like to tell of my experience. On the first day of the battle of Gettysburg, my regiment (the 157th N. Y.) was involved with other forces in a severe struggle at the northernmost point gained by our army in that great battle. Being overwhelmed by numbers and severe fighting at that point, our regiment was almost annihilated. I received three wounds, and was taken prisoner, but escaped the last night of the fighting. I was sent to Carver's Hospital, where my wounds healed very quickly. In less than three months I was voluntarily at the front again, and was mustered out in February, 1866, having served two years and a half after receiving the wounds. While I remained in the army the wound on the side, being near the sword-belt, troubled me more than those in the face, but when I returned home this condition was reversed. The wounds in my face were very conspicuous, and everybody wanted to know all about them. They became more troublesome, while the unseen wound on my side ceased troubling me.

As the years went by these wounds became more and more painful, and my face was very sensitive to damp and cold weather. Any unusual exposure was pretty sure to result in a painful attack, which would sometimes involve my neck and shoulders also. At such times we would resort to anything that promised relief, but finally everything pretty much failed. The doctors told me that these old wounds, which had become veritable mountains to me, were the cause of most of the troubles of which I complained, and that probably they would result in my premature death. This I could easily believe, because I was already more dead than alive part of the time. But as I read in the Christian Science text-book, the Spirit of truth quietly and silently entered into my consciousness, reversed the harmful medical theories and human beliefs, and behold the result—these old troubles are done away with. The deep scars grew less noticeable, the loose bones became fixed in place, and the suffering has faded out until now I suppose there are months at a time that I never even think of them.

And this great good has come to me without any direct effort or argument on my part, or help from any one else, simply by my revolving and holding in my thought the truth of the Bible as explained in "Science and Health with Key to the Scriptures." Need any one fear I shall feel too grateful to Mrs. Eddy for making this healing truth available for me in my extremity?

JOHN H. ROE, Salt Lake City, Utah.

In April, 1903, my husband and I attended our first Christian Science service and were deeply enough impressed to want to learn what those people knew that we did not, so we bought a copy of the text-book, Science and Health, and began to study. For years I had been subject to bowel and rheumatic trouble, etc., and was wearing glasses for eye trouble. To-day I am free from them all, and am perfectly well and strong. Christian Science has proved to be the best of remedies for the children: the so-called diseases of childhood all yielding to the truth. I could write pages and then not tell all, for we have learned that there is no form of discord so small or so great which the truth as taught in our text-book will not help.

While we are indeed grateful for the physical healing and protection, it is as nothing compared with the sense of peace and rest that comes with the enlarged understanding of God as our Father-Mother, as made known to us through the teachings of our text-book. We took our oldest child at the age of six to an eminent oculist, who treated her eyes and fitted them with glasses. At the time he said it would be necessary for her to wear them all her life. Three years later she was treated by another oculist, and the same verdict was given. September, 1902, she started in at school, still under the oculist's care. While she did not often complain, her eyes were not improving. At times she could not distinguish work placed on the blackboard, although the teacher had given her a front seat. The following April she asked if she might go to the Christian Science Sunday School. To-day she says it seemed then very much like any other Sunday School, except that the teacher asked her why she wore glasses, and then said, "Don't you know God never made sick eyes?" She did not know then, but she knows now, for on the way home she took off her glasses, and has never put them on nor felt the need of them, nor has she tried to save her eyes in any way since. She made four grades in school in the first two years after her eyes were healed. I feel that I can never be grateful enough to God, and to Mrs. Eddy, our dear Leader, for giving us this blessed truth.

MRS. BERT B. DAWSON, Boulder, Col.

In our far-away home in northern Mindanao the papers and letters giving an account of the dedication and Communion services at The Mother Church, reached me but a week ago, Aug. 19, and last Sunday I had a special session all to myself, enjoying the Lesson-Sermon for the Communion service, and reading the printed accounts of the dedication. I know of no students of Christian Science nearer to us than Manila, which city it takes us from five to eight days to reach, and it was fourteen months ago that I had my last talk with a Scientist. We seem to live here in an atmosphere of conflicting human thought, and nearly all the time it has seemed difficult to maintain a reasonable mental poise. There have been periods when it has seemed difficult to apply the Science, but at such times I have been able to cling to the simple yet comprehensive statement, God is Love. Upon special occasions it has come home to me that God is here and is quite as active as in the midst of so-called civilization. Each time the lesson is brought to me it comes with added force; it comes also with an added humiliation that I should ever seem to forget and to doubt His presence.

During a residence of several years in the Philippine Islands I have known almost every variety of tropical disease to be successfully met by Christian Science treatment. My husband, who is not a student of Science, was attacked two years in succession by a fever, which kept him confined to his bed from one to two weeks each time. The third year it came upon him very severely one evening as we were preparing to entertain a large company of invited guests. By seven o'clock he was obliged to go to bed and I could get no time to do any special work for him until nearly twelve. Then, after working for him for perhaps fifteen minutes, I went to bed, to work intermittently as I

Digitized by Google

lay in the dark during a wakeful night. In the morning he had no trace of illness. The fourth year the fever passed him by entirely. Several months later I found myself in a small town, temporarily cut off from the outside world by the breaking of the cables, and down with my first and only attack of tropical bowel trouble. It came suddenly and fiercely, and the thought of being alone in Science and not able even to obtain help from Manila, put me into a great state of fear I read Science and Health as constantly as I could. The third day I was too weak to hold the book, so had it propped by a pillow beside me on the bed, but kept on reading. Then the fear began to subside and I grew better. With three days more of work I was able to go for an evening walk, quite myself once more. My husband had kindly refrained from speaking of my condition to the people in the town, and so it was not until I was entirely well that a dear American nurse came to see what she might do for me.

Five years of almost constant travel and adventure have impressed me most strongly with the sense of God's protection realized by one having even a slight knowledge of the application of the laws of Truth as taught by Christian Science; and this protection has been shown in the harmonious accomplishment of various undertakings and in a conscious spiritual exaltation in the face of difficulties overcome. One notable example was when, in 1904, my husband and myself made a trip of eight days into the interior of Mindanao. This trip had been accomplished before only by parties of men accustomed to "roughing it." It meant hard mountain climbing and every one soaking wet for hours at a stretch. All expeditions before ours had been fortified with whisky and quinine, but even so no one had returned without being the "worse for wear,"—several men having been laid up for days, and one young fellow suffering for weeks,—and we were advised of the bad personal effects of the trip if we did not take along several quarts of whisky and ounces of quinine. Besides ourselves, our party consisted of one young soldier and some thirteen native guides and carriers. The expedition was most harmonious and enjoyable,—no accidents, no colds, no bad effects of any sort resulted. It was the first and only eight days for seven years that I have been separated from a copy of Science and Health. Before we started I prayed for the protection of the party, and for the entire trip—like the violin obligato to a song—throughout every day's happenings there ran in my mind, Nothing can by any means harm God's children, and with it was an almost constant consciousness of spiritual exaltation. I am grateful for the knowledge that gives me this consciousness of protection,—grateful for this and for all the many blessings of Christian Science.

GRACE P. G. KNUDSON, Cagayan, Mindanao, P. I.

In April, 1888, I had an attack of rheumatic trouble which confined me to bed for about six weeks. During this period, and for some time afterwards, I was attended by our family physician. From April, 1888, till August, 1889 (when I was healed through Christian Science), I was unable to perform any kind of manual labor without suffering great pain. After it became apparent to me that our family physician was not effecting a cure, I placed myself under the treatment of another, who claimed to have made a special study of the disease; but without avail. I gradually grew worse, although taking medicine constantly and exercising the greatest care in following the doctor's directions, until the conviction forced itself upon me that I would not be able to pursue even the study of telegraphy, which I had taken up in the hope that I might be able to earn a livelihood at some very light work. My lot seemed to be narrowing down to a life of dependence and misery. There were other circumstances which greatly aggravated my suffering, and made the gloom of that hour dark indeed.

In addition to the disorder above mentioned, I suffered from an ingrowing toe-nail. This was twice operated upon by a surgeon, who said that if it troubled me again the only thing to be done was to amputate the toe at the first joint. It did trouble me again, and was in even worse condition than when the surgeon operated on it, but it was completely healed in five days' treatment by a Christian Science practitioner in Milwaukee, in the fall of 1892. Besides the two cases mentioned I was healed of an attack of lung trouble and many minor ailments through Christian Science, which has been my only physician for sixteen years; and whereas I was very often sick before learning of this blessed truth, and was regarded as the sickly one of the family, I am now in perfect health, having been accepted by three old-line and one fraternal insurance company as a first-class risk.

I have also found a logical religion and a consistent Christianity, which is far from being the least of my blessings. Previous to 1889 I had been for several years, and in fact ever since I was old enough to reason on the subject, utterly unable to believe in the prevalent religious teaching; the Bible seemed to be obscure and contradictory, and I became a confirmed agnostic. All this was gradually and beautifully changed as my thought became imbued with the scientific and practical Christianity taught by Mrs. Eddy.—JAMES PHELPS, Milwaukee, Wis.

I have a great deal to thank Christian Science for. Four years ago I was taken sick and was operated on for tubercular trouble. I was operated upon three times, but experienced only temporary relief. Finally I came to Colorado, and two years ago I employed two of the best physicians and surgeons in Denver. They said that only an operation could help me, and I stood only one chance in a hundred of getting off the operating-table alive, as one physician diagnosed the case as spinal trouble of a serious nature. I stopped taking medical treatment and consulted a Christian Science practitioner. After five months' treatment, and the regular study of our text-book, "Science and Health with Key to the Scriptures," I was healed. I am gaining rapidly in flesh, and best of all I am happier than ever before in my life. I owe it all to this great truth, pointed out to us in our text-book, by our dear Leader, Mrs. Eddy.

MRS. EVELYN TRACY, Denver, Col.

It has been ten years since my wife and I first became interested in Christian Science. My wife at that time was an invalid, being supposedly in the very last stage of lung trouble. For three years her health had gradually failed, physicians having failed to help her, and she had given up all hope of ever recovering her strength. At this juncture I purchased a copy of Science and Health, took it home to my wife, and got her consent to have a Christian Science practitioner treat her. While her healing was comparatively slow, it was complete. She was under treatment five months. After four weeks' treatment she was able to walk about, and on being weighed was found to weigh only sixty-seven pounds. She now weighs one hundred and forty-five pounds and is in perfect health. This is only one of the many good demonstrations with which we have been blest in the past ten years.

I will also relate an experience which we had with our little boy in November, 1904. My wife and I left him alone at home while we went to Kansas City. Before we returned home he and some other boys were rolling a large spool of lead cable, weighing three tons, which had been left on the sidewalk by the telephone

Digitized by Google

company. The spool rolled off the sidewalk onto the paved street, and turned over on our boy's foot. The neighbors, being very kind, took the boy home and called a physician and a nurse; but the good doctor knew that we were Christian Scientists, and having due respect for our religion he did nothing except to put ice on the badly injured foot and leg to ease the pain. He insisted, however, that there was flesh in the foot that would have to be cut out. He also said the boy would probably be laid up all winter. At this juncture the physician was dismissed, the ice removed, and a Christian Science practitioner was summoned. In four days the boy was able to walk about the yard on crutches, and in four weeks his foot was well. I thank God for Christian Science, and I sincerely hope that this tardy acknowledgment will induce some poor sufferer to investigate and learn of the truth that makes us free.

G. E. SNYDER, Leavenworth, Kan.

Among all the testimonies that are given of the "night" through which many have passed, my own experience seems to be the darkest in variety of suffering, in surrounding conditions, and in length of duration. When this past presents itself to me, my spirit wells up in gratitude for the courage and bravery and spiritual strength of our dear Leader, at whose feet it was my great privilege to sit and learn years ago,—whose love has made emergence from such a dark cloud possible, emergence into the light of divine Love. The psalmist says, "O give thanks unto the Lord, for he is good: for his mercy endureth for ever. Let the redeemed of the Lord say so, whom he hath redeemed from the hand of the enemy." Through the patient and loving teaching and waiting of our dear Leader, I have come to the certain knowledge that "the Lord is good" and that His mercy "endureth for ever," and I am rejoiced at the privilege of saying so. I give thanks that I have been redeemed from the hand of those enemies of all mankind,—sin, sickness, and death. My struggle to reach an understanding of the truth was long and hard. For many years I was troubled with the thought that the little printed notice, "Mrs. Eddy takes no patients, etc.," was even cruel. It was not that Mrs. Eddy took no patients, which troubled me,—I could easily see the wisdom and justice of that,—but I seemed to have had a hard experience, and I longed to have Mrs. Eddy tell me to whom to go. Watching so long that little sentence, I failed to see that in the most perfect way she was constantly telling us all to go to our heavenly Father. Now I have come to regard that same notice as an expression of true courage, and one of my greatest blessings.

Were I to relate the sufferings of many years, all would know that my gratitude for deliverance must be unbounded, —gratitude to the infinite, unfailing Principle, Life, Truth, and Love; gratitude to Christ Jesus, whose life was so pure and true that time could not hide it; gratitude to our Leader, whose life has also been so pure and true that it has lifted us to an understanding of what Truth is, and gratitude to those brother and sister Scientists who have patiently helped me. I am thankful for the steps already taken, and always mindful that there is something better and higher.

MRS. ANNA C. THEW, New York, N. Y.

The Bible and "Science and Health with Key to the Scriptures" have been my constant companions for nearly five years, and I now wonder how I ever lived without them. I had suffered from severe headaches, stomach and bowel troubles, etc., all of which have been healed through a sincere and persistent application of the truth which Mrs. Eddy teaches. The healing is, however, nothing, compared to the mental uplifting,—the knowing that we need not be in bondage to maferial law, that it is possible for each one of us to realize here and now our true existence as God's children, and to know God as the all-guiding Father and Mother. The truth first came to me through one who was daily reflecting this healing power of Love. I am most grateful to all those who have voiced truth to me. Daily my prayer of gratitude rises to God for Christian Science. I have learned that only as I live this truth, can I express my overwhelming sense of gratitude to our beloved Leader, Mrs. Eddy, whom I love and revere.

MRS. MARGUERITA W. SMITH, Paterson, N. J.

In 1902 I began to be sick. I tried home remedies and taking care of myself for a year. During this time an uncle who was visiting us told us of Christian Science, but no one paid any attention to it. I finally was so ill that my relatives called in a doctor. He cared for me the next six months, but I grew steadily worse, and finally I was bedfast. The doctor said mine was a strange case and that he really could not decide what was the matter with me. He tried first one remedy, then another, till at last he told my folks I would never be well. At this hour of need the uncle again visited us, and this time we gladly heard of Science.

We are German people, and at that time none of us except a brother could speak or understand very much English. My brother brought a practitioner, and I took my first treatment New Year's day, 1904. It was not only a new year, it was a new life to me. I felt so happy after the treatment, and I agreed with the practitioner that if I should be able I would come to her office the next day. That night I had the first real sleep I had had for months, and the next day found me willing and able to go to the practitioner. Though we could none of us read English save my brother, I bought a copy of Science and Health. The Lesson-Sermon that week showed how all language is of Mind, God, and this has helped me. I have learned to read our text-book, and I can prove that I understand it for I have had many demonstrations of what it has taught me. It has taught me to love the Bible, a book I did not care for before, but now I read it in both German and English. *Der Herold* has been a blessing to us, giving us the Lessons in the German too. In all I had twelve treatments, and am so glad to be well. I work all day long; and best of all, I know what health is now.

My mother had lung trouble the year previous to my healing. We had a doctor, heavy expenses, a long spell of sickness, and a longer convalescence. Soon after I was healed my mother again had the same trouble. This time she had Christian Science treatment, and was well in one week. Not only was she well, but her fear of a relapse was overcome. We are indeed grateful for Christian Science.—ANNA KORTH, Leavenworth, Kan.

In the New Testament we are told that "the Word was with God, and the Word was God." In Isaiah we read concerning this, "It shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it." Several weeks ago I was suffering from an extremely inflamed and very sore heel. During the time I was making an effort to overcome it, I spent an afternoon with two dearly loved Scientists. The whole time was spent in conversing upon the subject of truth, the power of the word of God,—no other subject was thought of or mentioned. The conversation was deeply interesting and instructive to me, and when I wakened the next morning I found to my great joy that the foot was perfectly healed. Neither of the Scientists knew of the healing for some days, nor was the condition mentioned to them. The demonstration was made by the spoken word of Truth. We were all deeply grateful for this proof of the power of Truth to heal through the spoken word. It

Digitized by Google

has proved to us through actual demonstration the truth of what Mrs. Eddy teaches in "Science and Health with Key to the Scriptures."

MARY B. HARTRICK, Toronto, Ont.

I am truly grateful to Christian Science for a better understanding of the Bible, and for its cleansing and healing power. Christian Science came into my life when I was greatly in need of help. I had throat and lung trouble in the worst form, and was without hope of ever being a well woman again, as the last doctor that treated me gave me no encouragement whatever. A friend had mentioned this grand healing power to me, so as a last resort I turned to Christian Science. I applied to a practitioner for help, and began to improve from the first treatment. This was almost two years ago, and I could not ask for better health than I have to-day. The peace of mind that came with the healing is much to be thankful for. I am also thankful for our literature, and for our Leader, who has labored and is still laboring so patiently for mankind.

MRS. MAGGIE BOTTS, Miami, I. T.

In attempting to express my gratitude to God, which is the smallest part of one's duty, my thoughts go back to the years that were spent in ignorance of infinite Love, when the darkness of pain and sorrow was only brightened spasmodically by the artificial light of material pleasure, which gave no permanent relief but more often than not left me blinded by its dazzling unreality. From babyhood upwards the thoughts of hereditary weakness were always held over me, the winter being a season of constant trouble. Added to this were business troubles, etc., and bad eyesight, one eye being extremely weak.

From the time when I became interested in Christian Science, four years ago, these material beliefs have gradually been displaced by the power of Truth. The chest trouble has dwindled to a shadow. The winter of discontent has been made almost summer by the warmth of ever-present Love. The fear of poverty is being obliterated by the knowledge that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I no longer feel that death follows my every step, because it is seen to be an enemy, a phantom, therefore nothing. My eyes are no longer strained, for I look beyond the mass of material illusion with the never-failing light of understanding. The spiritual uplifting has brought me to realize in some degree what is meant by the "river of water of life," because it is cleansing me of all the impure thoughts that former belief failed to remove, although on two occasions I honestly tried to mend my ways and discard such things as profanity and gambling; but I found nothing to give me the strength needed to rise above them until I sought Christian Science, mainly for relief from sickness.

Life has never been so sweet as it is now, for the happiness brought about by Christian Science has no canker; it is of pure gold. It is no dream of a visionary, but a joy that enters even into the most ordinary walks of human experience. For this knowledge of a God who shields as with the strength of a father and the tenderness of a mother, for the scientific and logical explanation of the words and works of Christ Jesus the Wayshower, I have to thank our Leader, Mrs. Eddy; but to show my true appreciation of her I must endeavor to live Christian Science, not simply talk about it.

THOMAS POGSON, London, England.

I was cured of heart disease and dropsical trouble in 1897. This was accomplished through Christian Science. I had been troubled with both these diseases for several years. An acquaintance of mine, who is a doctor, told me I would be in the graveyard soon if I did not have medical treatment. I finally went to a good doctor and had a thorough examination. He said that owing to the condition of my heart, I could not possibly live in this high altitude; and that even if I did go away from Leadville I might drop dead any minute. My husband told him that if he would cure me, he would pay him liberally, but the doctor said that neither he nor any other doctor could cure me. The next day I made my will, thinking that I had to die, as the doctor had said.

A short time after the doctor had told me these things, a friend who is a Christian Scientist came to the house. I was very downhearted, and told him all the doctor had said. My friend said to me, "It is not true; God is here, and you don't have to die." From that moment I knew that I was going to live. This friend treated me for about a week, and I improved from the very first. I have not the slightest trace of those troubles now.

MARY J. STUTHMAN, Leadville, Col.

I should like to express my thanks to our Leader for giving us "Science and Health," which is indeed the "Key to the Scriptures" and which has made me understand and love the Bible as I never did before. Christian Science has made my life bright, healthy, and happy. A few years ago I was nearly always suffering; constantly under the care of doctors, and in bondage to every kind of fear, both for myself and my husband. Christian Science has shown me how wrong and needless it is to take anxious thought for the morrow; it has also shown me that God's children are protected from every kind of evil and that our fears are but dreams from which we need to be awakened. My awakening has been very gradual,—there seems to be so much to unlearn, so many man-made theories to drop; but how splendid it is to be sure that we have found the right path to Truth and to know that as we study to apply our present understanding, and use what we have already gained, we shall receive more light and knowledge; that no work is a waste of time, even though it may seem to bear no present fruit. Since coming into Christian Science, I have been healed of severe nervous trouble and great weakness, also of depression and many other ailments. All these have been overcome gradually, and peace has taken the place of great unrest.

For all these blessings I am daily thankful, and though I am only just beginning, and there are many things to overcome, yet I know each phase of error will be destroyed, for "divine Love always has met and always will meet every human need" (Science and Health, p. 494). The Lesson-Sermon is the greatest daily help, also the *Sentinel* and *Journal*, which always contain some helpful message. I pray that my life may prove useful to others, and that I may reflect Love even as our dear Leader has shown us in her own beautiful life and writings.

MRS. KATHLEEN WATERLOW, Bembridge, Isle of Wight, England.

[Written for the *Sentinel*.]

PROTECTION.

GERTRUDE RING.

WHEN God leads, though earth darkness shroud
With foemen close at hand,
'Twixt you and them His flaming cloud
Will never fail to stand.

And has He called? O towering wave,
Flow back and form strong walls
To guard the unknown way we brave
In faith, because God calls!

FROM OUR EXCHANGES.

[Rev. William Chalmers Covert, D. D., in *The Christian Work and Evangelist.*]

Men make an awful mistake when they turn their backs upon Jesus. He is the best friend labor ever had. He does more to lift wages and install humane methods into industrial life, than all the benefactors in the world. Through his teachings we are to find the only solution of these problems of one man in relation to another. No judicial board of arbitration will ever do it without Christ and his teachings getting more and more into life. The legislation of Congress will never do it without the love of God being shed abroad in men's hearts through Jesus Christ. Labor unions will never do it unless men who labor and men who employ labor have in their hearts and display in their lives the love of him who stood by the carpenter's bench to honor labor, and who went to the cross to redeem the soul of the laborer.

[*The New York Observer.*]

It is time that Christians everywhere began to act as though they were indeed brothers in Christ and joint-heirs of the glory which is to be revealed. It is time that the world looking on should be constrained to exclaim: See how these brethren love one another!—that ancient cry and comment which moved hard-hearted Romans and superficial Greeks to inquire into, and many of them to embrace, the teachings of the once despised cult of the Nazarene. When the churches practise the ideal of brotherhood, completely and conscientiously, as they now do in part and haltingly, converts will pour in upon them, general rejoicing will result, and God will be honored by the Christly character of the Christianity which will then and there be concretely illustrated and enforced.

[Rev. Martin Anstey in *The British Congregationalist.*]

We must read the New Testament in the light of the fact that in its pages Jesus Christ not merely spoke to others in a bygone age, but speaks to us to-day. The Holy Spirit lives in the record, breathes through it, and produces a holy impression in the hearts of those who read and those who hear. When we read the words, "Follow me," "Be not overcome of evil," "Behold I stand at the door and knock," we know that whatever may have been their primary, original application, they convey a direct, an immediate, and an authoritative message from God to ourselves.

[Rev. U. S. Milburn in *The Universalist Leader.*]

The modern type of religion is catching the spirit once more of the religion of the Christ who came not to be ministered to, but to minister unto; who sought not self salvation, but the salvation of others; who never thanked God that he was saved, but even rebuked his friends when they called him "good;" who spent his life in teaching men the Way, the Truth, and the Life. It is "life, more life, and fuller," that we want in these modern days.

[*The Nashville Christian Advocate.*]

Do not constantly obtrude your own personality. Reflect that your motives and your intentions are matters of indifference to the public. Men will judge you by what you are and what you do, and it is right that they should. Sometimes there will be misapprehensions. When they occur be calm; the truth will come out.

[*Zion's Herald.*]

Many men who would cut down their apple-trees if they did not grow and bear fruit are not themselves ashamed to remain year after year stunted and cramped in moral character.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The recent threatened strike on the part of trainmen and conductors of the railways west of Chicago has been satisfactorily settled. The demand on the part of the employes was for a nine-hour labor day and a twelve per cent increase in wages, to which the employers would concede only a ten-hour labor day and an increase of ten per cent in wages. Both sides submitted the dispute to arbitration, under the Erdman Law, passed in 1898, by the terms of which the Chairman of the Interstate Commerce Commission and the Commissioner of Labor were to use their best efforts towards conciliation. As a result of this arbitration the men abandoned their demand for a nine-hour work day and the railroads made an advance in wages over their previous proposition. It is said that the employes on these railways will now profit during the coming year by a total of over five million dollars, the number of men gaining by the advanced wage-scale being about fifty thousand. Both sides to the controversy have expressed themselves as satisfied with the solution accomplished by the Federal agents, who on their part have testified to the spirit of fairness with which, in general, the differences have been treated.

The convention for the purpose of drawing up a constitution for the new State of Oklahoma, having completed its work, is now submitting to the people a 125 page book, containing more than one hundred thousand words, the longest State constitution ever proposed. It has a strong prohibitory clause, provides for the initiative and referendum and for direct primaries, forbids elective State officers to succeed themselves, forbids railroads to own coal lands, provides that the books of corporations shall be open to State inspection, prevents stock watering, and provides for the two-cent per mile passenger fare. It does not include woman suffrage, which was defeated by a few votes. The census shows that Oklahoma is inhabited by the purest Yankee stock to be found anywhere on the continent.

The rededication of the palatial Carnegie Institute of Pittsburg occurred last week in the presence of a distinguished audience of representative men from England, France, Germany, Canada, and the United States. The building, which contains no woodwork, has required two and one-half years to construct and cost $6,000,000.

Walter Wellman, who will attempt to reach the North Pole by an airship, has just left America. He expects to leave for Tromsoe, Norway, about June 1, and before the middle of the month to be at his winter quarters in Spitzbergen. It is likely to be the last of July or early in August before a start can be made for the Pole.

The Postmaster General has awarded a contract for furnishing stamped envelopes and newspaper wrappers for a term of four years from July 1, 1907, to the Mercantile Corporation of New York, for $5,525,386.

The President has decided to appoint George Otis Smith of Maine to be director of the geological survey, to succeed Charles C. Walcott, who has been appointed to be head of the Smithsonian Institution.

The number of cubic yards taken from the Culebra cut on the Panama Canal during March was 815,270. This exceeds the largest previous record for a single month by 177,000 cubic yards.

Forty cadets from West Point attended the National Arbitration and Peace Congress in Carnegie Hall, New York, as delegates to the "University Meeting" on Tuesday.

Secretary Metcalf has granted the application of Commander Robert E. Peary for a leave of absence for three years for further Arctic exploration.

Foreign.

It is said that the tentative program for the Peace Conference at The Hague in June, submitted by Russia in April, 1906, has been accepted by the Powers with certain reservations. The United States Government has reserved the liberty of submitting two additional questions, viz., that of the reduction or limitation of armament, and that of bringing about an agreement to observe certain limitations in the use of force in collecting ordinary public debts accruing from contracts. The British Government has reserved the right to raise the issue of disarmament, and also has reserved the right to abstain from taking part in or of withdrawing from discussion of any question which would be unlikely to produce useful results. Japan takes much the same position as England, and Russia herself gives notice that she will ask to be excused from discussion of issues that are impracticable. In France and in England sentiment favorable to disarmament is growing. Two o'clock in the afternoon, June 15, has been fixed for the opening of the Conference. The function will occur in the Knights' Hall.

Lord Cromer, for many years the British agent and Consul General in Egypt, has resigned his post, and Sir Eldon Gorst, who has had his entire confidence and was recommended by him as his successor, has been appointed to the position.

Germany will have a "world's fair" in Berlin in 1913. The movement is supported by leading merchants and politicians. The fair is intended to celebrate the twenty-fifth anniversary of the Kaiser's accession to the throne.

The Olympic games, which are to take place in London in 1908, will form the fourth of the series of Olympiads, which was inaugurated at Athens in 1896, and continued at Paris in 1900 and St. Louis in 1904.

The relations between the Russian Lower House of Parliament and the Administration are becoming acute on account of Premier Stolypin's repeated rebukes for overstepping its competence.

Industrial and Commercial.

Western railroad officials have practically decided upon the new schedules for passenger trains between Chicago and the Pacific coast and intermediate points. If the time as now agreed upon is put into effect, the schedule of the fastest train from Chicago to Los Angeles will be lengthened from seventy-one hours and five minutes to seventy-two hours; to San Francisco from sixty-nine and a half hours to seventy-two; from Chicago to Denver from twenty-seven and a half hours to thirty-two; from Chicago to the Missouri River from thirteen hours and twenty-five minutes to fourteen hours and thirty minutes.

Within a radius of thirty-five miles of the City Hall in Manhattan at the beginning of the present year there were three hundred and eighty-nine thousand telephones in service and under contract, requiring seventeen thousand employes to operate and manage, sixty buildings, and nearly eleven hundred thousand square feet of office space and one hundred and eighty-two central offices. During 1906 there were sixty-seven thousand telephones installed.

Six hundred million dollars is an estimate of the engineering work under way in and tributary to New York City alone, exclusive of ordinary building and of Federal expenditures in the harbor. Construction three times as great as the equivalent of the Panama Canal is moving steadily to completion and success.

Apparently successful efforts to establish the manufacture of chiffon in Nottingham, England, are described in a report from Consul F. W. Mahin. It is said that chiffon has hitherto been manufactured solely in the French district of Lyons, and it is estimated that last year fully twenty million yards were imported into England.

The Russian cotton crop for 1906 was approximately 147,500 tons of clean cotton, twenty-five per cent in excess of any previous year. The most important cotton zone of Russia lies in the Ferghana district of Central Asia, where the area under seed in 1906 was 64,676 acres. In the Syr-Darya district 10,090 acres were under seed.

The Carnegie Steel Company has placed in operation a big new plate mill at Homestead, just completed at a cost of $700,000. It is known as 72-inch mill, and it has a capacity of four hundred tons of plates daily.

The Boston and Maine Railroad, in order to relieve the congestion of its system, is spending $6,500,000 in new equipment, including eight thousand cars, fifty engines, and about forty miles of new double-tracking.

The Texas Cotton Warehouse Company has been organized at Dallas with $2,500,000 capital stock. Its purpose is to build cotton warehouses and establish warehouse systems.

The report on the Indian cotton crop for the season of 1906-7 shows that the total area in all territories reported on is now computed as 22,344,000 acres.

Cocoa importations into the United States are now averaging more than $1,000,000 a month, against an average of $250,000 per month a decade ago.

General.

In the center of Kildine, an island in the North Sea, is perhaps the most curious lake in the world. The surface of its waters is quite fresh and supports fresh-water creatures, but deep down it is as salt as the greatest depths of the sea, and salt-water fish live in it.

Through a gift from Mrs. Russell Sage the Moody School for Girls at Northfield, Mass., has benefited to the extent of about $150,000. With this there will be built a chapel and a music hall.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PEACE MEETING IN THE MOTHER CHURCH.

SUNDAY evening, April 14, there was held in The Mother Church, The First Church of Christ, Scientist, in Boston, a public meeting for the purpose of giving recognition and support to the great international peace movement now prominently before the world, and which is heartily endorsed by Mrs. Eddy and her followers. The Executive Committee of the National Arbitration and Peace Congress, held in New York, April 14 to 17, had issued a request to all the churches in that city to hold Sunday meetings auxiliary to the Congress, in order that the public might become better informed upon the whole general question of arbitration and peace, together with the work of The Hague Peace Conference. Mrs. Eddy, on being informed that such a request had been made, directed that a meeting should be held in The Mother Church in Boston, in order that the movement might receive the formal approval and sympathy of her Church.

The meeting, which was presided over by Rev. William P. McKenzie, was a success in every way. The large auditorium, with a seating capacity of five thousand, was completely filled before the meeting opened at half past seven, and fully a thousand persons stood throughout the exercises. The order of services included an organ voluntary, the singing of Hymn 153 from the Christian Science Hymnal, the reading of an appropriate selection from the Scriptures (Psalm 37 : 1–11 and Isaiah, 55 : 11, 12), silent prayer followed by the repetition of the Lord's Prayer, the reading of appropriate selections from Mrs. Eddy's book Science and Health, and addresses by Hon. John D. Long, ex-Governor of Massachusetts and ex-Secretary of the Navy, Hon. John L. Bates, ex-Governor of Massachusetts, and William Lloyd Garrison. After the addresses the immense audience sang the Doxology with impressive effect, and the meeting was then closed with the reading of 2 Thessalonians, 3 : 16, 18, as a benediction. The speakers were introduced by Mr. McKenzie, who said,—

An ancient proverb declares that "to the counselors of peace is joy," and a New Testament writer elaborates the thought by saying that "the fruit of righteousness is sown in peace of them that make peace." Furthermore we have the word of the Master, who declared the beatitude of those who seek peace and pursue it when he said, "Blessed are the peacemakers: for they shall be called the children of God." The teaching of Christian Science on this subject is found in the text-book, Science and Health, where Mrs. Eddy writes: "When the divine precepts are understood, they unfold the foundation of fellowship, in which one mind is not at war with another, but all have one Spirit, God, one intelligent source, in accordance with the Scriptural command: 'Let this Mind be in you, which was also in Christ Jesus'" (p. 276). "It should be thoroughly understood that all men have one Mind, one God and Father, one Life, Truth, and Love. Mankind will become perfect in proportion as this fact becomes apparent, and thus the true brotherhood of man will be established" (p. 467). "The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed" (p. 340).

The Pastor Emeritus of this church, Mary Baker Eddy, may not be present in person, but this is her preaching which you have heard; and you may thereby estimate her place as a teacher of righteousness and Leader of men into the ways of peace. For forty years she has labored in this Cause, and now—being relieved of worldly care—she is devoting her life with unexampled industry to the labor of establishing peace on earth and good will among men. Learning that the National Arbitration and Peace Congress would begin its meetings in New York to-day, and that by its Executive Committee the churches in that city had been invited to hold services in connection with the object of the Congress, our beloved Leader has deemed this a fitting occasion for her Church in Boston to manifest its interest in this great movement. This meeting has been announced at her recommendation, and you who have accepted the invitation are heartily welcomed. The speakers of the evening need no introduction to you, for they are nationally known and universally respected as men who, by lifelong devotion to the righteousness which exalts a nation, are now receiving the appreciation and kind judgment of their peers. I shall, then, simply mention the names of Hon. John D. Long, Hon. John L. Bates, and William Lloyd Garrison, and call upon the first-named speaker to address you.

Mr. Long spoke as follows:—

It seems to me especially fitting that this meeting, called, as your Reader has explained, in behalf of "peace on earth, good will among men," should be held in this beautiful church temple dedicated to God's love and peace in the hearts of the family of men. What is the spirit that calls together this vast congregation? It is the spirit of the Master, who taught the brotherhood of man, and that brotherhood is simply human affection, human sympathy, mutual dependence, common welfare. What is the spirit of these hymns that so gloriously swell from these thousands of voices sounding in unison under this vaulted roof, and so touching the better feelings of our nature that they bring tears—not idle tears, but happy tears—to the eyes in quick response? It is simply the spirit of true human fellowship. That spirit would not be here—you could not sing these songs—if this were a scene of blood and carnage

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

and hate and combat and wounds and death. Why not carry this spirit out beyond these sacred walls into the whole world—out beyond this sacred day into all time? That is the purpose of the Arbitration and Peace Congress.

This is hardly the occasion for a word. No man in this enlightened throng can instruct or inform it. No man can speak any thought or sentiment that is not already familiar to every one here. It seems to me, as I stand almost awed in this presence, as if it were rather an occasion for silence, an occasion for feeling,—for that silent but inexpressibly eloquent feeling which is better than words, which no eloquence can voice, which no poet, even the most gifted, can sing, and which reaches its highest glow and inspiration when great numbers such as this congregation come together,—electric cords thrilling from soul to soul—all souls in one. Divine spirit of sympathy, animating all hearts! All one with the exaltation of benevolence and love! Better perhaps that we remain in the deep silence of unspoken prayer, and listen there for the voices of the angels, who seem at such a time to come forth out of the recesses into which the activities of our busy life retire them and whisper to us the Beatitudes. The blessed angel to-night is the white angel of peace. We can hear her gentle voice repeating the words you have already listened to: "Blessed are the peacemakers: for they shall be called the children of God." And very happy it is that this angel is more and more becoming a familiar figure, not only in our own land but in all civilized lands. Under her benign influences even grim-visaged war has been smoothing his wrinkled front. No honor has come to our President greater than the medal given him in token of his interest and work in behalf of peace. War has no severer critic or rebuker than our great soldiers.—Washington, Grant, Sherman,—who counted the glories that it brought to them as little in contrast with its unutterable horrors, and there is no star in the recent constellations that shines with a brighter luster than that which attaches to the name and memory of John Hay.

It must be, of course, "that offenses come." I do not know how our recent war with Spain could have been avoided, or by what other human means we could have saved and rescued outraged Cuba from the horrors of oppression. I do know the pain in the heart of President McKinley that no power on his part enabled him to avert or prevent it. The salvation of Cuba, her independence, the glorious promise that awaits her, are the only justifications that that combat, thank heaven, was not waged for conquest, or for glory, or for gain. The other redeeming features in it are its brotherhood, the unparalleled generosity of our terms of peace, the utter absence from it of any national or personal hostility on our part, the genuinely Samaritan charity on the part of our Government in binding up the wounds growing out of the conflict, speeding the release, and even in paying the cost of transportation home of the prisoners. And let us also remember the never-to-be-forgotten humanity of Cervera, the Spanish admiral. There were splendid examples, even in the storm of battle, of Christian humanity on both sides.

So it may be said that the horrors of war are indeed lessened; but the reform must go farther than that. The civilization of this age demands that war shall not be resorted to except in the very last extremity, and that very soon under any circumstances war must cease. No war for glory or conquest or gain. No more Napoleonic wars, devastating a continent. No more wars like our invasion of the weaker Republic of Mexico. No more wars like those of the centuries now long past. No more wars like the Crimean. No more South African sacrifices on the altar of incompetent statesmanship. There may be exceptional cases, but next to none where those differences, which of course arise between nations as between individuals, must be settled; but they will be settled by some method other than war,—by methods which even on the score of material profit will bring better terms to both sides. This is the new spirit abroad. It is the spirit of arbitration. And we are here to-night to speed it. The Hague and other peace tribunals will outshine in glory even Gettysburg and other like battles, to the utter oblivion of the *ignes fatui* of Agincourt, and Austerlitz, and Buena Vista, and Sebastopol—names which we would love to forget and to expunge.

One of the bright things in our recent history is the many treaties with a view to arbitration which our Government has been making with foreign Powers, and I join most cordially with you to-night in swelling the voice of Boston, in recognition and support of the objects and aims of the National Arbitration and Peace Congress, which to-day opens its session in New York, and one of the most significant features of which is the representation there of the United States, and its participation there, in the person of our Secretary of State, Elihu Root.

Peace among the nations of the world! What a glorious consummation it is. And yet think of it—it is only extending the circle of that peace which our religion, our domestic and social relations demand of us as neighbors and citizens and brothers in our intercourse with one another. It is only a little larger expression of that peace of mind which it is the mission of this Church and of every church to teach; which allays the complexities in our individual lives, which bids the stormy passions and tumults and fret of our hearts be still, and brings in their place serenity and content, lifting us and lifting the world into a higher, calmer, kinder, happier, and better life.

Mr Garrison said,—

It is a privilege to join my voice with yours against the inhuman practice of war and for the settlement of international disputes by reason and arbitration. I assume that the prompt response of this Church to the call for moral aid in the avoidance of war is an earnest of abiding faith in the spirit of the Prince of Peace. Such is the profession of all churches, yet the Christian name has fallen into disrepute because of the readiness of its bearers to uphold and justify legalized murder when their own country is involved. The reading of the Beatitudes in the Sunday service is no atonement for habitually disregarding them.

Nobody objects to peace in the abstract. Even professional soldiers listen complacently to discourses in praise of its virtue, because they consider them counsels of perfection; for they have no bearing upon the present and to expect an immediate application is regarded as Utopian. They concede that the end is desirable, but the possible time of realization is always placed in the dim future, beyond the lifetime of the preacher. Meanwhile armies and navies must be sustained, else civilization and Christianity would go to the wall. This is the mockery of religion and the refuge of cowardice. The time to put into practice the principles that are to make a heaven on earth is here and now. The popular professions are hollow, for the current belief of Christian nations is that nothing would be more dangerous than the abolition of armies and navies. The kingdom of God is apparently dependent upon murderous cannon and battleships of steel. The spiritual armor of righteousness is only a figure of speech.

From this fixed habit of thought we are summoned to take part in a movement which, if it prove vital, will upset the basis of every government on earth. It will strip every uniform and badge from the gaudy soldiers who parade them, and, beggaring the profession of arms, send back to honest industry the locust armies that infest and devastate the earth. In a devout and earnest movement, all this reversal of accepted ideas must be faced. Its espousal implies a grapple with powers and principalities not lightly to be undertaken, for it requires the martyr spirit which every effort to better the world has exemplified in suffering and sorrow.

Digitized by Google

How much sincerity underlies this common movement having its center at The Hague can only be determined by the event. If, shirking the first and obvious question of reducing armaments, the conference shall confine itself to devices for alleviating suffering or exempting non-combatants from spoliation, it will be a waste of time and the loss of a glorious opportunity. To make war less hideous is to prolong its bloody reign. It is to attack only the leaves and branches of the evil. It is the roots which need the axe.

We have ourselves been through such a period of demoralization, consequent upon a war ranking among the most barbarous on record, and need a new vision and a readjustment of the moral sense. While the delirium of war and false glory possessed the land, while pulpits dealing in spurious declarations of love for peace were upholding acts which stagger civilization, while generals and admirals were worshiped in place of Jesus and the sword exalted above the cross, the country was blinded by blood and conquest. Sated with brutalities and cheated of hoped-for profits of distant trade, this guilty nation and our kindred in guilt across the Atlantic are ripe for repentance which should manifest itself in acts. Already Great Britain has shown us a noble example, and Gen. Botha, the hunted South African enemy of five years ago, is now the honored representative of his country in England. May we be swift to follow in such footsteps.

It would be cheering to think that morality prompted the institution of the arbitration court. It certainly actuates those who alone can make the experiment successful. But the prime motive and suggestion came from a despotism frightened by the costs of war, the weight of debt, the increasing difficulty of procuring loans, and the fear of a downtrodden and crucified people. And this accounts for the sending as delegates to The Hague, in the interest of established wrong, so many military and naval men, sure to defend the system of war. The irony of it! Soldiers at a peace convention! Slaveholders summoned to give advice regarding the destruction of their interests! The wolves invited to plan for the safety of the flock! But the weak nations have no cards of invitation, although they are the parties having most to dread. And no delegations of the common people, who are counted upon to furnish the revenues of conflict and bear the hardships resulting, are bidden to the august council.

Fortunately the general revival of a peace sentiment among all nations (consequent upon the revulsion from war horrors), and the growing seeds of real peace sown by Tolstoi and his apostles, are factors which despotisms cannot ignore. The efficiency of the genuine representatives of peace at the conference will depend upon the public sentiment behind them. Every demonstration with an earnest purpose and the courage of plain speech will strengthen the hands of these leaders. I trust that this meeting will cheer them with no uncertain message.

It is not the atrocities of war we wish to soften; it is the thing itself we seek to exterminate. We know the demoralization of camps, the abrogation of Christian morals demanded, the justification of methods born of the pit, we know the aftermath, the lowering of social conditions, the degradation, poverty, and vice springing from the hell of war. If the fomenters of our late war could see the future menace to civilization and democracy which in the form of consequent human wrecks will gather in the slums and multiply in the byways of our crowded centers, they would have troubled dreams. Every strife of arms begun by presidents or monarchs drags after it the inevitable miseries that dehumanize the race. And impoverishment and physical suffering are but a fraction compared with the destruction of ideals and soul corruption.

This new and growing Church, a marvel among religious movements, bases its faith upon the omnipotence of Mind. To extirpate evil, cease to think evil. To extirpate war, the human mind must refuse to entertain the thought of murder, whether of private or of public nature. And professing as we all do, whether in or out of church organizations, abhorrence of settling difficulties by violence, are we not bound to oppose customs that make for war? When we see the innocent school children of the city drilled in the art of killing, and parading the streets unconscious of the shame, have we not the duty to protest? When laws made in the interest of privilege rob uncounted millions of their birthright and freedom, surely the indignant remonstrance of the just should be heard around the world.

Churches as a whole have been found wanting when tested by trials in crucial times. Platitudes have taken the place of duty enjoined by the teaching of the lowly Man of Nazareth, hence popular religion has become a formula. If the saving philosophy of the creed which is here professed can meet the tests of Christianity that come with unrelenting frequency, this spacious temple will bear a glory which has departed from so many houses of worship where material means have been the lesson of the cross.

Mr. Bates' address was as follows:—

The history of mankind has been sad,—man fighting with man, tribe with tribe, nation with nation, wars for power and wars for spoils, selfishness the controlling instinct and respect for the rights of the weak almost unknown. The Chaldeans succumbed to the Assyrians. The Assyrians were conquered and despoiled by the Medes, the Medes gave way to the Persians under Cyrus, the Persians and Egyptians gave way to the Greeks under Alexander the Great, and the Greeks gave way to the Romans and the Romans to the tribes of the North. These large currents in history were but typical of all the smaller currents, There was aggression, spoliation, war everywhere. Like ferocious beasts, men have preyed upon each other. To the Jews all others were Gentiles, to the Greeks all others were barbarians, to the Romans all others were enemies. Treasures of incalculable value have been expended to kill men in war, and human life has been disregarded, suffering multiplied, and blood continually shed.

In twenty-five years of the century just closed, from 1855 to 1880, Europe and America killed 2,188,000 men, or four times the population of Boston, and the direct computable cost was thirteen billion dollars, or about six hundred dollars for each man killed. From 1791 to 1815 European wars cost the countries participating therein two thousand men on the average daily, or a total of seventeen million of slaughtered men. The horror of a San Francisco earthquake may blanch the faces of men, but these horrors are as nothing to those caused by the tempests of human passion. Even to-day, with the world on a peace footing, eight million men are under arms, the war budget of nations amounts to $1,800,000,000, annually, and ships of war are now building that will add another million tons to the tonnage of the world's navy. Engines of destruction are multiplying, bright minds have spent years in devising implements of warfare,—machines that will do the slaughter of a million javelins of old, explosives that will tear apart the bone and flesh of a regiment, and—still unsatisfied—many believe with Rear Admiral Campbell of the British navy that soon men will navigate the air with fleets that shall have power to annihilate the armies of the land and the navies of the sea.

Yet, in the midst of the preparations for strife, those who love the human race take courage because of what has been accomplished. Individual combats among men for the settlement of disputes, once considered honorable, have passed away, and in its place disputes are arbitrated under the law by judicial tribunals and settled not on the basis of the relative strength or the physical power of the individual,

Digitized by Google

but on the basis of the relative justice of his cause. Generations have passed since this stage of progress was reached, and it has taken mankind long to realize that brute force does not make right in the nation any more than it does in the individual; conscience binds them in equal bonds. But the realization has come, and great progress in the pacific settlement of disputes among nations has already been made.

This advance has almost entirely been confined to the last hundred years. More has been accomplished to make war unnecessary and odious during these five score years than during all previous history. Statesmen have learned that the highest statesmanship consists not in keeping the minds of the people diverted from ills at home by foreign war, but in avoiding war and curing the evil from which the masses suffer. Diplomatists have learned that it is greater to settle disputes with the pen than to lead victorious armies in slaughter. Nations have learned that the rights of smaller peoples are to be respected, and would scorn to make war merely for conquest or advantage. So the civilized world to-day appeals to reason and to justice more than to the sword, and seeks to settle its disputes by diplomacy, by treaties, by mutual agreements, by joint commissions, by arbitration. War is still a last resort, but the cases are multiplying rapidly of settlements by peaceful means that could once have been effected only by the sword.

In the last ninety years nations have entered into two hundred and thirty-eight arbitration treaties for the settlement of serious differences between them; for similar purposes over thirty international conferences have been held, and last and most wonderful achievement for the harmony of nations, there has been established at The Hague a tribunal to which international disputes may be submitted. Even twenty-five years ago such a tribunal would have been looked upon as an impossibility and the suggestion fit only for the fancy of the dreamer; but it is now a reality, and rapidly becoming a most effective agency for the perpetuation of a world peace. Who shall measure the progress already made? What tables can be used? Two hundred and thirty-eight arbitration treaties in ninety years! Two hundred causes of war removed! How much of suffering has been saved; how many homes have been kept intact; how many lives have been allowed to bless their fellow-men, by reason of the wars not fought and the sacrifices not necessary, because nations like men have settled their quarrels in a just way and not resorted to arms.

We meet to-night to show our interest in the greatest reform movement of the present age. Universal peace is no longer a dream, nor a vision never to be realized. It is a possibility, and the day of its realization is no longer to be regarded as in the distant, but in the near future. If you ask why one may speak with such confidence now, when to previous generations such a result seemed Utopian and impossible of realization, I answer that we live not only in a different generation, but under different conditions from any that have preceded. This old earth has shrunken from a globe with boundless spaces undiscovered, unmeasured, and unknown, to a mere whispering-gallery, whose farthest corners are instantly reached by the touching of a key, a gallery so small that one may hear the cry of every people and see the acts of every nation; but while the earth has shrunken, the human heart has expanded, and to-day, instead of holding all men of a different race as enemies, it opens to all humanity.

What has made this change possible? The printing-press has increased the information that men have in regard to each other. It has banished ignorance, and removed prejudices, and revealed the likeness of all men, whatever their color, or race, or condition. Steamships and railways have brought people into easy communication with each other; they have made possible travel and trade, and revealed the common interests of men. The telegraph and the telephone have furnished means to keep every part of the world in constant touch with every other part, and to keep all informed and all in line in the general advancement. Trade and commerce have resulted from these great inventions, and in the network with which business interests have encircled the earth have appeared bonds of steel, linking nations together because their business interests demand it. While neither the printing-press, nor the steamships and railroads, nor the telegraphs and telephones, nor commerce and trade could of themselves decrease the rivalries, or stifle the jealousies, or overcome the suspicions, or curb the cupidity, or eradicate the ancient hate of nations and make possible the dawning era of peace, yet they have made possible an accelerated and rapid development of that spirit of fraternity among men that finds its best expression in the Golden Rule, and that responds to the cry of Cain with the words, "I am my brother's keeper." —a spirit of fraternity that, starting from the sea of Galilee eighteen hundred years ago, has in the last century, largely as the result of conditions made possible through the agencies that we have mentioned, become a silent, uplifting, irresistible force, weaving chains of affection and good will, binding nations together, deprecating warfare, insisting on fair play, supplanting suspicion with confidence, hatred with love, and making possible the existence of tribunals to settle disputes, and of congresses to define the principles of international law; and this spirit of brotherhood, urged on by an awakening conscience, has more of power to promote peace and to perpetuate harmony among nations than has the thundering of cannon or showers of bursting shell.

The whole world is now interested in this matter. You can hardly take up a daily paper that does not contain a report of some gathering in the interests of this great reform; hardly a great city but what has its peace society; no great nation but what has among its most respected leaders men constantly making efforts to advance this cause. Within a comparatively few days there have been a score of meetings held. A great National Peace Congress opens in New York to-day. The British Ambassador to America in a recent magazine article calls attention to the folly of the increase of armaments. The British Prime Minister insists that the coming conference at The Hague shall take some action on the limitation of armaments. King Edward himself on every occasion takes pains to manifest his interest in the peace movement. The new King of Norway proclaims the fact that Norway is peculiarly pledged to promote the movement. The women's societies of Hungary have appointed a committee on peace and arbitration. Switzerland votes money for the work of an international peace bureau. These are but recent instances showing the world-wide interest in the movement. It would be impossible in the time allotted to me even to mention a tithe of the different manifestations of this reform movement at the present time, but there are so many that he who runs can see that the movement has gained enormous headway, and that with President Roosevelt and the American nation in the forefront of the movement, we can reasonably expect that the coming conference at The Hague will take advance steps on many matters that will tend to the promotion of a world harmony. Thinking men of all nations no longer desire merely, they are demanding that the court at The Hague shall be given larger power to arbitrate, that all civilized nations shall enter into treaties for the peaceful and judicial settlement of their disputes, and that the world court already inaugurated shall be supplemented by the world parliament, with power to define the great principles that shall govern civilized nations in their relations to each other. The world moves on, and "the thoughts of men are widening with the process of the guns," and many in this audience may yet live to see the day

> When the war-drum shall throb no longer,
> And the battle-flags be furled,
> In the parliament of nations—
> The federation of the world.

THE TRUSTEES' ANSWER.

On Monday, April 15, Streeter & Hollis, counsel for the Trustees appointed by Mrs. Eddy for her property, filed a motion on behalf of the Trustees, also their answer to the supplemental bill filed by the "next friends" in the proceedings now pending in the Superior Court at Concord. The full text of the motion and answer is as follows:—

STATE OF NEW HAMPSHIRE.

Superior Court.

Merrimack, ss. April Term, 1907.

MARY BAKER GLOVER EDDY *vs.* CALVIN A. FRYE,
By her next friends, ALFRED FARLOW,
GEORGE W. GLOVER, IRVING C. TOMLINSON,
MARY BAKER GLOVER, IRA O. KNAPP,
GEORGE W. BAKER, WILLIAM B. JOHNSON,
FRED W. BAKER, STEPHEN A. CHASE,
EBENEZER J. FOSTER EDDY, JOSEPH ARMSTRONG,
EDWARD A. KIMBALL,
HERMANN S. HERING,
LEWIS C. STRANG.

In the Matter of Trustees' Motion (Filed April 2, 1907) for Leave to Intervene and be Substituted as Plaintiffs in Place of said "Next Friends."

MOTION OF THE TRUSTEES THAT THE "NEXT FRIENDS" BE ORDERED FORTHWITH TO SHOW CAUSE WHY THE MOTION TO INTERVENE SHOULD NOT BE GRANTED.

On this fifteenth day of April, 1907, the Trustees, Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, move that George W. Glover, Mary Baker Glover, George W. Baker, Fred W. Baker, and Ebenezer J. Foster Eddy, purporting to act as "next friends" of Mary Baker G. Eddy in the original proceedings brought March 1, 1907, be ordered forthwith to show cause why the motion of the Trustees, verified by their oath and filed April 2, 1907, for "leave to intervene and be substituted as plaintiffs in place of said 'next friends,'" should not be granted, and to that end be ordered to file without delay their objections thereto, if any, in writing, verified by their respective oaths, and that, upon the filing of such objections, if any they have, duly verified by oath, a speedy hearing on said motion be ordered, so that the validity and effect of said trust deed and the relations of the Trustees as well as the relations of said George W. Glover, Mary Baker Glover, George W. Baker, Fred W. Baker, and Ebenezer J. Foster Eddy, to these proceedings, so far as the same may be effected by the execution and delivery of said trust deed and the property conveyed thereby to the Trustees, may be determined by the Court upon a full consideration of all material facts.

By their Solicitors,
STREETER & HOLLIS.

STATE OF NEW HAMPSHIRE.

Superior Court.

Merrimack, ss. April Term, 1907.

Supplemental Bill Filed April 6, 1907, under Docket No. 3652.

MARY BAKER G. EDDY *vs.* HENRY M. BAKER,
By her next friends, ARCHIBALD McLELLAN,
GEORGE W. GLOVER, JOSIAH E. FERNALD,
MARY BAKER GLOVER, TRUSTEES FOR
GEORGE W. BAKER, MARY BAKER G. EDDY.
FRED W. BAKER,
EBENEZER J. FOSTER EDDY,

ANSWER OF THE SAID TRUSTEES.

(Filed April 15, 1907.)

Henry M. Baker, Archibald McLellan, and Josiah E. Fernald, Trustees under trust deed executed by Mary Baker G. Eddy, March 6, 1907, say that, in making and filing this answer, they do not waive but do hereby reserve all their rights to object to the maintenance of these proceeding by said "next friends," to the form and sufficiency of the pleadings, and, among other things, their rights—

1. To a speedy hearing and decision of their motion (filed April 2, 1907) for leave to intervene and be substituted as plaintiffs in place of said "next friends."

2. To apply to the Court at any stage of the proceedings to investigate and determine the following among other questions:

(1) Whether these proceedings were brought in good faith by the so-called "next friends" for the personal benefit of Mrs. Eddy and are now being carried on for her benefit.

(2) Whether those proceedings (*a*) were brought and (*b*) are now being maintained by said "next friends" to protect the property interests of Mrs. Eddy.

(3) Whether these proceedings were initiated by said "next friends" of their own motion or by other undisclosed persons, not friends but enemies of Mrs. Eddy and her religious teachings, and not for the purpose of benefiting Mrs. Eddy or protecting her property, but to harass and harry her personally and to bring reproach, if possible, upon the religion of which she is the Founder.

(4) Whether these proceedings are illusory.

(5) Also any other question that may be raised as to the true status of such "next friends" before this Court, in these proceedings, as volunteers purporting to act for Mrs. Eddy and for her benefit.

With the foregoing reservation of their rights, the said Trustees, Baker, McLellan, and Fernald, answering said so-called supplemental bill, say:

1. With reference to the allegations in article I of said supplemental bill, they are informed and believe that the plaintiffs, on March 1, 1907, brought an original bill against the ten defendants named therein and that the same was thereafter served on said original defendants, but aver that the same has never been served upon the said Trustees or any of them.

2. With reference to the allegations in article II, the Trustees, upon information and belief, deny that, immediately after the filing of said original bill March 1, 1907, the original defendants or any of them procured and induced Mrs. Eddy to execute the deed referred to; but the Trustees admit that, upon the execution and delivery of the trust deed March 6, 1907, they proceeded, at the request of Mrs. Eddy, to take possession of all the real and personal estate conveyed thereby.

3. With reference to the allegations in article III, the Trustees deny that they or any of them now are or ever have been the agents and attorneys of the original defendants, or that they now are or ever have been subject to the control of said original defendants, or that they now are or ever have been a part of any combination with the original defendants or anybody else to surround and seclude the person of Mrs. Eddy or, in connection with

Digitized by Google

the original defendants or anybody else, to take charge, possession, and control of her property and business and manage the same according to their own will and pleasure. They also deny any knowledge that such combination now exists or ever has existed, and that the Trustees (or anybody else to their knowledge) have either completely or partially succeeded in effecting the alleged purpose of such alleged combination. They further deny that the said "next friends" ever had or now have "abundant reason" or any reasonable reason whatever to believe that the Trustees or any of them have ever acted or been associated with the original defendants in any combination whatever, as alleged by the "next friends," or that the Trustees, in connection with their alleged associates or any of them, or otherwise, have wrongfully misappropriated or unlawfully diverted either large or small or any sums of money and large or small or any amounts of property of Mrs. Eddy.

4. With reference to the allegations in article IV, the said Trustees deny that said Mary Baker G. Eddy was not competent for any reason to execute the deed of March 6, 1907, or to contract with the Trustees as set forth in said deed. The Trustees also deny that the said trust deed is a device either of themselves or of the original defendants, contrived and carried out for the purpose of enabling any one to accomplish the wrongful purposes of any alleged combination or for any wrongful purpose whatever; but, on the contrary, they aver that said trust deed was executed and the property delivered to the Trustees by Mrs. Eddy, without the knowledge of any of the original defendants except Mr. Frye, her private secretary.

The Trustees further aver, upon information and belief, that, except said Frye, no one of the ten original defendants knew of the making of said deed until several weeks after its execution; and that, with one other exception, none of the ten defendants had any knowledge or information whatever about the execution of said trust deed and delivery of property to the Trustees until March 30 or March 31, 1907.

5. The Trustees further aver that they in good faith severally contracted on March 6, 1907, with Mrs. Eddy, to accept the trust then created by her and agreed with her in writing to perform the duties of the trust according to the terms and conditions of the deed; and that, in addition to their personal written contract, they have executed and delivered to Mrs. Eddy a bond of one-half a million dollars, with sufficient sureties, conditioned on their proper performance of their said contract. They further aver that the execution of said trust deed and contract was a reasonable and proper act of the grantor and for her personal benefit and protection and for the benefit and protection of her property and estate, and that the allegations by said "next friends" of the grantor's incompetency to make such deed and contract are immaterial.

6. The Trustees further aver that it is their duty under said trust deed and their contract with Mrs. Eddy to protect and preserve her entire estate, and their further duty, if the allegations of the bill are true, to prosecute said ten defendants in behalf of the trust estate for the recovery of all money and property, if any, misappropriated or diverted as alleged; and they aver that they hold no relation to the ten defendants or any one else which will prevent or impair their prosecution, according to its merits, for the benefit of the trust estate and in accordance with their contract with Mrs. Eddy, this or any other action now existing or hereafter arising, and always under the supervision of the Court.

The Trustees respectfully ask the Court to order a speedy hearing upon their motion filed April 2, 1907, for leave to intervene and be substituted as plaintiffs in place of said "next friends," and that a decision of the question raised by the prayer of the "next friends" in the supplemental bill be postponed until the hearing and determination of said motion to intervene.

STREETER & HOLLIS, Solicitors. HENRY M. BAKER,
ARCHIBALD MCLELLAN,
JOSIAH E. FERNALD.

Merrimack, ss. April 15, 1907.

Personally appearing, said Henry M. Baker, Archibald McLellan, and Josiah E. Fernald made oath that the facts above set forth upon their own knowledge are true and the facts set forth on information and belief are in their belief true. Before me:

FRED C. DEMOND, *Justice of the Peace.*

SELECTED ARTICLES.

[M. E. T. in the *Putnam* (Conn.) *Patriot.*]

A dogma learned is only a new error; but a spirit communicated is a perpetual possession.—ROBERT LOUIS STEVENSON.

It is not mere succession of days, nor accident of birth and environment that constitutes a life; but the spiritual area a mind covers, its stretch over the thought of its own day out beyond time and space. In fulness of spiritual consciousness, in consecrated purpose, in abundance of giving, is the "mystery of the power" of the woman that is baffling the attack of a so-called "unprejudiced and impartial" periodical.

Mrs. Eddy has made claim not to gain, but to give; not to be loved, but to love; not to live in, but to lose self. This is the apex of life—renunciation of self. Greater love hath no man than this, that he die to self. "What have ye done?" is the divine question that searches and uncovers life. Biographies, creeds, motives even, face to face with deeds count but little.

No pure, no brave act is lost, or goes unwitnessed or unloved. Knowing this, God's children, who love much, can work with nobleness of aim, can wait with sweetness of peace. This she has done. This she is doing. Her life emphasizes the truth that we *are* insomuch as we are to other men. Not yet is her task here ended, nor her long day done. Her wisdom's gentle radiance still lights the way,—

An influence luminous,
A shining peace.

To her the "sundown comes splendid and serene."

[Editorial in the *Marshall* (Tex.) *Sun.*]

We are not qualified to deliver an essay on the creed of the Christian Science Church or on the facts connected with the recent suit, and we would not attempt it had we the information, for this is not a religious publication; but we have the greatest respect for any religious creed which accomplishes good. There is no question but that the Christian Science Church has accomplished great good. The Church is but twenty-seven years old, and yet it has more followers to-day than many older sects. No effort is made by any Christian Scientist to thrust the creed down an unwilling throat. . . . There is a spirit of intolerance about the attacks upon the Christian Science Church which we do not relish, and that hints at a violation of the Constitution of the United States, which guarantees to every one the right to worship as he chooses. We do not mean that to be a member of the Christian Science cult is in itself a

Digitized by Google

guarantee of worthiness, for we have yet to discover the creed which is not shamed by the hypocrite. No charge of hypocrisy can be laid at the door of Mrs. Eddy. She has led gently and has practised what she has preached. She has reached an advanced age with a record of good deeds. . . . We have the greatest respect for Mrs. Eddy and for her teachings, and we doff our hat to the Christian Science Church as we do to any sincere creed which helps men to do right.

[Charles K. Skinner in *The Saginaw* (Mich.) *Courier-Herald*.]

Christian Science has nothing in common with the philosophy of India. It does not teach that the whole universe is a falsehood or the creation an unreality, but it corrects the false conception that God's creation was material. It declares that God, being Spirit, created all things spiritual like unto himself. Our critic, from his view-point, believes that "Mrs. Eddy undoubtedly imbibed the ideas derived from the various doctrines of transcendentalism which were being greatly discussed in her girlhood days, and out of them, more or less commingled, formulated her own philosophy; which is substantially that of the idealists that preceded her, particularly those of India." This theory may satisfy those who have not fully and conscientiously investigated the teachings of Christian Science to the extent of demonstrating the statements laid down in the text-book, Science and Health, but those who have had the healing power of God proved in their own lives through Christian Science, after every other source of help had failed, know too well that the philosophy of India has nothing whatever to do with the origin of this religion.

The history of Mrs. Eddy's childhood days, which may be read in her book entitled "Retrospection and Introspection," and which is also referred to in some of her other writings, shows conclusively that she was a very spiritually minded child, seeking for things higher and better than matter with the undaunted faith that a truer and closer knowledge of God would prove Him to be the great and only help in time of need.

[Non-Sectarian in the *Ridgewood* (N. J.) *Herald*.]

In every way to be commended is the action of the Baptist Church of Ridgewood in inviting the various religious denominations to meet their new pastor. The ministers of churches bear important responsibilities not only to their own congregations, but to the community at large. The teachings they give out are far-reaching in effect on community life. Therefore, what more natural than that townspeople should take a real interest in the advent of a new minister? What more natural than that they would wish to meet him and learn to know him? What more natural than that the members of religious bodies be invited to meet and greet him and wish him Godspeed in his new field of labor?

Curious it is that this most natural thing has not been practised in this town except in a very limited way. Upon our Baptist brethren rests the credit of having ignored sectarian bias by widening their invitation to include the Christian Science and Unitarian bodies. This may seem a trifling attention, but it is in fact the first recognition extended by any church in Ridgewood to either the Unitarians or Christian Scientists, since either of these movements has existed here. Therefore too much cannot be said in praise of the courage and courtesy of our Baptist brethren in reaching out the hand of fellowship to these two denominations heretofore ignored by the churches in Ridgewood. May this truly Christian spirit mark an era of greater tolerance in Ridgewood towards all those who may elect to worship the one God in the manner in which their own reason prompts!

[Editorial in the *American-Reveille*, Bellingham, Wash.]

Without entering into the question of the efficacy of Christian Science in the cure of physical ailments, it may be said that as a physician of the mind it is the most wonderful cult of the century. The Christian Scientist makes the world better for his living in it, and the belief not only makes the believer happy, but it makes those around him happier and more comfortable. It has been the good fortune of the writer to be thrown with many Christian Scientists, and we have noticed certain characteristics about them which are well worthy of emulation. There is nothing of the hypocrite about the Christian Scientist. He believes thoroughly and unreservedly. Also he has the courage of his convictions, and will at all times and in all places defend his faith. Our Christian Science friends are all honest and conscientious. They are self-respecting, wear good clothes, move in good society, attend strictly to their own business, and pay their debts.

[Editorial in the *Boston* (Mass.) *Courier*.]

In giving those who introduced and supported the anti-Christian Science bill leave to withdraw, the members of the legislative Committee on Public Health proved themselves to be liberal, large-minded men, and their action reflects honor both on themselves and their constituents. The proposed bill, which was substantially the same as the four others that have preceded it, was wholly without justification, and sought to establish class legislation which would have benefited no one except a few medical practitioners. The members of the General Court also are to be commended for accepting the Committee's report and thereby setting the seal of their approval on its action.

[From the *Lafayette* (Ind.) *Courier*.]

Kokomo friends are greatly interested in the cure of Miss Lena Cooper, threatened with tuberculosis. Some months ago she left Kokomo for El Paso, Tex., but the climate did not seem to help her. She began a study of Christian Science, and at once followed the precepts directed by Mrs. Eddy, with the result that she has been restored to health and has gained in weight. She is soon to return to Kokomo, to resume her place with Cooper & Hardy, of which millinery firm she is a member. Miss Cooper had tried various remedies without avail, but began to improve from the moment she entered upon the study of Christian Science.

[Editorial in the *Medford* (Ore.) *Daily Tribune*.]

The faith of man in the goodness of his God does not strike us as a subject for jest. Christian Science aims to emancipate the afflicted from the thraldom of their misguided imagination, and if it does no more than dispel the foolish imaginings of the hypochondriac it is deserving of our approval. We have yet to find an instance in which the doctrine has upheld or counseled evil.

[From *The Grand Rapids* (Mich.) *Herald*.]

We may properly inquire into a man's conduct and into his relations with the world and society, and bring him to time if he does not conform to law and custom. But what a man's religion may be, what doctrine his soul favors, is not the world's business and the world has no right to inquire into it nor to make fun of it.

[From the *Winchester* (Mass.) *Star*.]

There is a feeling among many sensible people that the attacks on the Christian Science Church are unwarranted and uncalled for. The people belonging to this Church are among the best residing in this State or elsewhere, and it does seem as if they were entitled to be let alone—which is all they ask for.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

FROM THE CHURCH IN CONCORD.

Concord, N. H., April 11, 1907.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader and Friend:—We, the members of First Church of Christ, Scientist, in Concord, New Hampshire, gathered for our quarterly meeting, with one voice send to you our greetings of love and loyalty. Our place of meeting in the magnificent granite church edifice, which is your precious gift to this fair city, appeals to us as a fitting symbol of your life of piety and self-immolation for the good of others.

The members of this church keenly realize how unjust is the cruel persecution, and how uncalled for is the blind criticism which has recently been vainly aimed at you and your Cause. We know that you and your Church rest on eternal foundations "and the gates of hell shall not prevail against it." Your followers in this church, nearly all of whom are your fellow-citizens in the capital city of the Granite State, some of whom are your students, and some members of the household at Pleasant View, stand to-day stronger than ever before in our unwavering loyalty and heartfelt gratitude to you, our beloved Leader and friend.

This church rejoices with you that the vast majority of the good folk in your native State, and the overwhelming sentiment in your home city, entirely regardless of class or creed, are outspoken in your behalf. The New Hampshire Legislature, recently adjourned, which in the past has rejected legislation unfriendly to Christian Science and has incorporated into the laws of the State justice to your Cause, showed not a single sign of unfriendliness,—in fact its members in large numbers were frequent in their attendance upon the services in this church.

New Hampshire is proud of the record of your honorable family in this Commonwealth, and its worthy citizens appreciate that your entire life merits the encomium, "Well done." We know that from on high you have the solace, "I will not leave you comfortless: I will come to you."

On behalf of First Church of Christ, Scientist,

JOHN HENRY WORTHEN, JOHN WESLEY PLUMMER,
MABEL CHANDLER GAGE, WM. ANDREW THOMPSON,
JOSEPH A. MOORE,

Committee.

APPRECIATION.

WE are glad to publish the above letter to our Leader, Mrs. Eddy, from the church in her home city, and we wish that our allotted space would permit of the publication of all such letters that she receives, but it is impossible to print more than a small fraction of these expressions of confidence, gratitude, and love. The letters that we publish from week to week indicate the position which Mrs. Eddy holds in the hearts of her followers, and this position is rightfully her due by reason of her labors and achievements.

The unnumbered thousands who have been healed and reformed through Mrs. Eddy's ministry would fail in gratitude and in their duty to their fellow-men did they not testify as they do, in the Wednesday evening meetings and through our denominational periodicals, to the healing power of Christian Science which has been manifested in their lives. Nor is it surprising that whenever Christian Scientists are gathered together in the name of God and His Christ, they should give expression to the gratitude they feel to the one who has taught them, as men have not been taught since the days of our Master, how to have in themselves "that Mind which was also in Christ Jesus."

The eyes of the world are upon Christian Scientists, and in the degree to which they measure up to the standard of the Master are they loyal to their Leader, who has kept the words and works of Christ Jesus ever before them. It must be encouraging to her to know that notwithstanding the falsehoods that have been published about her, and the misrepresentation of her teachings that has gone on for years, the movement which she founded forty years ago is growing more rapidly to-day than ever before in its history. The Sunday services and Wednesday evening meetings are more largely attended, the lectures are delivered to larger audiences, our literature is more widely circulated, and Science and Health is being read by an ever-increasing number, who are experiencing through its study the healing which our Master said should follow them that believe. Christian Science is meeting the world's need, and its Founder has made for herself a place in history as well as in the hearts of men.

The letter from the Concord church is significant as an expression of the confidence and love with which Mrs. Eddy is regarded by those who see her from day to day and know of their own knowledge the esteem in which she is held by her fellow-citizens, who see her good works.

ARCHIBALD MCLELLAN.

TRUE WORSHIP.

The Lord alone shall be exalted in that day.—ISAIAH.

IN the second chapter of Isaiah we read that "the mountain of the Lord's house shall be established in the top of the mountains,"—in other words, that the Divine idea will be exalted above all human concepts, and that all nations shall seek to know the truth. The prophet also tells of the disappearance of idolatry,—"a man shall cast his idols of silver, and his idols of gold, which they made each one for himself to worship, to the moles and to the bats," and it is interesting to note that this prophecy is being literally fulfilled at the present time in China, where the people are casting their idols into the rivers, and where the native press is coming out boldly against idolatry. This may be regarded as a natural sequence of general enlightenment, but it should be remembered that the Chinese people have for ages been refined and intellectual, yet they were far from being monotheists. It should also be remembered that although the ancient Greeks and Romans were distinguished for their learning, they were grossly idolatrous, and their mental concepts of Deity were not only puerile but actually vicious.

In the Christian Science text-book we read that "the first idolatry was faith in matter" (Science and Health, p. 146). This is a very broad statement and is practically an indictment of all mortals who have come to have more faith in materiality than in God. In the olden time those who bowed down before the work of their own hands unquestioningly believed that they were thus doing right, and modern idolators as unquestioningly believe that they are right in ascribing to matter the power which belongs to Mind alone, but this does not alter the fact that all such beliefs are opposed to faith in God, who is Spirit. Mrs.

Digitized by Google

Eddy says, "The idols of civilization are far more fatal to health and longevity than are the idols of barbarism" (Science and Health, p. 173).

The idolatrous tendency of the so-called human mind is evidenced at every point,—yet, as Paul says, "We know that an idol is nothing in the world, and that there is none other God but one." Christian Science points out the blindness of mortals in turning away from Spirit,—the only source of good,—to matter, which is "nothing;" and in ascribing to "nothing" the power to give life, strength, health, and happiness. Although mankind continually indulge the belief in materiality as the source of good, they begin to be conscious of the bondage this belief imposes when they are sick and suffering, and then it is that they are most ready to cast "to the moles and to the bats" the idols which cannot deliver them, and to turn to Christ, Truth, in whom alone is salvation from all evil.

Mrs. Eddy's startling message to the world, as given in Science and Health, is that we must turn to Spirit to find life and health; and unnumbered thousands have thus turned when all else had failed, and they have found what Christ Jesus offered sufferers in his day, viz., life and health. Nor is this all; as worship is the deepest instinct of man's nature, the uplifted sense which ever accompanies true healing turns away from the idolatry of material belief to the worship of God "in spirit and in truth." The old prophet foretold the passing of idolatry when God should "arise to shake terribly the earth;" and said that then universal peace should be established,—"nation shall not lift up sword against nation, neither shall they learn war any more."

The greatness of the change which Science brings, only those can tell who experience its workings. "Thou shalt have no other gods before me" is then written not on tables of stone, but upon human hearts, and desire begins to turn away from matter to Spirit and spiritual things. In Christian Science the deification of the human mind as a healing agency has no place; it recognizes one Mind, one God, and emphasizes the Scriptural demand, "Him only shalt thou serve."

ANNIE M. KNOTT.

LECTURE IN THE MOTHER CHURCH.

The semi-annual lecture on Christian Science in The First Church of Christ, Scientist, in Boston, Mass., will be delivered by Judge Septimus J. Hanna, C.S.D., member of the Christian Science Board of Lectureship, Tuesday evening, April 30, at 8 o'clock. The lecture will be free, and the public is cordially invited.

LETTERS TO OUR LEADER.

Pleasant View, Monday, April 8, 1907.

Dear Leader:—Have you noticed the remarkable coincidence regarding the subject of the Atonement? When I began to look up the current Sunday Lesson-Sermon today, I was struck with the fact that just now, when through the last *Sentinel* you have invited the Field, that is to say, the world, to a consideration of this all-important theme as taught in your book, it is already being assiduously studied by all who love our Cause,—and they are legion,—as the present week's Lesson in the *Christian Science Quarterly* is the "Doctrine of Atonement." This is all the more singular and strikingly significant if, as I suppose, you had not even noticed that this is the Lesson for next Sunday. Truly God does move "in a mysterious way His wonders to perform."

Faithfully your student,

GEORGE H. KINTER.

Concord, N. H., March 31, 1907.

Mrs. Eddy.

My Dear Cousin:—I am just home after a two-months absence. While away I read the papers very little, but enough to learn they were still trying to persecute you, dear one. If it were in my power to give you one crumb of comfort, or in any way to express my love, and deep gratitude for what you have done for me, then would my heart be glad. Such selfless love as you have given to poor homesick and heartsick humanity cannot fail to win God's blessing and a "well done." I know how brave you are, dear heart, and from where your strength cometh, and "with God all things are possible." I would love to tell you some of the many kind and loving thoughts for you which I have heard expressed while away, and you could not doubt that your friends are many.

With deepest love, I am your true friend and cousin,

NELLIE.

(MRS. GEORGE H. MOORE.)

Toledo O., March 29, 1907.

Mrs. Mary Baker Eddy,

Pleasant View, Concord, N. H.

My Very Dear Teacher:—By reason of the flagrant falsehoods concerning you in recent publications, many persons have been led to inquire what is the truth about this matter, and are now eagerly reading the revelations of Truth in your immortal book, "Science and Health with Key to the Scriptures." Surely the night of ignorance is far spent, for the signs of the dawn are all about us. The prophecy in 2 Kings, 6 : 16, is being fulfilled—"They that be with us are more than they that be with them." What more convincing proof that you are the Discoverer of this truth need any one ask, than your latest edition of our textbook, where the truths are so clearly expressed that no one can mistake their meaning or doubt for a moment that you are their true author. Your words in the article entitled "Harvest"—"Her life is proven under trial, and evidences, 'As thy day is, so shall thy strength be'" [*Sentinel*, Dec. 1, 1906]—lifted a great burden from me, and I learned a lesson—to love more. Those words are an inspiration to me to press forward, to know only the truth you have taught me. Divine Love is present. "He shall cover thee with his feathers. . . . For he shall give his angels charge over thee, to keep thee in all thy ways." If in any way I can do anything for you, do not forget to call on me.

Your loving, grateful student,

SARAH J. CLARK.

New York, N. Y., April 2, 1907.

Dear Mrs. Eddy:—It is now twenty years since I first heard the words "Christian Science." Following the first explanation of its teaching and scope, made to me by one of your early students, within three days I experienced a return of eyesight, after having worn eyeglasses or spectacles fifteen years. I laid them both aside and have never looked through either since that happy day. Neither have I taken a drug or material remedy of any kind in all these years. In the two precious books, the Bible and "Science and Health with Key to the Scriptures," I have found the healing truth, and in your life-work an inspiration and an example. I beg to express this to you, for I, too, am a native of the Granite State, and remember my father's high appreciation of your brother's character and ability, which were widely recognized in New Hampshire. In the last twenty years, one fourth of my lifetime, I have watched the handful of your followers with whom I then affiliated, grow into a vast multitude, strong in the faith which is expressed in works,—a great cloud of witnesses to the truth for which you stand,—and each year brings to me a

Digitized by Google

deeper love and veneration for Truth's message, and for its Messenger. Faithfully yours,

ABBY A. MOODY.

Washington, Ia., March 31, 1907.

Beloved Leader:—The members of First Church of Christ, Scientist, Washington, Ia., desire to send to you out of full hearts an expression of remembrance and love, while passing through the supreme trial of the present hour. Words are inadequate to express the depth of our gratitude for the calm trust gained from the understanding of the truth contained in your words in "Miscellaneous Writings" (p. 267): "The audible and inaudible wail of evil never harms Scientists, steadfast in their consciousness of the nothingness of wrong and the supremacy of right." We rejoice that this understanding enables us to rest in the sweet assurance that you, God's faithful messenger to the world, are "safe in His strength," and in the knowledge "that His presence, power, and peace meet all human needs, and reflect all bliss" (*Ibid.*, p. 263). A wave of tender love flows out to you this glad Eastertide for your gift to us of the last edition of "Science and Health with Key to the Scriptures." We also wish to extend our grateful appreciation to each faithful worker in our Cause, which you so patiently and unselfishly, under God's guidance, have labored to establish.

It is the sincere desire of this little branch of the Mother Vine to prove our faith by our works; that we may gain the "love made perfect through the cross," so nobly exemplified in your life of unswerving devotion to divine Principle, Love. Lovingly and loyally yours in Christ,

MRS. C. A. ROBERTS,
MRS. L. E. MCCALL,
Committee.
MRS. E. W. MORRISON, *Clerk.*

Braintree, Mass., April 3, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The members of First Church of Christ, Scientist, Braintree, Mass., send you loving greetings and renewed assurance of their loyal support in this hour of trial and persecution. Your attitude of forbearance and compassion is an incentive to greater effort, on our part, to realize the Mind "which was also in Christ Jesus." Through the ministrations of this branch church —itself the outgrowth of the self-sacrificing labors of your devoted student, Mrs. Helen A. Nixon, C.S.D.—this community is experiencing the healing, saving touch of the truth voiced by you to this age. Proofs of the efficacy of Christian Science in destroying all forms of erroneous belief are constantly multiplying in our midst, as indicated by the testimonies given at our Wednesday evening meetings. The consecrated efforts of each member to exalt Principle above personality have borne fruit in increased efficiency in all departments of the work.

We are grateful to God for the revelation of Christian Science which has come to the world through your life of unceasing endeavor for humanity; and we earnestly pray that we may be faithful to our trust in these days of the fulfilment of prophecy.

FRANK H. SPRAGUE, *Clerk.*

Des Moines, Ia., April 3, 1907.

Beloved Leader:—The trend of events certainly indicates the rapid strides that you are taking out of matter into Spirit, that the experiences in your dream-life are coming forth so rapidly to be disposed of. It is such a comfort to think of you as being indissolubly connected with the divine Principle of your being. The cup which Thor, the peasant god of Scandinavian mythology, was challenged to drain dry was discovered to be invisibly connected with the ocean, and it made no difference how much water was removed, the cup was always full. I never can think of your love, peace, strength, activity, harmony, health, wisdom, etc., being exhausted, because they proceed from the ever-flowing fountain. "Man possesses nothing which he has not derived from God" (Science and Health, p. 539). We can now more fully appreciate this from you in "Miscellaneous Writings":—

> My world has sprung from Spirit,
> In everlasting day;
> Whereof, I've more to glory,
> Wherefor, have much to pay.

I am so glad to know through you that right is the touch-button of omnipotence. Life is sweet when loyal to God and to you, His messenger.

Ever yours with unceasing love and loyalty,

VALERIA J. CAMPBELL.

Gardiner, Me., April 4, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of First Church of Christ, Scientist, Gardiner, Me., desire to assure you of our gratitude, loyalty, and love. We recognize the wisdom of your leadership and earnestly desire to be more obedient to your teachings. We know that, as a result of your labor and self-sacrifice, the sick have been healed, the sorrowing have been comforted, and the sinful have been reformed. You have not only reiterated the command of the Master to return good for evil, but you have lived it.

Yours in the bonds of love,

EDITH MAY LUNT, ISABEL DORR,
LUCY E. LUNT, *Committee.*
EDITH MAY LUNT, *Clerk.*

Cotuit, Mass., April 4, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, First Church of Christ, Scientist, Cotuit, Mass., in our regular quarterly meeting held to-day, express to you our deep love and gratitude. Never before have we appreciated your great work for humanity so much, and we can only prove our love and loyalty by striving to be faithful and obedient in following your wise guidance. We thank you for the revelation of Truth which has come to us through your writings, and we pray to possess that Christlike spirit of patience and forgiveness which is manifested in your life. We are not dismayed by the efforts of the enemy to harm you, for we are assured that "no weapon that is formed against thee shall prosper; and every tongue that shall rise against thee in judgment thou shalt condemn." In loving gratitude,

ELIZABETH A. DOTTRIDGE, *Clerk.*

Boston, Mass., April 4, 1907.

Mrs. Mary B. G. Eddy, Concord, N. H.

My Dear Mrs. Eddy:—I wish to thank you for your words of loving consideration which recently came to me by the hand of your secretary, Mr. Wilson; you are indeed a friend to all who are striving to be and to do right. I would take this occasion also to tell you that I rejoice with you in the most recent evidence vouchsafed to you, and to your followers, of the ever-present and protecting power of divine Love. Surely "no weapon that is formed against thee shall prosper; and every tongue that shall rise against thee in judgment thou shalt condemn. This is the heritage of the servants of the Lord, and their righteousness is of me, saith the Lord."

I remain, dear Leader, yours lovingly,

IDA G. STEWART.

AMONG THE CHURCHES.

MANCHESTER, ENGLAND.

In Daisy Bank Road, Victoria Park, Rusholme, there is a building shaped like an inverted letter Y. It stands back from the road, and on each side of the path leading to the entrance is a stretch of greensward. Such is the exterior of First Church of Christ, Scientist. The design is certainly attractive, and the branches of the edifice, suggestive, it has been said, of the outstretched arms of Love, form reading and class rooms, while the stem is the nave or chapel, in which the services are held.

The first impression we receive of the interior is one of brightness. The walls, arched at the sides, are plastered or cemented white, and on them are texts in gilt from the Scriptures, and one by Mrs. Mary Baker G. Eddy, the Founder of the Christian Science sect. This reads, "Divine love always has met and always will meet every human need" [Science and Health, p. 494]. Instead of a pulpit there is a platform on which are two beautifully carved reading-desks. Behind them are two high, straight-back chairs, also carved. On the front of the platform is a vase filled with large lilies, and a number of palms add to the general picturesqueness. A small organ finds a place in a corner near to the platform. The congregation numbers about fifty or sixty, and the members of it are well dressed. The service is short and simple, and is conducted by a lady and a gentleman, who take up positions at the reading-desks. For those who desire to make inquiry into the tenets of Christian Science, the use of the free library attached to the church, it is announced during the service, is allowed daily.

Manchester (Eng.) *City News.*

ROCKLAND, ME.

The Christian Scientists of this city are to have a house of worship. The society, which has been worshiping for several years in a hall on Main Street, has been presented by David C. Smith of this city with the free use of the Cedar Street Baptist church, organ, and bell. This church was built in 1852 at a cost of $8,000 and is situated on one of the most sightly spots in the city. It has a town clock, purchased by contributions from the citizens. The church has not been used as a house of worship for twenty-five years and a few years ago was purchased by Mr. Smith, who owned the property adjoining. The work of fitting up the church for occupancy by the Scientists will begin at once.

ST. PAUL, MINN.

First and Second Churches of Christ, Scientist, conforming with a law covering the uniting of churches in the State of Minnesota, have consolidated under the name "First Church of Christ, Scientist, of St. Paul, Minn." A most cordial invitation was extended through the newspapers, and personally as far as possible, to all lovers of Christian Science in the city to unite with this new church. We are free of debt, and we trust that time will prove this church to be a true symbol of the church triumphant, reflecting only Life, Truth, and Love, and that it may be a credit to our beloved Leader and to the Cause of Christian Science.—CORNELIUS FOCKENS, *Clerk.*

LAFAYETTE, IND.

The Christian Scientists of this city have just taken a lease of five years on the Crain homestead, 703 South Street, and will begin to-day to make extensive improvements preparatory to its use as a place of worship. They expect to occupy it by March 20. They have been meeting in a room in the Milford Block, but the membership has grown to such an extent that it is necessary to secure larger quarters, and the place just leased by them is a very desirable one. A number of changes will be made, so as to convert it into an auditorium and reading room. Some of the best people in Lafayette are associated with the congregation and the membership is growing very rapidly.

Lafayette Journal.

SABULA, IA.

The Christian Science Society of this city has acquired a home of its own by purchasing of Hon. G. E. Hilsinger the building near the city fish-ponds, formerly occupied by the *Advocate* office. The society, which was started a number of years ago by two or three adherents, has grown steadily, and it was thought practicable to obtain a church building for their own use. The meetings were first held in a private home, later Eldredge's hall was used, and for the past seven years the Congregational church has been leased by the society. The Scientists expect to occupy their church by April 1, and the building will be neatly fitted up in preparation therefor.—*Sabula Gazette.*

LITTLE ROCK, ARK.

First Church of Christ, Scientist, has leased Hollenberg Hall, on the third floor of the Donaghey Building, corner of Seventh and Main Streets, in which it will hold its services in the future. This hall is supplied with an elegant modern pipe organ, which will be presided over by August Halter of Chicago. The Reading Room, on the same floor, is supplied with all authorized literature pertaining to Christian Science.

Little Rock Democrat.

SPRINGFIELD, O.

The Christian Science churches of this city have been united in one body and will be known as First Church of Christ, Scientist. The first services held since the union were those on Sunday morning and afternoon at the Grand Opera House and were well attended. The church will still retain its large Reading Room in the Bushnell Building until the large hall in the Union Block is remodeled for its benefit.—*Springfield News.*

CRANFORD, N. J.

The first Christian Science church to be erected in Union County will occupy the site of the Osborne homestead, at Milan Street and Springfield Avenue, Cranford. The edifice will cost $50,000 and be constructed of stone. Work will be started early this spring.

Plainfield (N. J.) *Press.*

The traditional American way, the traditional English way, of dealing with abuses, evils, injustices, is to remedy them by better laws, by better methods of administration, by the selection of better men for office. The process is not one of sudden impulse, not one of revolutionary change. It is sometimes exasperatingly slow. It requires patience as well as energy, careful thought as well as determination and zeal. It offers little excitement to those who do the work and does not present to the nation at large much satisfaction as a dramatic spectacle. But, slow as the process may be and otherwise deficient in soul-stirring quality, it has the great recommendation of being pursued in accordance with standards that are based in sober thought and that have been tested by experience.

THE LECTURES.

HARVARD UNIVERSITY CHRISTIAN SCIENCE SOCIETY.

Mr. Bliss Knapp, Harvard '01, delivered a lecture on Christian Science last night [March 25] in Phillips Brooks House. Mr. Knapp explained the origin and principal tenets of Christian Science, and laid particular emphasis on the religious foundation of the faith.

Christian Science is based upon a close relation between healing and religion. The metaphysical nature and cure of diseases is admitted by physicians. Christian Science has realized its results by mental and spiritual healing, which is made possible by religion. Evidences of cures are seen in the recovery of lepers, the deaf, and the blind. Contrary to popular belief, there is no connection between Christian Science and hypnotism. Mrs. Eddy has revived the lost spirit which is embodied in the union of religion and healing. All diseases are mental, and may be removed not by drugs but by spiritual understanding and childlike humility.—*Harvard Crimson.*

RICHMOND, IND.

Bicknell Young, who spoke at the Pythian Temple last Monday night [March 11] on Christian Science, was introduced by City Judge W. C. Convers, who said,—

Truth is the star of hope for mankind. As one of God's jewels, shining through the dark canopy of night, guided the three wise men to the birthplace of the Christ-child, so truth, shining through the gloom of error, shall guide us to the perfect life if we but follow. Truth should be accepted wherever found, and prejudice should not prevent us from reaping the abundant harvest of God's love. Prejudice and ignorance are the enemies of advancement, and hold in bondage those who refuse to look beyond the circle they prescribe. I am sure our common aim is the desire for a better understanding, a purer conception, and a more perfect attainment of truth. With a broad tolerance, as seekers after truth, let us give ear to the message our speaker brings to us to-night. Let us hear it with respect and decide its claims with fairness.—*The Richmond Palladium.*

ALHAMBRA, CAL.

The neat church edifice of First Church of Christ, Scientist, of Alhambra, was filled to its utmost capacity last Sunday afternoon [March 10]. It was a large audience of nice looking people, and many of them came from Los Angeles, Pasadena, and other points to hear the able and eloquent lecture on Christian Science given by Hon. Clarence A. Buskirk. It is admitted by many, not Christian Scientists, that the lecture was a feast, both spiritually and intellectually. Whether the auditor could at once believe all the claims in support of the Christian Science creed or not, he could not help but appreciate, if he be trying to live as a Christian, the undying realities that form the basis, the groundwork of the organization, viz., divine Love and faith; a plain, personal worship of God in all things, at all times and under all circumstances. It must be acknowledged that spiritual riches should come to all who individually embody in their daily life the underlying teachings enunciated by the expositor of Christian Science who addressed that large Alhambra audience Sunday afternoon. You could have heard a pin drop about all the time he was addressing the assembly.—*The Advocate.*

WALLA WALLA, WASH.

Clarence C. Eaton of Tacoma, Wash., delivered an excellent lecture to a good attendance at the Keylor Grand Theater last night [March 28]. The lecture was under the auspices of First Church of Christ, Scientist, of this city and was greatly appreciated by all who heard the speaker. Mr. Eaton was introduced by ex-Mayor Gilbert Hunt, who said in part,—

The religious world is waking up. We are claiming our birthright. Orthodox societies of all denominations are coming into closer touch with each other. They are beginning to realize that we should have dominion over all the earth, as has been promised us by the great Master. In these later days Christian Science has come to us with glad tidings, teaching us that our birthright is health and happiness and that it is not necessary for us to be under bondage to sin and disease.—*Evening Bulletin.*

LECTURES AT OTHER PLACES.

Ridgewood, N. J.—Judge William G. Ewing, Jan. 20.
New York, N. Y. (Fourth Church).—Rev. William P. McKenzie, Feb. 3.
Woburn, Mass.—Bicknell Young, Feb. 15.
Battle Creek, Mich. (Second Church).—Edward A. Kimball, Feb. 21.
Reynolds, Ga.—Rev. William P. McKenzie, March 1.
San Francisco, Cal.—Hon. Clarence A. Buskirk, March 1.
Pomona, Cal.—Hon. Clarence A. Buskirk, March 5.
Kinston, N. C.—Rev. William P. McKenzie, March 5.
Highland Park, Ill.—Frank H. Leonard, March 5.
Huntington, W. Va.—Frank H. Leonard, March 7.
Fort Wayne, Ind.—Judge Septimus J. Hanna, March 10.
Mystic, Conn.—Rev. William P. McKenzie, March 10.
Champaign, Ill.—Frank H. Leonard, March 10.
Richmond, Va.—Bliss Knapp, March 10.
Long Beach, Cal.—Hon. Clarence A. Buskirk, March 11.
Whittier, Cal.—Hon. Clarence A. Buskirk, March 12.
Philadelphia, Pa.—Frank H. Leonard, March 12.
Columbus, O.—Bicknell Young, March 14.
New York, N. Y. (Third Church).—Bicknell Young, March 15.
St. Louis, Mo.—Judge Septimus J. Hanna, March 15.
Tucson, Ariz.—Hon. Clarence A. Buskirk, March 16.
Williamsport, Pa.—Bicknell Young, March 17.
Emporia, Kan.—Judge Septimus J. Hanna, March 17.
Hartford, Conn.—Bicknell Young, March 18.
Wilmington, Del.—Bicknell Young, March 19.
Kansas City, Mo. (First, Second, and Third Churches).—Rev. William P. McKenzie, March 19, 21, and 22.
Asheville, N. C.—Bicknell Young, March 22.
New York, N. Y. (Sixth Church).—Bliss Knapp, March 24.
New Orleans, La. (First Church).—Hon. Clarence A. Buskirk, March 24.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

TESTIMONIES OF HEALING.

In October, 1904, I first heard of Christian Science through a family of Scientists whom I met,—an acquaintance for which I have since been very thankful. From the time I was a child I had felt it my duty to be a Christian, but was always in search of something I could not find. I had attended four different churches, but was not yet ready to accept the religious belief of any. I was searching for something better, and at last I had found it. I got a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and by the first of January, 1905, I was ready to lay aside all material remedies. The following August I had class instruction, and have been able to meet all problems myself, except that when I first took up the study of Science I had three treatments. Last July I met with an accident while out riding. I fell off, and seemingly injured my spine, but I got up, and mounted my horse, knowing that as God's child no error could harm me. After I had ridden a mile all pain had ceased. A few days later I noticed that when I stooped down there seemed to be some trouble, and I then set myself to work more earnestly than before. The result was that in three days I was all right.

I cannot express my heartfelt gratitude for what Christian Science has done for me. I thank our dear Leader, Mrs. Eddy, for the blessed truth she has made so clear to all who will accept it.

MISS LELA PHELPS, Wallace, Neb.

In gratitude for blessings received through Christian Science and for the help that others' testimonies have been to me, I add mine, hoping it may aid some one. Two years ago I was led to try Christian Science for physical ills,—an abnormal growth, ovarian trouble, etc. All of these were overcome by the power of Truth, and I am very thankful for the understanding which I am gaining of God's laws and the proof that they are laws of harmony. The spiritual uplift has been more to me than the physical healing, for through the study of "Science and Health with Key to the Scriptures," by our Leader, Mrs. Eddy, I am realizing the allness of Spirit, God, and the nothingness of matter. I am very thankful that one of God's children was pure enough in thought and purpose to be able to give out this spiritual food to others in need. How glad I am to live in an age when Christianity is again demonstrating the power of divine Love, with "signs following." Only a few weeks ago I was healed of a severe attack of bowel trouble, with a few treatments.

For all these blessings I thank God, also Mrs. Eddy for giving us the understanding in her book Science and Health. I try each day to reflect God, good.

MRS. IDA M. HOUCK, Tiffin, O.

I desire to express my gratitude for Christian Science. For two years I had not been able to sleep well and gradually became worse till I was unable to sleep at all. This seemed to result in great weakness, and I had to leave my family and home and go away into the country, but when I returned I was no better. A friend then told me about her healing and advised me to try Christian Science. She lent me a copy of the *Sentinel*, and after reading it my husband proposed that I try Christian Science, as it was not possible for me to go on as I then was much longer. I called on a practitioner, and asked if she could heal me, and if she had ever had a case like mine. Her answer was that she could not heal me, but that God could. I remained with her for some little time, and had a treatment; then I went home refreshed and hopeful. I slept soundly all through the night, and rose with such a consciousness of peace and joy in the morning! I never suffered from want of sleep again. I had worn an elastic band on my ankle for eighteen years for an injury, and had always to use a stick to help me when out walking, but I was able to lay these aside at once when I accepted Christian Science. I am now well and happy. I thank God for my health, and for the wonderful understanding of the Bible that has been given me through the study of the Christian Science text-book. I am grateful to Mrs. Eddy for all her love for suffering humanity.

(MRS.) ANNE MURRAY, Edinburgh, Scotland.

In 1862, after we had all been worn out with taking care of our children through a six-months siege of illness, I became so ill that I could not lie down. Our family doctor said I had a serious heart trouble; that I might live two years and I might die at any time. After a year I was better, but never could lie down without suffering. This condition continued with some changes till 1888. In the mean time we had eight doctors, and all but one agreed that I had organic heart disease, and that it could not be cured. Christian Science was then introduced to me through the healing of my daughter, and I was healed in a short time. My healing was thorough, and I could literally "run, and not be weary; and . . . walk, and not faint." Since that time I have with very few exceptions been able to overcome all the ailments which have presented themselves. I can never express my gratitude for what Christian Science has done for me, and for even the little understanding I have of this glorious truth that heals both mentally and spiritually. I am thankful that I live in this blessed time. I can never tell how thankful I am that one was found so near the infinite as to learn these truths and give them to suffering humanity. To Christian Science I owe everything I have and all that I am.—MRS. B. A. SAIN, Topeka, Kan.

After seven years of prolonged and intense suffering I am now perfectly strong and healthy. I had acute nervous trouble and every form of female weakness, resulting in what five doctors termed an impoverished condition of the blood. This condition continued so long that my friends and family were discouraged. The last year of this illness I had a continual cough, and frequent attacks of stomach and bowel trouble for which my physician failed to give any relief, except through morphine, the constant use of which was rapidly shutting off all natural action. My recovery seemed almost hopeless, and I received no encouragement from the doctors.

This was my condition when I found Christian Science, of which I knew nothing. I was told it was the true understanding of God, and I asked for treatment. In five days from my first treatment the Scientist pronounced me healed, but such peace and mental freedom came with the healing that I asked a continuation of the visits, which was granted me for ten days. This was in April, and the last of the following June I entered into a business engagement, giving my entire attention to that line of work for fourteen years, without losing a day on my own account. While I am no longer in the business world, I am a strong, healthy woman. It is eighteen years since my healing, and in all that time not a suggestion of sickness has appeared in my household that has not been met and mastered through an understanding of God as an all-powerful, all-wise, ever-present Father,—such an understanding as was perfectly demonstrated by our elder Brother, and awaits each one of us in proportion as we lay down self and follow him in the truth.

MARY VANCE MOORE, Eureka Springs, Ark.

Digitized by Google

Two years ago this spring I was attacked with what seemed to be rheumatic trouble, and having taken my stand for Christian Science, I of course used neither medicines nor applications. My wife, who is also working out the problem of being in Christian Science, had previously helped me in several attacks, and I asked her to treat me for my present trouble, which she did; but I did not respond as usual, and seemed to be getting worse all the time. I had become emaciated and one shoulder was much distorted. I was also suffering continually and getting very little sleep. The fear caused by these conditions, together with that held by all our relatives, seemed more than we could successfully handle, as we were young in Science. We finally decided to go for help to our former practitioner.

This time divine Love, which "always has met and always will meet every human need" (Science and Health, p. 494), met my case in a very few treatments. It was found that an abnormal growth was the chief difficulty, but it was destroyed by the power of Truth. I was relieved in every way, and have been a well and happy man ever since. I am very grateful to Mrs. Eddy, our beloved Leader, for giving us the blessed opportunity of learning a practical religion which can be demonstrated at all times and under all conditions. I am very sure that I owe my life to Christian Science, and I hope this testimony will appeal to others who may be about to undergo an operation, and lead them to try Christian Science first; because if God is all powerful, as we have always admitted, why not rely on this power to heal all our diseases, for He will never fail us. I am so thankful that I did not listen to those who wished me to try material remedies they thought would help me. I stood firm through it all and received my reward. Christian Science is without doubt the religion of Christ Jesus.

ALFRED T. TONG, Stapleton, Staten Island, N. Y.

I served four years in the Civil War, was captured and sent to Libby prison, and there contracted lung trouble and many other diseases. Following my return home I spent hundreds of dollars for medical treatment with eminent physicians. I then went to the Pacific coast for a change of climate, and spent nearly two years in traveling for my health. My family physician told me he could not cure me, and I then went to a hospital. After an examination I was told that I could not be cured, and that I could not live in this climate. After another medical experiment I was again advised to try change of climate, but I settled my affairs and waited for death to relieve me of my suffering, which I thought would not be long.

I was then appealed to in a way to which I could not say no, and I very reluctantly agreed to make one more effort for life. Christian Science was first brought to my notice from a reliable source, and as it was the only available thing that I had not tried, I went to a practitioner at Seattle, Wash., and was healed. I took thirteen treatments in May, 1902, and I am well to-day and living where the doctors said I could not live. I feel that I am living a new life, and that it is worth living, and now my chief aim is to do something for suffering humanity.

On my return home after being healed through Christian Science, I met the specialist who had treated me last, and he insisted on making an examination of my lungs. When this was done he said my lungs were virtually healed. Some time ago my former family physician had a case that he could not cure, and he sent the patient to me, saying he knew I had been healed, and that I could tell where the cure might be found.

GEORGE M. WADE, Montesano, Wash.

The 91st Psalm is a most wonderful argument for Truth, and when understood according to the teaching of Science and Health, we can realize that it is our constant protection from sin, disease, and death, also from limitation of every sort. As we daily live and practise the teaching of Christ Jesus,—doing unto others as we would have them do unto us,—there will be no wrong done unto another, and the constant declarations for Truth will usher us into the kingdom of eternal harmony—heaven. The author of the Christian Science text-book has given to this age, in Science and Health, the rules for all true mental work, and those who follow her, working in loving obedience, will reap the true riches.

I cannot find words to express what the truth, as taught in Science and Health, has brought me. Eleven years ago I was a physical wreck, pronounced incurable by specialists. I suffered from a serious and distressing trouble of the eyes, and had almost constant pain, but was completely healed in Christian Science by the study of our text-book, the aid of a practitioner, and by daily working against error. It was a struggle, but a glorious one, after learning what the true warfare means, as we come to know it in Science and Health. Millions shall yet rise up to call her blessed who has given us "the little book." The Bible, with this book, is the impersonal preacher, teacher, and missionary, proclaiming Truth to all the world. To think the truth and live it brings us health, riches, joy, and heaven.

CHARLES F. MEEK, New York, N. Y.

It is with a deep sense of gratitude that I acknowledge the many benefits received in Christian Science. It is over three years since I began the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the many ways in which I have been helped are to me proof positive that it is the truth of which Jesus spoke when he said, "Ye shall know the truth, and the truth shall make you free." I was taken with severe lung trouble, and after the first attack, I consulted a physician who was considered the best in our town. He gave me what he called a thorough examination and said that the conditions were very serious and that if I did not resign my school position and go to a warmer climate, at the end of another year I would be where nothing could help me. I, however, kept on with my school duties, having two more alarming attacks after this and growing weaker each day, until at the time school closed in June I was a complete wreck, physically and mentally.

Two weeks after the close of school I departed for Los Angeles in search of health. It was while at Phoenix, Ariz., where I stopped a while on my way to Los Angeles, that Christian Science was first brought to my notice. At first I looked upon it as rather a foolish idea, but at last decided to give it a trial. However I went on to Los Angeles first. I was in Los Angeles just one month when a great sorrow came to me. It seemed that I had prayed so earnestly, and then to have to endure this sorrow was more than I could bear and still believe that there was a just God. If only I had known how to pray aright. After returning to my home I found that I had contracted a cold on the train, and a deep sense of fear came up, for the symptoms were alarming. I dared not go to my doctor, for I knew what he would say. I seemed to be a complete nervous wreck, but in the face of all this my school was to begin in three weeks.

It must have been the "still, small voice" of Truth speaking to me, for one day as I lay on my bed, thinking over all the past, the thought came to me, "Can it be that I have not understood God aright, and this is why He has not answered my prayers?" I thought of the many dear people we had met at the testimony meeting in Los Angeles, and of their wonderful testimonies of healing. I said to myself, "If God healed them He will heal

Digitized by Google

me;" and I then decided to read Science and Health and see if I could find what was in it that could heal, for all those whose testimonies I had heard referred to Science and Health as having been the source of their redemption. I commenced reading, and suffice it to say that it did not take long to discover what was in the "book" to cause them to adhere so closely to it. I was gradually becoming "in Christ . . . a new creature." When the time came for school to open I assumed my duties the same as ever. It was not long, however, until error seemed stronger than Truth to me, and I secured the help of a practitioner. After having taken a week's treatment I felt again that Truth was the conqueror; not that I was completely healed then, but with patient study and a constant striving to realize God's allness I am now able to say positively that I am healed, not a trace of the troubles which I have mentioned being manifest in any form.

I have also been healed of weak eyes, having worn glasses for eight years. I seldom spent a day in the schoolroom without going home in the evening with a distressing headache, but that is all of the past now. I am grateful for the many ways in which I have been helped in Science, but for none more than the spiritual uplifting I have received, and I feel that I am learning to know God better every day. It seems a grand privilege to live in an age when one has been found through whom God has revealed to us this new-old truth, and it is my desire to show by deeds, not by words, the life of a true Christian Scientist, and to let my light so shine that I may be able to help my brothers in their struggle for life and liberty.

MRS. BESSIE M. DEMOTTS, Brookings, S. Dak.

I gladly submit the following facts of my healing through Christian Science. After suffering for several years from stomach and bowel trouble, which developed into a bad case of gall stones, I was under the care of a physician for several months; but was constantly growing worse. I was told by the attending physician that an operation was the only hope of recovery. I was taken to a hospital, and an incision was made in the abdomen, disclosing such a diseased condition that the operation could not proceed. A very painful course of treatment was kept up for several weeks, but I was constantly growing weaker, and my system more diseased, and the physician said that another operation would be necessary. Then, when I had regained my strength, a third operation would be necessary.

At this juncture, in a state of great despondency, I turned to Christian Science. I should have stated that in addition to the trouble before mentioned, another disease had developed. I went to the hospital on Feb. 22, 1904, and came out on March 15. I began Christian Science treatment about a month later, and by June I was completely healed. On the day of my remarkable healing I was in bed and suffering intensely. I fully resolved, however, that I would not again resort to any material remedy, but rely wholly upon God. I turned to Science and Health by Mrs. Eddy, and after reading a paragraph, realized immediate relief from the pain, and was able to arise at once, dress myself, and join my family at supper. The discharge ceased immediately, the last disease disappeared in a day or two, and I have never had a return of the trouble. My health is perfect, and I find the truth, as taught by Mrs. Eddy, to be an ever-present help in all times of both physical and spiritual need.

MRS. CANDACE MITCHELL, Birmingham, Ala.

It is about eleven years since I was first led to try Christian Science, after all else had failed. Some of my worst troubles were female disease, malaria, etc. I was then living in Texas, and everything in the way of medical treatment and surgery was done for me, till at last the verdict was that I must get out of this climate if I wished to save my life. I was then sent to Denver, Col., and while there had an eminent surgeon treat me. For a time I seemed better, only to go back into worse conditions than before. After my return to Texas, we moved to Arkansas, with the hope of saving my life. After giving the climate a good chance to heal me,—which it failed to do,—I heard of Christian Science. I tried it as a last resort, and was cured. Though my healing seemed slow, I clung to Truth and never gave up nor thought of going back, as I had tried everything else. I now know that in my case there had to be a transformation through the renewing of the mind, and that nothing but Truth could ever have reached me. I have not gone into details nor told how hopeless seemed the conditions as I do not like to recall them to memory.

MAGGIE PRATT, Fayetteville, Ark.

With a sense of gratitude to God for Christian Science which no words can express, I will tell of one of the many proofs we have had of its truth and efficacy. We were having our yard filled in, and our little girl, five years old, had gone in the wagon after a load of soil. On the return trip the horses became frightened and ran away. Both the driver and child were thrown out, and the large truck wagon with its heavy load went over the child. A lady who saw the accident begged my husband to take the child to a doctor before bringing her home, knowing that I was a believer in Christian Science. He brought her home, however, and asked if I did not think we had better have a doctor. I said no; for I felt that I dare not trust her in that condition to material methods. Instead, we sent for a Christian Science practitioner. The accident occurred about six o'clock on a Saturday evening. At twelve o'clock that night the child was seemingly helpless, for the little body was terribly crushed. Twenty-four hours later she still seemed to be in a dangerous condition, but the practitioner held firmly to the truth as taught in Science and Health. Not a single material application was employed, but every man-made law and every medical law was overcome. In forty-eight hours our little patient ate a nice breakfast. In five days she could sit up; in eight days she could stand up, and her feet began to turn to their natural position. The gain was rapid and steady. In three weeks the demonstration was perfect, and the Bible promise was proven true, "They that wait upon the Lord shall renew their strength; . . . they shall run, and not be weary; and they shall walk, and not faint."

This occurred two years ago last March, and our child is unusually large for her age and has splendid health at the present time. The evidence of injury to the hip is nearly obliterated, and she has had some good demonstrations for herself and others. Does any one wonder that Christian Scientists love and reverence their Leader, Mrs. Eddy?

MRS. IDA HOBBS, Prescott, Ariz.

[Written for the *Sentinel*.]

RISEN WITH CHRIST.

WILLIS V. COLE.

WHEN he, the God-anointed, gently stepped
From out the rock-ribbed tomb that Sabbath morn,
Where'er his foot alighted blossomed forth
A virgin lily; thus was Easter born.

From out the sepulchre of sense now men
Step forth, transformed, into Love's sunshine clear;
And then beneath their feet the lilies fair
That symbolize man's purity appear.

FROM OUR EXCHANGES.

[Rev. R. J. Campbell, M.A. in *The British Congregationalist.*]

We are here to express God, to do His will. He is ever waiting to refresh the world with love, power, and joy. All history represents the incoming of God to the life of the world. Wherever He finds opportunity He will, in accordance with the law of His own being, give and do the best. That best already exists for every one of us, and always has existed; it is eternal. You cannot so much as imagine a want which is not already supplied in the eternal purpose. . . . When, with an unselfish purpose in your heart, you seek to draw upon the universal love for the means wherewith to express that love in the world, you can be perfectly confident that you will get what you ask for, and even more than you ask for; for your prayer supplies opportunity for the operation of a great spiritual law.

[*The Congregationalist.*]

It is said that interest in religion is not waning, that never was there more earnest devotion in cultivating men's higher nature, and greater gifts to education, and to every form of philanthropy than now, yet attendance on church services is declining, and interest in institutional religion grows less and less. The chief reason for this condition is the same as that which threatens business prosperity in the midst of plenty. It is the constant culture of distrust of religious leaders and institutions. That honest and wise men should differ in their opinions is natural. Wisdom grows through fair discussion of their opinions by men who trust one another; but distrust is cultivated by attributing unworthy motives to Christian teachers, and by labeling their views as dangerous to the moral life of the community.

[*The Examiner.*]

A man called of God to any work is borne along in it by the Divine will, and radically differs from a self-constituted prophet and reformer. He will be waiting on Providence and not running ahead of it. It may be difficult in the beginning of his work to distinguish between the true prophet and the self-constituted one. It will not be difficult in the end. If God has not spoken by the prophet, events will condemn him. No circumstances can take off from men the responsibility of listening and following.

[*The Outlook.*]

No request is worthy to be called a prayer which expresses a desire for that which we ourselves are unwilling to grant. The debtor who, while pressing those who owed him, asked his lord to remit his own debt, was guilty of a double offense; he was guilty of the debt and he was guilty of arrogance. A prayer for forgiveness uttered in an unforgiving spirit is a piece of brazen impiety. The petition, "Forgive us as we forgive others," is not only a prayer for pardon; it is also a prayer for a spirit of decent reverence.

[*The Christian Register.*]

Free thinking is not dangerous, and progress is not a crime, although some so esteem it. It is curious to note in the trials of the heretics that the question is always what the man has believed, and not what he has done. A heresy trial never weighs gold, but weighs what baser metal it can find.

[Rev. Walter Dole, D. D., in *The Universalist Leader.*]

Evil has no absolute existence. It was not created by God. . . . Were men to strictly follow truth, love, and justice, there would be no evil in the universe. Every faculty of man, guided by truth and love, leads to God.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Under a verdict of guilty, brought in by a Federal Jury in Chicago on the 13th, the Standard Oil Company is liable to fines aggregating $29,260,000. The verdict was found in the rebating case which has been on trial for six weeks, and the company was found guilty on 1,463 separate counts in the indictment, each of which calls for a fine of from $1,000 to $20,000 under the Elkins law. Only one ballot was required to find the verdict. During the trial evidence was submitted by the Government to show that while the published tariff of the railroad filed with the Interstate Commerce Commission named eighteen cents per one hundred pounds as the rate between Whiting, Ind., and East St. Louis, Ill., the Standard Oil Company of Indiana got a special rate of six cents. The defendant company pleaded that it had acted in good faith in believing that the six-cent rate had been properly filed with the Interstate Commerce Commission, and was therefore a lawful rate. It is expected that the Standard Oil Company will move for a new trial. If this is denied the probable course of action will be to ask the court for stay of judgment; and on the ground that only one violation of the act was committed in the series of shipments, it will be contended that the fine cannot exceed the maximum of $20,000. Should this stay of judgment be denied, an appeal may be made to some higher court.

The Joint Congressional Postal Commission appointed at the last session of Congress, in a formal statement bearing upon the work thus far done, favors the establishment of modern up-to-date business methods in conducting the business and keeping the accounts of the post office and postal service. "The present system was established in 1833," says the statement, "and in view of the great changes and remarkable growth of the postal business since then, it is believed that the Commission will be able, in the light of the proposed examination, to recommend to Congress a revision of the postal laws to the great advantage of the public service. It has been said by those claiming to be well informed, that a contract could be entered into with responsible parties to conduct the Post Office Department and the postal service with the same efficiency as now in vogue for one-half the cost, and the investigation now provided for will prove or disprove the correctness of such claim. The expert investigation will be prosecuted energetically to ascertain the methods employed and the sufficiency and accuracy thereof, for the purpose of collecting and guarding the revenues."

Another step for the enforcement of the prohibitory law in Kansas was made a few days ago when Attorney General Jackson filed *quo warranto* petitions asking the Kansas Supreme Court to drive all brewery companies out of Kansas. Two additional suits were filed, one against a wholesale liquor house at Wichita and the other against a company owning real estate in Kansas. The Supreme Court is asked to oust the corporations from doing business in the State. All of the corporations are chartered in other States and cannot under any circumstances obtain a charter in Kansas, as the business is prohibited.

The magnificent new headquarters of the United Engineering Societies, mechanical, electrical, and mining, in Thirty-ninth Street, New York, donated and erected by Andrew Carnegie at a cost of $1,500,000, was formally dedicated on the 17th. President Roosevelt sent greetings to the engineers' societies upon the opening of their new home, which is national in scope, and a similar communication from President Diaz was read by the Mexican Ambassador to America. Earl Grey, Governor General of Canada, who was delayed in his arrival, sent his congratulations to Mr. Carnegie and the united engineers by wire.

President Roosevelt has promulgated an order giving Saturday half-holidays during July, August, and September to all mechanics, laborers, and other employes at the manufacturing and supply arsenals and depots under the War Department and in the offices of the division and department headquarters of the army, and in the engineer department at large.

A bill aimed against the abuse of expert testimony in murder trials where insanity is pleaded as a defense, has been introduced in the New York Assembly. The bill would prevent hypothetical questions being asked in any criminal case where insanity is a defense.

Corporation Counsel Ellison of New York, acting, it is understood, under direction of Mayor McClellan, has sent a request to Albany for the appointment of a legislative committee to investigate all the departments of the municipal government.

When assembled in Hampton Roads upon the opening of the Jamestown Exposition, there will be an aggregate of thirty-six warships of various types representing the United States.

What the Philippine Islands have cost the United States is to be the subject of a careful inquiry by the Bureau of Insular Affairs of the War Department.

Foreign.

The expiration of the eighteen months' limit for the evacuation of Manchuria by the Russian and Japanese troops was marked by the nomination on the 15th at St. Petersburg of Russian consuls at Kirin and Tsitsihan, the last two towns in Manchuria to pass from Russian hands to the Chinese civil administration. The evacuation of the Russian troops was completed March 21, almost a month ahead of the specified date. Japan also has fulfilled her obligations and when the management of the Manchurian Railways was transferred to Baron Goto's company on April 1, the Japanese Government commenced withdrawing the remnant of the troops employed in Manchuria. The work was completed on April 8.

The Japanese Government has issued proclamations extending the guild system and giving companies the right to borrow freely of State funds at low rates of interest. The number of guilds has increased in six years from thirty to seven hundred. The Minister of Agriculture and Commerce is urging the further development of the system. The action of the Government in loaning money to great industrial projects is construed as a step towards ultimate federal control, and ownership of the industries so generously fostered. Salt, tobacco, and camphor have already passed into Government hands and railroads are tending that way.

Hull and Leicester, England, the former with a population of about two hundred and forty thousand, have had a successful year with their municipal tramways. Hull has reckoned her net profits at $120,000, out of which $75,000 goes to the aid of the rates. This system has been under municipal management for seven years, during which the profits have amounted to over $500,000. Leicester reports a successful year for municipal tram cars, with revenues of $580,000 and working expenses of $345,000.

For the fiscal year ending June 30, 1906, the total number of arrivals of passengers at the port of Halifax was 34,154, of whom 23,525 were new settlers, an increase of 3,482 persons over the previous fiscal year.

Two hundred and fifty thousand Jews left Russia in 1906, of whom two hundred thousand came to the United States. Thousands more of Hebrew families are now preparing to leave Russia.

Industrial and Commercial.

A new group of cotton-goods mills is projected for East Boston, which will cost from four to five million dollars and employ eight thousand hands. The buildings, as planned, will be on the water front and so be able to receive raw material and ship finished goods by water.

Negotiations looking to the formation of a world-wide rubber trust by the consolidation of the United States Rubber Company and the Intercontinental Rubber Company, with a capital stock of $150,000,000, have been entered into.

The average value of poultry and eggs sold annually in the State of Kansas as returned to the assessors in the last five years was $6,849,662, or a value of nearly double that of the potato crop for the same years.

The Baltimore and Ohio Railroad has started agents at work securing rights of way and buying property for the ultimate building of a four-track system between Pittsburg and Cumberland, Md.

Nearly three hundred and twenty million pencils are manufactured in the United States every year, requiring seventy-three hundred thousand cubic feet of wood, practically all of which is red cedar.

The Lake of the Woods Milling Company of Keewatin, Ont., has received orders for flour from the Orient amounting to one hundred and forty thousand sacks, to be shipped by July 1.

Practically all of the merchant iron that the Pittsburg district will produce during the last half of the year has been closed out by purchases made by important steel interests.

The new corporations organized under the general laws of Connecticut during March numbered fifty-two and were capitalized at $31,715,000.

An accurate census shows that the number of stenographic clerks employed in the nine executive departments in Washington is 1,568.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ANSWERS FILED.

THE answers of the ten Christian Scientists named as defendants in the proceedings commenced by the so-called "next friends" of Mrs. Eddy, were filed in court on the 17th inst. These answers were made under oath, except the answer of Mr. Kimball, who was absent and asks leave to file his oath at a later date. Mr. Frye's answer reads as follows:—

STATE OF NEW HAMPSHIRE.
SUPERIOR COURT.

Merrimack, ss. April Term, 1907.

MARY BAKER GLOVER EDDY, By her next friends, GEORGE W. GLOVER, MARY BAKER GLOVER, GEORGE W. BAKER, *vs.* CALVIN A. FRYE, ALFRED FARLOW, IRVING C. TOMLINSON, IRA O. KNAPP, WILLIAM B. JOHNSON, STEPHEN A. CHASE, JOSEPH ARMSTRONG, EDWARD A. KIMBALL, HERMANN S. HERING, LEWIS C. STRANG.

The Answer of Calvin A. Frye.

I.

The said defendant admits that said Mary B. G. Eddy is a resident of Concord in said County of Merrimack, and, so far as he knows, the names and places of residence of the other persons named in paragraph I of said bill are correctly stated.

II.

The said defendant is informed that said Mary B. G. Eddy is 86 years of age; but he denies that her mind is or ever was so impaired by the infirmities of age and otherwise as to render her in her circumstances incapable of so understanding her property rights as to be able to exercise her full and unbiased will with respect thereto; and he denies that she is, or ever has been, incapable of managing her affairs and protecting her property with prudence and discretion against the undue influence, control, or fraud of others; and he denies that she is incapable of managing the present legal proceedings.

III.

The defendant says that he has been in the employ of the said Mary B. G. Eddy for about twenty-five years last past; and for a considerable part of said time he has acted as private secretary for her; that during all the time of his said employment her said house at Concord and all other houses in which the said Mary B. G. Eddy has resided during the period aforesaid, together with all persons employed and residing therein or connected therewith, have always been, at all times, under the absolute control and direction of the said Mary B. G. Eddy; he denies that he alone or in conjunction with the said defendant Strang or others of said defendants kept the said Mary B. G. Eddy carefully or otherwise surrounded and secluded, either by themselves or by household servants selected for that purpose by himself and the said Strang or other of the said defendants.

The said defendant cannot state how many persons see the said Mary B. G. Eddy at her said house or elsewhere, nor does he know the exact length of time by her allowed to them when calling upon her, but he says that the said Mary B. G. Eddy is and for a long time has been engaged in important religious and literary work, which, together with the transaction of her business affairs, consumes her entire time, and that, by her express direction and the rules adopted by her in the allotment of her time, only such persons as have most important matters concerning which they wish to consult her, are at any time seen by her; that the said Mary B. G. Eddy determines for herself whom she will see, and the length of time that will be given for that purpose.

He denies that he ever personally or in conjunction with the said Strang or other of said defendants refused to allow any person or persons to see the said Mary B. G. Eddy or that he has prescribed or limited the time to be allowed to persons desiring to confer with her except in accordance with the rules prescribed by the said Mary B. G. Eddy for the conduct of her household and business.

IV.

Respecting the matters alleged in paragraph IV of the said bill of complaint, the said defendant says that he is advised that the greater part, if not all of the same, are wholly immaterial, and upon this question the said defendant asks the judgment of the court. But as to such of said allegations as shall be found to be material, the defendant does not admit the same, but demands proof thereof.

V.

The said defendant denies so much of paragraph V of said plaintiff's bill, as apparently alleges that said Mary B. G. Eddy is mentally and physically unable properly to care for her person and estate and that she is surrounded by designing persons who are using her and her condition for their own selfish ends. As to all other allegations therein set forth the defendant is advised that the same are immaterial; but if any of said allegations shall be found by the court to be material, the defendant does not admit the same, but demands proof thereof.

VI.

The defendant denies so much of paragraph VI in said bill as apparently alleges that the said Mary B. G. Eddy

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

has been and is transacting business either in her name by others, or by herself while unfitted for the transaction thereof, and as to all other allegations in said paragraph set forth the defendant is advised that the same are immaterial, but if the court shall find that the same be material, the defendant does not admit such allegations, but demands proof thereof.

VII.

The said defendant denies that he now is or ever has been engaged in a combination with the other defendants, or any of them, or with any other persons, either to surround and seclude the person of the said Mary B. G. Eddy or to take charge, possession, and control of all her property and business affairs and manage the same solely according to his or their own will and pleasure; he denies that any such combination has ever been effected or ever was attempted or contemplated by himself or with the other defendants, or either or any of them; and he denies that any act by the said Mary B. G. Eddy conveying property during many late years has been controlled and directed by himself, nor, as he is informed and believes, by any other of the said defendants; and the defendant denies that the said Mary B. G. Eddy is and has been for many late years not legally responsible for the acts done by her, and unfit to manage and control her business and property, but, on the contrary thereof, he avers that the said Mary B. G. Eddy always has, as he is informed and believes, most intelligently directed and managed her business affairs.

VIII.

The defendant says that he is advised that the matters set forth in paragraph VIII of said bill in respect to copyrights, the Metaphysical College, The Mother Church, and the real estate are immaterial, but if any part thereof shall be found by the court to be material, so far as relates to this defendant, he does not admit the same, but demands proof thereof.

IX.

And the said defendant answering further, says that he denies that either he alone or with the other defendants and their associates acting with him have ever wrongfully converted to his or their own use or have otherwise misappropriated or unlawfully diverted large sums of money and large amounts of property of the said Mary B. G. Eddy, or any sum or amount whatsoever; and he denies there is "abundant" or any reason whatever to believe that such acts ever were committed by himself alone or in conjunction with the other said defendants, or either of them; and he hereby demands the proof of these and all like allegations against him in the said bill of complaint set forth.

And the said defendant answering further, says that he believes and has good cause to believe that the said bill of complaint is not brought by the so-called "next friends" of the said Mary B. G. Eddy in good faith, for the purpose of protecting her person and property; but that, on the contrary thereof, the same was begun without the consent and contrary to the wishes of the said Mary B. G. Eddy as said persons now pretending to act as "next friends" well know; and the said defendant charges that in his belief said action was instigated and is now being promoted and carried on by persons who are hostile to the said Mary B. G. Eddy and the religious principles of which she is the discoverer, founder, and exponent, for the purpose of annoying the said Mary B. G. Eddy and attempting to bring herself and the said principles into disrepute, and thereby to hinder and retard her said work.

And the defendant further says that he has no knowledge or information respecting many of the allegations in said bill set forth, but he hereby demands the proof of all material matters therein contained not herein specifically admitted, and he hereby offers to appear at any and all times to answer further whenever thereto required; hereby reserving to himself the right to object to the legal sufficiency of the said bill whenever there may be proper occasion so to do, and hereby reserving the right to make such supplemental answers as may be necessary by reason of any change in the parties to or the form of the proceedings now pending in this court.

CALVIN A. FRYE.

EASTMAN, SCAMMON & GARDNER, *Solicitors.*

Merrimack, ss. April 17, 1907.

Personally appearing the above-named Calvin A. Frye made oath that all matters above stated as facts are true and such matters as are stated upon information and belief he believes to be true.

Before me: E. G. EASTMAN, *Justice of the Peace.*

The answer of Mr. Strang is the same as that of Mr Frye, except as to paragraphs III, V, VI, VII, IX, which were answered as follows:—

III.

The said defendant admits that the said Mary B. G. Eddy lives in her own house in said Concord, but he denies that she now is or ever has been under the charge and in the custody of himself and the said defendant Frye or either of them, or any other of the said defendants, and he avers that he never had anything to do with the custody and control of said house or of the said Mary B. G. Eddy in any way or manner whatsoever except under the direction of the said Mary B. G. Eddy.

The said defendant admits that he lived at the said house of the said Mary B. G. Eddy for about fourteen months next prior to the filing of this bill of complaint, and he says that during the aforesaid time he was employed by the said Mary B. G. Eddy to assist her in the performance of important religious and literary work upon which she then was and theretofore had been engaged; that during the time of his said employment, and always, as he is informed and believes, the said house, together with all persons employed and residing therein or connected therewith, were and are, at all times, under the absolute control and direction of the said Mary B. G. Eddy; he denies that he alone or in conjunction with the said defendant Frye or other of said defendants kept the said Mary B. G. Eddy carefully or otherwise surrounded and secluded, either by themselves or by household servants selected for that purpose by himself and the said Frye or other of the said defendants.

The said defendant cannot state how many persons see the said Mary B. G. Eddy at her said house or elsewhere, nor does he know the length of time by her allowed to them when calling upon her, but he says that the said Mary B. G. Eddy is and for a long time has been engaged in important religious and literary work, which, together with the transaction of her business affairs, consumes her entire time, and that, by her express direction and the rules adopted by her in the allotment of her time, only such persons as have most important matters concerning which they wish to consult her, are at any time seen by her; that the said Mary B. G. Eddy determines for herself whom she will see, and the length of time that will be given for that purpose.

He denies that he ever personally or in conjunction with the said Frye or other of said defendants refused to allow any person or persons to see the said Mary B. G. Eddy or that he has prescribed or limited the time to be allowed to persons desiring to confer with her except in accordance with the rules prescribed by the said

Digitized by Google

Mary B. G. Eddy for the conduct of her household and business.

V.

As to the allegations in paragraph V of said bill, the said defendant says he has no knowledge thereof, but he is advised that the same are wholly immaterial, and he hereby asks the judgment of the court thereon, but if any of said allegations shall be found to be material, the defendant does not admit the same, but demands proof thereof.

VI.

The said defendant denies so much of paragraph VI of said bill as alleges that the business of the said Mary B. G. Eddy has been done and is being done, either in her name by others or by her while unfitted for the transaction thereof; and as to all allegations in said paragraph in respect to the property of the said Mary B. G. Eddy, he has no knowledge concerning the same.

VII.

The said defendant denies that he now is or ever has been engaged in a combination with the other defendants, or any of them, or with any other persons, either to surround and seclude the person of the said Mary B. G. Eddy or to take charge, possession, and control of all her property and business affairs and manage the same solely according to his or their own will and pleasure; he denies that any such combination has ever been effected or ever was attempted or contemplated by himself with the other defendants, or either or any of them; and he denies that any act by the said Mary B. G. Eddy conveying property during many late years has been controlled and directed by himself, nor, as he is informed and believes, by any other of the said defendants; and the defendant denies that the said Mary B. G. Eddy is and has been for many late years not legally responsible for the acts done by her, and unfit to manage and control her business and property, but, on the contrary thereof, he avers that the said Mary B. G. Eddy always has, as he is informed and believes, most intelligently directed and managed her business affairs; and he further says that the said Mary B. G. Eddy directed and dictated, without the intervention of any other person or persons whomsoever, the literary and religious work upon which he was employed by her as aforesaid.

IX.

And the said defendant answering further, says that he has no knowledge or information respecting the nature and extent of the property of the said Mary B. G. Eddy, and he denies that either he alone or with the other defendants and their associates acting with him have ever wrongfully converted to his or their own use or have otherwise misappropriated or unlawfully diverted large sums of money and large amounts of property of the said Mary B. G. Eddy, or any sum or amount whatsoever; but, on the contrary, he avers that he never had any part thereof in his hands or possession, and he denies that there is "abundant" or any reason whatever to believe that such acts ever were committed by himself alone or in conjunction with the other said defendants or either of them; and he hereby demands the proof of these and all like allegations against him in the said bill of complaint set forth.

The answers of Messrs. Tomlinson and Hering were identical, and differed from Mr. Frye's answer in regard to paragraphs III, IV, V, VI, IX. They answered these paragraphs as follows:—

III.

The said defendant admits that said Mary B. G. Eddy lives in her own house in said Concord, but he denies that either the said house or the said Mary B. G. Eddy are under the charge and in the control of said defendants Frye and Strang, or either of them, and he denies that said Frye and Strang, or either of them, or any other of said defendants, keep the said Mary B. G. Eddy carefully surrounded and secluded by themselves and by household servants of their selection. The said defendant says that he does not know how many persons see the said Mary B. G. Eddy, nor does he know how long time such persons consume for the purpose aforesaid, but he says that the said Mary B. G. Eddy has absolute control of said house and of all persons connected therewith; that she determines for herself what persons shall be permitted to see her and how long a time shall be occupied for this purpose.

IV.

The defendant says that he is advised that the matters in paragraph IV. of said bill, which refer among other things to the relationship of said George W. Glover to the said Mary B. G. Eddy, the said Glover's letters and his alleged visits to the said Mary B. G. Eddy, and said Glover's conclusions as to the condition, are wholly immaterial, but if any part thereof shall be found by the court to be material, so far as the same relates to this defendant, he does not admit the same, but demands proof thereof.

V.

The said defendant denies so much of paragraph V of said plaintiffs' bill as apparently alleges that the said Mary B. G. Eddy is mentally and physically unable properly to care for her person and estate and that she is surrounded by designing persons who are using her and her condition for their own selfish ends, but as to the allegations in said bill respecting the relationship of said plaintiff, "next friend," Baker to the said Mary B. G. Eddy, the said Baker's sale of a watch to her, and other like matter, the defendant is advised that the same are immaterial, but if the court shall determine the same to be material, the defendant does not admit the same, but demands the proof thereof.

VI.

The said defendant denies so much of paragraph VI of said bill as alleges that the business of the said Mary B. G. Eddy has been done and is being done, either in her name by others or by her while unfitted for the transaction thereof; and as to all allegations in said paragraph in respect to the property of the said Mary B. G. Eddy, he has no knowledge concerning the same.

IX.

And the said defendant answering further, says that he has no knowledge or information respecting the nature and extent of the property of the said Mary B. G. Eddy, and he denies that either he alone or with the other defendants and their associates acting with him, have ever wrongfully converted to his or their own use or have otherwise misappropriated or unlawfully diverted large sums of money and large amounts of property of the said Mary B. G. Eddy, or any sum or amount whatsoever; and he denies that there is "abundant" or any reason whatever to believe that such acts ever were committed by himself alone or in conjunction with the other said defendants or either of them; and he hereby demands the proof of these and all like allegations against him in the said bill of complaint set forth.

The answer of Messrs Farlow, Knapp, Johnson, Chase, Armstrong, and Kimball was as follows:—

Digitized by Google

STATE OF NEW HAMPSHIRE.

SUPERIOR COURT.

Merrimack, ss. · April Term, 1907.

MARY BAKER G. EDDY, By her next friends, GEORGE W. GLOVER, MARY BAKER GLOVER, GEORGE W. BAKER, *vs.* CALVIN A. FRYE, ALFRED FARLOW, IRVING C. TOMLINSON, IRA O. KNAPP, WILLIAM B. JOHNSON, STEPHEN A. CHASE, JOSEPH ARMSTRONG, EDWARD A. KIMBALL, HERMANN S. HERING, LEWIS C. STRANG.

ANSWER OF ALFRED FARLOW, IRA O. KNAPP, WILLIAM B. JOHNSON, STEPHEN A. CHASE, JOSEPH ARMSTRONG, AND EDWARD A. KIMBALL.

These defendants, answering under oath, except the defendant Kimball, who on account of his absence craves leave to file his oath to this answer at a later date, say that in making and filing this answer they do not waive but do hereby reserve all their rights to object to the maintenance of these proceedings by said next friends, and to the form and sufficiency of the pleadings, and with the foregoing reservation of their rights these defendants for further answer say:

1. They admit that the said Mary Baker G. Eddy is a resident of Concord in the State of New Hampshire, and that, so far as they are informed, the names and places of residence of the other parties named in the first paragraph of the plaintiff's bill are correctly stated, except that the defendant Chase is a resident of Fall River, Massachusetts.

2. These defendants are informed, and believe, and therefore aver, that the said Mary Baker G. Eddy is eighty-five years of age, but deny that her mind now is, or ever was, so impaired by the infirmities of age, or otherwise, as to render her incapable in any way of so understanding her property rights as to be unable to exercise her free and unbiased will with respect thereto, and they deny that she is or ever has been incapable of managing her affairs and protecting her property against the undue influence, control, or fraud of others; or that she is incapable of taking charge of and managing the present, or any other, legal proceedings.

3. These defendants admit that the said Mary Baker G. Eddy lives in her own house in said Concord, but upon information and belief deny that she is in charge and custody of the defendants Frye and Strang, or of any one else, and say that the allegations of the third paragraph of the plaintiff's bill are immaterial and irrelevant and upon this question ask the judgment of the Court; but as to such of said allegations as may be found to be material, the defendants hereby expressly deny the same, and call upon the plaintiffs to make such proof thereof as they may be advised.

4. These defendants say as to the allegations in the fourth paragraph of the said Bill of Complaint, that they are wholly irrelevant and immaterial and pray the judgment of this Court thereon; but if such allegations shall be found to be material, these defendants say that they have no knowledge thereof, and leave the plaintiffs to make such proof thereof as they may be advised.

5. These defendants say as to the allegations in the fifth paragraph of the said Bill of Complaint, that they are wholly irrelevant and immaterial, and pray the judgment of this Court thereon; but if such allegations shall be found to be material, these defendants say that they have no knowledge thereof, and leave the plaintiffs to make such proof thereof as they may be advised.

6. These defendants say, as to the allegations in the sixth paragraph of said Bill, that they have no knowledge of the property of the said Mary Baker G. Eddy, except as is hereinafter specifically set forth, and leave these plaintiffs to make such proof of the allegations concerning the same as they may be advised; but they specifically deny that she is unfitted, in any respect, for the transaction of business, and that the same has been done, or is done, in her name by others.

7. These defendants deny specifically and in detail the allegations in the seventh paragraph of the said Bill of Complaint, and demand proof thereof.

8. These defendants, answering the allegations of the eighth paragraph in said Bill, say that they are in large part immaterial, scandalous, and irrelevant, and that they ought not to be called on to make answer thereto, and pray the judgment of this Court thereon; but further answering, they admit that said Mary Baker G. Eddy is the author of a literary and religious work entitled "Science and Health with Key to the Scriptures," together with other works which have been copyrighted in her name; the defendant Armstrong admits that he is a resident of Boston, and one of the executive members of The First Church of Christ, Scientist, but he denies that he is the publisher of all the Christian Science works, as alleged in the said Bill, but says that he is, and has been for a number of years, the publisher of Mrs. Eddy's personal writings, and that he has periodically and fully accounted for, and turned over to her, all royalties and profits from such publications; the defendant Johnson admits that he is the Clerk and an executive member of The First Church of Christ, Scientist, and the defendant Chase admits that he is the Treasurer and an executive member of said First Church of Christ, Scientist; and the defendants Farlow and Knapp admit that they are executive members of said Church. The defendant Kimball admits that he is a Christian Science lecturer, and that said Mary Baker G. Eddy, on or about October third, 1899, transferred certain copyrights to him, and that he retransferred the same to her, but he denies that he ever had any beneficial interest in said copyrights, or that he ever received anything therefrom. These defendants, and each of them, deny that they have received, except in the case of defendant Armstrong, as above specifically set forth, any moneys, or income, belonging to the said Mary Baker G. Eddy, or that any such income has been controlled or retained in any way by them, or any of them, and say that there has been nothing for which they, or any of them, should account or have accounted. And except as hereinbefore specifically admitted, these defendants deny the allegations of said eighth paragraph of the Bill, and demand proof thereof.

9. These defendants, answering the ninth paragraph of the Plaintiff's Bill, say that they have no knowledge or information respecting the nature and extent of the property of the said Mary Baker G. Eddy, and deny that they, either individually or collectively, or in connection

Digitized by Google

with the other defendants to this Bill, or any of them, or with any one else, have ever wrongfully converted to their own private use, or otherwise misappropriated or unlawfully diverted, large sums of money and large amounts of property of the said Mary Baker G. Eddy, or any sum or sums whatsoever; but, on the contrary, they say that they have never, either individually or collectively, had any part thereof in their hands or possession, and deny that there is abundant, or any, reason to believe that such acts were ever committed by them, either individually or collectively or in conjunction with the other defendants to this Bill, or any of them, and they demand proof of all these and other like allegations set forth against them in the Bill of Complaint.

And these defendants further answering, say that they believe, and have good reason to believe, that the said Bill of Complaint is not brought by these plaintiffs as so-called "next friends" of the said Mary Baker G. Eddy in good faith for the purpose of protecting her person and property. These defendants charge that the so-called "next friends" named in the Bill of Complaint are such only in name, and that they have been induced to loan their names for use in said Bill at the instigation and at the expense of certain evil-minded persons, not related in any way to said Mary Baker G. Eddy, or having any interest in her, or in her estate, and are furnishing money for the prosecution of said Bill of Complaint for their own evil purposes and to advance their own selfish interests. And these defendants further charge that this action was instigated and is now being promoted and carried on by persons who are hostile to the said Mary Baker G. Eddy and the religious principles of which she is the founder and exponent, for the further purpose of annoying the said Mary Baker G. Eddy and bringing herself and the said principles into disrepute, and thereby hindering and retarding her said work.

And these defendants further say that they have no knowledge or information respecting many of the allegations in said Bill set forth, but demand proof of all material matters therein contained not herein specifically admitted, and they hereby offer to appear at any and all times to answer further whenever thereto required; but say that they ought not to make this or any answer to this Bill, because it is multifarious in that it makes various and unrelated charges against the different defendants herein and seeks to determine them all in this suit, and because said Bill is vague and indefinite and filled with immaterial, scandalous, and irrelevant matter and does not set forth any cause of action under the laws of the State of New Hampshire.

And these defendants hereby reserve the right to make such supplemental answers as may be, for any reason, necessary or proper.

ELDER & WHITMAN,
WILLIAM A. MORSE,
of Counsel.

ALFRED FARLOW,
WILLIAM B. JOHNSON,
IRA O. KNAPP,
STEPHEN A. CHASE,
JOSEPH ARMSTRONG.

EDWARD A. KIMBALL,
by ELDER & WHITMAN, *Attorneys.*

COMMONWEALTH OF MASSACHUSETTS.

Suffolk ss. Boston, April 16, 1907.

Then personally appeared Alfred Farlow, Ira O. Knapp, William B. Johnson, Stephen A. Chase, and Joseph Armstrong, and made oath that they have read the foregoing answer and that the allegations therein contained are true, except those stated upon information and belief and as to such allegations they believe them to be true.

Before me:

WILLIAM A. MORSE, *Justice of the Peace.*

THE NATIONAL ARBITRATION AND PEACE CONGRESS.

W. D. MC CRACKAN, M.A.

THE Congress bearing the above title, which was held in New York from April 14 to 17, marked a forward step in the progress of the human race. While it was denominated a National Congress, the presence and the speeches of visitors from many lands lent the event an international aspect. As an expression of world-wide public opinion, preparatory to the more formal deliberations and to the official acts of the second Hague Conference, to be held in June of this year, this great gathering was not only deeply impressive but also practically effective and influential for good. Not only were the principal nations of the world represented in New York, but the religious denominations had been invited and had sent delegates, and the churches in New York had been asked to hold services at which the aims and the purpose of the Congress could be set forth.

In response to the invitation of the Congress, and upon the recommendation of our beloved Leader, a delegate was sent to New York, bearing credentials from The First Church of Christ, Scientist, in Boston, The Mother Church, and also from the editorial staff of the Christian Science periodicals. In addition to meetings held by Christian Science churches in New York, a great meeting was held in The Mother Church in Boston on Sunday evening April 14, a report of this meeting being given in the *Sentinel* of April 20. It was but fitting that the Church founded by the Discoverer and Founder of Christian Science, whose teachings instil and establish genuine peace in the hearts of men, should be represented at this National Arbitration and Peace Congress.

An impressive unity of thought pervaded the ranks of the delegates. Differences of opinion on non-essentials only seemed to emphasize the universal agreement on the paramount question of peace. Apparently every department of mental activity was represented; not only the various religious bodies, but also the schools, the universities; the executive and legislative branches of government, Federal, State, and municipal; the judiciary, beginning with the United States Supreme Court; commerce and labor; the arts and physical sciences; the various peace societies, —all brought their tribute of praise to the blessings of peace and demanded its establishment upon a durable basis.

In general it may be stated that much emphasis was laid upon the religious and ethical basis for peace and upon the fundamental causes of war. In the opening speech of the Congress, made by Rabbi Hirsch of Chicago, a lofty note of peace was struck when reference was made to the one God, the Father of all, and throughout the session the appeal was often made to the creator as the God of love and not of war. It became more and more apparent, as the deliberations of the Congress proceeded and the speeches of reformers of various schools had been delivered, that human selfishness lay at the bottom of international as well as national problems. In many ways the nature of this selfishness was exposed as self-deceived and as destined to bring in its train self-inflicted wounds.

The teaching of Christian Science is very explicit on the point that peace must be earned before it can be enjoyed, that dis-ease in error is preferable to ease in the same. Christian Science turns the willing student to God, divine Principle, as the source and origin of all real peace. Thus Mrs. Eddy shows that the possibility of at-one-ment with God also invokes the necessity of disassociation with evil, and that this liberation produces the only legitimate warfare which can be found, namely, that between the flesh and Spirit.

Much time and thought was devoted by the Congress to arbitration as the natural method of forestalling war between nations. In this connection it is interesting to notice

Digitized by Google

that the reference of the famous Alabama Claims by the United States and Great Britain to be settled by international arbitration at Geneva, Switzerland, in 1871, set a notable example to the world. This instance will probably be cited by future historians as marking the first great step in the federation of the nations. It certainly gave a wonderful moral impulse to the cause of peace. Indeed the little Republic of Switzerland has since become a veritable repository of international arbitration. A large number of international unions have established their central offices at Bern, the capital of Switzerland, among these being the International Peace Bureau.

In connection with questions of arbitration effective work has been and is being done by a Legislative Committee and a Judiciary Committee, both committees having for their secretary a gentleman well known to Christian Scientists, Mr. Hayne Davis. The presence and participation of many women in the Congress was also an inspiring feature, bearing witness to our Leader's teaching in behalf of "the rights of woman acknowledged morally, civilly, and socially" (Science and Health, p. 587). Among the most affecting incidents of the Congress was the presentation to its President, Mr. Andrew Carnegie, of a flag of peace by the National Society of the Daughters of the American Revolution, of which society Mrs. Eddy is a member. The presentation was made by a committee sent for the purpose from Washington, D. C., where the National Society was in session. The constant activity of King Edward of Great Britain in furthering peace between nations was not overlooked at the Congress and he has now become generally recognized as Edward the Peacemaker. It was also brought to public attention that Emperor William of Germany, though frequently referred to as a "war-lord," has not waged a single war during his entire reign of almost twenty years, colonial enterprises being excepted. So, too, was grateful reference made to the action of the Czar of Russia in calling together the first Hague Conference.

First and foremost in importance among the expressions of opinion to which the Congress gave rise, must be counted the carefully and cautiously worded letter sent by the President of the United States. This document, which was of course generally printed in the daily press of the country, was distinctly favorable to the aims and purposes of the Congress, but counseled patience and conservatism in such action as the Congress might take. Coming from the man who had succeeded in bringing to a close the war between Russia and Japan, and who had but recently made an agreement with the President of Mexico to avert war in Central America, this letter was received by the delegates with special respect and kindly attention. Next in official importance to the letter of the President was the long and comprehensive review of the questions involved in international arbitration made by the Secretary of State, Hon. Elihu Root. This speech set forth the distinctly governmental standpoint, elaborating the difficulties which confronted the governments of the various nations in their desire to arrive at unity of action. In listening to the words of the Secretary of State the delegates did not forget his services in the cause of peace, illustrated by his recent visits to the South American Republics and to Canada.

An afternoon was set aside for the Young People's Meeting, which was largely attended by school children. It proved to be a very touching manifestation of spontaneous, natural enthusiasm for the peace sentiment, encouraging to all and deeply significant of the future. Nor should the music rendered on the opening night of the Congress be overlooked, for the compositions chosen showed to what an extent the desire for peace and the appreciation of the sense of peace have influenced some of the world's greatest composers.

On the last day of the Congress a series of resolutions were adopted by unanimous vote of the delegates present, among whom was the delegate of The Mother Church. These resolutions may be said to mark an historic moment in the development of international peace. They are appended herewith in abbreviated form:—

(1) That The Hague Conference shall hereafter be a permanent institution. (2) That The Hague Court shall be open to all the nations of the world. (3) That a general treaty of arbitration, for ratification by all the nations, shall be drafted by the coming Conference, providing for the reference to The Hague Court of international disputes which cannot be adjusted by diplomacy. (4) That the United States Government urge upon the Conference action looking to the limitation of armament. (5) That the Conference extend to private property at sea immunity from capture in war.

PEACE MEETINGS IN THE NEW YORK CHURCHES.

WE quote as follows from a letter received from Mr. John D. Higgins, Clerk of First Church of Christ, Scientist, New York:—

I enclose herewith a clipping from this morning's *New York Times*, giving an account of the special service held in this church at three o'clock yesterday afternoon, preliminary to the Peace Congress convening in this city today. The meeting was very successful and satisfactory in every way, both to the audience and to the speakers. The auditorium was filled. Prior to the opening of the meeting, and in honor of the nationality of the chief speakers, the organ rendered "Die Wacht am Rhein" and the "Marseillaise."

Mr. Hayne Davis, American Secretary of the International Conciliation Committee, who is also Secretary of the Legislative and Judiciary Committees of the Peace Congress, conducted the services, which were opened by the singing of Hymn 153, "A Glorious Day is Dawning;" reading from the 13th chapter of 1 Corinthians; also a selection from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, this reading being followed by silent prayer and the audible repetition of the Lord's Prayer.

Upon the platform with Mr. Davis were Hon. Richard Bartholdt, Member of Congress from Missouri and President of the American Group of the Interparliamentary Union; Baron d'Estournelles de Constant, Member of the French Senate and of The Hague Court of International Arbitration, and Eugene, Baron Fersene, of St. Petersburg, Russia. Mr. Davis first introduced Mr. Bartholdt, giving an account of some of the interesting and critical incidents in his life which had qualified him to be pre-eminently the leader in the Peace idea in the United States. Mr. Bartholdt delivered an address, explaining the principles which he proposed to set in operation in the international realm, so as to substitute law for war.

Baron d'Estournelles de Constant was next introduced. He first addressed the audience in French, but soon took up the English, and explained the necessity of uniting the good people in all countries in an efficient organization for the establishment of justice and the maintenance of peace, explaining the purpose and progress of the Association for International Conciliation. In closing, he extended an invitation to all his hearers to become members of the Association for International Conciliation, which he is organizing and laboring to perfect, requesting those in the audience who desired to co-operate with the good people in all countries to communicate with Mr. Hayne Davis, American Secretary of the Association for International Conciliation, 542 Fifth Avenue, New York city.

Baron Fersene of Russia was then introduced, and in a few words expressed gratitude for being permitted to participate in this service, presenting the fact that all

Digitized by Google

discord must disappear before the power of divine Love, which is destined to introduce a reign of perpetual harmony through the right action of each individual in accordance with the divine promptings. Baron Fersene is a Christian Scientist. All the speakers in the course of their remarks paid marked tribute to the service which Mr. Hayne Davis has rendered in this great work for the progress and welfare of mankind and the establishment of righteousness and peace.

Mr. Bartholdt then requested the chairman to entertain a resolution approving the principles explained in the addresses and the method suggested for their more general application. Such a resolution was unanimously adopted. A hearty *viva voce* vote of thanks to the speakers was taken at the suggestion of the chairman. The meeting was closed by the singing of the Hallelujah Chorus from the "Messiah," by at least one hundred selected singers of the church, the words of which, "The kingdom of this world has become the kingdom of our Lord and of His Christ, and He shall reign for ever and ever," furnished a beautiful and appropriate conclusion for the meeting. Baron d'Estournelles de Constant was so moved by this event that he requested the privilege of moving a vote of thanks to the singers, which was carried with much appreciation and applause.

The following is an excerpt from the newspaper clipping enclosed in Mr. Higgins' letter:—

Services preliminary to the Peace Congress, the regular sessions of which will begin to-day at Carnegie Hall, were held in several city churches yesterday, the meetings being addressed by one or more of the delegates to the Congress. In every instance, contrary to the expectations of many, the attendance was extremely large, and the intense interest displayed in the speeches on international peace occasioned surprise. Chief among the special services was that held at First Church of Christ, Scientist, which was attended by a congregation of nearly two thousand persons and was addressed by Baron d'Estournelles de Constant, head of the French section of the International Peace Conference; Richard Bartholdt, President of the American Arbitration Group, and Hayne Davis, American Secretary of the International Conciliation League. Following the preliminary service, Mr. Davis, as chairman of the meeting, introduced Mr. Bartholdt, explaining his work in the interests of international peace, and giving him the credit of calling together the convention that will convene to-morrow. He also explained how Baron d'Estournelles came to leave the diplomatic service to take up the fight for peace.

Mr. Bartholdt said that the question of international peace was the greatest moral question before this or any other people in the world, and that the love of one's fellow-men and the love of peace was the essence of religion. "We cannot be good Christians without being opposed to war and to the taking of the lives of men in war," he said. "War is a flagrant violation of every tenet of religion." Continuing, he said that it was a time for deeds not words, and that the Congress which is to meet to-day is called for the purpose of expressing the public sentiment of America in favor of arbitration and peace. He then called upon those present to say "amen" to the program that had been arranged. The international condition, to-day, he said, was not a peaceful one, but simply an armistice. What was needed was to replace this temporary peace with permanent peace, which could not be disturbed save when one nation rebelled against the will of all the other nations. As individuals went to court to settle their differences, so nations should do the same, and they should obey the law they had made for the guidance of their citizens. Continuing, he said: "Against these contentions two arguments have been advanced by what I must say are high authorities. The first, contained in the President's message, was that if a nation finds it has been wronged by another nation, it must stand for its rights and protect its rights, even if the doing so leads to war. To this I answer: 'Who is the best judge of what is right, the government that thinks it has been wronged or an impartial tribunal appointed for the purpose of settling such disputes?'" Referring to the cases settled by The Hague Tribunal thus far, and the fact that not a single appeal had been taken, Mr. Bartholdt said it had been evidenced that the moral force of public opinion was more powerful than armies and navies. It was proposed, he said, to have the next Hague Conference made a permanent body, and the program arranged for presentation there contemplated an arbitration treaty between all nations and thorough investigation of all important matters before action was taken. The nation opposing this plan, he said, would be regarded as the black sheep of the family.

Baron d'Estournelles spoke first in French. In English he praised the people for turning out in such numbers to listen to speeches on peace, and said that no such interest was displayed on the subject in the capitals of Europe. Every one was agreed on the principles of the movement, he continued, but the thing was to discover the way to accomplish the end. That progress had been made he felt assured, for twenty-five years ago the firing on the fishing-boats in the North Sea by the Russian Admiral Rojestvenski would have caused a great war. What was necessary, he said, was a "trust" of good will, an organization of individuals to forward not simply arbitration, but conciliation.

A peace service was held Sunday afternoon, April 14, in the edifice of Third Church of Christ, Scientist, New York, on 125th Street, near Madison Avenue. The following order was observed:—

Song, "Missionary Hymn," page 153. Reading from the Bible, Isaiah, 11th chapter. Silent prayer, followed by the audible repetition of the Lord's Prayer. Mr. House, the First Reader, then stated that our Leader, the Rev. Mary Baker G. Eddy, being deeply interested in all that makes for peace, was heartily in sympathy with the National Arbitration and Peace Congress to be held in this city. Her attitude in regard to this subject could not better be expressed than by reading selections from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The readings may be found on pages 467, 276, and 430.

Prof. A. J. Goodrich was introduced as the first speaker. He quoted the words of General Sherman, "War is hell," as pertinent to the teaching of our Saviour, "The kingdom of God is within you." When we recall the immense armament of the world, we realize that peace can only be brought about by turning to God, with whom all things are possible.

Rev. O. B. Beals spoke in part as follows: "War began with Cain, who slew Abel. Since that time the loss of life from war has reached into billions, and the cry has been, 'War,' against that which is highest and best. This is the result of worshiping other than the true God. Jesus' commandment, 'Love they neighbor as thyself,' spoils war."

Other speakers followed, after which the meeting was concluded by singing the Doxology and pronouncing the benediction.—*Correspondence.*

First Church of Christ, Scientist, Brooklyn, N. Y., dispensed with the usual Sunday evening service on April 14, and in its place held a meeting in keeping with the International Arbitration and Peace Congress then in session in New York. The meeting was opened with

Digitized by Google

a hymn and appropriate Scriptural reading, followed by silent prayer and the Lord's Prayer. The First Reader read suitable portions from Science and Health, and then introduced Dr. Martin A. Meyer, rabbi of Temple Israel of Brooklyn, who made a stirring address upon the subject "Peace." This was followed by remarks from one of the church trustees, who then offered the following resolution, which was unanimously adopted:—

Whereas there is about to be held in New York city a National Arbitration and Peace Congress, whose object is to encourage and establish more friendly relations between nations, to the end that all differences may be decided by peaceful methods rather than resort to force of arms, be it resolved, that First Church of Christ, Scientist, of Brooklyn, N. Y., in meeting assembled on this 14th day of April, 1907, gives its unanimous endorsement to the principles and purposes of this Peace Congress; and further, that we pledge ourselves to use every endeavor to establish among all peoples and nations a desire to "live peaceably with all men," and to strive to bring out through love and harmony the time

When the war-drum shall throb no longer,
And the battle-flags be furled,
In the parliament of nations—
The federation of the world.

Correspondence.

AMONG THE CHURCHES.

NEW YORK, N. Y.

That the members of the Christian Science faith are determined to demonstrate their loyalty to Mrs. Eddy was shown by the throng that attended the regular Wednesday night meeting of First Church of Christ, Scientist, at Ninety-sixth Street and Central Park West. Although the meeting was held soon after one of the most violent storms of the season, adherents of the new religion poured into the great building in such numbers that for the second time in the church's history an overflow meeting had to be held in the Reading Room. For almost a year the attendance at First Church has been so large that supplemental meetings seemed necessary, but it was feared that members would lose interest if obliged to attend service elsewhere than in the magnificent main auditorium, which is famed the world over for its exceptional architectural beauty.

The first of the overflow meetings, held last Sunday, proved instantly successful, extra seats having to be provided even in the Reading Room. Last night's gathering was almost as large as Sunday's, despite the bad weather. The services at the principal and overflow meetings were similar in character and resembled family gatherings in the freedom of expression and friendliness of spirit displayed. The members, men and women, eagerly availed themselves of the opportunity to give expression to their belief in Christian Science and to narrate some of the benefits received from its profession and practice. Remarkable instances of healing of bodily ailments, including violent fevers and fractures of limbs, were told. Greater emphasis, however, was laid by those testifying upon the spiritual advantages derived from study of the new religion.—*Evening Journal.*

UTICA, N. Y.

First Church of Christ, Scientist, is to be congratulated. Yesterday there was filed in the county clerk's office a deed by which Pratt G. Smith and wife transfer to the church the lot on the southwest corner of Genesee and Avery Streets, and in due time the society will build a church edifice on it. The lot is the unanimous choice of the members of the society, and is a spacious and very sightly one. It occupies a prominent position on the second rise of ground in going south on Genesee Street and is amply large for the purpose for which it will be used. It has a frontage of one hundred feet on Genesee Street and one hundred and eighty-four feet on Avery Street, large enough to accommodate a church edifice and have plenty of light and air on all sides. It is so far uptown that it will never be disturbed by the encroachments of business. The members of the society are receiving congratulations on having the finest site for church purposes in the city, surrounded by the most costly residences the city contains.

The society has been formed quite a number of years. The work in this city was started by Miss Marie Adams some years ago, and services were held in her home at 11 Rutger Street. The society was incorporated March 5, 1894, and for the past eight or nine years has been holding services in the New Century Club rooms, first on the lower and for some years in the main hall. Its methods in dealing with business matters are those of ordinary business, *i.e.*, pay as you go. It raises funds only among its own members, and entirely by free-will offerings. It has no sales, entertainments, or money-making devices of any kind, apart from voluntary contributions, and it has had such good success with this plan that it will never try any other. This has enabled it to pay cash for the property purchased, and left it with a comfortable balance toward the church building fund. The church will be built when the money is on hand to pay for it, and with the society's method of doing business, this will not be long. The society is composed not of wealthy people, but of those in comfortable circumstances, and when they put up a church building, it will be something which will be churchly, dignified, and beautiful, entirely in keeping with the handsome surroundings amid which it will stand. Whoever is familar with what congregations of the same denomination have done in other cities, need no guarantee as to the kind of structure which will be put up here. The Utica society has a membership of one hundred and seventy-five in the church, and more than twice that number in the congregation. It is free from debt and pays its bills monthly, and has never gone over the month with a deficiency. It has not only paid its way in its services, but has accumulated a building fund. Aside from this it has given a number of public lectures and sent out considerable literature, without taking up a collection or asking any contributions from the public. Since it has been in the New Century Auditorium it has also contributed between eight and nine thousand dollars to The Mother Church. It will, therefore, be seen that it is prosperous and in a very healthy financial condition. Of late the attendance at its services has been so large as to tax the capacity of the auditorium, and the members look forward confidently to the time when they will be able to hold services in their own house of worship. There is no doubt that they can and will successfully handle the project on which they have embarked.

Utica Press.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

MILACA, MINN.

Miss Mary Brookins of Minneapolis lectured for First Church of Christ, Scientist, March 15, before a fair-sized audience in the Congregational church. She was introduced by the Congregational minister, who said in part,—

It affords me the greatest pleasure to stand identified this evening with this great modern movement called Christian Science. I have watched with much interest its rapid development. This great movement has in it the spirit and teachings of the great Master; therefore it must prosper and grow in spite of the scoffing and ridicule of the superficial thinker. When the winter frosts and storms come upon us in this northern climate of ours, many poor sick men and women wend their way to California, and there find quiet and rest and health which could not possibly be had here. The orange grove could not possibly look luxuriant and be beautiful and fruitful in our Minnesota, but in California, under the glorious sun and balmy air, the orange grows in all its lusciousness and abundance, and then is sent out to bless the world. So thousands of our fellows in all walks of life have found balm and healing and comfort in Christian Science, and to-day are living beautiful and successful lives because its great teachings have come into their heart and life. It has been a California to many a sick soul. I know it will grow and prosper just as it emulates the teachings of the great Master.

Correspondence.

EL PASO, TEX.

A large and enthusiastic audience greeted Hon. Clarence A. Buskirk at the Crawford Theater last night [March 19], to hear a lecture upon the subject of Christian Science under the auspices of Second Church. The speaker was introduced by Cyrus H. Jones of this city, who spoke in part as follows:—

I am led to believe from what I have heard of Christian Science that it is an institution founded upon truth, which has for its fundamental teaching the uplifting and betterment of the human race, the uplifting and encouragement of the discouraged, the sick, and the poor; thereby pointing them away from the gloom and darkness which may perchance surround and enshroud them, bidding them turn their eyes upon a brighter and happier future, and assuring them of a more perfect and happy life. If I am correct in this brief surmise of its great objects, if I have been correctly informed of its great and underlying Principle, then I desire to state that Christian Science can never be destroyed by ignorance, envy, or hate. I say that it can never be destroyed by such methods, though all their combined influence be brought against it; but it will continue to grow and spread its joy and happiness wherever it is taught, for any institution that has for its fundamental object the uplifting and betterment of the human race, the advancement of Christianity, the cheering of the sick and poor,—let it be called whatever you may choose to call it, —is a blessing to mankind and should and will make its influence and power felt in the world at large. If there is one human being that is benefited by the speaker's words this evening, then we should all rejoice, for we are all one great family of sojourners here upon this earth, and our great aim should be to help one another.—*El Paso News.*

NEW YORK, N. Y.

Second Church of Christ, Scientist, gave two lectures in the church edifice on Thursday and Friday evenings, March 28 and 29, Mrs. Sue Harper Mims of Atlanta, Ga., being the lecturer both evenings. On Thursday evening Mrs. Mims was introduced by Mr. James R. Turner, a member of this church, whose introductory remarks were in part as follows:—

The year 1866 will remain distinctive, as it marks the advent of Christian Science—the Science and Christianity taught by Jesus. We of this day are indeed fortunate in being able to participate in the re-establishment of the teachings of Jesus Christ. At no time during the last sixteen hundred years has there been a movement of such importance in this direction. The growth and extension of Christian Science is confined to no country nor people. It is the reappearance of the gospel of Truth, alleviating and healing all human suffering,—a gospel that heals the sick and reforms the sinner by bringing man into harmony with divine laws. It is not new; for Truth is never new except to those who are buried in the mists of materialism.

Correspondence.

On Friday evening Mr. Henry Prentiss introduced the lecturer, saying in part,—

Christian Science reveals Truth as the divine Principle of Christ Jesus, which enabled him to overcome all inharmony manifested in want, disease, and sin; it declares that true faith in Christ Jesus is the exercise by us of the same faith that gave him power over all evil, and that we, too, may triumph over evil as we gain spiritual understanding and demonstrate it in our lives. Christian Science uncovers the spiritual, real man created in the image and likeness of God, which mortal man, self, would hide from our view.

Correspondence.

ATLANTA, GA.

Mr. Bicknell Young lectured on Christian Science at the Grand Opera House, March 21. He was introduced by Hon. Jas. W. Austin, who said in part,—

For a number of years I have passed twice daily your beautiful church on Baker Street, I have had a business and a personal acquaintance with many of your people, and I have from the unprejudiced standpoint of an outsider observed for ten years past the growth of your cult in our city; and, in this presence here to-night, I can, and I do fearlessly, bear this testimony to the Christian Scientists of Atlanta: that I have watched their lives, and have seen in those lives a gentleness and a courtesy so rare and beautiful as to set upon them the mark of a peculiar people in this community; that I have seen their faith assaulted with bitter words of scorn and ridicule, and to every gibe and sneer thrown by reckless hands against them, I have heard them give back in reply, with a patience that touched my heart, the soft answer that turneth away wrath; that I have witnessed their faithful attendance on the services of their church and the great diligence wherewith they study the Word of God and search the Holy Scriptures,—and surely such golden fruits as these come only from the Master's garden. Therefore it is with genuine pleasure that I present to-night the distinguished gentleman who comes to discuss with you the elemental teachings of your faith; a charming and a cultured gentleman, a man of ripe scholarship and profound learning, and possessed of those rare qualities of mind and soul which go to make the strong and forceful reasoner and the eloquent speaker.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

MRS. EDDY AND THE PEACE MOVEMENT.

Pleasant View, Concord, N. H., April 3, 1907.

Mr. Hayne Davis, American Secretary,
International Conciliation Committee,
542 Fifth Avenue, New York City.

Dear Mr. Davis:—Deeply do I thank you for the interest you manifest in the success of the Association for International Conciliation. It is of paramount importance to every son and daughter of all nations under the sunlight of the law and gospel.

May God guide and prosper ever this good endeavor.

Most truly yours,

MARY B. G. EDDY.

MEMBERSHIP FOR MRS. EDDY.

AT a meeting of First Church of Christ, Scientist, New York City, held in the church edifice, April 19, 1907, Edwin F. Hatfield, First Reader, presiding, it was moved by Mr. Hayne Davis, and "unanimously voted, that Mrs. Augusta E. Stetson be requested to ascertain whether it would be agreeable to our beloved Leader, Reverend Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, to permit this church to supply the sum necessary ($1,000) to provide for her a membership in the Association for International Conciliation on its highest plane of membership, that is, a member '*Fondateur*,' and if so, that the appropriate action be taken to complete the membership."

The First Reader, in addressing the meeting, called attention to the relation of Christian Science to the world-wide movement for permanent peace, and particularly to the National Arbitration and Peace Congress which had just been held in New York and in which members of First Church had taken active part. He gave full meed of recognition to Mrs. Eddy's work for universal peace, as did also Mr. Davis, who was called upon by Mrs. Stetson to address the meeting.

After explaining the general purpose of the Association for International Conciliation, and its American Branch, Mr. Davis stated that upon assuming the duties of secretary and executive officer of the American Committee, he had written our beloved Leader, acknowledging her part in the peace movement. Mrs. Eddy's letter in response was read to the meeting.

Mr. Davis then referred to the invitation extended by the Baron d'Estournelles de Constant, to those present in this church on Sunday afternoon last to become members of the Association for International Conciliation, and explained the basis and classification of membership in that body. It was suggested that all those who desired to avail themselves of the privilege thus offered, should communicate with Mr. Hayne Davis, Secretary of the American Committee, at 542 Fifth Avenue, New York City, giving their name and address, with the amount which they desired to contribute, and that the contribution be equitably divided, so that a due proportion of it should be devoted to the maintenance and strengthening of the mother vine at Paris.

It was then voted that the members of the church be permitted to contribute to the purchase and presentation of an appropriate souvenir of last Sunday's meeting to Baron d'Estournelles de Constant, as an evidence of gratitude to him. A collection was thereupon taken for that purpose.

[From the *Concord* (N. H.) *Daily Patriot*.]

A LETTER FROM GERMANY.

Frankfurt-a-Main, Feldergstrasse 41.
March 31, 1907.

Dear Mrs. Eddy.

Dear Beloved Leader:—When reading the awful lies in the *World* I thought that perhaps I too might give a little help in uncovering at least one of them, by stating what I did about your letter of Nov. 30, 1906, for the lies are spreading here too. I wrote the enclosed words, and I should be glad if you would think them of any use. I leave it to you to have them published in the Christian Science periodicals or elsewhere.

(Following are the words above referred to.)

"Some days ago I had some clippings from the *World* —New York—sent to me, from which I saw that Mrs. Mary Baker G. Eddy is again attacked in the same loveless way as in autumn last year. I got at that time a letter from Mrs. Eddy in her *own* handwriting, and want to state here that this letter of Nov. 30, 1906, is *neither* written by *one* who is *weak from age, nor by* one *whose mind is impaired*, for the handwriting is strong and distinct and the contents of the letter are clear and bear evidence of an *un*-impaired mind. I know therefore that *now* as *then* these reports are without basis and that every one does well in not believing them."

Lovingly, tenderly yours,

FANNY VON MOLTKE.

EVENTS OF THE WEEK.

IN giving our readers a twenty-four page paper this week, instead of the usual twenty pages, we have had in mind their desire for full information concerning the answers under oath filed by the defendants in the proceedings now pending in the Superior Court at Concord, as the demands upon the space of most newspapers do not permit full reports of such matters.

We have, too, the pleasure of presenting a brief report of the sessions of the National Arbitration and Peace Congress, contributed by Mr. McCrackan, who represented the *Sentinel* and our other denominational publications, as well as The Mother Church, The First Church of Christ, Scientist, in Boston, upon this occasion. The work of Christian Scientists in behalf of the great peace movement is the logical result of Mrs. Eddy's teachings, in which she has always laid great stress upon the Christianity of peace, and the necessity of justice and brotherly love as the basis of human intercourse and the comity of nations.

This Congress has aroused public opinion as never before to the possibilities of universal peace, with an international court of arbitration as its chief agency in settling the differences of nations, and in this respect it was a great success; but it must not be forgotten that unless the peace of God is in the hearts of the people, the peace of nations is not assured.

Our readers will also be glad to learn of the action of First Church of Christ, Scientist, New York City, by which our Leader becomes officially identified with the Association for International Conciliation. This was a gracious act to one who has said that the international peace movement "is of paramount importance to every son and daughter of all nations under the sunlight of the law and gospel."

ARCHIBALD MCLELLAN.

ONE OF LIFE'S LESSONS.

A RECENT editorial in a religious magazine says,—

> Pain and sorrow and death are not only appointed for all men and women, but are among the greatest teachers, and therefore the best friends, of men and women. . . . Pain is not to be treated as if it were an interference with normal living; it is as much one of the processes of living as the necessity of observing rules and learning lessons is a part of education in the school.

The statement that pain should not be regarded as "an interference with normal living" is not only startling, but is contradicted by human experience, for pain unquestionably interferes with the conscious harmony and activity of the human mind and body, and unless it is overcome the limits of human endurance are soon reached. The continuance of suffering usually indicates conditions which may even result in death, but according to the logic in question this should neither be avoided nor regretted. It is difficult to see how any one could accept this view of "pain and sorrow and death" and consistently employ any means whatever for the relief of suffering. One thing is sure, viz., that pain cannot be both good and evil. If it be good, it certainly should be allowed to work out its mission unhindered; if evil, it cannot too soon be overcome.

In the article in question there is a critical reference to the teaching that pain and sorrow are "wholly removable or essentially evil," and a very evident misunderstanding of the position of Christian Scientists in this respect, although there is no direct reference to them. As a matter of fact Christian Scientists are not so much concerned with the removing of pain as with the overcoming of the mental and moral conditions which lead to suffering, though outsiders do not seem to be aware of this. Our text-book teaches that suffering may come from disobedience to God's law, or it may be the result of a non-recognition of the Divine presence and power; or again, it may be simply the result of belief in a man-made law of disease. If the latter, the pain usually disappears before mental enlightenment as inevitably as darkness before light. Even in the case of wilful sin, or non-recognition of the demands of spiritual law, the pain itself is not a good, but it shows that there is an evil to be overcome, an evil to which the sufferer may cling because of his mistaken belief that there is some good or some pleasure in it. Assuming this evil to be cultivated selfishness, and the pain its symbol, both must go when the demands of divine Truth are recognized.

It is now very generally admitted that Christian Scientists bear pain with greater fortitude and less complaint than do any other class of people, although they are sometimes blamed for this very thing, and their endurance attributed to mere stoicism, while the fact is that they desire to learn at any cost the great lesson involved in the overcoming of pain, and to witness the triumph of spiritual law, which establishes the supremacy of Mind over all material belief, pain included.

To the Christian Scientist this whole question is disposed of in the Scriptural teaching that in the kingdom of God there is neither sin, pain, nor death. Christ Jesus declared this kingdom to be present even in that day, and he did not hesitate to overcome the evils which would dispute its ever-presence. Paul referred to death, not as a "friend," but as the "last enemy" which should be destroyed. The Master proved God's power and presence by overcoming sin and pain, and told his followers to do likewise. To-day, after the lapse of many centuries, Christian Science is repeating this beneficent work, and thousands of sufferers gladly testify that with their release from pain has come release from doubt and despair, and a sure sense of God's love and power as truly available in all human need. Thus the lesson of life's meaning, which pain fails to teach, is learned in knowing God as the only Life and intelligence of man's being, and to the extent that this truth is realized harmony prevails. ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Cambridge, Mass., April 15, 1907.

Beloved Leader and Friend:—My gratitude is sincere for the opportunity given me yesterday to appear before the public as your friend. Higher privilege there is none than to be employed in this service which you are directing, wherein you discovered the only true way to work reform. The meeting last night was a success. Hon. John D. Long was met by so much love, which was evidently unexpected by him, that for a moment his emotion almost overcame him. You will see the report, so I need not characterize the speeches.

With love to you and devotion to your service,

Yours faithfully,

WM. P. MCKENZIE.

Boston, Mass., April 9, 1907.

Mrs. Mary Baker G. Eddy.

Beloved Author of "Science and Health with Key to the Scriptures":—I send you the first copy which has come to my hands of my new book. With the exception of a few chapters it has been written under the hospitable shelter of your Boston home, which now, as always, stands ready for your occupancy, whenever you elect to use it. As the lakes I have described reflect the rocks and mountains, which have been spiritually defined by you as "solid and grand ideas" (Science and Health, p. 511), so you are reflecting to me and countless others the imperishable facts of Truth.

I would not have you spend any of your precious moments in the perusal of my work. I send it in courtesy and as a compliment to the author of the greatest book of the age, the text-book of Christian Science. Science and Health determines its own position in literature. No one need attempt to assign a place for it, either by criticism, detraction, or even by praise. It is established in history and in the hearts of men by the good it does, not by what chance critics may think about it. Aside from the Bible, the historic heritage of the race, there is no work in the whole range of literature, whether one search under the classification of religion, philosophy, medical writings, or *belles-lettres*, which is accomplishing the actual good that Science and Health does. Aside from the Bible I know of no book but yours which *heals*. It heals those who read it receptively.

I was greatly impressed, in reading the chapter on "Fruitage" in the recently revised version of the Christian Science text-book, to notice the great body of grateful testimony to the healing efficacy of the Word in Science and Health. I count it the greatest honor which has ever come to me that I have been asked to read from your book, every Sunday to about six thousand people, and every Wednesday to four thousand and over. Frequent cases of instantaneous healing are reported at our services and meetings; many persons are being healed by regular attendance and all are benefited.

For your book, your life-work, and your loving example I thank you profoundly.

Yours faithfully,

W. D. MCCRACKAN.

Chicago, Ill., April 8, 1907.

Dear Mrs. Eddy:—We hope you may see this letter, for we want you to know the good news it contains. That is our one reason for taking a moment of your time. We want to tell you something of the greater interest being manifested daily in Christian Science, as we have had a chance to observe it in the Reading Rooms here in Chicago. Ever since evil's recent attack upon you, the number of

Digitized by Google

those coming to inquire about Science and to purchase the text-book has daily increased. Some, perchance, have only a passing interest, but by far the larger part are those earnestly seeking to know the truth. All classes of people come,—the business man, the scholar, the laborer,—some not knowing the name of the book even, simply asking for "Mrs. Eddy's book;" others looking for the "book that heals folks;" while others are asking how to "learn something of Christian Science;" but whatever the inquiry may be, all are seeking the truth. Not infrequently do these inquirers tell us that a few months before they knew nothing of Science, but they have been watching some one who is a Scientist and have noticed the great change for the better.

Another noticeable result of the recent upheaval is the awakening of the Rip Van Winkles, persons who were "interested in Science some years ago, but failed to get anything out of it, and dropped it." These have lately discovered that it is worthy of study, so are coming to get a new copy of Science and Health, and many of them with childlike simplicity are asking the "best way to begin to work." We are glad to tell you that there is a marked decrease in the number who say "Science and Health is hard to understand" or "too difficult for the beginner." Little by little that siren's song is being drowned by the Hallelujah Chorus of those who are being redeemed through the reading of this book. We are trying to know that every purchaser of Science and Health can understand the truth it contains, can demonstrate this truth, and that no claim, nor combination of claims, of evil can rob him of its inherent blessing.

We know it would do your heart good, were you needing any such help, to peep into these quiet Rooms and see the eager, earnest men and women reading and pondering your books; and we also know that could you thus look in upon us, both they and ourselves would be blessed beyond words to express.

Lovingly yours,
MARY A. PACKARD.
ELMA E. WILLIAMS.

Washington, D. C., April 10, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—I acknowledge receipt of your esteemed and valued favor of the 8th instant, enclosing your check to the order of James A. Sample, our treasurer, in the sum of one hundred dollars. This is indeed very kind of you and I note with pleasure your kind remarks and your good wishes for us in the building of our Temple. We sincerely hope and trust that we may have the pleasure of your presence in this city at some time when this beautiful structure will be completed, and I shall esteem it one of the greatest pleasures of my life to have the honor of showing you through the same. I am a member of First Church of Christ, Scientist, in this city of Washington, and all the members of my family are also members of this church. My son-in-law, Mr. John J. Boobar, is president of the board of trustees.

Again permit me to thank you most cordially, and with kindest and most sincere regards, I beg to remain

Very respectfully yours,
B. F. SMITH,
President Board of Control, Masonic Fair.

Cleveland, O., April 10, 1907.

Mary Baker G. Eddy, Concord, N. H.

To Our Beloved Leader:—Joyful, in the accretion of numbers to the body of the Church militant; exultant, over the mighty works performed in the Church spiritual, and watching and patiently waiting for the dedication of the Church triumphant, the members of Second Church of Christ, Scientist, of Cleveland, O., in special meeting assembled, of one mind and in one voice, contribute and convey this testimony of our faith, hope, and love. In loving remembrance, grateful acknowledgment, and humble recognition of you, as one of "God's messengers sent on an embassy of Love," we desire to attest publicly our unalterable purpose of holding fast to "that which is good:" to certify our conviction that nothing "shall be able to separate us from the love of God, which is in Christ Jesus our Lord:" and to reiterate our fealty to the inspired Discoverer and Founder of Christian Science.

We are impelled to further expressions of joy, in the knowledge that you have called into the communion of your home, in association with those whose fidelity to you demands our fullest confidence, the teacher from our church, Mrs. Lida W. Fitzpatrick. Your daily life has been to us a living demonstration of obedience to Christ's command,—love our enemies, and bless those who persecute us,—and your every act has also been in consonance with your own precept in "Science and Health with Key to the Scriptures" (p. 43), that "Love must triumph over hate. Truth and Life must seal the victory over error and death, before the thorns can be laid aside for a crown." With hearts overflowing with love and sincere thankfulness, we are

Most sincerely,

C. E. SQUIRES, KITTIE F. ROBERTS,
O. P. FISHER, LULU G. WEBSTER,
ADELAIDE W. LONG, C. V. HULL,
J. A. WEBSTER, *Clerk Special Committee.*
F. B. MORGAN, *Clerk.*

Chicago, Ill., April 9, 1907.

Mrs. Mary Baker Eddy, Concord, N. H.

Dear Leader:—It is the unanimous desire of Fifth Church of Christ, Scientist, of Chicago, to express, as far as words can, that which we so deeply feel,—our love and loyalty to you in this hour. Our confidence in you is based upon the wisdom which you have invariably shown in your forty years of leadership; it is the result of the good fruits that have come to us from obedience to your counsels; it is the outcome of that perception of Truth which the study of your words has unfolded to us. The experiences of this time of trial have brought us to a keener appreciation of the unselfish devotion of your life to God, as manifested in your efforts to reveal to men the scientific and true creation. We stand to-day as an expression of "Church," giving out and receiving harmony and healing because you have stood in unswerving faithfulness for the truth about God and man. We are grateful that through your consecration we do know how to worship the Father. We know somewhat of the beauty of holiness, the sweetness of Love, because "Science and Health with Key to the Scriptures" has instructed us and enlarged our concept of reality. We know that we can demonstrate on this plane self-immolation, pure love, and faithfulness to God, because you have proven these things.

We send this word to you as an outward expression of loyalty to Truth, and to Truth's Messenger. May it carry to you the message of our loving, grateful confidence in you, now and always.

Faithfully yours,
GENEVA MARY CLIPPINGER, *Clerk.*

Oxford, England, March 29, 1907.

Dear Mrs. Eddy:—You will like to know that you have faithful followers in this ancient city, who are getting daily help and comfort from your most precious book and your teachings of the wonderful truth, the ever-helping presence of divine Love. Our numbers are increasing from a very humble beginning in 1902. We unite in thinking of you with love and gratitude for the great happiness you have brought into all our lives by your book.

EDITH RYND, *First Reader.*
R. L. HENRY, JR., *Second Reader.*

SELECTED ARTICLES.

[Katherine M. Yates in *The American Queen.*]

THE QUESTIONS OF MY FRIEND.

[In the supposed conversation contributed by Mrs. Yates to the March issue of *The American Queen* she answers several of the trite criticisms of Christian Science which the followers of that faith have had to meet on many occasions. Mrs. Yates has told her story so well that the thought of many of our readers will immediately turn to some experience of their own of a similar character.—EDITOR *Sentinel.*]

A friend said to me the other day: "Of course I know that there is ever so much good in Christian Science, and I have seen plenty of people who have been helped by it, and of course I think it is all right for certain things; but do you honestly believe that when there is something serious the matter, something really serious, that Scientists ought to try to get along without a physician?"

"Well," I said, "what do you think is the reason that we employ a Christian Science practitioner instead of a physician?"

"I suppose——" she hesitated, "I suppose it is because you think it would be wrong to have a doctor; and because you wish to be consistent, and——" she seemed at a loss for further explanation of our very peculiar conduct.

"You have," I said, "omitted a most exceedingly important point."

"What is it?" she inquired.

"This: that *we wish to get well.*"

She looked somewhat taken aback.

"And that, quickly," I added, "and permanently. Don't you think this a fairly good reason in itself?"

"Yes," she said, "but you don't always."

"Do doctors' patients, always?"

"No," she admitted rather reluctantly; "but I don't see how you can think that you can get well without a doctor, that is, from anything serious. It doesn't seem reasonable. I don't understand what foundation you have for such a belief."

"Have you ever studied the matter?" I asked.

"Well, no, I have never exactly studied it; but I have asked, ever so many times, to have it explained to me, and no one ever made it seem reasonable to me, though they do seem to understand it themselves."

"Now listen for a moment," I said. "Suppose that a civil engineer is engaged in his work, and remarks that a certain tree, upon the opposite side of the river, is at such and such a distance from the bank.

"But," observes a bystander, "how do you know? You have not been to that side of the river."

"I have a means of calculating," says the engineer, "which brings me the right result, without the need of crossing over."

"Nonsense!" exclaims the bystander, "how can you calculate a thing like that? There is no way to find it out but by going over there and measuring."

"And yet I do calculate it correctly, by means of my instruments and my rules."

But the other shakes his head. "It isn't reasonable," he says, "to believe that you can measure that space without going over there."

"Well," says the engineer, "I don't care to argue the matter with you; but if you wish, go over there and measure the distance, and then come and verify my figures."

The man does so, and finds that the engineer's figures are correct. He is momentarily puzzled, then declares it to be a mere coincidence; adding, "for nothing can make me believe that there is any rule for working out a thing like that."

So the engineer selects another tree and once more proves the accuracy of his calculations. The man becomes more interested. "It really does seem to work!" he exclaims. "Tell me how, so that I may do it."

"I cannot explain it in a few words," says the engineer. "You will have to study the process, as I have had to."

The other looks incredulous. "It is very odd," he says, with some irony, "that if there really is a rule, you cannot tell it to me, so that I may use it for myself,—or perhaps it is a secret that you do not wish others to know?"

"No," says the engineer, patiently; "the facts and methods are open to all who care to take the pains to learn; but they cannot be stated in a few words; they must be studied, practised, and proved."

"Well," rejoins the other, "I don't understand it, and I could never have any confidence in a rule like that. I could never place any dependence upon it. It might be all right to experiment with, in small matters; but I would never base any important calculations upon any such basis as that. I'll take my measuring line and go across the river every time."

"But suppose that your measuring line is inadequate? Suppose that you wish to know the width of a river where there are rapids and no bridge? What will you do then?"

The other considers for a moment. "Well," he says, "when I can't use my measuring line, I'll throw up the sponge. Anyway, I haven't the slightest confidence in that method of yours, and I don't understand it, and I don't think that you ought to be allowed to use it in important calculations."

But the engineer only smiles. "It is your privilege," he says, "to use your own methods in your own affairs, and I claim the same right. I have proven my rule over and over again, hundreds and hundreds of times, and I know that it is not coincidence or guesswork. I know that it is founded upon a solid basis of mathematical truth. Your measuring line may stretch or shrink, or be inadequate for your purpose; but my method is always accurate and sure. Wherever I have failed to obtain an immediate and correct result, the fault has been in some mistake in my reckoning, not in the method itself, and this I have always discovered by a careful review of my work. The method is logically clear and correct when one has studied it,—so clear and so logical that, had I never once obtained a correct answer, I would still know that the rule is exact, just as you know that two absolutely straight horizontal lines must be parallel to each other, whether your hand is steady enough to draw them absolutely and accurately horizontal, or not. Your result may not show parallel lines; but that is because your hand trembled, or your eye was not true, not because of any variation of the *fact.* Your wavering lines cannot affect that."

My friend nodded her head over the little allegory. "Yes," she said, "I see. I suppose that you *can* depend upon what you understand and prove for yourself. But, honestly, if you were very, very sick, wouldn't you be afraid not to have a physician?"

"My dear," I said, "I'd be afraid *to* have one. Not but that I believe them to be honest and noble in their profession, but——"

"Ah," interrupted my friend, "there is your fanaticism, that you fear to be punished for doing what you think wrong, and there is your stubborn effort toward consistency, also."

"You are wrong," I said, "entirely wrong. Now suppose that you had been very ill, and had employed Doctor Jones, and that you liked and respected him; but that you were confined to your bed for many weeks, and that for a long time afterward you suffered from the effects of

Digitized by Google

the illness. Now suppose you were again attacked in just the same way, with symptoms just as severe, conditions just as serious, and suppose that you employed Dr. Smith this time, and that his mode of treatment was radically different from that of Dr. Jones, and that he explained to you its process and the reason for its results, so that you understood; and suppose that this time you recovered within a few days, and that there were no evil effects remaining. Now, should you, in the course of time, be taken ill again, what would be your natural inclination? To send for Dr. Jones, under whose care you lay in bed for weeks, or for Dr. Smith, who had you on your feet in a few days? Would you stop very long to consider the question?"

"No," said my friend.

"Now," I continued, "suppose that some one should say to you: 'I don't see how you dare to employ Dr. Smith. I never tried him. I always have Dr. Jones, I have a standing account with him, for I am sick a great deal; but I wouldn't trust Dr. Smith. He may be all right in small matters; but I don't understand his methods, and I wouldn't trust him with anything serious. I think that you go too far in your loyalty and your effort to be consistent with your eulogies of him and his methods, when you trust him with grave cases or with the care of your innocent little children.'

"'But,' you say, 'I have tried Dr. Jones, and I was nearly always sick while under his care, and I have had very little illness, and that quickly met, by Dr. Smith. I would be afraid to go back to Dr. Jones.'

"'Oh,' says your friend, 'you are afraid that Dr. Smith would do something to revenge himself, if you should leave him.' Now what would you say to her?"

My friend nodded again. "It does look different from that point of view," she said; "but still, I cannot bear the idea of using Science alone upon little children, who cannot choose for themselves."

"My dear," I said, "you know a good many Christian Scientists, have you ever noticed that they seemed to care less for their little ones than do other people?"

"Oh, no,—no indeed."

"Well, now, do you know of any normal, loving mother or father who would deliberately risk a little one's life for a mere stubborn whim? You know what a child's life is to its parents; then you surely need not question whether that parent is or is not going to employ for that little one the method of healing which he honestly and earnestly believes in his heart will bring to it the swiftest and surest relief. Look at it from a common-sense point of view. We are not pagans, sacrificing our lives and the lives of our little ones to some sense of religious fanaticism, to some cruel pagan god; but we are normal men and women, using for ourselves and for those dear to us that which we have learned to know is the wisest and most efficacious remedy, and trusting ourselves to the conduct of a tender and loving God. That we have studied along certain lines which cause our opinions to differ from yours, does not argue that we are, necessarily, in the wrong. When you have studied as diligently and as honestly along the same lines, you will think with us."

My friend shook her head doubtfully. "I haven't much time for study," she said, "and, besides, I don't seem to have much success when I use Christian Science. I guess I haven't faith enough. I tried it on the last cold I had. I just made up my mind that I wouldn't take any medicine or do one thing for myself. My husband was worried almost to death, for I coughed day and night for two weeks. I never did have a cold hang on so. But I just told him that I was going to stick to it, and see what Science would do; and when I did finally get well, he said he hoped I was satisfied, so well satisfied that I'd never try it again. I told him I guessed I was."

"Did you see your practitioner often?" I asked.

"Oh, I didn't have a practitioner! I just used it myself."

"But,—but you have never even read the text-book!"

"No, but I just thought I would see what I could do with it."

"Well, you say you used it; *how* did you use it?"

"Why, I told you,—I didn't take any medicine, or do anything."

"And was that all?"

"Yes, only I tried to think I didn't have a cold."

"And you call that using Christian Science?"

"Yes. What do you call it?"

"Well," I said, "if you wish my honest opinion, I call it a very foolish proceeding."

"Why? Isn't that what you do?"

"Let us have another illustration," I said. "Suppose that you had been living upon an entire meat diet, and should decide to become a vegetarian, and should begin by recognizing the very important point that you must stop eating meat. Therefore you stop. Now suppose that in so doing you entirely lost sight of the fact that a very necessary feature in being a vegetarian is that one should eat vegetables. You did not take that into consideration,—you simply stopped eating meat; and, as you had been eating nothing else, and now substituted nothing, you ate nothing whatever. You merely kept telling yourself that vegetarians averred that meat was not necessary, and went on, from day to day, growing hungrier and hungrier, and thinner and thinner, and stating to all enquirers that you were testing vegetarianism to see what was in it. It wouldn't take you very long to come to the conclusion that vegetarianism was not practicable, that you, at least, couldn't get along without meat, and you would notify your friends that you had tested the theory to your sorrow; and then you would return to your meat diet, sadder and not much wiser; but well convinced of the error of vegetarianism; for you are positive that you would have starved to death if you had kept it up. Now, in so doing, are you giving the vegetarian theory a fair showing? Aren't you really slandering it and misleading those who do not understand exactly your method of testing it?"

"Yes, I suppose so; but to test it that way would be absurd."

"Now, you needn't laugh," I said, "for that is exactly the sort of test that you gave Christian Science. The foundation of your method of treatment was negative,—*not* to take medicine. A continuous negative never yet brought a positive result, its ultimate is nothing. Your foundation must be positive, an accepted fact; and your method must contain more positives than negatives, more knowledge of the truth than denial of error, if you would realize a positive result. That you took no medicine, no more argued that you were using Christian Science than that you were using osteopathy or voodoo practices; and as for having given it a fair trial,—well, what do you think about it now, yourself?"

My friend pursed her lips. "I suppose you are right," she said; "but I didn't see it that way before."

"And you have told others that you used Christian Science on that cold, and what the results were?"

"Yes, I suppose I have,—quite a number."

"Well, don't you think that it would be a good plan to modify that statement to them, when you have a chance?"

"Yes," she said, "I will. And I suppose it wouldn't hurt me to really try Science some time."

"No," I said, "I don't think that it would hurt you, and the chances are that it would do you a lot of good."

"There is one more thing that I would like to ask," she went on. "It seems to me that if the healing is of God, it ought to be free. I don't see how the practitioner can think it right to charge for it."

"I'll tell you one reason," I said. "You see, the practitioners have not yet demonstrated over the necessity of

Digitized by Google

eating food and wearing clothing and having roofs over their heads. When a person gives up his ordinary pursuits which have heretofore furnished him with a livelihood, and takes up the study and practice of Christian Science, can you tell me by what means he can obtain the necessaries of life if he makes no charge for the time which he devotes to this work? He cannot give all of his attention to it, and still carry on other vocations, and yet he must eat and be clothed. Can you solve the problem otherwise than by the charge of the very low rate for the time given to the patient?"

"No," said my friend, "I suppose that he has to live, the same as the rest of us."

"He surely has," I said, "and there is, also, another reason for the charge. A gift, as of work in this case, given without charge, and accepted by the recipient as his right, not as a favor (for that seems to be your argument), has little value. It has cost no effort,—it makes little impression. It is a small matter. If it fail, there seems to be little lost; hence much of the efficacy of the treatment is forfeited through the indifference of the recipient. His attitude of apathy is a bar to the good which he might otherwise receive. But let him feel that he has something at stake, and lo, his attitude is eager and receptive. And, again, were this work given without charge or price, the mere curiosity seeker, the searcher after new experiences, the chronic sponge, the seeker for something for nothing; all of these would so fill the time of the practitioner that the real sufferer, the earnest seeker, the honest investigator would be crowded from their places; for it would be well-nigh impossible to supply practitioners enough to do the work."

My friend nodded once more. "I see the argument," she said, "and I am glad to know your side of the question. I have argued quite a number of such questions with Christian Scientists, and they always seem to get the best of the argument. As I said, I think that there is a lot of good in it; but there are quite a number of points that I don't believe. I can't argue them very well, though, for I am not exactly sure as to what you really do think. You see, nearly all of the absurd things that people say you accept, I find are just as ridiculous to Christian Scientists as they are to me, and that you really do not believe them at all. I don't argue as much as I used to, though, I just ask questions," she added.

"That is a good sign," I said, laughing; "but let me give you a word of advice.—read the text-book. Then you will know what we really do accept, and what we really do prove, and that will be better than asking questions to find out what we don't believe and what we don't practise. And when you have read it, you will be in a very much better position to argue than you are now."

"But," protested my friend, "perhaps I will not wish to argue when I have read the book."

"*Perhaps you will not*," I agreed, heartily.

[Editorial in *The Star*, Wilmington, Del.]

We are not sure as to where the line should be drawn between the quacks and those who, without the use of drugs, claim the power of curing disease and alleviating human suffering. Of one thing, however, we are sure, and that is that there are many believers in the Christian Science system, high-minded and honorable men and women, whose right to put their religious belief into practice ought not to be denied them. It is claimed by those who favor this medical bill that it in no wise interferes with the Christian Science religion, and that the adherents of the cult can go on, as heretofore, in the treatment of physical or mental ailments without rendering themselves in the least liable to the law as embodied in the medical bill. We say "as heretofore," for we have heard of no charge that the Christian Scientists have at any time been guilty of any offense under the terms of the new law, except in the matter of charging a fee for their treatments. Thus, it would appear, the whole matter, so far as the Christian Scientists are concerned, is reduced to a commercial basis. This is not very high ground on which to predicate a public measure for the protection of the people, and it is certainly not the ground on which the main idea of the bill is founded. But there seems to be no other basis for what the Christian Scientists regard as a direct attack upon them.

If the Christian Science method of treatment is hurtful, it ought to make no difference whether their healers collect a fee for their service or not. In other words, the offense should not be in the charge for the treatment, but in the treatment itself—unless it is held, which we have not heard, that they are practising a fraud, otherwise harmless, for a cash profit. If they are to be permitted to go on attempting the cure of disease, in what respect will denying them the privilege of charging for their services be a protection to the public, in the sense that this bill is designed to secure such protection? We have no more interest in Christian Science than has any other citizen who is not a member of that sect, but it does seem to us that this bill has not dealt with Christian Scientists in that spirit of fairness to which every individual and every class is entitled. Either they should be prohibited from practising their system of cure, on the ground that it is harmful, or they should be allowed to charge for their service or not, as may be their pleasure and the pleasure of those who seek their assistance.

It has been suggested that as the Christian Science healers bear a spiritual relation to their followers similar to that borne by the pastors of other denominations to their church members, that therefore the healers should receive a salary, to be raised in the same manner as are the salaries of the pastors. This would be a good suggestion were it not for the fact that it seems to contemplate the regulation of an affair which is clearly within the sole province of the Christian Scientists to regulate for themselves. It is not for outsiders to dictate how the Christian Science Church shall arrange for the compensation of its healers. If the Methodist Church, for instance, were to decide that their preachers should provide for their pay by charging a fee for pastoral visits and for prayers for the comfort and consolation of those to whom they thus ministered, would any one think of asking for a law prohibiting them from making such a charge?

This whole matter, as we see it, hinges on the question as to whether the Christian Scientists are sincere in their belief that human ailments may be cured or ameliorated by their system of mental treatment, and as to whether the methods of their treatment are or are not hurtful. Unless it is charged that they are not sincere and are simply imposing upon the credulous,—an imputation that is not advanced by anybody so far as we know, and which, if it were, would be disproved by the high personal character of the Christian Scientists themselves,—or unless it is charged that their methods are positively injurious, as in the case of ignorant or unskilful administration of drugs,—a charge that is still unvoiced,—then, so far as it relates to Christian Scientists, we fail to see the justice of the bill which received the unanimous endorsement of the State Senate on last Tuesday.

[Editorial in the *Boston Herald*.]

In throwing open its doors to all comers to listen to eloquent addresses from distinguished speakers in behalf of universal concord and peace, The First Church of Christ, Scientist, scores fraternally and handsomely.

TESTIMONIES OF HEALING.

It is now nineteen years since I first heard of Christian Science. A very dear friend of our family, who had been an invalid for years, was healed through it. This seemed very wonderful to us, and from that time on our family felt a kindly interest in Christian Science simply through what it had done for our friend. It was about a year after this that we had an occasion to see a proof of the healing power of Truth in our home. My brother's wife, shortly after the birth of her babe, became dangerously ill, and this condition continued for almost five weeks without any relief. Our family physician, whom we all loved and trusted, was unable to furnish relief, to say nothing of healing the condition. One morning when an unusually severe attack was manifesting itself, the doctor was sent for in haste, and my mother in her distress called in a neighbor who had begun to investigate Christian Science a few weeks before. It so happened that a Christian Science practitioner from Leavenworth was at that time visiting at our neighbor's home, and the two ladies came to our house together. The Christian Scientist, seeing the distressed condition, asked if she might try to help my sister-in-law until the doctor arrived. It was some time before he came, and when he did come he found a condition that he never had before —his patient was quietly sleeping. The Scientist turned to the doctor and said very gently, "Doctor, I do not believe the lady will need your attention this morning." When informed what had been done, he was thoroughly surprised; in fact we were all startled. There was never a return of this disease, and the patient is to-day a living witness to the healing power of Truth. My brother was healed of an intermittent fever that he had had since childhood, and my mother of severe stomach trouble. All of this was within a few weeks of the healing of my sister-in-law.

Two years after this we moved away from our good neighbor who had helped us over many rough places; but in all this time we had never seen a copy of Science and Health, and supposed it must be for those who studied Christian Science with a teacher. In 1891, shortly after my marriage, I was visiting in Chicago, and was stricken with a serious illness. Four weeks of constant attention by one of the best physicians in Chicago found me very little better, for complications had set in. It was finally thought best for me to be taken home, and in order to accomplish this I was kept under the influence of morphine until I arrived at home. The change made some difference in my condition, and upon my arrival my husband's physician was called in. After months of suffering I was able to be out for a short time, but for almost two years was under the constant attention of this physician. When I would see the efforts put forth by the physician, my husband, and all those around me with such poor results, my thoughts would often go back to the time when Christian Science did so much for us. I would often think if I could only get hold of that book, just to see what was in it. We had occasion to move, and very fortunately for me we found ourselves across the street from a Christian Science practitioner, while my mother and father were next door. I would lie in bed and often wish I were able to go across the street and talk with the practitioner. My father was taken very suddenly with lung trouble one night, and after a consultation decided to send for the Christian Science practitioner instead of a doctor. He was helped immediately, and the day after was well, without any bad effects whatever. The practitioner loaned them a copy of Science and Health, and they finally purchased one.

It was not long before my mother brought Science and Health to me, and I am sure I soon learned that I had the "pearl of great price." I cannot say that I merely read Science and Health; I studied it night and day, and I noticed that I was gaining in strength each day. The understanding came slowly, but I gained in health rapidly, until one day, about four weeks from the time I first read the book, I awakened to the fact that I was well,—the pain that had been my companion so long was really gone. Words can never express what this means to me as I look back and think of it. I knew from that hour that if God was able to relieve me in four weeks, something doctors had been trying for two years to do, I would not be afraid to trust Him forevermore. I threw away everything I had in the form of medicine (and it was legion), and have trusted God ever since. I am most thankful to say that I am enjoying the best of health and have since the time I was healed. During this time I have had several severe ailments present themselves, but I passed through them with little difficulty, and regained my health soon after. I have never had any return of the original trouble. In the years since 1893 I have found the power of Truth sufficient to meet and overcome every trial that has presented itself. I am very thankful to God, and to Mrs. Eddy, for the truth that sets free.—MRS. BELLE THOLEN, Leavenworth, Kan.

This morning as we sang in church our Leader's hymn, "O'er Waiting Harpstrings of the Mind" (Christian Science Hymnal, 179), my heart responded with an earnest desire to fulfil the closing words, "Some daily good to do, to Thine, for Thee," and the desire remained like an unspoken prayer. On returning home I opened the current *Sentinel*, and found therein a most helpful article on "True Giving," and the thought came to me that I had the real treasure, and could give of it now; that thus I might help to answer the prayer. This treasure is the understanding of Life, Truth, and Love which has come to me through the patient, self-sacrificing labors of our revered Leader, Mrs. Eddy, and through the inspired wisdom of her book, "Science and Health with Key to the Scriptures."

It is fourteen years since I first realized physical healing through Christian Science. At that time I was healed of a severe eye trouble, taking off a pair of powerful glasses at the first treatment and never having use for them again. I was engaged in art work that required close and constant application, and had suffered intensely not only in my eyes, but through my head. The relief was immediate, and I suffered no further inconvenience. All my life I had been in delicate health, at times a great invalid, and when the truth first came to me I was on the Pacific coast, having gone there in search of health. After the healing of my eyes I took up the study of Christian Science, and from the first my improvement was marked and steady. I never had any treatment from a practitioner, but through the reading and study of our text-book, and by applying the understanding thereof as it came to me, one ailment after another disappeared, until in less than two years I was a well woman physically and mentally. The dark shadows had disappeared, and I was no longer a burden to myself and to others, but rejoicing in the knowledge that existence is eternal, a forever unfolding of God's goodness.

From early childhood I had pondered on the things of God, and found no answer in the teaching of the churches; still, amid darkness, doubts, and physical and mental suffering, I felt that some day I should understand. That day and the longed-for understanding have come. In Christian Science is the answer to all the perplexing questions of the ages. No one can drink of this fountain and go thirsting away. Is any sick or sin-laden, weary or discouraged, doubting or despairing? To that dear one I can joyfully say, Come, and lay the burden down at the feet of Christ, Truth, who will heal you.

Digitized by Google

Fourteen years of daily experience in relying on divine Love, as understood in Christian Science, for every need enables me to testify truthfully to its unfailing help. May Love carry this message to some hungering heart; some weary searcher for the truth find the light and walk therein. Too deep for words is the understanding and appreciation of our beloved Leader, in what she has done and is doing for God and mankind.

ALICE CARY VICTOR, New York, N. Y.

In February, 1895, I suffered untold agonies on account of injuries received at childbirth. Another physician who was called, after a careful examination said that he was surprised I was still alive. He directed suitable nursing, and thus partial healing was secured. The next year I resumed my school work with a large room of eighth-grade pupils, but I was always in pain, and finally in the second year I became so weak that I had to give up before the close of the winter term. I was considered a nervous wreck, and no one expected me ever to be well again. I had three different physicians, all standing high in the profession, and they did all they could, but finally decided that a surgical operation was the only hope. The surgeon who performed the operation said there was an abnormal growth, and that a second operation would very likely be needed later on. The operation gave some relief, but still it seemed that I never would be well or able to walk much again. I could sit erect for only a few minutes at a time, and although a young woman I was reduced to a mere skeleton and looked old and decrepit. One of my former pupils was a Christian Scientist, and she used to call and talk with me and leave some Christian Science literature. I read what I could, and committed to memory parts of the Bible to which references were made in the testimonies of healing. Soon word came to me that a dear sister in a distant town, who knew nothing of Christian Science, was declared to be dying from internal disease. I immediately went to work with what little I had learned of the truth, declaring God's allness and realizing the truth for her, and thereby she speedily recovered full health and strength and has so continued to this day. My next effort was for myself, when, having severely scalded two of my fingers, I declared the truth vigorously, and the next day the worst burned finger was well and showed no manifestation of soreness.

I longed to try Christian Science fully for myself, but did not know how or where to find a practitioner, so I could only wait for the return of my pupil-friend, who was out of town; yet when she came to see me, and asked me to try Science, my reply was that we had tried so many things and nothing seemed to do any good, that it seemed useless to try any more, when our medical bills were already a heavy burden. She then asked if her teacher in Science might come and talk with me, and I assented, but said I would not promise to take treatment. She left her copy of Science and Health for me to read, and soon brought her teacher, who talked kindly with me, explaining some things, and then left me to think upon the subject. When my husband came home I told him of it all, but like myself he had no faith. However, I read what I could in Science and Health till the next day, when I became so far convinced that I could be healed that I sent for the practitioner. She soon came, and my first treatment was on May 9, 1900. That afternoon I sat up comfortably for five hours. My husband was greatly surprised when he came home, and said if I was well enough by May 20 to attend the dedication services, he would go with me. The next day, with the aid of my husband, I walked three blocks for my treatment, and afterwards returned with him. The following day I walked there and back with only a girl to assist me. The third trip and later ones I went alone with God. On the second day when I was coming home up the hill it seemed as if I could not do it, but quickly the thought came, "My strength is sufficient for thee;" so I took God at His word, and arrived home without any sense of fatigue. On the third day I removed the surgical support and have never needed it since, nor was there any occasion for a second surgical operation. I received nine consecutive treatments, and on May 20 I was ready to go with my husband to the Christian Science church dedication. After sitting in the crowded congregation for three hours, I walked home again and got the dinner, and still no sense of weariness. My husband was then fully convinced, and became at once an earnest student of Christian Science. He is now Second Reader, and I have served several years as chief musician. We are constantly enjoying many indisputable proofs of the truth and value of Christian Science as taught in our denominational text-book, "Science and Health with Key to the Scriptures" by our Leader, Mrs. Eddy. It enables us to understand how an infinite God is all-power, all-knowledge, all-presence, Life, Truth, Love, and how the real, spiritual man is the image and likeness of Spirit, God; is God's idea, hence man is as free from the law of sin and death, as is God whom he reflects. With many of us the physical healing from mortal ills seems to be needed to awaken us to a realization of God's all-presence, but when awakened by such sweet experiences, it is only by constant study of the truth and faithful obedience thereto that we can grow into the Mind of Christ.

MRS. SUSAN E. R. MERRILL,
SAMUEL H. MERRILL,
Fairmont, Minn.

Christian Science was brought to my notice about a year ago. My first impression of it was unfavorable, but in spite of this I sought a practitioner to gain the physical relief which I had not found through medical treatment. During the conversation with the Scientist I was conscious of a ring of truth such as I had not heard before. There was a gleam of light which then seemed very far away, but that glimpse of something for which I had always longed could not be taken from me, and it has been steadily growing brighter. I left the practitioner, and anxiously awaited the time for my next visit, which proved to be the beginning of much good, both physically and spiritually. I have tried not to be "a sluggard in the race" (Science and Health, p. 22), and I have found that by working out our own salvation God works with us to this end. It has indeed been so in my case. I am entirely healed of serious eye trouble, having worn glasses constantly for eleven years, but now have no further use for them; also of rheumatic and internal trouble, besides many minor ailments. My gratitude to God and to Mrs. Eddy cannot be put into words, for giving us "Science and Health with Key to the Scriptures."—MRS. IDA R. STRAUSS, Cleveland, O.

About ten years ago the first great sorrow of my life came to me with the passing away of my eldest little daughter. Christian Science had been presented to me before her illness, but I did not rely wholly upon it, employing medical help. I did, however, place the baby under Science treatment, to prevent if possible any appearance of the same trouble in her, and the result was all that could be desired. The only hope, the only light I could see, came through Christian Science, and for hours I studied our Leader's words, especially in "Miscellaneous Writings." I visited the Reading Room, and gained strength and courage to take up the daily duties, to be cheerful, and help others whenever I could. Since then I have tried to be a Christian Scientist. There have been some dark hours, some stumbling, and there have

Digitized by Google

also been victories and rejoicings. As I look back over the years I can only be thankful for the knowledge of the truth, which has so often helped me, and I think, Where would I be, what would I be, without Christian Science? I feel that gratitude is more than words, and everything I do that helps any one, any word I speak that gives cheer, is but an expression of gratitude to the giver of all good gifts for His gifts to me, and gratitude to our Leader for her untiring efforts in behalf of humanity.—ELIZABETH L. S. MADDEN, Troy, N. Y.

Before coming to this province I had lived for about ten years at Vancouver and Victoria, British Columbia, and about four years of that time I had suffered untold agony from bladder trouble. During that term I had been treated by four different doctors, and the last one, on account of the serious nature of the malady, advised me to have an operation performed, but because of the apparent doubt as to the outcome of the operation I did not consent to undergo one. A little later on I had a very severe attack, and was attended by one of the best surgeons in the city, who prescribed a remedy to be taken three times a day for about six months, or undergo an operation, and I tried the remedy until it seemed almost as bad as the disease.

Shortly after this I accepted a position in Winnipeg, and after my arrival there I began attending Christian Science services. After hearing week after week of the many beautiful demonstrations of healing through Christian Science, I decided to try it for myself, as by this time kidney trouble had appeared. I applied for treatment to a Christian Science practitioner and the first treatment brought immediate relief. In the course of a very short time I was healed of the bladder, kidney, and liver troubles. Then I became interested still further, and purchased the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. After studying this book for a time, I found one day that a truss which I was wearing gave me such discomfort that I had to remove it, and discovered that the ailment which had caused me so much pain and inconvenience for over twenty years was no longer in evidence. I threw away the truss, and have had no occasion to use one since. The expense of new appliances every little while during those twenty years was quite an item alone. This healing took place about three years ago, and I have lifted heavy weights many times since, but have not suffered the slightest inconvenience in any way. I have not tasted medicine of any kind for over six years, but have trusted in Christian Science alone for all my healing.

After having suffered so much and so long, and having been delivered out of all this suffering and being able to enjoy life to its fullest extent, how can I express in words my gratitude to God, and to the Discoverer and Founder of this blessed truth that is doing so much healing work throughout the world to-day? It is all being done by giving us the right concept of God, our heavenly Father, and of man created in His likeness.

WM. LOUGH, Winnipeg, Canada.

It is now over five years since Christian Science was presented to me. It was the practical daily help that attracted me then, learning of the impotency of evil and the allness of God, good. I had always believed before in the power of evil, and left myself in God's hands to help me out of it. Christian Science taught me to treat all evil as illusion, as merely a ghost in the dark, to be regarded fearlessly as nothing, in whatever phase it may come to one. I learned, too, that we must bring forth fruits of the Spirit in our daily thought and walk. This was so different from the old thought of praying to be made better. Now our duty is summed up in our dear Leader's Message, beginning, "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them" (*Sentinel*, Oct. 6, 1906). Science and Health teaches us to meet and conquer the false belief of life in matter, or of any life apart from God. I had my time of doubts and fears to go through, and seemingly lost my God and Saviour for about a week, but found Him—as did Mary in the garden—by turning around and looking up to see Him.

I wish also to say that I have proved the efficacy of Christian Science, both mentally and physically, in the healing of sorrow and discord, of rheumatic and nervous trouble, also the effects of a severe fall, etc.,—all by declaring the truth and knowing God to be the only Mind; that this Mind governs, guards, and guides us into all harmony, and that His presence, power, and peace do meet every human need. The *Sentinel* and *Journal* are a great help, as is all Christian Science literature; and especially Mrs. Eddy's writings, which teach one to know God, "whom to know aright is Life eternal" (Science and Health, Pref. p. vii.).

MRS. ALICE STANLEY CLARKE, Ryde, I. of W., England.

It is sincere gratitude that prompts me to tell others of the healing power of Christ, Truth. About the 15th of last July, my son, thirteen years of age, attempted to ride an unbroken horse. It reared and fell backward, carrying the boy to the ground. His limb was severely injured, and I called a physician to examine it. I also called another doctor. The limb was much swollen and he was suffering intense pain. The doctor gave him some drug to ease the pain, placed the limb in an ice pack and said that was all he could do; but the suffering continued. The second evening my son asked me to get a Christian Science practitioner. I did so and in a half hour he was sleeping, but soon awoke and in pain. I insisted upon his taking the drug left by the doctor, and temporary relief followed, but only for a short time. I wanted him to take more, but he refused. I then went to see a man whom I knew was a Scientist and told him my discouraging story, and I shall never forget the rebuke he gave me. He placed his hand on my shoulder, and with a smile said, "You are holding that boy from being healed." He said it so gently, so lovingly, that I asked him in what way I was doing so. His answer was, "Through mortal fear, and by mistaking human affection for the love God gives us." The sense of fear was met right there. When I got home my son was free from pain and he had no more of it. In ten days he was able to walk without crutches: there was no stiffness in the joint, the swelling went down slowly but surely.

Thank God for the truth that makes man free, and for that inspiring book, "Science and Health with Key to the Scriptures," by which the world can know the truth.

W. E. PARMELEE, Spokane, Wash.

Before I heard of Christian Science I had spent much time in sanitariums and had been under the care of doctors and specialists for what was called chronic liver complaint, also a stomach trouble, accompanied at times by severe mental depression. At last I consulted an eminent physician of New York city, but did not gain under his treatment, and again passed nearly a year in and out of a sanitarium. Then the doctor told me medicine could do nothing for me, and I returned home without hope. A friend gave me a *Christian Science Journal*, which I read eagerly, and finding a practitioner's address, I wrote for treatment. After the first treatment (absent) I dressed and went to my business, to which I had given very little attention for nearly a year. I then had five weeks' treatment, and since that time, over eight years ago, I have not missed one day from business on account of illness. I have been in business in this city thirty-five years, and for many

Digitized by Google

years our doctors' bills were from a hundred and seventy-five to five hundred dollars a year. Since I first heard of Christian Science I have never had any kind of material treatment. I am in the best of health, and am very happy in trying to live this wonderful truth which is made so clear through the teaching of our text-book, Science and Health by Mrs. Eddy, for which I humbly give thanks every day. After my healing, Christian Science meetings were started in my home, and now we have a flourishing church in this city. I shall be glad to answer any questions relating to my healing.

CHARLES H. BARNES, Poughkeepsie, N. Y.

May 7, 1901, I was given ether and had several teeth extracted. The following day I became very ill and took to my bed. A physician was summoned, who treated me for a week or two and then said he could do no more. Another physician was called, who diagnosed my case as severe nervous trouble. I was under his care for five or six months and he sometimes made three visits a day, but finally he, too, said he could do no more for me. I lay in bed nearly all the time, occasionally sitting up for a little while, and for three months I was not allowed to see callers. Sometimes it seemed as if my reason had left me. I could take but very little nourishment, and finally could not retain even infants' prepared food.

About six months after I became ill, a Scientist called to see me. I asked her if she thought I could ever be any better, for I had then given up all hope of ever being well. She said that I could be healed if I would do what Christian Science requires. I agreed to do this, and all medicines were thrown out and the treatment begun. The Scientist told me to get up, go out to the table, and eat whatever I wanted. I told her that I would do so, but that I knew it would kill me. I did eat, increasing the amount of food gradually, and began to gain. The awful cloud lifted, and I grew stronger. In five weeks I was doing my own work without any help. A short time before I began treatment my father came to see me. Before he went away he came to my room, and wept as he kissed me good-by. I knew then that he thought I was going to die. Two or three weeks after Christian Science treatment began, he came to see me again and found me cooking. He was greatly surprised, and wondered if it really could be I. This sickness cost my husband a good deal of money, and the amount spent for Christian Science was comparatively small. I am in excellent health to-day, and even go out nursing.

MRS. ALICE E. WING, Farmingdale, Me.

I write the following testimony in the hope that it may lead some one to the truth which makes free. In June, 1899, my health commenced to fail. I was very nervous and unable to sleep, and gradually grew worse, until the following February, when I was compelled to give up. I was in bed two months, and although I was around the house during the summer I was unable to do any work. I went to a sanitarium to consult a specialist, who said I was in a very serious condition, and unless I received help very soon was liable to be a confirmed invalid. As I did not improve under his treatment, but rather seemed to grow worse, I returned home very much discouraged. I kept on trying everything that was recommended me by friends, electricity, osteopathy, etc., also change of scene and climate. I was in a very distressing condition, being at times so full of fear that I did not want to see my friends. In May, 1903, my mother died, after several weeks' illness. She had been treated by two physicians, one a specialist on nervous diseases. I was also under the care of one of them for about two years, and of the other for three or four months. Not having improved, I consulted another physician, who after a thorough examination said I must either try the "rest cure" or a constant change of scene. Neither of these prescriptions appealed to me, as I had been away more than I had been at home. In the fall of 1903 I went away East for three months, but returned very nervous and unable to sleep more than a few hours at a time. Soon after my return I was told that my brother was insane, and in July, 1904, he was taken to an asylum. At this time my fear was very great indeed, and it seemed as if I could hold out but a few weeks longer. My physician informed me that medicine could do me no good and I must leave immediately for the seashore and not come back under a year.

At this time divine Love led me to a Christian Science practitioner, who said that I need not leave home; that God was there, just as well as at the seashore. Although I knew practically nothing of Christian Science, I was willing to try it. In less than a week I commenced to sleep like a child and felt happy and free from care. I took in all fifty-five treatments, costing about a tenth of what the medical treatment had done. My health is better than it has been in years. I am completely cured of sleeplessness, the fear of insanity has entirely disappeared, and with my own understanding of Christian Science I am able to meet the slight ailments which present themselves, having taken but four treatments during the past nine months. In the five years previous to my healing through Christian Science, I had been treated by three specialists for an ear trouble, besides the treatments which I had taken from a number of other physicians.

I feel very grateful to God for revealing this truth to our beloved Leader. It has led me from darkness into God's glorious light.—LILLIE CHAPIN, Janesville, Wis.

Seven years ago last May I passed through eight weeks of severe sickness, resulting from stomach trouble. I had the very best surgical as well as medical doctors that could be had, but at the end of the eighth week they said everything had been done that they could do. A Christian Science practitioner was then called, and I was saved from death. I am willing to testify to this anywhere, for I know it is the truth. Previous to this illness I had stomach trouble for twenty years, and had been in a hospital for operations, thinking they would help me, but I gradually grew worse, until I was healed in Christian Science. I am glad to be able to say that I am now well and happy, as I have been since my healing in 1899. I have proved many times for myself and others that the truth heals both sin and sickness. I am very grateful for Christian Science, which teaches us how to work out our salvation from all evil.

MRS. E. A. CRAWFORD, Brunswick, Me.

[Written for the *Sentinel*.]

INFINITIES.

EMILY HOUSEHOLDER.

A DROP of opalescent dew
Reflects entire the varied hue
Of rainbow, sun, and sky;
The fine essential fragrance sweet
Of nature's perfumed store replete,
Is the violet's supply.

The tender impulse to be kind,
Which in the human heart we find,
Is Love's high tide wave's crest,—
The tremor of unerring power
That guides the planets hour by hour—
Is God, by man expressed.

Digitized by Google

FROM OUR EXCHANGES.

[*The Christian Work and Evangelist.*]

For three years Jesus, who based his judgment of men and women on the spirit that animated them, who laid all his emphasis on the spirit as opposed to the letter, had been traveling up and down Palestine, spreading the message of his ideal of a society where love and kindness should govern all the relations of men. He had taken what was good in the religion of his times, yet by his emphasis on the underlying reality and his disregard for the external form, by his carelessness for such things as strict Sabbath observance and social considerations, he had sorely shocked the Pharisees, those good churchmen who held salvation to be merely a matter of religious creeds and observances, and by the broad spirit of his humanity he had roused their bitter enmity.

[John Bascom, LL.D., in *The Christian Register.*]

The supreme purpose of the pulpit is the exposition of divine love and a vital transfer of it to all conditions and all classes in human society. As long as a preacher keeps within the bounds of Christian belief—and it is a wide field and no man's paddock—and converts that belief into a life ever more tender, more penetrating, more explicit, we should accept him as one of God's messengers, ordained under His own hand and possessed of the only apostolic succession that can ever master the world. It is these men that are to transform the world into the kingdom of heaven, not those who have established themselves as gatekeepers, and turn back more than they admit.

[John Reed Shannon, S.T.D., in the *Western Christian Advocate.*]

This life is as a highway leading out into the citizenship of immortality. Any human being who has placed his feet upon this royal highway of life, even though his existence be the poorest, the commonest, the most restricted sort of an existence possible, has received a gift past all computation, beyond all imaginable value—the mysterious gift of life. He has before him all that eternity means to a child of the infinite God; and this infinite God is under infinite responsibility to do all He can to make this mysterious gift of life to His child an unspeakable blessing.

[Editorial in the *Steuben Farmers' Advocate*, Bath, N. Y.]

The science of living means the abandonment of many over-indulgent pleasures. It means to quit worrying; also, to quit quarreling and lying. It means to quit dissipating. In brief it means—quit sinning. There is no real pleasure in sin. We pay doubly for every error we make in the science of living. Quit worrying, learn to control yourself, quit eating too much, quit counting up your worthless gold. Live right, if you wish to share in the real pleasures of heaven on earth.

[Rev. Marion D. Shutter, D. D., in *The Universalist Leader.*]

We must begin to live the life eternal in this world. We must seek what God seeks and love what He loves. We must study and assimilate the character of Christ. We must be guided by his principles and carry on his work. And if this service shall give us an impulse in the right direction, it will enable us to rise with Christ to that newness of life which, by its own inherent right and power, is immortal!

[*The Standard.*]

The man who stands in the midst of his fellows intent in doing all the good he can, in all the ways he can, to all the people he can, in the name of Jesus Christ and impelled by his spirit, has come upon the supreme manifestations of piety.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Printed from new plates and containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75
Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration will be found on the wrapper. No other notice will be given.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

In all other countries, six cents per copy, postpaid to any address: twenty-five copies, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

It is not improbable that President Roosevelt may soon announce to the Chinese Government that the United States does not care to receive any more money on account of the indemnity awarded to this country, growing out of the Boxer uprising. China has already paid the United States $5,000,000, almost enough to satisfy the claims of American citizens injured by the riots and to reimburse the Government for the cost of the expedition sent to the relief of Pekin. President Roosevelt has let it be known that he thinks it would be unjust to China to have the United States profit financially by the Boxer uprising. As things now stand this Government will net about $16,000,000 or $18,000,000 out of the settlement of that trouble, unless China is told to stop payments. The money demands made upon China by the combined Powers amounted to about $300,000,000 and the share of the United States was about $25,000,000.

The following reply was recently made to an official of the W. C. T. U.: "Our company controls advertising space in ninety-five per cent of the street car lines of New England for the next ten years. I have given orders that from this time on, no solicitation be made and no advertising be taken for liquors, beer, or any other article coming in the line of intoxicants. We have one contract running now in the surface cars, and a small one on the elevated, that we shall be obliged to carry until the contract terminates or suffer heavy damages; but after these expire you may be assured that there will be no more advertising of this kind in our cars." It was learned that it would cost the company $180,000 to refuse to accept contracts already in sight for the coming year.

Investigation has already been set afoot, largely through the instrumentality of the President, for the valuation of the Government coal lands of the West. This work will put the Land Office in a position to sell the remaining Government coal lands at something like their real value, instead of at the nominal price of $1.25 an acre. The work that has been done already indicates that there are hundreds of thousands of acres of coal land all over the public domain in the West that will rank with the best West Virginia steam coal as a power producer, though it will have to be used through the medium of a gas engine.

A new society, which wants only a hundred members at five dollars a year to carry it on, to be known as the Concordance Society, has been organized with Prof. Albert S. Cook of Yale University as president. The only English concordances now available are those of the following books or authors: The Bible, The Book of Common Prayer, Burns, Cowper, Fitzgerald's "Omar," Keble, Milton, Pope, Shakespeare, Shelley, the *Spectator*, Tennyson (incomplete), Science and Health by Mrs. Eddy. There is none of Wordsworth, Browning, Coleridge, Keats, Chaucer, or Spenser.

Commissioner Smith of the Bureau of Corporations is sending special agents into New England and other sections to study the price of lumber. This is a part of the investigation of the lumber trust. Enough has already been learned to show decided and uniform advance in the price of practically all lumber in the last decade, far beyond anything that would have been warranted by the natural shrinkage in supply. There was a very great advance in prices in 1906, which the Bureau is trying to fathom.

The General Education Board at its last meeting subscribed conditionally $625,000 to five colleges. At the same meeting $42,500 was given to schools for colored people, making a total of $280,000 given by the Board for work among the negroes. Altogether the Board has distributed $1,702,500 thus far to educational institutions.

The Indian Bureau has been advised of the willingness of the Sioux Indians at the Cheyenne River Reservation to lease about one hundred thousand acres of their land to the band of three hundred Ute Indians who left the reservation in Utah last summer and wintered at Camp Meade.

Foreign.

The Mikado, who has just received in audience the delegates to the Peace Conference at The Hague, urged them to use their best efforts to obtain good results there, adding: "We have always said that we were solicitous for the peace of the world. You are expected to carry out this desire at the Peace Conference to which you are now being sent." The Japanese delegates will present a series of independent propositions, among them being: The conclusion of conventions for the conduct of battles on land and at sea; the use of mines in commercial routes; the use of wireless telegraphy between besieged fortresses and points in neutral territory; the use of neutral ports for belligerent purposes; methods for declaring the opening of hostilities; the limitation of armaments.

Lord Cromer, who recently resigned his position at the head of Egyptian affairs, in his report of the progress in the various departments of the Government for 1906 says: "The idea of the Egyptian National (or anti-British) party, that the natives can exercise full rights of autonomy, is absurd; cohesion between the Egyptians and foreigners can only be secured by the creation of a local international legislative council composed of thirty-six members, twenty of them elected; the present system of legislation by diplomacy must be abandoned."

A few days ago it was announced that the Sultan of Turkey had issued an irade granting all the demands of the Powers as to Macedonia, and that the Ambassadors had therefore consented to an increase of three per cent in the Turkish customs duties, thus bringing to an end negotiations that had lasted twelve years. But now, after the Porte had announced that all terms had been complied with, there is another hitch, owing to covert evasions of the terms. In consequence none of the Ambassadors signed the protocol, and will not until the Porte realizes that it must abandon its policy of obstruction and intrigue.

A special departmental committee has issued a report saying there is no doubt that a number of English people have assumed the title of baronet either wrongfully or upon the most doubtful basis. These cases approximate five or six per cent of the entire baronetage. The committee recommends legislative action to create a tribunal that shall prevent the unlawful use of any title.

The Sultan of Morocco is reported unwilling to carry out the terms of the Algeciras Convention. He is said to be delaying facilities for the formation of the international police and also pays no notice to the French claims relative to redress for the murder of a French citizen.

By command of King Edward the Automobile Club of Great Britain and Ireland has been dignified by the prefix "Royal," and for convenience the name has been changed to Royal Automobile Club.

The Under Secretary for Public Instruction of Italy, Signor Ciufelli, says the excavations at Herculaneum by the Government will be begun very soon.

Japan proposes tariff amendments in 1911 which will recover her tariff autonomy.

Industrial and Commercial.

Railroad property in Minnesota is valued at $215,000,000 by the Sundberg investigating committee, which recently returned its report to the State Senate, this being approximately $27,000 a mile. The property is capitalized to the extent of about $400,000,000, or $50,000 a mile on an average. The net earnings, according to the committee's findings, averaged over $5,000 a mile last year, or eighteen per cent on the committee's valuation. A large section of the report is devoted to a drastic review of the Chicago and Great Western. The capital stock and funded debt of this road is $143,608 a mile, and the committee figures its value at $28,000 a mile.

Decisive action was taken last week by the American Railway Association to remedy the car shortage. The failure of some roads to furnish a sufficient quota of equipment for their own traffic, and the failure to provide and enforce proper rules for the return of foreign cars to their own roads, are responsible for the shortage. To remedy the evil the association adopted a rule, to be confirmed later by letter ballot of all the roads, providing that any railroad which shall hereafter not promptly return to the owner, after unloading, all cars consigned to it, will be penalized $5 for each car so misused, to be paid to the owner of the car.

The Monterey Iron and Steel Company at Monterey, Mexico, has decided to more than double its capacity. The original plant cost more than $10,000,000, and according to plans which have just been adopted an additional $10,000,000 will be expended in enlarging. The plant is now turning out twelve hundred tons of refined steel per week, and cannot meet the demands for structural steel received from all parts of Mexico.

Bad steel rails are causing many of the disastrous wrecks on American railways, according to a statement made by some of the most prominent operating officials who attended the spring meeting of the American Railway Association at Chicago. A committee has come to the conclusion that a dangerous percentage of the steel rails manufactured have flaws which cause them to snap and break under the thrust of fast trains.

The international commerce of the world now exceeds $26,000,000,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

HISTORY OF THE NEW YORK ORGANIZATIONS.

[We copy the following article from the May issue of the *Broadway Magazine*. We regret that in a history of the New York Christian Science organizations the fact was not named that the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, gave the *first* lecture on Christian Science ever delivered in that city. —Editor *Sentinel*.]

Christian Science had acquired a very considerable following in Boston before it gained a foothold in New York City. Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, and author of its textbook, "Science and Health with Key to the Scriptures," had established the Massachusetts Metaphysical College in Boston in 1881, and by the beginning of the year 1885 had instructed a great many students in Christian Science Mind-healing. Prior to the establishment of her College, for many years she had taught classes in Mind-healing. These students had scattered to different parts of the country, and wherever they went they began to teach and practise Christian Science. Under authority of Mrs. Eddy, each of her students was permitted to organize what was known as an institute for the teaching of Christian Science, and in these institutes classes were taught in Christian Science Mind-healing. By this method Mrs. Eddy's students gradually drew to themselves bodies of their own students, who in time formed the nucleus of a church. In some instances the students of several institutes united in forming one church.

The first students of Mrs. Eddy to come to New York City to teach and practise Christian Science Mind-healing were Mr. J. Allan Campbell and his wife, Mrs. Lysbeth L. Campbell, who came in March, 1885, at Mrs. Eddy's request. They organized the New York Metaphysical Institute, which was the first institute organized in this city. In the fall of 1885 Mr. Campbell taught a class, consisting of twelve students, which was the first Christian Science class ever taught in New York City. To Mr. and Mrs. Campbell also belong the honor of entertaining the first National Christian Scientists' Association, which was founded by direction of Mrs. Eddy in the year 1886. On Feb. 11 of that year its first meeting was held in New York City at their home, No. 672 Lexington Avenue. Christian Scientists from Chicago, Boston, and other parts of the United States, to the number of thirty-two, were present. Mr. Campbell was elected president of the association for the first year. Mrs. Campbell is still practising Christian Science in New York City.

The next of Mrs. Eddy's students to come to New York City was Mrs. Laura Lathrop, who came in the fall of 1885 at Mrs. Eddy's request. Mrs. Lathrop, immediately after her arrival, began to practise and teach Christian Science, and in the fall of 1886 organized the New York Christian Science Institute, at No. 144 West Thirty-fourth Street, the first advertisement of which appeared in *The Christian Science Journal* of September, 1886. Mrs. Lathrop is still engaged in the teaching and practice of Christian Science in New York City.

Mrs. Lawrence Brown, A.M., M.D., was the next student to come to New York City from the Massachusetts Metaphysical College to practise Christian Science. She arrived in the early part of the summer of 1886 and established the New York Academy of Christian Science in January of 1887, at 108 West Forty-second Street, where she taught and practised Christian Science.

During the summer of 1886, Mr. F. D. Snider, with his wife, Mrs. Carrie H. Snider, came to New York from Kansas City and began the teaching and practice of Christian Science. They organized the Metropolitan Christian Science Institute, at 27 West Twenty-sixth Street, in 1888.

In November of 1886, Mrs. Eddy sent Mrs. Augusta E. Stetson to New York City. Mrs. Stetson had been teaching and practising Christian Science Mind-healing for two years in Boston, Mass., occasionally supplying the pulpit of the Christian Science Church, now known as The First Church of Christ, Scientist, of Boston, Mass. Upon arriving in New York City, Mrs. Stetson began at once to practise and teach Christian Science, but did not organize an institute until she had taught a large body of students. In 1891 she organized the New York City Christian Science Institute, at 96 Fifth Avenue.

Mrs. Eddy afterwards taught other students who were residents of New York City, most of whom still continue to practise and teach Christian Science.

The first meeting of the body now known as First Church of Christ, Scientist, of New York City, was held informally on the 27th of November, 1887, at Columbia Institute, No. 729 Sixth Avenue, at which Dr. S. J. Sawyer made an address. Prior to this date meetings had been held in the homes of Christian Scientists, but no organization as a church had been attempted.

On Dec. 4, 1887, the first regular Sunday sermon was preached by Mrs. Augusta E. Stetson at Columbia Institute, and three weeks later, Dec. 29, the first of three meetings required by law to effect incorporation was held at the residence of Mrs. F. A. Kingsley, No. 25 West Thirty-first Street, which was also the residence of Mrs. Stetson. Following are the names of the persons who organized the church: Dr. S. J. Sawyer, C.S.D.; Mr. F. D. Snider, C.S.B.; Mrs. Carrie H. Snider, C.S.B.; Mrs. Laura Lathrop, C.S.B.; Mrs. Augusta E. Stetson, C.S.D.; Mrs. Caroline W. Frame, Mr. R. Skinner, Mrs. Elizabeth Skinner, Mr. J. M. Gano, C.S.B.; Mrs. Vienna D. Gano, C.S.B.; Mrs. F. A. Kingsley, Mrs. Lawrence Brown, A.M., M.D., C.S.B.; Mr. J. H. Richards, Mrs. J. H. Richards, Mr. O. C. Frost, Mrs. Margaret S. Ellis, Mrs. H. G. Hastings.

The certificate of incorporation of the church was filed on Feb. 3, 1888. A few days before this a hall was se-

Digitized by Google

cured over Caswell & Massey's drug store, No. 578 Fifth Avenue, where services were held. On Feb. 20, 1888, Mrs. Augusta E. Stetson was formally elected first pastor of the church, and was re-elected its pastor each year until 1895, when personal preaching was discontinued and the Bible, together with "Science and Health with Key to the Scriptures," the text-book of Christian Science, were ordained by Mrs. Eddy as the only preachers in all Christian Science churches. Mrs. Stetson was then unanimously elected First Reader of the church, to which position she was re-elected each year until 1902, when a new by-law of The Mother Church, providing for rotation in office of Readers, was instituted, limiting the term of office to three years. Upon the adoption of this by-law Mrs. Stetson immediately resigned her position as First Reader. Since then she has devoted her time exclusively to the teaching and practice of Christian Science. She is also a member of the Board of Trustees of the church.

Before the end of 1888 the congregation removed from over Caswell & Massey's drug store to Crescent Hall, No. 138 Fifth Avenue, where, on Oct. 15, the first Christian Science Sunday School ever held in New York City was instituted.

By January, 1889, the congregation had grown to such proportions that Crescent Hall was too small, and a move was made to Hardman Hall, Nineteenth Street and Fifth Avenue, where it remained until April, 1894, when, because of lack of room, it removed to Rutgers Presbyterian Church, later known as Scottish Rite Hall, at Madison Avenue and Twenty-ninth Street. Services were held here until September, 1896.

On Feb. 6, 1896, the church purchased the church property formerly occupied by the congregation of Rev. R. Heber Newton, at No. 143 West Forty-eighth Street, at a cost, together with the land and improvements, of upwards of one hundred thousand dollars. This is the first church property ever owned by Christian Scientists in New York City.

In April, 1899, the Forty-eighth Street church having been outgrown, a new building site was purchased on the northwest corner of Central Park West and Ninety-sixth Street. The corner-stone was laid on Thanksgiving Day, 1899. In the corner-stone were placed the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and a copy of all her other writings, together with *The Christian Science Journal*, the *Christian Science Sentinel*, and *Quarterly*, and a list of all the members of the church, with a letter from Mrs. Eddy, which reads as follows:—

"Pleasant View, Concord, N. H.

"To Mrs. A. E. Stetson:

"Beneath this corner-stone, in this silent, sacred sanctuary of earth's sweet songs, pæans of praise and records of Omnipotence, I leave my name with thine in unity and love.

"MARY BAKER G. EDDY.

"Nov. 30, 1899."

The first regular service was held in the unfinished building on the 14th of June, 1903. On the 29th of November of the same year the church was dedicated. Four services were held to accommodate the large number of visitors, many of whom were unable to enter for lack of room. It is estimated that four thousand persons were present at the afternoon service, and fully a thousand were unable to gain admission. A dedicatory message by Rev. Mary Baker G. Eddy was read by Mrs. Stetson, and a dedicatory address was written and delivered by Mrs. Stetson.

Although the seating capacity of the new church is about twenty-one hundred, there are often a hundred or more persons standing during the regular church services. The cost of the church was upwards of twelve hundred thousand dollars. The entire amount was contributed by Mrs. Stetson's students and the members of the church. No funds were solicited or received from the outside. The present membership of the church is 1,883.

The Sunday School membership is two hundred and six. There are twenty-six teachers, besides a superintendent and officers. The church has maintained a free Christian Science Reading Room in connection with the church continuously since May 19, 1891.

On Feb. 15, 1889, a great impulse was given to the Christian Science movement in New York City by a lecture delivered by Rev. Mary Baker G. Eddy at Steinway Hall. Referring to this lecture in the issue of the following morning, the New York *World* said: "Over a thousand ladies and gentlemen assembled last night at Steinway Hall and listened to a lecture by Rev. Mary Baker G. Eddy, of Boston, President of the Massachusetts Metaphysical College, on the subject of 'Science in Christianity.' The lecturer was introduced by Rev. John A. Ager, of Brooklyn.

"In speaking of Christian Science, Mrs. Eddy said that the starting-point was God, and that there was no power beside Him. 'If God is All in all,' she said, 'there is no place for sickness, sin, nor death. Christian Science,' continued the lecturer, 'teaches us that Jesus really showed us the way to God, to the true Life of man, which is Spirit. Is *materia medica* a science? I have not found in it the character of invariability that belongs to science. I have found by actual experiment that as a drug is attenuated its power is increased until the drug is gone, and when nothing is left but mind, its greatest efficacy is reached.'"

On May 27, 28, and 29, 1890, a meeting of the National Christian Scientists' Association was held in the city of New York at Lenox Lyceum Hall, Madison Avenue and Fifty-ninth Street. There was a large gathering of Christian Scientists at this meeting from all parts of the United States and Canada. Gen. Erastus Bates presided, and the address of welcome was delivered by the pastor of the church, Mrs. Augusta E. Stetson. A large number of reports were read from different parts of the country, showing that Christian Science had made very considerable progress at that time.

On Oct. 15, 1891, Mrs. Laura Lathrop organized Second Church of Christ, Scientist, with nine members besides herself. The following are the names of the charter members of Second Church: Mrs. Laura Lathrop, C.S.D.; James M. Gano, Elizabeth P. Skinner, Florence P. Benedict, Mrs. Vienna D. Gano, Minnie S. Osgood, Charles H. Freeman, Caroline W. Frame, Agnes E. Rollen, Dean J. Osgood.

Each of the above named left First Church with Mrs. Lathrop for the purpose of organizing Second Church, believing that it was expedient to organize another church further up-town. For a time Second Church met at a private house, No. 161 West Thirty-fourth Street. Later it moved to 117 West Forty-second Street, and then to 1544 Broadway. From there it moved to Hodgson Hall, 2 East Forty-fifth Street, and then to Scottish Rite Hall, Twenty-ninth Street and Madison Avenue, after it was vacated by First Church. In these various locations the church spent the first ten years of its existence, and at the end of that period it erected its beautiful marble church edifice at the corner of Sixty-eighth Street and Central Park West, at a cost of five hundred and twenty-five thousand dollars. During these ten years the church increased its membership from ten to one hundred and seventy-five, and since that period it has added four hundred and twenty-two members, thus mak-

Digitized by Google

ing its present membership five hundred and ninety-seven. It also has one hundred and ten pupils in its Sunday School and seventeen teachers.

There are many interesting features connected with the voluntary contributions to the building fund of this church. A noteworthy instance was the donation of the $15,000 Odell organ, which was presented to the church in the name of a little child, and in humble gratitude for the child's restoration to health by Christian Science from a so-called incurable disease. The reading-desk of solid mahogany was contributed by members of the theatrical profession, who desired to express their gratitude in this practical way for the many benefits they had received in Christian Science.

The church edifice seats twelve hundred. Mrs. Laura Lathrop was re-elected pastor of this church each year until 1895, when all personal preaching was discontinued, and thereafter was elected First Reader each year until 1902, when a by-law of The Mother Church was adopted, providing for rotation in office of Readers. Since then Mrs. Lathrop has devoted her time to the teaching and practice of Christian Science.

Third Church of Christ, Scientist, of New York City, was incorporated on the 13th day of December, 1895, and did the pioneer work of Christian Science in the Harlem district. Following are the names of the charter members: Mrs. Carrie Harvey Snider, C.S.D.; Mr. Charles H. Dale, Mr. Henry B. Simmons, Mr. Charles P. Simmons, Mr. Frank P. Lawrence, Mrs. Effie Andrews, Mrs. Jennie L. Dale, Mrs. F. Huberta Foote, Mr. Joseph A. Lemmon, Mrs. Mary J. Ross, Miss Emma Nichols Ross.

Services were first held in the Hamilton Bank Building, 125th Street, then in Ellerslie Hall, at No. 80 West 126th Street. In August, 1905, the church moved to its present church building on 125th Street, between Fifth and Madison Avenues. The church has now two hundred and sixty-four members, and there are eighty scholars and fifteen teachers and officers in the Sunday School.

Fourth Church of Christ, Scientist, New York City, was organized in October, 1896, with nine charter members, who are as follows: Mrs. Elizabeth P. Skinner, C.S.D.; Mrs. Caroline W. Frame, C.S.B.; Mrs. Vienna D. Gano, C.S.B., Mrs. Frances V. Sanford; Mrs. Anna M. Cable; Mrs. Jane G. Roeber; Miss Agnes Rollin; Mr. Edward A. Roeber; Mr. C. J. Howard.

Church services were first held in the basement of 314 West Seventy-sixth Street, then at 2291 Broadway, and later at 251 West Eighty-second Street, its present location. The number of members of the church at the present time is one hundred and twenty. There are four teachers and twenty-five pupils in the Sunday School.

Fifth Church of Christ, Scientist, New York City, was organized May 29, 1900, by Mrs. Rosalind Roberts, C.S.B.; John L. Roberts, C.S.B.; Miss Julie Tournier, Mrs. Grace Hoffman White, Horace Dillon, Mrs. Ella J. Dillon, Mrs. Fannie Johnstone, Mrs. Margaret Stockwiss, Mrs. Harriet Inglis, Miss Marie Dumont, Mrs. Florence Baker, Miss Georgiana Stoddard, Clarence E. Burnham, Mrs. Annie Burnham, Mrs. Mary L. Frieze.

Services were held in a hall at the corner of Fifty-ninth Street and Madison Avenue until January, 1904, when the present church edifice at 228-230 West Forty-ninth Street was obtained. The church now has eighty-three members, with seventy-five pupils in the Sunday School.

Sixth Church of Christ, Scientist, New York City, was organized May, 1906, with fifteen members. The services are held at 131 East Thirty-fourth Street.

The Central Reading Room in New York City is at 23 West Twenty-third Street. The following is quoted from the *Christian Science Sentinel* of Feb. 27, 1904:—

"The Central Reading Room at 23 West Twenty-third Street, which was opened in November, 1903, under the auspices of representatives from Second, Third, Fourth, and Fifth Churches of this city, has greatly progressed in its work, and much Christian Science literature has been distributed."

In March, 1905, the Harlem Branch of the Central Reading Room was opened at 123 West 125th Street. The two Reading Rooms are still maintained, and are doing an important work in Christian Science.

THE DEAD PAST.

J. S. BRAITHWAITE, M.A.

In the record of the conversation between Jesus and the woman of Samaria there is nothing to indicate that Jesus really told the woman all her past in detail. Two points stand out strongly, that she certainly believed her past life to be an open book to the man with whom she had been talking, and that in some way there had dawned upon her thought the possibility of the Divine reflected in man—a new idea of the Messiah or Christ.

The question, "Is not this the Christ?" arose from the sense of release she was already experiencing. It may perhaps have been release from the strain of hiding from her neighbors a dishonest past and yet trying to live honestly in the present. Many to-day are staggering under the burden of this almost impossible task and sighing for release. All that had occurred in the present instance was that a stranger in conversation with the Samaritan woman had appeared to know all the secrets of her past life and yet to regard her without curiosity and without condemnation. Instead of reproach had come the quiet and gentle assurance that the time had now arrived when all alike should understand God in the light of a loving Father, whom His children were to worship "in spirit and in truth," since He is Spirit.

Material existence, with all its joys and sorrows, for the first time seemed to this woman shadowy, unsubstantial, and in its place was dawning a more real and far nobler concept of life, of man, and of God. "Is not this the Christ?" Forgetting the business she had in hand, the woman hurried away to call others to join her in this wonderful prospect. It is the same to-day, and Christian Science—the pure Christ-message—is reaching those that are willing to hear it, bringing that same release to mortals and proving that what we call our past is as dead as the fallen leaves in winter.

When Jesus read in the synagogue he selected the passage from Isaiah, "He hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." The healing of the broken heart (wounded egotism), the deliverance (from the senses), the recovery of sight (spiritual awakening), the setting at liberty (the freedom of Truth), are all one in the action of divine Principle, Love, and mark the stages by which the darkness of mortal unhappiness, impurity, and ingratitude is dispelled. To the superficial and worldly-minded the Master said, "Ye can discern the face of the sky; but can ye not discern the signs of the times?" He who is living in the past, cherishing memories of half-forgotten joys or sorrows, is under a delusion,—discerning merely "the face of the sky,"—and is losing all that makes life worth living. In this attitude of thought mortal mind despairfully cries, as did Hamlet,—

> O God! God!
> How weary, stale, flat, and unprofitable
> Seem to me all the uses of this world!
> Fie on't! ah fie! 'tis an unweeded garden
> That grows to seed; things rank and gross in nature
> Possess it merely.

Such an outlook on the world as this many Christian

Digitized by Google

Scientists of to-day once had, but how changed has the outlook become as Truth has lifted the veil from their eyes. They no longer see a universe of "things rank and gross in nature," but all around them is beginning to be "clothed upon" with a new vesture of beauty they had never before seen. They are learning that the pure in heart will see good in everything, and that the belief in the necessity of evil is erroneous, self-imposed. By the persistent rejection of the false evidence of the senses they have begun to emerge from "the temporal *debris* of error" (Science and Health, p. 289), and so to identify self with the true as to carry within them the consciousness of Love, which is an abiding "under the shadow of the Almighty."

In the study of the Christian Science text-book we find our past. All false motives, with their attendant ambitions, affections, conceits, and jealousies, are spread out before the impartial judge, Truth, and as each advances its own special plea of self-justification, the answer comes, "I never knew you." The real man never thought those mean thoughts which have brought such suffering in their train. Each individual who is for the first time gaining even a faint perception of what the real man is, like the prodigal son is coming "to himself." Arising from the husks of past materialism, he begins at once to find a change taking place in his life. The dark shadows of mortal thought, whether they have attached themselves to him as a belief of unhappiness in the past, weariness or dis-ease in the present, anxiety as to the future, flee away from the sunshine of Truth and Love which marks the dawn of the awakening thought.

With this awakening Christian Science brings also the zest with which the student seeks more and more earnestly to gain the rule by which in discerning and discarding the false he will gain and retain the true. St. Paul said, "This one thing I do, forgetting those things which are behind, . . . I press toward the mark for the prize of the high calling of God in Christ Jesus."

THE BIBLE INTERPRETED.

GERTRUDE SMITH.

WYCLIF'S translation of the Bible was not welcomed in England, and the New Testament passed through a trying ordeal when Tyndale interpreted it in English. The Government employed active agents to watch the seaports of England and seize every copy; and all that were found were promptly burned. For years after the English translation, the reading or even the possession of a Bible was "prohibited on the pain of death;" but divine Love overruled the savagery of carnal mind, and the Bible became in time the spiritual guide-book of the English-speaking world.

The Holy Bible! Our hearts stand still in contemplation of what this earth would be if bereft of the godly influence of the "Book of books." Above the chaos of creeds human opinions have neither lessened the utility of the Bible nor thwarted its purpose—it has shed a unifying light over all. Hundreds of books have been written about Christ Jesus; thousands of books have been written about the Bible; and does it seem strange in this enlightened day that the prayers of the Christian world for centuries should have been answered in still another book that exalts the Christ and pays highest tribute to the Bible? Not since the great bonfires of Bibles celebrated the translation of the Holy Scriptures into English has a book been written that has created the discussion, roused the prejudice, and brought forth such peans of gratitude as the little book "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Our hearts overflow with gratitude that God has sent a messenger to make the Bible more inspiring and helpful than ever before. Its portals are entered through "Prayer," and no earnest seeker for Truth can turn away from this first chapter of our text-book without a deep sense of the sacred quality of the book. The prayer of every Christian has been for a more perfect understanding of God, and how to assimilate and make the life of Christ Jesus his own. It has always been a wonder to the human mind that the child of God should be a creature torn by conflicting desires and impulses. For consolation in their bewilderment men have looked forward to death—and death, though fought against with every known material means, has after all been considered the entrance into heaven, an eternity with God and the angels.

We are told that there were poor yeomen so anxious to obtain the Word of God at the time of Wyclif's translation, that they willingly bartered a load of hay for a few chapters of St. Paul! And what shall we barter for a scientific understanding of this one statement of the Master? "It is the spirit that quickeneth; the flesh profiteth nothing." Science and Health has startled the world and moved the materially minded to rage by the denial of matter. Let us barter a moment of clear thinking for this verse from St. Paul: "Henceforth know we no man after the flesh: yea, though we have known Christ after the flesh, yet now henceforth know we him no more." If man is not to be known after the flesh,—matter, material sense,—how is he to be known?

Throughout Mrs. Eddy's interpretation of the Bible we find unmistakable evidence of her adoration of the Christ. Much is made of the resurrection of Jesus from the dead, and his triumphant exit from mortal view is extolled. There can be no thought, after an unprejudiced study of Science and Health, that its author is seeking to give a demonstrable interpretation of the Bible. She has simply thrown upon its sacred pages the clear light of her spiritual understanding, and revealed what has ever been the healing of the nations—the Mind of Christ. In Science and Health thought is constantly turned from the body, the material sense of things, to God. The student is emphatically shown that to look away from the body we must have the Mind "which was also in Christ Jesus," be concerned with that which is spiritual only. Gradually, through a clearer understanding of God, matter is seen to be unreal and temporal, or nothing to the Christlike thought.

Many who are still in the bondage of materiality are beginning to raise their heads and listen to the rejoicings of those who have been healed through the study of this wondrous book. The applied teaching of its interpretation of Scripture is blowing the trumpet in Zion; the Bible is being loved and studied as never before. The bonfires of prejudice and ignorance may flame up for a time, but they cannot destroy the truth. "The leaves of the tree were for the healing of the nations," and the scientific interpretation of the Bible is showing the gathering thousands in the Christian Science churches "the tree of life."

Three names are given to a man; one by his parents, another by the world, and the third by his works—the one which is written in the immortal book of his fate. Which of these three names is the best? Solomon teaches us, when he says: "A good name is better than the sweetest oil."—THE TALMUD.

You are not simply a reservoir *into* which so much truth, goodness, greatness, is to be poured, there to remain forever. You are a channel through which God is transmitting His life and love to other men. That you are, or you are nothing.—J. F. DUTTON.

SELECTED ARTICLES.

[Reuben Pogson in the *Scarborough Post*, Yorkshire, England.]

Christian Science is not faith healing. Faith may be present in the consciousness of the patient, but not necessarily more so than honesty, justice, etc. Though recognizing the capacity of these attributes to assist in maintaining harmony, not one of these is considered the "healing power" of Christian Science. According to your report, the lecturer said "he thought suggestion was the key-note of Christian Science. Faith would not replace an absent limb or restore a fracture; but by faith or suggestion they could often remove minor functional disorders."

Christian Science does vastly more than remove "minor functional disorders." This fact, attested by unnumbered well-authenticated cases of healing, must place it —by the admission of the lecturer—far above the province of faith healing and mental suggestion. These methods of healing simply go to prove that all disease is of mental origin. Faith healing and suggestion do not destroy the mental cause of disease; they simply change one belief for another.

Christian Science, in its healing of sickness, not only does not "suggest" health to the human mind, but it destroys in the false consciousness of the patient the entire belief in the reality of this so-called human mind, and insists rigidly that there is only one Mind—*i.e.*, God—in whom there is no consciousness of sickness, sin, mental suggestion, faith healing, hypnotism, *materia medica*, hygiene, etc. The key-note of Christian Science healing is the spiritual understanding of God, which demonstrates Him to be Love.

[Editorial in *The New Orleans* (La.) *Item*.]

There is a school of thinkers who believe that men and women will one day come to be guided by reason, who hope that their moral, spiritual, and intellectual qualities will become so developed that they will cease to do those things which are wrong, those things which are harmful to themselves and others, but will be guided along higher, better paths by something from within. We believe the Christian Scientists practise this belief. . . . Around us everywhere most things are going right, but many things the mistakes of others? What is the responsibility of each of us? How far does it extend? Where does it stop? All these are questions we should ponder, not now and then, but very often.

[Editorial in the *Dayton* (O.) *Herald*.]

If we mistake not, Christian Science is practised largely by devout Christians. It is based, as its followers allege, upon the teachings and the life of Christ. The *Herald* makes no distinctions among the various religions and sects; it gives space in its columns to Jew and Gentile, to Protestant and Roman Catholic, to every creed and denomination which seems to be working for the good of humanity.

[B. Fair in the *Quincy* (Mass.) *Ledger*.]

When Benjamin Franklin discovered that electricity could be led by a cord, he established in the minds of men the recognition of a fact which had always existed. He brought nothing new into the world except a limited are happening all the time that are wrong. Are we doing what can be done, what should be done to make things better, to set them right? Are we doing what we should do to keep them from going wrong? Are things predestined to happen? Are they happening for the best as they do happen? Are things done and things left undone by us responsible in part for the tragedies, and imperfect understanding of a force which was not then being utilized. If he had not tested his belief by an actual demonstration with kite and key, it would have remained for others to prove the possibility of using a force having no material form.

When Mrs. Eddy discovered the Principle of Christian Science, she established no new facts or laws, but she did gain an understanding of an unused power far greater than electricity, and she has communicated this understanding to those who followed her researches and were willing to prove their understanding by demonstrating through actual tests the availability of the Almighty for all good. Mrs. Eddy has made a study of Christian Science for over forty years, and at least discusses the matter seriously and without venom, sarcasm, or hatred.

The writer is not a member of the Christian Science denomination, but has read the work referred to and failed to find any evil in Mrs. Eddy's teachings.

[Alfred Farlow in the *Boston Times*.]

Our critic undertakes to ridicule Christian Science by the assertion, "You seem to have a hand, but it is only in the seeming." This ridiculous statement is not a reasonable deduction from the premise of Christian Science. It does not take into consideration what Christian Science gives in the place of what it repudiates. While Christian Science affirms that the universe is not material, it does not declare it to be unreal. It is the false, material concept of things which is denied by this Science, not the thing itself. Each part of man and the universe, from the smallest to the greatest, is real, though not what it seems to be, to that quality of understanding which does not perceive it from the spiritual view-point. Christian Science affirms that the spiritual understanding of creation is the correct understanding, that all the troubles of earth are based upon a misunderstanding, and that they are all corrected by attaining and practising a right sense of cause and effect. Our critic should note that it was Jesus who denied the reality of death. He said of the damsel: "She is not dead, but sleepeth;" thus denying that death was what it was believed to be by those who witnessed it, and affirming it to be a dormant mental condition from which its victim could be aroused by Divine power. It is true that Christian Scientists do deport themselves in a measure as if they believed sin and sickness to be real; that is, they recognize the existence of these in erring mortal experiences and that they must be dealt with and overcome. Even a ghost must be explained away, although to the well informed it is understood to be merely an apparition. Every form of error must be met and mastered with the truth.

The gentleman declares that "all people who think themselves sick are simply insane." This gives no adequate understanding of Christian Science. Sickness is not believed to be something wrought up in the imagination, though its foundation is understood in Science to be mental; and this fact is proved when, by correcting the mental condition, the discordant bodily condition disappears. Almost everybody in this age of the world admits that the mental has something to do with the bodily condition, and although many as yet are not ready to admit the sweeping declarations of Science, they have not been able to estimate to what extent the mental has to do with the physical, nor to say "thus far and no farther." It has been left to Mrs. Eddy, the Discoverer of Christian Science, to solve and demonstrate this proposition to the age. While Christian Science condemns unreasonable dietetics and hygienic methods, it advocates temperance in all things. It advocates fresh air and pure food, and cleanliness of both mind and body, on the basis that the purest, cleanest, and best is most nearly the spiritual, and therefore the most healthful and desirable.

THE SENTINEL COMMENDED.

A few out of many letters commending the *Sentinel* were sent to our Leader, Mrs. Eddy, and she has requested that they be published, together with the letter in which they were forwarded to her. These letters follow:—

Boston, Mass., March 23, 1907.

Beloved Leader:—I think it will please you to read the enclosed letters, if you have the time to spare. They show that the increase in the price of the *Sentinel*, which you directed, is approved by our readers. I wish that the growth of interest in Christian Science, which is now so manifest, might have come in some way other than through attacks on you, but the increased interest in your teachings amounts almost to a "boom." The Publishing Society is hard pressed to provide room for all the extra clerks necessary to attend to the wonderful increase in the demand for Christian Science literature. God is making the wrath of man to praise Him. Lovingly yours,

ARCHIBALD MCLELLAN.

Baltimore, Md., March 18, 1907.

Mr. Archibald McLellan,
Editor of the *Sentinel*, Boston.

My Dear Sir:—As the former editor and publisher for ten years of a fraternal monthly paper, with a circulation running from fifteen to fifty thousand monthly, and dependent on four or five pages of advertising in its sixteen pages in order to make it a paying venture on the basis of one dollar annual subscription, I have frequently wondered at your ability to issue the *Sentinel*, weekly, at the low cost of one dollar per annum. I heartily agree in the measure of your new valuation, two dollars per annum, as it is in harmony with the intrinsic value to those who are seeking for further light. You are certainly deserving of high commendation for the typographical excellence, the general improvement in its form, stock, and suggestive title page, as for the careful, able selection of matter, editorial, testimonial, and of an educational and uplifting character from the pens of earnest, faithful, inspired followers of our beloved Leader. It is really a priceless treasure to those who look to it weekly for the strengthening testimonies and the truth to uplift and sustain them; especially at such times as error, through the secular press, is attempting to destroy the faith mentioned by Paul in his Epistle to the Hebrews, 11 : 1, 6.

A resident of Boston, I am stopping here for two months on special work, and welcome the *Sentinel* more than ever, as it has aided me in denying certain fallacies brought to my attention by friends, and thus causing a change of thought in them. Sincerely yours in the faith,

AUGUSTUS F. HOWELL.

Woodland, Cal., March 9, 1907.

Christian Science Publishing Society.

Dear Editors:—As you will see from date above, I am away from home, but this morning my *Sentinel* was forwarded to me, and it seemed as if a dear friend had come from home. I am pleased at the appearance of the *Sentinel*. As many have it bound, it should have the best of paper, and it is cheap at twice two dollars. Having been a printer and publisher myself at one time, I am qualified, to some extent at least, to be a judge of such things. I am sure the Field will appreciate the advance.

Sincerely yours,

J. W. BAKER, Salem, Ore.

Santa Barbara, Cal., March 12, 1907.

Dear Mr. McLellan:—I have read with pleasure your editorial in the *Sentinel* of March 2, announcing the enlargement and improvement of that paper. There is no doubt about its being a two-dollar publication, and I am sure that this change will meet with a ready response from the Field. We cannot over-value our *Journal* and *Sentinel* as educational factors, and in giving to the world true Christian Science both deserve a large circulation because they hold aloft the banner of Christian healing without attacking the beliefs of others. We thank you and your loyal associates at headquarters for your faithful efforts in behalf of our Cause and its Leader.

Sincerely yours,

EDWARD W. DICKEY.

Hackensack, N. J., March 21, 1907.

Mr. A. McLellan, Editor *Sentinel*.

Dear Sir:—The *Sentinel*, always abounding in up-to-date, helpful articles, seems to be growing so much more powerful and so overflowing with gems of literature that one is compelled to read and re-read its columns. Your issue of March 16, 1907, should be placed on file, and retained for constant reference by every Christian Scientist throughout the world. It would indeed be a hard matter to select the most useful or appropriate article within its covers.

The *Sentinel* is truly fulfilling its mission. It is not only a sentinel in all that the word implies, but it is a whole regiment of soldiers marching forth to overcome, and overcoming the enemy by its continued and forceful presentation of the truth. The *Sentinel* is being appreciated, and the management is not by any means the first who have believed that the former price for it was entirely too low.

Most sincerely in the truth,

HARRY A. ROBERTS.

Needham, Mass., March 21, 1907.

The Christian Science Publishing Society,
250 Huntington Avenue, Boston.

To the Editors:—While sending out some *Sentinels*, containing "General Streeter's Statement," there came to me such a sense of gratitude that we had such a periodical to send out, representing our Cause, that I cannot refrain from expressing it to you. Never did I appreciate as now the wisdom, dignity, ability to work under wise leadership, and the Christian character which enables one when reviled to refrain from reviling again, manifested by those who are standing on the watchtowers, as it were, of this great religious movement. Never before did the meaning of Nehemiah's account of the rebuilding of the walls round about Jerusalem, and the way to apply those lessons to our present needs, dawn upon my consciousness.

Our *Sentinel*, which we have seen grow and improve from year to year, comes to us now in faultless attire, an outcome of persistent effort to bring out perfect work in the line of journalism. Instead of finding fault with the increased subscription price, we all wonder that it has come to us so long, enlarged and improved, for the original price. "'Peace, be still!' our Father is at the helm" (*Sentinel*, Aug. 3, 1899), reminds us that prophecy is being fulfilled to-day; and that the world is recognizing it, is evidenced by such statements as we find in Lord Dunmore's tribute to Christian Science and its Founder, Mrs. Eddy, in the March *Cosmopolitan*, where he refers to her as "a woman whose loving, self-sacrificing nature should be ever prominent before the world, as an example for every one to follow." In the early history of the *Sentinel*, at a time of trials for our beloved Leader, she gave us this message of wonderful import. In every trying hour, when the *Sentinel* comes it seems to bring that same message, and my heart goes out in gratitude to God for the dear one to whom has been given "the instinct that can tell that God is on the field when He is most invisible!"

Appreciatively,

ESTELLE R. FREEMAN.

THE LECTURES.

OMAHA, NEB.

Hon. Clarence A. Buskirk lectured on Christian Science at the Boyd Theater, April 4. He was introduced by Judge Irving F. Baxter, who said in part,—

When I behold this large audience of thoughtful men and women, the inquiry naturally arises, Why are we here? Certainly not from curiosity, for the subject of the address to-night has long since ceased to attract the simply curious; but it does attract those who think and those who reason and all earnest seekers after truth. We Americans are essentially a people who claim the right to think and act for ourselves. The foundation-stones of our national government are freedom of speech and of religious liberty. Every one has a right to his opinion, but he must suffer the penalty if his opinion be wrong. It is well, therefore, that we should come to hear and to ponder what the speaker shall tell us. His message is fraught with "on earth peace, good will toward men." He will, no doubt, tell the story of a wonderful woman, of her wonderful sacrifices, and her more wonderful discovery. This discovery may seem new to many of you, while in fact it is only the rational application of the simple teachings of Jesus, and it calls upon us to know and recognize the omnipotence of God.—*Correspondence.*

TOPEKA, KAN.

Rev. Arthur R. Vosburgh lectured on Christian Science for the Second Church at the Opera House, Sunday afternoon, March 31. He was introduced by Arthur J. Bolinger, Esq., who said in part,—

The religion of Jesus Christ, I take it, is essentially a religion of progress. Nowhere in any of his teachings can we find warrant for avoiding the study of a subject, merely because it has not yet received the stamp of ecclesiastical approval. Truth is truth, no matter where it is found and no matter who are its exponents. The fact that thousands of intelligent people have found in Christian Science something they could not discover elsewhere and something that has brought to them a satisfaction they could not otherwise obtain, entitles it to our most careful consideration. It is no idle thing for a church to be able to prove its teachings by incontrovertible facts. The world has long sought for such a demonstrable religion. I feel I can safely say that there is not a person in this room to-day who cannot, either in his own life or in the life of close friends, recall some instance of the beneficial effect of an applied Christianity, of a religion no longer a mere argumentative theory, but a manifestation of a living Principle.—*Correspondence.*

NEW YORK, N. Y.

Mr. Bicknell Young delivered a lecture on Christian Science at First Church of Christ, Scientist, Monday night, March 25, to an audience that was probably as representative as any audience ever assembled in New York City. It was composed to a large extent of non-Scientists. Every available space in the church was filled and great numbers of people were turned away. It was a great lecture and was enthusiastically received. Mr. Young was introduced by Mr. V. O. Strickler, who spoke in part as follows:—

On one occasion a well-known preacher said that if we would find out what a few of the best thinkers in any age were dreaming about we would have what would be the current general thought of the succeeding age. The truth of this statement has been exemplified in the case of Christian Science. Forty years ago one of the best thinkers of this or any age—a woman—was dreaming about questions involving man's true relationship to God. She was without wealth or fame, and yet, within the brief space of forty years her dreams have become the treasured belief of multitudes of people.

A few weeks ago the editor of one of the great magazines in this city applied to me for information and data to enable him to write an article on Christian Science for his magazine. He said that he was not a Christian Scientist and knew almost nothing about it, but that Christian Science was attracting the attention of thinking people throughout the world at the present time to a greater extent than anything else, and that the popular demand for information upon this subject was so great that he felt compelled to prepare an article for his readers.

Correspondence.

SAVANNAH, GA.

Mrs. Sue Harper Mims delivered a lecture on Christian Science at the Savannah Theater yesterday afternoon [April 7]. Every seat on the lower floor and most of the balcony was occupied, and the audience showed the deepest interest. Mrs. Mims is well known in Savannah, her former home. In the audience were many who, while not holding the same religious views as Mrs. Mims, have the highest personal regard for her. Among the latter was Judge Samuel B. Adams, who had been invited to introduce her. In discharging this pleasant duty, Judge Adams paid a high tribute to Mrs. Mims, and said:

The compliment paid me by the request that I introduce the lecturer is enhanced by the fact that I am not of her faith. Any gentleman would be honored by an introduction to the lecturer; any gentleman should esteem it a distinction to introduce her to any audience. For years a resident of this fair city, now a citizen of our sister city of Atlanta, the widow of the gallant and knightly Livingston Mims, the representative of the best type of southern womanhood, this gracious and elect lady commands by her beautiful and useful life the homage of every true man. Whether her auditors accept her doctrines or not, they can be confident that she designs for them only what she conceives to be the highest, the truest, and the best, and that the dominant and absorbing purpose of her unselfish life is to illustrate and follow him who, when upon this earth, "went about doing good."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

MRS. EDDY'S LETTER.

THE following is Mrs. Eddy's letter to First Church of Christ, Scientist, New York, acknowledging the courtesy of that church in subscribing for her a membership of the highest class in the Association for International Conciliation.

Pleasant View, Concord, N. H., April 22, 1907.

First Church of Christ, Scientist, New York City,

Mr. John D. Higgins, Clerk.

My Beloved Brethren:—Your appointment of me as *Fondateur* of the Association for International Conciliation is most gracious. To aid in this holy purpose is the leading impetus of my life. Many years have I prayed and labored for the consummation of "on earth peace, good will toward men." May the fruits of said grand Association, pregnant with peace, find their birthright in divine Science.

Right thoughts and deeds are the sovereign remedies for all earth's woe. Sin is its own enemy. Right has its recompense, even though it be betrayed. Wrong may be man's highest idea of right until his grasp of goodness grows stronger. It is always safe to be just.

When pride, self, and human reason reign, injustice is rampant. Individuals, as nations, unite harmoniously on the basis of justice, and this is accomplished when self is lost in Love—or God's own plan of salvation. "To do justly, and to love mercy, and to walk humbly" is the standard of Christian Science.

Human law is right only as it patterns the divine. Consolation and peace are based on the enlightened sense of God's government.

Lured by fame, pride, or gold, success is dangerous, but the choice of folly never fastens on the good or the great. Because of my rediscovery of Christian Science, and honest efforts (however meagre) to help human purpose and peoples, you may have accorded me more than is deserved, —but 'tis sweet to be remembered.

Lovingly yours,

MARY BAKER G. EDDY.

"O FOR A FAITH THAT WILL NOT SHRINK."

WHEN Christian Scientists remember Jesus' saying, that if one had faith even as a grain of mustard seed, he could speak to the mountains and they would obey him, they are impressed with the propriety of modest statement as to their present attainments; but they have occasion and they do rejoice that Christian Science has called them to the fulness of both physical and spiritual freedom, that it places no limit upon the possibilities of their overcoming and efficiency. It will certainly be some time, in the order of human development, before we can be perfect even as is our Father in heaven. Nevertheless, paradoxical as it may seem, every one who honors the authority of Christ Jesus is under obligation to be thus perfect to-day, and a clear perception of this immediate and uncompromising demand of Truth alone supplies the vital stimulus to spiritual advance. For this larger concept of man's privilege and power to assert and maintain his sovereignty over every enemy of his peace and progress, Christian Science stands, and in this it presents a well-nigh antipodal contrast to the thought and aspiration of the many.

There lies before us an article in which a reverend disciple of him who said, "The works that I do shall ye do also," "Go ye into all the world, and preach the gospel," "Heal the sick, . . . raise the dead, cast out devils," defines and discusses his understanding of this glorious commission, and his statement could but lead every worthy Christian Scientist to renewed thanksgiving for that unlimited sense of individual privilege and spiritual power which has come to him through the teaching and demonstrations of the Discoverer and Founder of Christian Science.

The article says in part, "The ministers of —— Church refuse to accept any patient till his case has been diagnosed by a trained specialist in nervous diseases . . . they believe in Science . . . and regard all attacks upon the organized knowledge of the race as attacks upon reason, and therefore suicidal." "For ordinary work, two doctors, trained along the most scientific lines, in psychological medicine, are in attendance at the church several days in the week, where they may be consulted. Only persons suffering from nervous trouble, and functional disturbances are accepted, and should any of these be already under medical advice, they must bring their physician's consent before their names can be enrolled." We are further told that "scientific and religious remedies are administered by suggestion," and that this "suggestion is available only within certain limits, there being not the slightest evidence that when an organic change has taken place in the body, such a change can be effected by mental means," and that "a cancer, for example, is not amenable to mental treatment."

The recognition that faith has any degree or kind of healing relation to "nervously run-down people" is something; indeed, many declare that the assertion of even this timid sense is inaugurating a "forward movement," but what believer in the words and works of Christ Jesus, and in the actuality of his commission to his followers, as quoted above, can fail to be impressed with the pitifully significant contrast between this twentieth-century material sense of Christian privilege and that realized by St. Paul when with inspired daring he said to King Agrippa, "Why should it be thought a thing incredible with you that God should raise the dead?" or when, after many years of practical experience in preaching and healing, he exhorted the Corinthians that their faith "should not stand in the wisdom of men, but in the power of God."

What, it may be asked, would the seventy have said if, upon their triumphant return from the divinely-appointed ministry of healing the sick and casting out devils, they had been taken to task by some Christian brother for presuming to cure organic disease, or even daring to undertake the healing work without first having every case "diagnosed by a trained specialist," and been reminded that to fail to recognize the authority of material therapeutics was "suicidal"? Surely those who are yet in bondage to this sense of limitation have occasion to sit down and weep, as did their fathers in Babylon, when they "remembered Zion." The world would fain hear a note of Christian triumph, of the overcoming of sin and sickness, in fulfilment of the Master's pledge,—but how shall they sing the Lord's song in this far-away land?

Thank heaven, things have wondrously changed of late. To-day a vast number of those who have been healed of all kinds of functional and organic disease through Christian Science (among whom are many ministers) are awakened to a realization of the weakening timidity and unworthiness of this unfaith. To her eternal credit be it remembered that when Mrs. Eddy began her championship of the liberty of the sons of God, when she declared for the present availability of divine Truth, and sounded

Digitized by Google

the note of a new and glad day in the immortal words, "The miracle of grace is no miracle to Love." "God will heal the sick through man, whenever man is governed by God" (Science and Health, pp. 494, 495), she then stood single-handed and alone "in the midst of the years." In demonstrating the truth of her contention by healing all manner of disease, and in instituting the quickening and beneficent work of Christian Science, she has achieved for the sick and the suffering, the desolate and the enslaved in this sad world, that which in common justice should have won for her the loving appreciation and gratitude of all mankind.

It was declared by the psalmist that when the Christ-idea had ascended (in human consciousness) he should lead "captivity captive," but speaking to the unbelieving, undaring, and inadequate disciples of his day, Christ Jesus said, "O faithless generation, . . . how long shall I suffer you?" and looking forward to this, the day of the re-appearing of the Divine idea in Christian Science, he said, "When the Son of man cometh, shall he find faith on the earth?"

JOHN B. WILLIS.

"TO DAY IF YE WILL HEAR HIS VOICE."

THE great peace gathering in New York City has passed into history, though its voice will echo down the corridors of time until the din of war and of all strife is forever hushed. Whatever may have been accomplished on this occasion, the important factor in the peace movement is the spirit which gave it birth, and which impelled some noble men and women at great cost to themselves to make strenuous efforts to save the world from the age-long miseries of war. Among civilized nations there are few if any who now contend for wholesale slaughter as a means of settling national or international questions, though many are slow to see that the time is ripe for the establishment of saner methods. It should be clear to all that to right belongs all time—that the time for wrong is never! While it is true that the highest good cannot be humanly expressed so long as men are ignorant of God and His law, it is also true that evil has no right to exist; therefore, when the belief in the necessity of evil is given up, the power and permanence of right will be recognized.

Nearly two thousand years ago Christianity was ushered in with an angelic chorus announcing peace and good will, and when the child Jesus was taken into the temple, Simeon the seer declared that he had come "to guide our feet into the way of peace." Toward the close of Jesus' earthly career, when pursued by the hatred of his unrelenting foes, even when menaced by the cross, he said to his followers, "My peace I give unto you;" and it was not the peace of an ignoble concession to error, it was no truce with the belief in sin, disease, or death. No! the war with error must continue till its every phase should be subdued, but in this decisive struggle only evil was to be destroyed; men were not to lose their lives in the victories of Truth, but to find them. Thus we find Paul, the great Christian warrior, declaring that "to be spiritually minded is life and peace;" and again, "The fruit of the Spirit is love, joy, peace."

It is now admitted that the cause of international peace has made more progress in the last ten years than in a thousand years before this time. Is it not, therefore, a just conclusion that spiritual mindedness is gaining ground. No one can deny that war is always waged for material considerations, and when these are made to give place to what the great Teacher called "the weightier matters of the law, judgment, mercy, and faith," the reign of righteousness and of peace will have begun. It is right that we should honor those whose efforts are bringing nearer this blessed consummation, and Christian Scientists everywhere rejoice that their beloved Leader's name is enrolled among the names of those who are the founders of the peace movement. For forty years she has labored incessantly to awaken her fellow-men to the great truths of spiritual being. She has never ceased to declare that all good *is now*, and attainable *now* by all who love God, good! This great truth has been proved to a wonderful degree by thousands who have been healed in Christian Science, and they hail with joy the signs of a new order of things—Divine Science correcting all the errors of mortal sense, so that we may confidently look for the speedy realization of the poet's prophecy:—

> Peace! and no longer from its brazen portals
> The blast of War's great organ shakes the skies!
> But, beautiful as songs of the immortals,
> The holy melodies of love arise.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

[Telegram.]

Chicago, Ill., April 24, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—You have followed the brief history of Seventh Church of Christ, Scientist, of Chicago, and you will be pleased to know that our hall, seating seven hundred, is already filled at Sunday services.

The step required of us in further following your example is plain, and in loving recognition of the privilege granted to us through your labors in behalf of mankind, we have to-night established our building fund and have voted to proceed immediately to build our own church edifice.

Seventh Church of Christ, Scientist, Chicago, Ill.
HARRIET RIED WHITE, *Clerk.*

[Telegram.]

Los Angeles, Cal., April 24, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—People remaining after Wednesday evening meeting of Second Church of Christ, Scientist, of Los Angeles, approximately fifteen hundred, being in sympathy with the world peace movement, appreciate the significance of your becoming a member of the American Branch of the Association for International Conciliation. We realize that this membership is in accord with your life purpose and work to establish the kingdom of heaven on earth, as expressed in your teachings that "one infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself.'"

BOARD OF DIRECTORS.

Chicago, Ill., April 22, 1907.

Beloved Mrs. Eddy:—While I was studying to-day's Lesson it suddenly came to me how many thousands were happily and confidently at work on the same Lesson—because of what you have done for us. Of those thousands, how many who previously companioned with despair, dreading each new day, awoke this morning glad of life's opportunities, strong to take advantage of them—because of what you have done for us. What numbers who once watched helplessly while others performed the duties they knew to be their own, now rejoice in the heritage of health, with a surplus of energy which they use for the good of other pilgrims—because of what you have done for us. A new stir, a new vitality, a new knowledge which effaces fear, is throbbing through the world to-day—because of what you have done for us. Its signs and symbols are

Digitized by Google

the white temples springing up throughout the land, monuments to God's goodness—because of what you have done for us. More love, more happiness, more grace, more peace, are manifested in numberless homes—because of what you have done for us.

Does every heart rejoice over these undeniable facts? No. Every thought which turns to you in love is aware of the persecution that assails you at this day, and of the marvelous fact that the fires are lighted solely because of what you have done for us. Then how can we be faithful enough, how be watchful enough, how be obedient enough to that Principle to which your own obedience is an awe-inspiring lesson!

On page 410 of Science and Health, beginning at the fourteenth line, is a paragraph especially dear to Christian Scientists at this time: "Every trial of our faith in God makes us stronger. The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love. The Apostle John says: 'There is no fear in Love, but perfect Love casteth out fear. . . . He that feareth is not made perfect in Love.' Here is a definite and inspired proclamation of Christian Science."

Oh, if all those who with eager hand are wielding the muck-rake, would lift their sullen eyes to read that message, it seems as if they must recognize its source to be heaven, and instantly know that it could travel to earth only through a stainless thought. With devoted love,

CLARA LOUISE BURNHAM.

Northampton, Mass., April 16, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the charter members of First Church of Christ, Scientist, of Northampton, incorporated under the laws of the Commonwealth of Massachusetts, March 29, 1907, as our first act, in deep gratitude to God, express our loving loyalty to you, our dear Leader, and to the Cause of Christian Science. We take pleasure in telling you that we are planning to erect a church building on a centrally located lot, during the coming summer. Our present hall is too small to accommodate the steadily growing attendance of both townspeople and Smith College students. Sincerely,

ELLA IONE MAYFIELD, LOTTIE B. STRONG,
MARY C. MAYNARD, *Committee.*

New York, N. Y., April 17, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—You may never pause in your busy moments to read these words, but a heart full of love for you, and gratitude for what Christian Science has done for me, craves expression. The sublime example of your life, in these times, is a beacon-light not only to Christian Scientists, but to the whole world. I believe this great world-movement for peace is, in no inconsiderable degree, the fruit of that gospel of peace which you have proclaimed to this age. To be worthy to follow in your steps is the earnest wish of one who is striving to love God above all things, and his neighbor as himself.

Gratefully,

CHARLES EGBERT BURNHAM.

Alexandria, Egypt, April 3, 1907.

Dearest Leader:—We, the undersigned, thought you might be interested to know that there is a little band of your followers here in Alexandria, where once the early Christians practised their faith, and that again the same truth is revealed and demonstrated here through your great discovery and teaching as well as by your life-work. We know the truth about you and that you are our God-appointed Leader to eternal harmony. We have tasted of the fruit of Christian Science and been healed, and behold, it is "very good." We send you our loving, loyal, grateful thoughts, well knowing that God's purpose cannot be overthrown nor His divine law broken. We thank you for your life-work which has so abundantly blessed us all, and we desire to follow in the footsteps of Truth.

Lovingly and gratefully yours,

S. ALEC. ALDERSON, MURIEL BULL,
F. NELLIE ALDERSON, HARRIET T. GAYE,
AGNES F. BAILE, W. GAYE.

New York, N. Y., April 13, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of Fourth Church of Christ, Scientist, at a regular corporate meeting, held April 11, send you an expression of our loyalty and love. We assure you of our sincere desire to make this branch of The Mother Church a manifestation of the Christ-spirit, as taught in Christian Science, and through more earnest work to confirm our love for the Cause which your faithful adherence to divine Principle has established for the world.

Yours in love and truth,

Fourth Church of Christ, Scientist, New York, N. Y.
SUSAN E. BECKERT, WM. M. RICHARDSON,
LAURA G. CHILDS, *Committee.*

La Grange, Ill., April 16, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—The members and congregation of First Church of Christ, Scientist, La Grange, Ill., are assembled for the purpose of deciding upon the erection of a new church edifice. La Grange is a suburb of Chicago. Our church membership is eighty-two. A few years ago we purchased a desirable lot, and at the meeting referred to in this letter we decided to proceed at once to the erection of a twenty-five thousand dollar structure.

We desire to express our thanks to the giver of all good for the many blessings which have been bestowed upon us. We believe that the greatest of these is the understanding of God as revealed through Christian Science; and, as our first act at this time, we wish to express to you our deepest thanks and gratitude for this glorious revelation which you have given to the world. We thank you also for your self-sacrifice and labor for the good of humanity, and for your example of a true Christian life, which is an inspiration to us all. We have supreme confidence in your ability, and are happy in acknowledging you as our Leader, Teacher, and Guide. Having learned that gratitude cannot be expressed by faith without works, we consecrate ourselves anew, and shall endeavor with renewed zeal to hold our "gaze to the light" (Miscellaneous Writings, p. 355), that this branch may bring forth more abundantly the fruits of the Spirit.

We assure you of our tenderest love, and of our loyalty. May the peace of God which passeth understanding be always yours.

First Church of Christ, Scientist, La Grange, Ill.
ANNA R. CAMPBELL, *Clerk.*

THE MAY MAGAZINES.

AMONG the magazines which publish articles on Christian Science in their May issues are *The Cosmopolitan, Success, Human Life, The Arena, Fine Arts Journal, American Queen, Broadway Magazine,* and *Government.*

Digitized by Google

AMONG THE CHURCHES.

MT. VERNON, N. Y.

The local Christian Science church has purchased the First Congregational church property, corner Valentine Street and North Ninth Avenue, and will hold its first service there Sunday evening [April 28]. Mechanics are now making alterations and improvements, to be completed in time for that date. This step of obtaining a central location has been contemplated for some time and culminated in this purchase, which gives local Christian Scientists a desirable corner lot for the erection of a permanent church and in the mean time a temporary building that will accommodate the growing congregation for a short time.—*Mt. Vernon Argus.*

NEW HAVEN, CONN.

The announcement is made of an important sale of real estate. First Church of Christ, Scientist, of this city, which now holds its services in Republican Hall, has recently purchased of the Windham County Savings Bank of Danielson, Conn., through local real estate firms, the lot at the corner of Winthrop and Derby Avenues, upon which a church edifice will be built. This is considered a very desirable location, because this part of the city is fast becoming a fine residential section, large numbers of beautiful homes having been built during the last few years. This lot overlooks Monitor Park, upon which stands the Ericson monument with its bronze eagle poised for flight. Prominent real estate men pronounce it one of the best sites in New Haven for a church.

The Leader.

ENGLEWOOD, N. J.

The committee for distribution of Christian Science literature for First Church of Christ, Scientist, of Englewood, N. J., reported at the annual meeting held Jan. 10, 1907, that two boxes had been placed in the railroad stations of the Northern Railroad, one box being placed at Tenafly, N. J., a station two miles distant from Englewood, and one placed at Englewood, N. J., for the distribution of free literature. The result was very encouraging. These boxes were kept filled during the past year and there has been distributed in this way 5,113 *Sentinels*, 339 *Journals*, 150 tracts, 100 supplements, 15 *Heralds*. It is known that through this free literature people have been interested, and have visited the church for further information. We also have a list of names of ninety-seven persons to whom Christian Science literature is sent by mail once each month with very favorable results.

MINERVA B. NELLMAN.
Chairman.

MEMPHIS, TENN.

First Church of Christ, Scientist, has recently purchased the church edifice known as the Central Methodist Church, with organ and all furnishings, for $18,000. The church is centrally located on one of the leading avenues of the city, is substantially constructed, and the main auditorium has a seating capacity of about eight hundred. There is also a large Sunday School room, committee rooms, etc. Our Reading Room has been established in the building in a beautiful suite of rooms well adapted for the purpose. The church still owns free of debt a most desirable building site, where it was intended to erect a new structure for worship whose foundation-stone should have been laid for Christian Science, but the opportunity of purchasing a place ready for use, and just suited to our necessity, seemed to be an offering from divine Love not to be rejected. We realize that the financial demonstration was only possible to us through the unity of purpose in the church and its loyalty to our beloved Leader, Mrs. Eddy. We trust to express this love to her daily in following where she leads, in doing the "good works" she has taught us can be done in his name. The first Sunday service was held in the church April 7. Our church was organized in 1894 and its growth has been continuous and most encouraging.

MRS. ROSA A. MARTIN, *Clerk.*

MANCHESTER, ENGLAND.

Luncheon-hour readings in Christian Science literature, largely consisting of expositions of the healing of sickness by prayer, are made possible to busy city men by the opening to-day of a Reading Room by this sect in Victoria Street. A visit to the room revealed a delightfully decorated and furnished apartment. On the oak tables were numerous Christian Science publications, and there were several interested readers. The general public are invited, and there is no subscription or charge, though persons so disposed will have the opportunity of contributing anything their hearts dictate. The headquarters of the movement in Manchester is the church at Victoria Park. In consequence of growing adherence to the Cause this building is shortly to be enlarged to twice its present seating capacity, which is two hundred and fifty. The Christian Scientists have a special meeting to-morrow night at which Mr. Bicknell Young of Chicago will speak.—*Evening Chronicle.*

LA GRANGE, ILL.

Plans for the immediate erection of an edifice for First Church of Christ, Scientist, in La Grange, were completed last evening, when the architect's plans were accepted by the executive committee. The church, as shown by the plans of the architect, S. S. Beman, will seat about four hundred and fifty persons. Bids for the erection of the building, which is expected to cost about $25,000, will be received next week, and work is to be started immediately afterward on the site at Catherine Avenue and Cossitt Street, in order that the structure may be ready for occupancy by Jan. 1. From a tiny colony of eight members, who met in a room over a dry goods store eleven years ago, the Christian Scientists of La Grange have grown in numbers until they now have more than twenty-five times that many at every Sunday service, and the Town Hall, which they have used for the last four years, is scarcely able to accommodate them.—*Chicago Post.*

OAK PARK, ILL.

The clerk of First Church of Christ, Scientist, Oak Park, Ill., reports satisfactory growth and activity in all the departments of church work. This church was organized in 1897, and now has fifty-five active members and an average attendance of about one hundred and fifty. The church contributed one thousand three hundred and forty-seven dollars to The Mother Church building fund, and was one of the first to include its own building fund. The officers and Sunday School contributed to the fund for the improvement of the streets in Concord.—*Correspondence.*

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

TESTIMONIES OF HEALING.

In the fall of 1898 I was at work as car carpenter at the Baring Cross railroad shops, when I was taken sick. Not then knowing anything about Christian Science, I was treated by a physician of Argenta, Ark.,—our doctor for years. He pronounced the disease a dangerous fever, and at the same time my right lung became involved. The doctor did the best he could for me and we had a great deal of confidence in him. After I got better of the fever, he commenced to treat me for the lung trouble, trying a new method. He also recommended a change of climate, but after examining me thoroughly he said that the conditions were very serious. He afterwards told my wife that both lungs were affected. I was not able to work any then, but we bought a farm and in the spring I was able to work a little. So it went on for about three years, and then a cousin of my wife wrote from Boston that he had been healed by Christian Science. He wrote, "I did not believe in anything, but a man cannot help trusting in a bridge that carries him safe over." He sent her some Christian Science literature, and my wife and I commenced to read the *Sentinel* and *Journal*. The first work by Mrs. Eddy that I read was "Miscellaneous Writings;" then my wife bought a copy of Science and Health and we began reading it. With some friends we began reading the Lesson-Sermons in a schoolhouse; then in the home of a neighbor; afterwards in another schoolhouse, and finally in an unused church; but by this time the opposition had become so strong that we could not get any one to attend, so we read at home.

My health was improving; I grew strong again. In August, 1903, I met the doctor on the street, and he was surprised to see me looking so well. I told him I was never stronger in my life. He said it was a miracle, that he had thought I could not live. I told him I expected to go to work again in the shops. He advised me not to do so, but I did, and although a part of the work was heavy, I felt very little tired when it came night, and would often carry a load of wood home on my shoulder, a distance of two miles. After supper I was not any more tired than in the morning. I worked there over a year, then went to another department for a few months. My work now is sometimes over and about hot steam pipes, but does not affect my health in any way, as the doctor was afraid it would. In March, 1904, I joined the Woodmen of the World, and a doctor in Little Rock examined me thoroughly. After he was through I said, "You find my lungs all right, don't you?" He said, "They are sound."

A short time after we moved from Faulkner County, my wife and I were coming home from church and met my former doctor. He expressed surprise at seeing me looking so well, and my wife told him that we had become Christian Scientists. He threw up both hands and said, "That explains it." To this day when he meets my wife he still tells her it was a miracle. I received no Christian Science treatments whatever for the above trouble, and it was nothing but the understanding of the truth, gained through reading and studying Mrs. Eddy's works, that healed me. For some time I did not acknowledge it, or even realize it, but I can see it now! Doctors do not, nor can they, restore the lost substance of the lungs. I believe they do not even claim to do this, but God can, and to Him be the glory. My wife and I are members of The Mother Church, also of First Church of Christ, Scientist, of Little Rock, Ark.

E. H. STEVENS, Little Rock, Ark.

About five years ago I became interested in Christian Science through the healing of a friend from various chronic troubles which had defied medical treatment. The healing was so complete that there was no room for doubt, yet I attributed it to will-power and abstinence from drugs. I reasoned, however, that if mortals could fool themselves into good health it was certainly a very good joke. My wife having been in rather poor health for some time, we bought a copy of Science and Health. Through its study periodical headaches were completely overcome, and she was otherwise benefited. I tried to read with her, but could not become much interested for the reason that I had never believed the accounts of the so-called miracles of Christ. In the fall of 1905, after handling quantities of thorny shrubs, a painful sore appeared on one hand, which caused much inflammation of the hand and arm. This was treated by a reputable doctor, who pronounced it a badly poisoned wound. The sore finally healed, but a little higher up others broke out. This condition went on for nearly two months, and I became so disheartened and despondent that I was totally unfitted for work. In desperation I decided to try Christian Science, so I applied for treatment to a practitioner. It was with a feeling almost of shame that I entered her house. I thought that if I got no relief,—and I had little hope that I would,—no one would ever find it out from me. After receiving treatment I left, feeling rather disappointed. I had gone but a few rods when I had occasion to move my arm, and to my intense surprise it seemed perfectly normal. There was at this time a very serious condition of the wrist joint, and the arm and hand were considerably swollen. I stopped and bent the hand up and down, testing it in every possible way, but could feel no pain or stiffness. It was simply wonderful to me! Only those who have experienced such a demonstration can understand my feelings at that time. In a very few days there was nothing left to show where the trouble had been but slight scars which are now entirely gone. After this I no longer doubted that Christ Jesus raised the dead or made the blind to see. All these things now seem very natural and reasonable.

I am indeed grateful for this healing, but looking back over an experience of less than a year, I see that blessings have come to me that far outweigh the physical healing. Whereas I was a confirmed fretter, often lying awake nights worrying about things over which I had no control, now all is peaceful and I sleep like a child. Work which seemed intolerable drudgery has become pleasant and interesting. Many things that seemed hard to bear have been made easy, and a feeling of security is gradually growing with me, while moments of doubt are fleeting. I am truly thankful to God, and thankful to Mrs. Eddy for the truth by which I was healed. I am even thankful that I had the trouble which led me to seek the light.—FRANK E. BOYNTON, Biltmore, N. C.

That "this corruptible must put on incorruption, and this mortal must put on immortality," has recently been made very plain to my thought. I have, through the realization of this truth, finally overcome an ailment of long standing. This was an abnormal growth, larger than my hand, which seemed to eat into what is called the vitals. I know what *materia medica* would have said of this case, but it would take too long to give the details. While working in Science on my own case, I was asked to treat another person who had a similar ailment. Through my understanding of the truth of being I was able to realize for her the allness of God, and this truth brought the healing, which she gratefully acknowledged. To know that "the flesh profiteth nothing" and that it is the Spirit which quickeneth, and that we must present our bodies (our consciousness) without spot or blemish, has been a great help in time of need.

Digitized by Google

To our beloved Leader, the Revelator to this age, I owe a lasting debt of gratitude, for through her perception of Jesus' teachings, and through her messages in all her writings, I have found the pearl of great price. As she has followed the Master, so let us follow, as Scientists, in her footsteps up to the very Horeb heights of holiness. "Holiness becometh thine house, O Lord," is the song that is daily coming to my ears. He that hath an ear let him hear the anthem and take up the glad song, for we must be holy, even as Christ is holy, before we can hear the welcome "Come, ye blessed of my Father."

HARRIET V. EMMONS, New York, N. Y.

In coming to this country, fully thirteen years ago, from Edinburgh, Scotland, I had an unexpressed desire to know God so that our prayers should be answered, being weary of what seemed to me a very mechanical religion, and I could never be reconciled to the formality of the orthodox sacrament. Nearly eleven years ago I found Christian Science, and on opening "Science and Health with Key to the Scriptures" by Mrs. Eddy, I read that God means good. I sincerely thank God, and our beloved Leader, for the revelation of this great truth which enables us to help ourselves and others out of the false sense of things, for it is through this knowledge of God and of man as His reflection that the healing is done. There is only one way to find this knowledge, and that is shown us in our text-book. Through its teachings we are awakened to know God's power, presence, and guidance, no matter what the selfish, deceptive sense of the human will may try to assert. Now we have great joy in our work for humanity and derive much help from the study of our Lesson-Sermons, and from our services, which mean so much to us. These services are not limited to the church walls, but their healing atmosphere extends into the world's consciousness.

It is interesting to see, in the great religious controversy now going on in Great Britain, that there is a reaching out for something higher and holier than the human, variable sense of things,—something to rely on with safety and satisfaction,—a practical religion. In one of the leading newspapers from home (Scotland), in an article relative to this subject, reference was made to a gentleman who, on visiting one of the large cities and being given the names of the principal churches and ministers, asked, "But where is God's church?" It is there and it is here, and if we seek we find. Science and Health (p. 1) says, "Desire is prayer." The spiritual signification of Church is given in the Glossary (p. 583), and the understanding of this Church is gained from studying our text-book.

In recalling some cases of healing experienced by us, two instances present themselves. Our little girl was protected from a supposedly contagious fever, also a little niece was protected by destroying fear for the family. Besides these, cases of asthmatic and throat trouble, and fever, as well as business problems and various discordant conditions, have been overcome by the truth.

MARY D. PORTEOUS, New York, N. Y.

Something over eleven years ago I was healed by Christian Science of many troubles,—stomach and catarrhal difficulties, etc.,—all of which disappeared by reading "Science and Health with Key to the Scriptures," and other writings by Mrs. Eddy. I was also healed of another illness of quite a severe character, but in this case I received a few treatments from a dear practitioner and was soon helped. About three years ago I was also freed from the bondage of wearing glasses, after having used them for about eighteen years, so that I can truly say, in the words of the psalmist, that my youth has been "renewed like the eagle's." I am able to read any kind of print by day or artificial light, although over seventy-one years of age; and not only in this one particular have youthful conditions been restored, but in all other phases of existence does the same kind of experience prevail. For all of this I feel inexpressibly grateful to God for the wonderful light that has come to this age, which frees us from the illusion of sin, disease, and death, and makes us know that we are indeed the children of the one God and joint-heirs with our elder Brother, Jesus the Christ.

The spiritual understanding of God as Life, Truth, and Love is a thing that we can never fully estimate, and remembering that all this comes through the pure and selfless character of our beloved Leader and Guide, Mrs. Eddy, would not one be an ingrate indeed who did not feel and express gratitude for all this glorious light given us in Christian Science. I was a working member of an orthodox church (for which I am truly thankful) for forty-five years, but must frankly confess that the spiritual good received in that relation was far short of what has come through Christian Science. To God be all the praise!

SIMON THOMAS, Scranton, Pa.

Christian Science was brought very forcibly before me about three and a half years ago by the complete healing of a friend from a disease pronounced incurable by medical practitioners. I had always before that time ridiculed its alleged cures, and although often urged by friends of sound judgment to try it for my own physical disabilities, I had persistently refused, until this case came under my immediate observation. This time I could not explain away the facts. Perfect results had been accomplished after other methods had failed. At this time I was a physical wreck, having been a sufferer from a complication of diseases for several years. I would often be compelled to resort to drugs in order to get sufficient relief from the continued and severe pain to get part of a night's sleep. Eight different physicians and specialists treated me. Their diagnosis usually differed, although it was finally established beyond question (according to this verdict) that the stomach was organically affected. At this point I was told by an eminent specialist that all he could do for me was to make me temporarily more comfortable.

In this extremity I sought the aid of a Christian Science practitioner. Results were immediate. The insomnia and all pain were at once relieved, and the healing of every discordant physical condition was accomplished in less than one week. Since that time my health has been perfect. My family as well as myself have all shared in the inestimable blessings of Christian Science, both physically and spiritually. Business cares have been lightened and happiness and prosperity increased. I can but feebly express my gratitude to our beloved Leader, Mrs. Eddy, for her consecrated and untiring labors for mankind, and as I grow into a better understanding of the immortal truths she is giving to the world, my desire grows greater each day to so live and prove her teachings that I may contribute my small share toward the realization of God's kingdom "in earth, as it is in heaven."

JOHN V. DITTEMORE, Indianapolis, Ind.

I was led to Christian Science through the healing of a friend. For about fifteen years I had suffered very much from chronic bowel trouble and the numerous ills which accompany it. I had tried a great many remedies without receiving any lasting benefit, and our family physician finally told me I never would be well unless I was operated upon. This I objected to, and I am happy to state that through the study of Science and Health and Christian Science treatment I have been completely healed of all my old ailments. While my healing was

Digitized by Google

slow I rejoice now that such was the case. Had I been instantly healed I would not have considered it worth while to study Science and Health, as my sole object in seeking Christian Science was to obtain the physical healing. I was ignorant of the fact that to know God aright is health and life. I have seen the power of Truth demonstrated in my family in the healing of several diseases, and as a result of my healing four members of my family are active Christian Scientists. I am very grateful for this truth.

SOPHIA J. GOOD, Atchison, Kan.

For years I was ill with nervous trouble, always enveloped with fears of every sort. I tried all kinds of medication, massage, and change of environment with no permanent relief; then I concluded to call on a Christian Science practitioner. I decided to have treatment, and was helped in the first week sufficiently to know that there was a power which was doing me good, both mentally and physically. I continued treatment about two months, improving all the time; then by the advice of the practitioner I commenced the study of the text-book, "Science and Health with Key to the Scriptures," and gradually worked out my own salvation from all the fears which had seemed so real. In a year I felt like a new creature, and words cannot express my gratitude for even the little understanding that I have of an omnipresent, unchangeable God of Love, and that there was one pure enough to receive this revelation and send it broadcast, healing the multitudes.

FLORA B. HUFF, Philadelphia, Pa.

[Translated from the German.]

Nine years ago I was freed in one Christian Science treatment of two troubles with which I had been afflicted from childhood. I was believed to have inherited sensitive feet, which caused me much trouble. When a child I had a supposedly infectious ailment, and for thirteen years I had a cough which was not only disagreeable to me, but disturbed others as well. I had medical treatment, but neither this nor home remedies could free me from the trouble. I was very sensitive to changes of climate and weather, and suffered greatly, therefore no one but myself can appreciate the peace and joy of freedom which this healing has brought me. My whole life has been transformed by Christian Science.

In 1 Corinthians, 12 : 31, we read: "But covet earnestly the best gifts: and yet show I unto you a more excellent way." I was at the time of my healing preparing to become a kindergarten teacher, and the untiring activity with which I have been enabled to follow my profession I owe wholly to Christian Science. In my work as a teacher I was sometimes obliged to read or lecture to large assemblies, and Christian Science freed me from nervousness, fear, etc., so that I could satisfactorily perform my duties. Before my healing I had made several sea-voyages, and was always ill from start to finish; but since I have through Christian Science gained an understanding of the Bible passages, "In him [God] we live, and move, and have our being," I have been on the sea for weeks at a time, and have never suffered even when the water was so rough that the captain and myself were the only ones at table.

Since I have taken up the study of Christian Science many ailments have been overcome for me, and an ankle which was badly injured while playing tennis was completely healed in five days through constant reading in "Science and Health with Key to the Scriptures." Sensitiveness, quick temper, hatred, and other discords in character became beautifully less through the teaching that "God is love." The *Sentinel, Journal,* and *Der Herold* are messengers that always render us necessary service at the right time, and I wish to express my gratitude to all the workers who so faithfully send the good news out to the Field. I wish to take this opportunity to express my appreciation of our dear Mrs. Eddy, who in Science and Health gives us a deep insight into her life-purpose. In her books we find a satisfactory answer for every question concerning man. I also wish to give thanks for the love which is being made manifest through Mrs. Eddy's life and works, so that now humanity may repeat the song of angels: "Glory to God in the highest, and on earth peace, good will toward men."—MISS JULIA RUNGE, Houston, Tex.

A few years ago there came to me a sorrow so deep, so dire, that I stood as it were with our Saviour in Gethsemane. I lost all except two loving young sons, in such a way that the hope of heaven alone could heal. Yet this Gethsemane taught me some wonderful lessons. I had always from childhood been in touch with God; not in the way of the churches, for the Bible did not appeal to me,—only those portions of the prophecies that spoke of the Christ to come, and the New Testament and the Psalms. The clear verdict of a God of Love filled my thought to overflowing, and I knew God could not take away one's life, but is absolutely all. I had never heard of Mrs. Eddy, or of Christian Science, yet I felt the power of divine Love held over me so strong and deep that with the giving up I was made to see the Deliverer, —Christian Science, all love, perfect, not a shadow to mar its beauty,—and then my prayer welled up to Him who notes even a sparrow's fall. I asked to be taken to these people, wherever this Science was to be found. Time passed, and after severe trials—innumerable mountains to sense—one came who healed me of my distress, lifted me to the feet of Christ. I saw man as God's image, and that was enough for me, though there are conditions still to master as we travel along the line.

I had always felt that the way of Truth would be shown the second time by a woman, and I thank God that I have been humble enough to behold the "star" and follow, and be called to help swell the number of God's anointed. Every burden has been lifted. I have followed even if the Red Sea lifted its stormy waters, for what matters it? I am on the road to the goal, and stand on the Rock, Christ. The time was when I had forgotten how to smile; now every burden is gone—rolled away—and there is not a vestige of broken-heartedness. My laugh is just as merry as of yore, and a song comes to my lips just as quick. I saw the wisdom of our Leader's message of June 16, 1902, and it filled me with joy. I took up the tangled threads of circumstances and wove them into steadfastness through these inspired words, which have set me forever at peace: "Are earth's pleasures, its ties, and its treasures taken away from you? It is divine Love that doeth it, and sayeth, 'Ye have need of all these things.' A danger besets thy path?—a spiritual behest, in reversion, awaits you." Surely this promise in Revelation fits my case: "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow nor crying, neither shall there be any more pain: for the former things are passed away."

MRS. LILLIE H. MCKINNEY, Pueblo, Col.

It is with heartfelt gratitude that I desire to make known what Christian Science has done for me. I had rheumatic trouble, which left me very lame; one limb was bandaged all the time and the other limb was helpless. I had tried several doctors, and they said there was no help for me, so I had made up my mind to bear the pain and suffering as well as I could, and I had many sleepless nights during the eight years of my suffering. I also had bowel trouble from taking so much morphine. My husband wished me to try Christian Science, as we had seen some wonderful

Digitized by Google

demonstrations, and we decided to call a practitioner. I was healed of all my troubles in the first treatment. I took the bandage from my limb, and have had no pain or trouble since, and the limb which was helpless is as sound as ever. I can walk from my home to the services on the Sabbath mornings, though it is a full mile. I was healed in July, 1897, and have never taken any medicine since. I am well, and often wonder how I ever lived without Christian Science. I am so thankful to God, and to Mrs. Eddy, for even the little understanding I have of Christian Science.

MRS. E. J. WATSON, Bangor, Me.

I was healed through Christian Science in 1889, after suffering from various diseases for several years. Among my difficulties was a catarrhal and throat trouble that had hindered my singing soprano for a long time. I also had neuralgic trouble, so bad that at times I was not able to do anything. Besides the ailments mentioned I suffered from stomach, heart, and lung trouble that kept me in almost constant pain. I tried doctors of different schools, with no lasting benefit, but the Bible says, "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint;" and this promise was fulfilled in my case.

I thank God for the understanding of this truth, which enables me not only to keep myself well, but to help others. I am also very grateful to our Leader, Mrs. Eddy, for her unceasing labor for the whole world.

MISS ESTHER M. SHERWOOD, Fairmont, Minn.

It is with a deep sense of gratitude that I wish to acknowledge the healing and regenerating power of Truth, to which I owe all that I have and all that I am. After several years of invalidism, in which I suffered from a complication of diseases; after enduring the horrors of the surgeon's knife and only realizing temporary relief, Christian Science found me in great mental darkness, besides being a victim of nervous and heart trouble. There were times that I could not walk a block, and I had for years been a sufferer from supposedly inherited stomach trouble. I was also wearing glasses, and the oculists said that I must have them fitted every six months and that I would never be able to go without them. After wearing them some eight years, I found one day, on reading Science and Health, that I could see without them, and I suffered no inconvenience at all from leaving them off. That was three years ago, and now my eyes are normal. I was also healed of an enlargement of my neck which caused me much trouble. After becoming thoroughly discouraged with material remedies, I turned to Christian Science and was perfectly healed. Knowing that sight is spiritual and cannot be lost, unconscious of heart action, the mental darkness has given place to a knowledge of ever-present Love. This last healing was slow.

I wish to express my thanks for this truth which has helped me to know God. To know Him aright brings perfect peace, happiness, and contentment. My earnest prayer is that infinite wisdom, Truth, and Love may make and keep me worthy to be found in the upward and onward march of the true Christian Scientists. I am grateful to God, and to our faithful Leader, Mrs. Eddy, for giving us this message of Love. My one life-motive is to help others to an understanding of this truth. I also wish to express my gratitude for the *Sentinel* and *Journal*.

ALMA T. MCCUTCHEON, San Diego, Cal.

I wish to express my deepest gratitude to our Leader, Mrs. Eddy, for her great and wonderful book, "Science and Health with Key to the Scriptures." I have received untold benefits since coming into Christian Science,—physical, mental, and best of all was the spiritual help gained by me. Christian Science has food for every hungry heart, and as we partake of it we begin to know "the peace of God, which passeth all understanding." I was healed of a stomach trouble which could not be met through *materia medica*, for I had tried everything without any relief, but at last I turned to Christian Science, and was healed in a few treatments. I was also healed of an acute attack of lung trouble in three treatments. Most of all, I am thankful for the spiritual understanding which gives to us a God who is Life, Truth, Love, infinite Mind, to whom we may look in every need.

MRS. SARAH M. WALKER, Chicago, Ill.

On reading in the *Sentinel* a testimony in regard to the victory of Truth in the case of an injured ankle, I decided to supplement it with a statement of two of my own similar experiences, one of them being a fall when descending from a trolley car some years ago, the other a recent fall on leaving an elevator. In the latter case there were people around who kindly lifted me and gave me a chair. They gave me the most friendly assistance, one dear young lady offering to accompany me; but, thank God, I have learned that the only real help is in the way of truth. So, holding to the thought of God as Love and Life, and thanking my kind fellow-beings, I rose and walked (though tottering at first) several blocks, and went into other stores before taking the cars for home. No one at home, in either case, has known of the untoward experiences, though the first cost several days of seeming endurance; this last only two or three of a sense of weakness. But I know that God fulfils His promise, "I will dwell in them, and walk in them; and I will be their God, and they shall be my people." Glory be to God, who giveth us to triumph through Christ.—FRANCES W. GESNER, New York, N. Y.

While passing through a critical period of my life I endured much suffering. For about four years I had been under medical treatment, also made a change of climate twice, trying both the Atlantic and Pacific coasts, but found that change of altitude made no difference in my health. I was finally taken to a hospital and given treatment, but without permanent relief. If the kindness of doctors and nurses could have aided me, I should have returned to my home a well woman, but when I left the surgeon told me he expected me to return in a short time, as he was satisfied that nothing but a very serious operation would restore me to health. I continued to take medicine several times a day for five months, and once more I was bedfast. I received medical treatment one month, was slightly better for a few days, but unable to go out of the house. Then I became worse, and was again in the same state in which I had been when taken to the hospital. I had lost faith in medicine and surgery, and did not call the doctor, but instead sent my nurse to a neighbor who had had Christian Science treatment, and she sent for a practitioner.

I shall never forget that first treatment; it left me in such a restful, peaceful state. I had one week's treatment at home. The fourth day I walked in the yard, and at the end of the week I took the car and went to the practitioner, climbing very steep stairs to her rooms. After the second week's treatment I was completely cured, and have now been four years without any recurrence of the trouble. I never had a fear that it would return, for I felt I had been healed by Divine power and that I would remain healed. While not yet a member of the Christian Science Church, I have been much helped by the knowledge I have received and am sincerely grateful for what was done for me.

B. S. MCDOWELL, Pasadena, Cal.

FROM OUR EXCHANGES.

[*The Christian Register.*]

The generous thought of Jesus is becoming the thought of the world. His natural and homelike picture of heaven as a home and God as the Father of us all is too highly prized to pass out of human thought. Men are studying less than ever the evidence that the body of Jesus was raised to life again. More than ever they are convinced that his spirit was triumphant over death and the grave, and that for such as he life was so abundant that it was bound to escape accident and death. More than ever before men believe that the very spirit of his life, death, and victory are found in the words, "In the world ye shall have tribulation: but be of good cheer; I have overcome the world."

[*The Outlook.*]

Our highest vision of love, our deepest insight into purity, our widest conception of life and growth, our divinest passion for perfection, our most joyful sense of freedom, our keenest delight in the play of thought, imagination, humor, our sweetest affections and most ardent service—it is these that lead the way to heaven and suggest its radiant happiness, its inexhaustible interest, its limitless growth, its perfect content in His presence who gave His children the gift of beauty as well as of righteousness: of variety, freedom, and gayety, as well as of purity, service, sacrifice.

[*The Standard.*]

Jesus' words of promise, affirmed and validated by his own resurrection, were not spoken that within the soul of man a new passion for immortality might be born, but that the eternal and deathless hunger, planted in the heart when man first came to be, might be satisfied by full assurance. Life and immortality have been brought to light. That which was dim has been made clear. The guesses and hopes of human hearts have been transformed into convictions.

[*The Congregationalist.*]

Christianity has not done its perfect work in our hearts until we really love our neighbor as ourselves, and it cannot justify itself as the universal religion until its professed devotees make the world believe that they care as much about establishing justice in every relationship of man with man and of securing mercy for the weak and friendless, as they do about going to heaven themselves.

[*The New York Observer.*]

For the Christian believer every morning is a resurrection, and every Sabbath is an Easter. Jesus Christ is the Lord of Life, who could not himself be holden of death nor suffer corruption, and it is his blessed privilege and gracious will to give to as many as seek him and identify their fortunes with his, eternal life, which has its genesis now and its glorious fruition through unmeasured ages.

[*The Christian Work and Evangelist.*]

For no act of any sort can have lasting effect except as it is based upon the rights of the other man. No genuine religious advance is possible which does not put love to the neighbor where Christ put it,—side by side with the love of God and intrinsically one with the love of self.

[Rev. Herbert Welch in the *Western Christian Advocate.*]

The need of the hour is to make the resurrection not simply a historical fact, accepted by the intellect as proved, but a real truth in the heart and conscience, manifested in a life surrendered to the dominion of a risen Lord and spent in the fellowship of a living Friend.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Printed from new plates and containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75
Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration will be found on the wrapper. No other notice will be given.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; twenty-five copies, $1.00; fifty copies, $1.80: one hundred copies, $3.00.

In all other countries, six cents per copy, postpaid to any address; twenty-five copies, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The first annual meeting of the American Society of International Law, which followed the first annual Peace and Arbitration Congress, was held at Washington, and was really a continuation of the sessions of the Peace Congress. The subjects for discussion included the development of international law; the second Hague Conference; rights of foreigners in the United States in case of conflict between Federal treaties and State laws; immunity from capture during war of non-offending private property upon the high seas; contraband of war; the transference of prize cases from municipal courts to an international court, and the forcible collection of contract debts.

A summary of the appropriations made at the last session of Congress shows a grand total of $920,798,143.80. The appropriations by acts are as follows: Agricultural, $9,447,290; army, $78,634,582.75; diplomatic and consular, $3,092,333.72; District of Columbia, $10,440,598.63; fortification, $6,898,011; Indian, $10,125,076.15; legislative, $32,126,333.80; Military Academy, $1,029,703.42; naval, $98,958,507.50; pension, $146,143,000; post office, $212,091,193; rivers and harbors, $37,168,083; sundry civil appropriation act, $110,769,211.30; deficiency appropriation act, $12,408,998.91; miscellaneous appropriations, $738,900.62; permanent appropriations, $149,886,320.

The Secretary of Agriculture in a recent address said, among other things: "For years the department has been distributing camphor tree seed, and thousands of trees are now growing throughout the South and in the Pacific Coast States. Two years ago a serious effort was made to develop the manufacture of camphor from these trees. By improvements in manufacturing processes satisfactory results have been accomplished, and a large manufacturing concern is now building up a camphor grove of two thousand acres in Florida, from which it hopes to make its camphor. This firm uses more than $500,000 worth of camphor every year."

The Interstate Commerce Commission has started an investigation into charges that hundreds of shippers throughout the United States, engaged in various lines of business, have been guilty of underbilling and underweighing commodities, in violation of the provisions of the new railroad rate act. As a result an order has been made that in the future railroads shall keep a record of violations of the law in this respect that shall be accessible at all times to agents of the Commission.

The monthly statement of the public debt shows that at the close of business April 30, 1907, the debt, less cash in the Treasury, amounted to $903,337,617, which is a decrease for the month of $5,768,949. This decrease is accounted for by the redemption of four per cent bonds of 1907, which aggregate practically the amount of the decrease.

The city of Springfield, Mass., is taking steps to secure a beautiful water front by removing the tracks and buildings of the New York, New Haven, and Hartford Railroad across the Connecticut River.

The Massachusetts Legislature has refused to pass a bill which proposed taxing the residential property of colleges and universities.

Foreign.

A great change is taking place in Persia. Its new Parliament is vigorously at work. New schools are being established, the old mosque schools, in which the rudiments of reading and writing are taught, strengthened, and Mohammedan pupils in the missionary schools are increasing. There has been a sudden increase in the quality and number of newspapers. Free publication of papers and books for the first time is being allowed. A tone of confidence prevails among the leaders, many of whom belong to the clergy.

The supplementary appropriation bill introduced in the German Reichstag provides $3,750,000 as the instalment of the amount to be expended in widening and deepening the Kiel ship canal. It is estimated that the total cost of the improvements will be $55,250,000, and that the work will be completed in seven or eight years.

Damascus, one of the oldest cities in the world still inhabited, until recently had its streets little better lighted than they were thousands of years ago; but Feb. 1, 1907, an electric street lighting service was installed and electric cars began running. Other Oriental cities will follow suit.

Russia is experimenting with the twenty-four hour time system, the hours being numbered consecutively from one to twenty-four. The Minister of Railroads has requested that the summer time-tables for the railroads to Moscow be printed in the new system.

It is understood that Spain has decided to support the Drago doctrine if it appears on the program of The Hague Peace Conference. This doctrine opposes the collection of private debts by a show of force by a foreign government.

Harrod's, one of the largest department stores in the West End of London, is catering to American visitors by displaying goods priced both in American and English currency.

The Russian Council of Ministers has decided to double track the Siberian Railroad from Atchinsk to Irkutsk this year.

A Japanese embassy is to be established at Constantinople, despite the objections of Russia.

Industrial and Commercial.

Orders for railway equipment and materials amounting to about $9,000,000 have just been placed by the Japanese Government in the United States. An order for one hundred and eighty-three locomotives of standard gauge was given the American Locomotive Company, and an order for twenty to the Baldwin Locomotive Works. The American Car and Foundry Company was given a contract for building six hundred and sixteen cars of standard size, and the Japanese Government is still in the market for about a thousand additional cars of various types. All these cars are for the South Manchurian Railroad. An order was given to the United States Steel Corporation for fifty-one thousand tons of steel rails and track fastenings, and fifteen thousand tons of steel rails, sixty-pound sections, for the Government road. The American Bridge Company was given an order for four hundred and eighty-eight bridges of single spans, ranging from seven feet to one hundred and five feet. There has also been ordered from the the J. G. Brill Company a complete train of the Pullman type. Two complete electric lighting plants were ordered, one to be erected by the General Electric Company and the other by the Westinghouse Electric Company. Numerous other minor orders for supplies were placed. All orders are to be delivered at San Francisco before Sept. 1. It is expected that additional orders will be placed during the next few months.

An important discovery that will be greatly welcomed by the patrons of the swift Atlantic steamers, has been made by Captain Kaempff and Chief Engineer Leuttmann of the Hamburg-American line's steamer Deutschland. This discovery consists of a slight alteration of the blades of a steamship's propellers, resulting in a remarkable reduction of the disagreeable vibration aboard the fast steamers. The alteration is described as changing the position of the blades on the propeller to such an angle that each of the four blades presents a greater surface of resistance to the water as the blades revolve. This resistance causes a reduction of the number of revolutions of one of the propellers, which ordinarily work synchronously. This results in greatly eliminating the vibration without lessening the speed.

The Interborough-Metropolitan Company of New York has closed a contract for fifty steel passenger cars for service in the subway and two hundred wooden cars to be used on the elevated. The order involves about $1,350,000. This is the first move by Theodore P. Shonts, recently of the Isthmian Canal Commission, now head of the Interborough-Metropolitan, to give the people of New York city better traffic facilities.

The United States Ruby Mining Company has recently been organized by a number of New York jewelry men and merchants to exploit and operate the newly discovered ruby country in the Cowee Valley near Franklin, N. C. Recently the real gem-bearing matrix has been found and the company feels sure that it has a true and valuable ruby mine.

Fifty plate glass mirror manufacturers of various sections of the country, at their recent meeting in Pittsburg, formed the National Mirror Plate Manufacturers' Association to eliminate price-cutting and restore good trade conditions.

A certification of consolidation of the Silversmiths Company of New York and the Silverware Stocks Company of New York, with a capitalization of $14,000,000, has been filed at Albany, N. Y.

General.

The most magnificent tomb in the world is deemed to be the palace temple of Karnak, Egypt, occupying an area of nine acres, or twice that of St. Peter's in Rome. The temple space is a marvel of gigantic columns, beautiful courts, and a wondrous avenue of sphinxes.

The estimated population for continental United States for 1906 is 83,941,510, and for the United States, inclusive of Alaska and the insular possessions, 93,182,240.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[From "Tent Life in Siberia," by George Kennan.]

AN ARCTIC AURORA.

"On the 26th of February [1866] . . . there occurred one of the grandest displays of the Arctic Aurora which had been observed there for more than fifty years, and which exhibited such unusual and extraordinary brilliancy that even the natives were astonished. . . . Late in the evening . . . there burst suddenly upon our startled eyes the grandest exhibition of vivid dazzling light and color of which the mind can conceive. The whole universe seemed to be on fire. A broad arch of brilliant prismatic colors spanned the heavens from east to west like a gigantic rainbow, with a long fringe of crimson and yellow streamers stretching up from its convex edge to the very zenith. At short intervals of one or two seconds, wide, luminous bands, parallel with the arch, rose suddenly out of the northern horizon and swept with a swift, steady majesty across the whole heavens, like long breakers of phosphorescent light rolling in from some limitless ocean of space.

"Every portion of the vast arch was momentarily wavering, trembling, and changing color, and the brilliant streamers which fringed its edge swept back and forth in great curves, like the fiery sword of the angel at the gate of Eden. In a moment the vast auroral rainbow, with all its wavering streamers, began to move slowly up toward the zenith, and a second arch of equal brilliancy formed directly under it, shooting up another long serried row of slender colored lances toward the North Star, like a battalion of the celestial host presenting arms to its commanding angel. Every instant the display increased in unearthly grandeur. The luminous bands revolved swiftly, like the spokes of a great wheel of light across the heavens; the streamers hurried back and forth with swift, tremulous motion from the ends of the arches to the center, and now and then a great wave of crimson would surge up from the north and fairly deluge the whole sky with color, tinging the white snowy earth far and wide with its rosy reflection. But as the words of the prophecy, "And the heavens shall be turned to blood," formed themselves upon my lips, the crimson suddenly vanished, and a lightning flash of vivid orange startled us with its wide, all-pervading glare, which extended even to the southern horizon, as if the whole volume of the atmosphere had suddenly taken fire. I even held my breath a moment, as I listened for the tremendous crash of thunder which it seemed to me must follow this sudden burst of vivid light; but in heaven or earth there was not a sound to break the calm silence of night, save the hastily-muttered prayers of the frightened native at my side, as he crossed himself and kneeled down before the visible majesty of God. I could not imagine any possible addition which even Almighty power could make to the grandeur of the Aurora as it now appeared. The rapid alternations of crimson, blue, green, and yellow in the sky were reflected so vividly from the white surface of the snow, that the whole world seemed now steeped in blood, and then quivering in an atmosphere of pale, ghastly green, through which shone the unspeakable glories of the mighty crimson and yellow arches.

"But the end was not yet. As we watched with upturned faces the swift ebb and flow of these great celestial tides of colored light, the last seal of the glorious revelation was suddenly broken, and both arches were simultaneously shivered into a thousand parallel perpendicular bars, every one of which displayed in regular order, from top to bottom, the seven primary colors of the solar spectrum. From horizon to horizon there now stretched two vast curving bridges of colored bars, across which we almost expected to see, passing and repassing, the bright inhabitants of another world. Amid cries of astonishment and exclamations of 'God have mercy!' from the startled natives, these innumerable bars began to move, with a swift dancing motion, back and forth along the whole extent of both arches, passing each other from side to side with such bewildering rapidity, that the eye was lost in the attempt to follow them. The whole concave of heaven seemed transformed into one great revolving kaleidoscope of shattered rainbows. Never had I even dreamed of such an *aurora* as this, and I am not ashamed to confess that its magnificence at that moment overawed and frightened me. The whole sky, from zenith to horizon, was 'one molten, mantling sea of color and fire, crimson and purple, and scarlet and green, and colors for which there are no words in language and no ideas in the mind, —things which can only be conceived while they are visible.' The 'signs and portents' in the heavens were grand enough to herald the destruction of a world: flashes of rich quivering color, covering half the sky for an instant and then vanishing like summer lightning; brilliant green streamers shooting swiftly but silently up across the zenith; thousands of variegated bars sweeping past each other in two magnificent arches, and great luminous waves rolling in from the inter-planetary spaces and breaking in long lines of radiant glory upon the shallow atmosphere of a darkened world.

"With the separation of the two arches into component bars it reached its utmost magnificence, and from that time its supernatural beauty slowly but steadily faded. The first arch broke up, and soon after it the second; the flashes of color appeared less and less frequently; the luminous bands ceased to revolve across the zenith; and in an hour nothing remained in the dark starry heavens to remind us of the Aurora, except a few faint Magellan clouds of luminous vapor."

THE CORRECTION OF MISTAKES.

SAMUEL GREENWOOD.

CHRISTIAN SCIENCE is the most simple and practical teaching which engages the attention of mankind, although to those of opposite view it may seem at first sight to be vague and visionary, if not impossible. Goodness and love are elemental qualities of being, without which even the human sense of existence would be a blank,

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

and yet to the purely sensuous thought these essentials of true manhood are as mere abstractions. In like manner the human mind, looking upon all things as material, may regard Christian Science as mystical and impracticable in this present world; whereas this teaching so clears the thought that mortals may perceive and appropriate the truth of man's spiritual being while yet sojourning in the flesh. In its operation and effect Christian Science is as simple and potent as the action and influence of goodness and love on human character and conduct. The importance of gaining an understanding of its teachings is commensurate not only with the splendor of its promises and the large measure of their fulfilment, but with mankind's desperate need.

Christian Science practice has no alliance or kinship with the occultism of the human mind, nor with any of its hypnotic or suggestive mental methods. In simple phrase it is the reformation of wrong ideals, the correction of mistakes, the rearrangement of thought to conform to the acceptance of the Divine supremacy and of man's spiritual perfection in the likeness of God. Any seeming difficulty in understanding this process lies wholly with mortals' unwillingness to learn and be governed by these truths. The threshold of the understanding and demonstration of Christian Science is the desire and readiness to give up the delusions of evil for the reality and permanence of good, the human material ideal for the spiritual Christ-ideal, with all that this implies. When the heart is glad to lay upon the altar all that would oppose or subdue the spiritual nature of man, the Science of Christianity is easily learned.

On the plane of human experience nothing is simpler or of more natural performance than the reversal of an exposed falsehood, the correction of an error, and the reordering of one's affairs in harmony with discovered truth. This is not regarded as impracticable, nor does any one question the effectiveness of the change resulting therefrom. The first thing one usually does, upon learning that he has been deceived in any course, is to seek the truth and adjust his thought and conduct to it, no longer considering his former belief true or real. He applies the truth, discovered by himself or another, to what had been falsely believed, and the result corresponds to the corrected belief. This is universally considered to be the natural and right thing to do in the ordinary affairs of life, then why should the same method be looked upon askance when used in Christian Science for the reclamation of the sick and the sinner from the false state into which their erroneous beliefs have led them.

There is no other successful way to treat a mistake than with the truth. Every schoolboy is aware of this unexceptional rule. An error has no right to exist or continue its delusions, and no one desires it to do so unless he is dishonest and hopes to profit thereby. The difficulty generally seems to be in perceiving that all human discords are mistakes, and in treating them accordingly. Yet if God and His works are accepted as the standard of truth, it should not be hard to conclude that evil, with its array of dire conditions, is a mistake, a state of things that does not result from Truth nor lead mortals thereto. If the wretched moral and physical conditions prevailing among men must sometime be worked out of and overcome before men can be wholly good and pure and Godlike, it should not be hard to conclude that they represent an erroneous and not the true state of being; that is, that they result from the mistakes of humanity, from wrong methods of thinking, and their consequent errors of believing. Then why not treat them as mistakes? Why not antidote them with the truth of being, even as goodness and love, if allowed to control thought, overcome evil and hate? Sickness must be as much of a mistake as is sin, for both proceed from the same false material premise, and both are healed through Christian Science by the application of the one truth.

A traveler who discovers that he is on the wrong train, does not reconcile himself to his false position by reflecting that because the engine and the speed and the train seem real and tangible, it must be true that he is there, and that although he will suffer much inconvenience he cannot alter his course, but must continue to the end of the road. Instead, he gets out at the first opportunity and takes the next train back; he corrects his mistake. The discovery that he is going the wrong way makes it possible for him to rectify his mistake, whereas his ignorance or denial of this would perpetuate his error and its consequences. Then what of him who is on the wrong road mentally and morally, the results whereof are apparent in sin and suffering? When he discovers his error is there no remedy therefor, no truth of the right way for him to apply without going on to the end of his wrong course? Does not the true road exist for him at the moment he discovers his mistake, and is there no means at hand whereby he can get back to the right starting-point? Does Christianity provide in this present world no return journey from the errors of the flesh and evil back to the truth of being and to God?

If one's ideal of life is wrong, if it leads him into error and sin, can it not be corrected as surely as that God is good and truth is true? Does not the fact that God is, that truth is, bear with it the possibility that one can forsake his false position and reform his way (thoughts)? All reform work, all Christian effort is based on this possibility; without it mortal man has no hope, while with it he may recover himself and establish his thought on the truth. Christian Science may well be called the hope of the race, for it has taken this possibility out of the realm of abstract logic and brought it into the range of every one's understanding and ability, making plain and practical the Christ-method whereby mortals may correct their errors, forsake their unrighteous thoughts, and come naturally into a more harmonious and spiritual sense of existence.

Considered in its broadest application, Christian Science practice is the correction of mistakes, the redemption of humanity from false conditions, the eradication of sin and disease from human experience because of their untruthfulness. The presence of an error is detected by results. A mistake has occurred in the working out of a student's problem when the answer is wrong. And likewise a mistake exists in the human concept of being when the result is a sick and sinful sense of man. Then how else can this error be corrected, and the resultant sin and sickness be removed, except through gaining the true idea in its place, the idea which Jesus represented, and upon which all his teachings and works were based? The working out of one's salvation according to this rule is as simple and effective in practical Christianity as it is in practical mathematics, a conclusion which the successful healing and reformatory work of Christian Science fully justifies.

Christian Science necessarily rests upon a spiritual basis, the basis that Being is Spirit and that His creation is spiritual and good; the basis of the divine fatherhood and man's spiritual sonship. As the individual wakens to perceive his error, to recognize that he is on the wrong course, this truth is ever ready to help him on his return journey. It is the Christ knocking at the door of the human heart. The mortal who hears and understands this knocking becomes aware how cold and poor and mean is his material thought-dwelling; and he opens the door at once if he is wise. Why should he remain shivering and suffering in his wretchedness, when his door opens from the inside, and the redeeming Truth waits for admission? Why should he believe that he must continue in his miserable habitation until it decays and

Digitized by Google

crumbles upon him, before the Christ can help and save him, while his angel visitant waits perennially for the opening of the door that he may enter and illumine and regenerate thought and being?

The opening of the human thought-door to the Christ-truth is Christian Science in operation. As thought welcomes this divine guest, the errors that formerly held sway begin to disappear, and the result is seen outwardly in improved moral and physical conditions; the individual becomes more loving and just, more harmonious and successful in all that pertains to his existence. This proves the position of Christian Science, and works for human betterment and salvation. Errors that are corrected cease to exist; and the results that flowed therefrom, no longer having a source of supply, also cease to exist. Mankind will continue to sin and suffer, sicken and die, in their material sense of being, so long as they believe life to be something apart from God. Is it not time that this error of the ages be uncovered and rebuked, and mortals be shown their way to freedom,—to health and righteousness and eternal life? To do this was the mission of Jesus; and it is the mission of Christian Science.

SCIENTIFIC SUCCESS.

HENRY BRADFORD SIMMONS.

MANY men are conscientiously striving in their careers to solve the problem of a scientifically successful business life—a success born of Principle and not a purely outward showing born of will-power, which may wither away. One may be apparently successful in business, but if he is making a god of material accumulation, instead of laying up treasures in heaven, he cannot be a truly successful man. The only true success is born of understanding, and is attained by listening to the voice of Truth.

As we gain a scientific sense of the infinite, we learn to measure success and riches by our dependence upon God, and gradually we gain the freedom manifested by Jesus when he told Peter to take the piece of silver from the fish's mouth, or when he broke the mesmeric material spell for the multitude and brought to them a sense of abundant supply. The recognition of divine Truth brings a mental richness which cannot know want. It is reaching the source of all supply and will certainly bring a scientific success. Self-seeking and a desire for monopoly are detrimental to success, for if one is neither mentally broad enough nor willing to see abundance for others,—that in God is unlimited supply,—he will necessarily be cramped and limited.

The word luck is obsolete in Christian Science, for we know where all good originates; and one can bring a taste of heaven to earth with a certainty and consciousness of power which will not fade away, for its substance is in Mind. Let us destroy those will-o-the-wisps called chance and luck, and gain an honest basis for work. If we do not bring out the immediate manifestation of harmony, self-examination will show whether greed, avarice, pride, or conceit are obscuring the childlike humility, honesty, and reliance on God so necessary in the business world. Our beloved Leader says in "Miscellaneous Writings" (p. 155), "Bring forth fruit—signs following—that your prayers be not hindered. Pray without ceasing. Watch diligently; never desert the post of spiritual observation and self-examination. Strive for self-abnegation, justice, meekness, mercy, purity, love."

Another important point is the faithful acknowledgment that success is due to God's guidance. We should never allow our egotism to whisper, "My hand hath done it." "Trust in the Lord with all thine heart; and lean not unto thine own understanding. In all thy ways acknowledge him, and he shall direct thy paths."

SELECTED ARTICLES.

AN ERRONEOUS REPORT CORRECTED.

[IN the *Boston Herald* of April 25 there appeared a misrepresentation of the remarks of Hon. John D. Long at the Unitarian Men's Club of Hingham. Governor Long immediately corrected this false report through a letter which appeared in the *Herald* of April 26 and in an interview published in the *Boston Transcript*. The report and corrections follow.—EDITOR.]

LONG HITS MRS. EDDY.

At a banquet and smoker of the Unitarian Men's Club of Hingham, ex-Gov. John D. Long took occasion to score Mrs. Mary Baker Eddy and Christian Science. In his opening remarks as presiding officer, Mr. Long said,—

"This gathering represents a certain religious and moral element in the town, and is of much benefit. All churches and church gatherings have much to do with the welfare of the community.

"In the case of Christian Science and its following, it is vastly different. In spite of the fact of its magnificent church edifice, costing upward of one million dollars, with thousands of followers and believers, it has not one atom of religion in it."

At this meeting nearly two hundred of the business and representative men of the town were present, and listened to an interesting address given by Governor Brady of Alaska.—*Boston Herald.*

GOVERNOR LONG AND CHRISTIAN SCIENCE.

To the Editor of *The Herald.*

Will you kindly correct the report of your Hingham correspondent of my remarks last evening at the Unitarian Men's Club here. I did not say that Christian Science "has not one atom of religion in it," nor anything of that kind, nor anything that could be taken as even tending in that direction. On the contrary, I referred to it as an illustration of enthusiastic loyalty to a faith, and said that what is good in it is in all our Christian faiths founded on the teachings of Jesus.

April 25, 1907. JOHN D. LONG.

LONG MADE NO ATTACK.

Ex-Governor John D. Long, when questioned this morning, indignantly denied that at the banquet and smoker of the Unitarian Men's Club of Hingham last evening he had said that there was not an atom of religion in Christian Science; which remark was accredited to him by one of the morning papers as having been uttered on that occasion.

Mr. Long said that this report of his sentiments was quite erroneous, and that on the contrary he had said that the magnificent support which Christian Science congregations gave their churches, was an example which Unitarian congregations might well emulate.—*Boston Transcript.*

[From the *Charlotte* (Mich.) *Leader.*]

"WHAT IS TRUTH?"

This is a question of considerable meaning. It has been asked by all the generations of the past, back as far as history, tradition, or mythology reach, and no answer yet written on the trestle-board of matter except that of the sphinx—silence. When "truth" is finally perceived by average humanity it will probably be found there, in the silence, and not in the boorish gibberish and exploitation of the "Eureka" crowd, who in every Sunday newspaper or monthly doggerel flaunt the remnant of some speck of matter aloft with the cry, "I have found it."

It is already learned, by all students and searchers, that

Digitized by Google

what promises to lead closest to that most desired haven, toward which all intelligent people are faced, is not in matter. We have to deal, unfortunately perhaps, almost constantly with what we call matter, but we know that real truth is not there any more than in the rainbow or the mirage, for under the skilful hand of the chemist and modern chemical equipment we find that matter is easily resolved into shifting, changing, unsubstantial chaos. It does not need the metaphysician or philosopher to tell us that the real seeker for truth must look elsewhere than in the domain of what we call matter. In fact, to dismiss all senseless arguing and petifogging, and step directly into the heart of the problem, there is but one direction to look with any promise for truth and what is most to be desired by the human soul, and that is into the realm of the unseen, into the deep silence of being. And we are compelled to go there more or less and sooner or later, in spite of ourselves.

Every one of us, driven from the unseen realms of life, would be no more than chunks of clay. Everything of value to the world, as also to its individual parts, comes from what cannot be seen, felt, tasted, smelled, or heard by the physical senses. All ambition, all love and affection existing between the parent and child or between friends, all hope, all pleasure, all that can possibly be real in life, comes from the unseen. The manifestations of what we know as matter can only be used for convenience, as the hoe to the farmer, the boat to the mariner, or vegetation for food. None of us would underrate the usefulness of matter in our present evolutionary pilgrimage, but neither can we afford to embrace it, wallow in it, and call it all. Every hour of our lives gives us experiences that would stamp such a proposition as a gross and unfortunate error.

Probably, with all of the seeming follies of this generation, there never was a more earnest desire on the part of so many people to approach what is true than the present. Many organizations and aggregations of people have been formed within the past twenty-five or more years, with a pledge to seek truth wherever found, laying conventionalities one side and often leaving friends to become strangers. There are sacrifices in these things, but who shall assume to sit in judgment when impulses for good serve as the burning bush to lead the footsteps of men and women? True, many organizations have broken into fragments. What of it? They were headed right. They were facing the rising sun. They were looking in the direction of the Holy Grail. Their paths may be long and arduous, but their eyes are turned away from an unwise faith in muddy matter to faith in the substantial, even if for a season their bodies are more or less chained to materiality—the wheel of time.

Just at present a most vigorous and apparently vicious attack is being made by a few periodicals and people upon one of these organizations, the Christian Scientists, and the Founder is being subjected to usage which ought to bring defeat to all connected with the unhappy scheme. With no attitude of rejection or acceptance of the teachings of Mrs. Mary Baker Eddy, one would much prefer to stand in her place, with her many years of experience in an effort to solve the problem of the sphinx, and with steadfast courage and faithfulness give to the world at least a few fragments of truth which might be demonstrated for the lasting benefit of mankind, than be the owner of a muckrake magazine and the control of a corps of literary haberdashers who can only command applause and attention by seeking the destruction of those who are far their superiors. Such methods as they employ, if permitted to be accepted as proper warfare even in common politics, would, if carried out to a finality, pollute the sacred graves of a Washington or a Lincoln, even the sepulchers of the apostles who followed the Saviour upon the hills and in the vales of Palestine.

To consent to the reaching back in an individual life covering eighty odd years, or a much less time, and from the tender and inexperienced years of childhood through the evolved life, bringing out pictures of the footsteps leading here and there, as is the common experience of all individual life, for the express purpose of magnifying the missteps on the upward march and minimizing the good which is grasped along the line, is the very height and depth of villainy and abomination. No person who ever lived should be asked to submit to such treatment, and few have been compelled to. If any scoffer at this proposition will give into our hands his life line of march of fifty years or more, with proper authorities to interview, to be even only truthfully portrayed in a historical sketch, we will be enabled to drive him or her into a dishonored grave, unless possessed of a character so well formed and developed as to be irresistible to the "gnawing tooth of time." And this plain fact is one of the most potent revelations that progress does actually exist with individuals and the race.

The intelligence of the country cannot afford such sacrilege, much less those who stand for the highest welfare and moral progress of the world.

[From the *Indianapolis Star.*]

A SEEKER AFTER LIGHT.

To the *Indianapolis Star:*

Passing a Christian Science church a few days ago, I noticed men unloading wagons of coal and kindling for heating purposes, and the thought occurred to me, Why this needless accumulation of fuel and outlay of money? If the cult leads to belief of insensibility to feelings of pain in other ways, why not to cold or heat? Why not assemble their audience and imagine the building warm and comfortable, and thus demonstrate beyond peradventure the error arising in orthodox minds in regard to this matter? That would be a practical side of their religion through which they would gather a host of converts to them, for there is nothing that appeals to the Christian mind, as well as to the immaterialist, like financial demonstrations. Continuing the same reasoning, Why eat to sustain the material body on this earth, if we are all spirit? Another laudable financial demonstration, if it can be compassed. I should like to be informed where sensibility and insensibility begin and end, being possessed of considerable nerves myself.

LOSTHOPE YESTERDAY.

[The above criticism of Christian Science was answered by the Publication Committee in the following letter.—EDITOR *Sentinel.*]

To the *Indianapolis Star:*

"A Seeker After Light," who wrote on Christian Science in your issue of Friday, is decidedly belated in his search. Astonishing as it may seem, the "thought" which so troubles him has "occurred" to others. Some years ago, indeed, Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, in revising her text-book on the subject, saw fit to comment at some length upon this seeming incongruity between the reasonable demand for spiritual perfection and present limited possibilities along this line. On page 254 of this text-book, "Science and Health with Key to the Scriptures," the author gives a pointed, clear, and "sensible" statement covering the points cited by our critic. This book is to be had at the Public Library, and it can be purchased or read at either of the two Christian Science Reading Rooms in the city, one in the Lombard Building, Room

Digitized by Google

17, and the other in the Newton Claypool Building, Room 620.

To those of the *Star's* readers who may fail to consult the text-book so easily available, and to our critic, should he fail to do so, it may and should suffice if we but point out the fact that Christian Scientists have ample and just precedent in the life and teaching of our Lord, not only for insistence upon the absolute supremacy of Spirit and spiritual facts and possibilities, but also for reasonable concessions to prevalent customs and existing limitations entailed by our present limited understanding of eternal facts of our being, which are "spiritual," and must be "spiritually discerned." He "who spake as never man spake," who raised the dead, healed the sick, and walked on the water, conformed to prevailing customs, solely, however, upon the basis of "suffer it to be so now."

Our critic's harmless little travesty on our name would have been more complete and striking had he introduced an initial letter, say the first personal pronoun, into it. He should have given this and his subject more "thought." R. STANHOPE EASTERDAY.

[Reuben Pogson in *Scarborough* (Eng.) *News*.]

Can Christian Science do more than offer itself willingly to the test enunciated by Jesus: "By their fruits ye shall know them"? It was estimated several years ago that at least a million people had been healed by Christian Science of diseases as various and numerous as is contained in human experience. If this is the fruit of an impostor, what should we not reasonably expect from an honest person? If the simple reading of Science and Health has healed thousands, and this book is the work of an impostor, what fruitage ought there not to be from the book that is said to expose the imposture? Jesus said, "If I by Beelzebub cast out devils, by whom do your children cast them out?" If Christian Science is the offspring of Beelzebub and yet casts out the works of Beelzebub, namely, sin, sickness, and death, is not this a kingdom divided against itself? and a kingdom divided against itself needs no critic to push it over. Mrs. Eddy's life is crowded with acts of generosity, tolerance, yea, the highest expressions of a love that is the reflection of divine Love, God. She has achieved, at least with regard to her native State, the hitherto impossible feat of breaking down the carnal law that "a prophet is not without honor, save in his own country," for she is esteemed by the citizens of Concord, N. H., even those who are not Christian Scientists. It has been prophesied that this critic's book will at last call forth violent replies from Christian Scientists. There is a good testimony in this "at last," but such prophecies are stillborn. Mrs. Eddy has taught her followers too well concerning the impersonal nature of evil for them to pin the malice, which uses this critic as a channel for its utterance, upon him. Some day he will wake up to see how he has been victimized because of his ignorance of the methods of evil, and his awakening—as well as that of the whole world—will be hastened because of the work of Mrs. Eddy and the overcoming of evil with good by her students.

[Editorial in *The Indianapolis Star*.]

In his remarkable address to the Methodist Conference at New York last Monday, William T. Stead made several statements that are of a kind to attract notice, and among others this: "In my visits to various parts of the world, I haven't found any one who thought the Church of Christ was a force in the world to-day. You speak of it to kings or the great men of Europe, and ask their opinion of its power, and they shrug their shoulders and tell you that the Christian Church has been allowed to go to the devil."

There is no reason to consider this an exaggeration, for the churches themselves have noticed it, and numerous sermons have been preached on the Church's loss of hold on the masses. Why is it, and what is the remedy for it? Will Mr. Stead's program of going in for universal peace reform the Church or increase its effectiveness? Nobody who stops to think will believe that. It is no doubt the right thing to do, but there is no prospective element of popularity in it. In fact there is a probability that the lessened efficiency of the Church is due to too much of that sort of thing—too much of reforming some one else. Sermons on universal peace have been common enough, and likewise sermons on the importance of converting China, and the evils of Mormonism. There is hardly any phase of reform or any theory of political economy that has escaped discussion. And that sort of preaching never converted a soul, nor added a particle to the effectiveness of the Church.

History can be searched through and no record be found of successful religious propagation that did not make it a personal matter. It was all addressed to the individual—"Woe unto you, scribes and Pharisees, hypocrites!" "To day if ye will hear his voice, harden not your heart;" "I seek not your's, but you." It may get to the extreme of Eggleston's "You are hair-hung and breeze-shaken over hell," but whatever form it takes it is something that goes home to the individual hearer, and makes him resolve to do something for the improvement of his own condition. Naturally that condition of ferment is hard to make continuous, and that is why there are "revivals" from time to time. Men drop into a condition of rest, of satisfaction with what they have attained, of "smug complacency," as Mr. Stead calls it. Sometimes that condition becomes so extreme that a reformation becomes necessary. Sometimes the change comes in an unlooked-for way, but there is always evidence that satisfactory religion can be had when it is gone after in earnest and on a personal basis.

And in this connection may it not be worth while for some of the churchmen who are worrying about the growth of Christian Science to inquire if this be not the reason of it? Consider the personal attitude that it involves—the call for prayer and faith by the individual. From the historical point of view there is no development of national morality that is not individual. It is well enough to look after others, but the primary injunction is: "Work out your own salvation with fear and trembling."

[Willard S. Mattox in the *Presbyterian Banner*, Pittsburg, Pa.]

When it is remembered that Mrs. Eddy's mission for forty years has been to do good in the world, to assist in the establishment of the kingdom of heaven on earth, to alleviate suffering, to eliminate sin and vice, to purify ideals, to magnify God in the affairs of men so that he may be recognized as our best friend, and when it is remembered with what success her efforts have been attended, it is difficult to understand the ill-natured and baseless attacks which have been made upon her.

Mrs. Eddy's argument that inasmuch as God, Spirit, is infinite, therefore there is no matter, has never been successfully controverted. In fact, the so-called materialistic schools are beginning to acknowledge the fundamental truths of Christian Science teaching. Mrs. Eddy does not deny noumenon and the phenomenal existence proceeding from this noumenon. The point of difference between Mrs. Eddy's teaching and her critics' is as to the constitution of this noumenon and its relation to its phenomena. Mrs. Eddy is consistent throughout in her reasoning. She says noumenon, or creator, is God, Spirit. This proposition is Scriptural. Proceeding upon the basis of the law, acknowl-

Digitized by Google

edged and well known even in natural science, that like produces like. Mrs. Eddy reasons that the phenomena or universe emanating from this noumenon, who is Spirit, must be as the Bible says, like Him, like Spirit. Consequently the universe must be spiritual and not material. There is nothing confused or ignorant about such clear logic. The confusion and ignorance appear rather in the misconception of this logic and in the failure to appreciate its cogency.

[Gray Montgomery in the *Omaha* (Neb.) *World-Herald*.]

Christian Science does not teach that "the trees, the fields, and the stars above are a delusion." It follows implicitly the teaching of the Bible that God is Spirit, infinite Love, and that He created all things spiritual and perfect, and, therefore, it denies that anything can be material. It denies materiality, not being. All that is is spiritual. None of God's manifestations are material. It is by understanding this that we are brought closer to God, that we "get right with God;" that the healing and regenerating work is accomplished.

Judge L. H. Jones in the December *Christian Science Journal* says: "Adhering logically and loyally to her premises, Mrs. Eddy reached the conclusion that if God, Spirit, is the source of all things, is ultimate reality or being, then all the phenomena of being, all that really is, must be spiritual and as perfect in its degree as this reality, and that whatever fails to manifest this spiritual perfection and reality cannot have real being; and, since all that appears to us to be wrong with things, all that is temporary, imperfect, sick, sinful, dying, is embraced in a wrong consciousness of life, the way to be rid of such appearances is not by pouring medicine into a shadow, not by doctoring a false, human concept of man, but by purging consciousness of the false and corrupt elements which give such concepts to us."

Christian Science has proven and is proving every day its practical utility and worth, and any sincere seeker for truth, who will study the text-book, can prove for himself that it is the same truth that was taught and practised by Christ Jesus on the shores of Galilee and the hills of Judæa.

[Editorial in the *Helena* (Mont.) *Independent*.]

The unbiased outsider is forced to regard the Christian Scientist as a combination of faith and good works against whom it would be both idle and unfair to bring the charge of fanaticism or bigotry. It is characteristic of the Christian Science cult that it foments no controversy, indulges in no dispute against the faiths of others. In one sense Christian Science is a sort of sublimation of optimism. It refuses to believe in anything but that which is good, pure, healthy, and sane. It has built for itself the most beautiful and costly churches in America. About its simple ritual it has assembled hundreds of thousands of the most practical, cleanly, progressive people in this country. It has done these things without assailing the beliefs of others. Its animus is more mental than emotional; its tenets are intensely rational, and, in the last analysis, inescapably reasonable.

Christian Science makes for peace, for hope, for courage, and for endeavor. In the main, and in the great bulk of belief and teaching, Christian Science makes well for good and wholesome citizenship, for freedom of thought, and for law-abidance.

The great deeds of those that have gone before us must ever serve as the keenest of spurs to drive us forward on the path of national greatness.

THEODORE ROOSEVELT.

THE LECTURES.

THE MOTHER CHURCH, THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON.

UNDER the heading, "Lauds Mrs. Eddy as Great Leader," the *Boston Herald* reported Judge Hanna's lecture as follows:—

"If Mrs. Eddy is incompetent and insane, then, in God's name, may we have a whole universe of incompetent and insane people!" Ringing emphasis was given to these words by Judge Septimus J. Hanna, in his lecture on Christian Science at The Mother Church last night, and a wave of mirth passed over the large congregation. "This is the insanity which the world needs," shouted the speaker, "the insanity for which the nations have longed, the insanity foretold by the prophets of old, the insanity which the only begotten son of God came to establish forever in this world!

"It is historically true that every great patriot and hero has been more or less misrepresented, maligned, and made the object of conspiracies and plottings on the part of the smaller minds around them, fired with malice and envy. It is more especially true of great moral and religious reformers. History fails to furnish a single exception to the rule that these reformers have been misrepresented and persecuted in the degree in which their labors and efforts were not understood. The moral and religious reformers, until their purposes and missions became apparent and known, were looked upon not as reformers, but as innovators, and therefore dangerous persons, and disturbers of settled conditions and institutions.

"Mrs. Eddy has to some extent shared and is sharing the fate of her predecessors. The enemies of advanced thought have ever flattered themselves that by striking down the leaders they could destroy the cause. Even President Roosevelt has been upbraided and criticised, but no attempt has yet been made to test the soundness of his sanity, although there is no telling when such a thing might happen."

Upward of six thousand Scientists attended the lecture. It was a brilliant spectacle. The spacious auditorium was thronged. Many were forced to stand. Judge Hanna came all the way from Colorado Springs to take the platform. Various theories were advanced for his coming just at this time. Critics said it was to "stem public sentiment." Scientists declared it had nothing to do with the pending lawsuit, despite the liberal allusions to the same. They said the event marked the regular semi-annual public lecture given by The First Church of Christ, Scientist.

Judge Hanna was for years First Reader at The Mother Church and for several years past has been a member of the official Board of Lectureship. He was introduced by Willis F. Gross, president of the church. Judge Hanna is every inch an orator, and he had the advantage of being thoroughly imbued with his subject. He prefaced his remarks by a brief historical sketch of the faith and its growth, reading that portion and all allusions to the litigation from manuscript. His concluding argument was made without reference to notes and comprised a vigorous analysis and defense of Christian Science principles. He quoted the Scriptures in support of Christian Science and declared that Mrs. Eddy had merely revived an element of Christianity that had long been dormant and ignored.

"Many thousands all over our land and in other lands are testifying to their resurrection from the slavery of the material senses toward the glorious liberty which comes from even a partial understanding of the allness of Spirit

Digitized by Google

and the delusiveness—the nothingness—of all that is apart therefrom," added Judge Hanna.

"It is gratifying that at a time when the enemies of truth were turning, with desperate energy, their batteries of malice and hatred against the cause for which this great church stands, and against its devoted Founder and Leader, there should have been held within these sacred walls a meeting of world-wide portent, a meeting the purpose of which was to carry into practical effect the central idea of the Christian religion, which central idea constitutes the corner-stone of this church, and which was announced by the angelic hosts heralding the birth of the world's Saviour —'Glory to God in the highest, and on earth peace, good will toward men.' And as a fitting sequence of this great occasion, that other event, the future significance of which none can now foretell, the recognition of the Discoverer and Founder of Christian Science as a founder also of the Association for International Conciliation, whose single purpose is the ultimate abolition of war and the establishment forever of a world peace. He is a dull discerner of the times who does not see in all this the hand of an overruling intelligence, the activity of one supreme Mind, nay, the literal fulfilment of prophetic Scripture.

"The enemies of the Christian religion evidently believed that by crucifying its Founder they could prevent the spread of the truth which he had come to establish. But in that instance, as in every instance in recorded history, the truth they sought to destroy was the more rapidly advanced by reason of such futile efforts, and so it is proving to-day. Christian Science is more firmly established in the minds of unprejudiced and thinking people than before the recent unjust and malicious attacks upon its Leader. We know that, notwithstanding all pretensions to the contrary, the onslaught is really upon the cause of Christian Science rather than upon its Leader.

"To-day, in this great presence, I feel impelled to say that if the Leader of the Christian Science movement, whose long years of toil, self-sacrifice, and consecration have resulted in the inauguration and advancement of a cause which is rapidly spreading around the world, and in its majestic course is healing and saving thousands of our fellow-beings, a cause which, if sacredly adhered to, will ultimately heal the world from all the untoward and unhappy conditions from which it ought to be healed, a cause that has brought and is bringing life and health and peace and joy into many thousands of hearts and homes, a cause, in short, that is carrying out the great purposes of the Founder of the Christian religion in their height and depth; if she whose teachings and labors are causing almost countless thousands to rise up and call her blessed because she has indeed been to them a great wayshower out of the bondage of sin and sense into the promised land of a larger and freer and holier existence—if this woman is incompetent and insane, then, in God's name, may we have a whole universe of incompetent and insane people."

The lecture was reported by the other Boston newspapers, from which we clip the following:—

The regular semi-annual public lecture of The First Church of Christ, Scientist, was given last evening by Judge Septimus J. Hanna, formerly Reader in the church here, but now of Colorado Springs. With reference to the present trials of Mrs. Eddy, the speaker said.—

"Every great patriot, including Washington, Lincoln, Grant, and Roosevelt, has been misrepresented and maligned by his enemies, whose smaller minds were actuated by malice or envy. The same has been especially true of the great moral and religious reformers, their opponents believing that by striking down the leader they can destroy the cause. The enemies of the Christian religion sought to prevent its spread by crucifying its Founder, but their action only served to cause it to spread the faster. So with Christian Science, which has become more firmly established in unprejudiced minds than before the recent unjust and malicious attacks upon its Leader.

"We know that, notwithstanding all pretensions to the contrary, the onslaught is really upon Christian Science rather than its Leader. If the Leader of this movement is incompetent and insane, then, in God's name, may we have a whole universe of incompetent and insane people. This is the insanity the world needs, for which the nations have longed—the insanity foretold by the prophets of old, the insanity which the only begotten son of God came to establish forever in this world."—*Boston Daily Globe.*

Before more than six thousand persons, who occupied all seats and all standing-room, to the exclusion of several hundred others turned away at the doors, Judge Septimus J. Hanna of Colorado Springs, Col., at The First Church of Christ, Scientist, last evening spoke for over an hour on the fundamental teachings of Christian Science and the marvelous growth of the cult, and eloquently eulogized Mrs. Mary Baker G. Eddy. It was the regular semi-annual lecture at the church, which was practically filled soon after six o'clock.

At one time First Reader in The Mother Church, for several years past Judge Hanna has been a member of the official Board of Lectureship. He was introduced last night by Willis F. Gross of Roxbury, president of The First Church.—*Boston Journal.*

An audience estimated at over five thousand people crowded the auditorium of The First Church of Christ, Scientist, last night to hear Judge Septimus J. Hanna of Colorado Springs, Col., speak on the subject of Christian Science.

The occasion was the regular semi-annual public lecture given by the church. Judge Hanna was at one time First Reader in The Mother Church, and has been for several years a member of the official Board of Lectureship.

He was introduced last night by Mr. Willis F. Gross of Roxbury, the president of the church.—*Boston Post.*

CHESTER, PA.

"The Idealism of Jesus" was the subject of an interesting lecture on Christian Science delivered by Rev. Arthur R. Vosburgh, in the Family Theater yesterday afternoon [April 21]. The lecturer was introduced by Harry D'Esta, proprietor of the Family Theater, who said in part,—

I myself am not a Christian Scientist, nor associated with them, but with all right-thinking people I am glad at all times to hear the truth. A religion which makes persons happier, healthier, and destroys the thousand and one worries and anxieties of every-day life, must certainly be of great good to humanity. It is testified to by thousands that the understanding of Christian Science has brought health and peace where before there was illness and great trouble. The relief from various ills is not regarded by Christian Scientists as a miracle, but the working out of a definite principle, as demonstrated by Jesus Christ and contained all through the Scriptures.—*The Republican.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

MRS. EDDY'S RELATION TO THE PEACE MOVEMENT.

As there has been more or less misinformation extant as to Mrs. Eddy's relation to the international peace movement, it may be well to state the facts in a few words, so that there need be no further misunderstanding. Mrs. Eddy had no official connection with the National Arbitration and Peace Congress recently held in New York, nor at that time with any national or international body under whose auspices the Congress was held. Subsequent to the Congress, First Church of Christ, Scientist, in New York, asked Mrs. Eddy to allow its members to contribute one thousand dollars, to secure for her a membership of the highest class in the American Branch of the Association for International Conciliation; and this courtesy was accepted by Mrs. Eddy in a letter to First Church of Christ, Scientist, New York, which has been published in the daily press as well as in a recent issue of the *Sentinel*.

Membership in the Association for International Conciliation is divided into six classes, as follows: *Fondateur*, *Donateur*, Honorary, Life, Associate, and Annual, and Mrs. Eddy's membership is of the first of these classes. We are informed that Mrs. Eddy is the first American member *Fondateur*, and that she is at present the only American member of this class. Membership in the American Branch includes also membership in the general Association, and we understand that the different classes are open to any person who has the objects of the Association at heart and contributes the amount necessary to obtain a membership of the class desired. The Association was founded by Baron D'Estournelles de Constant, who is its President and also a member of The Hague Court.

It will be seen from the above that Mrs. Eddy's only official relation to the peace movement is that of a voluntary member of the Association for International Conciliation, and that precisely the same membership is open to any person who may wish to identify himself with the Association in the same way. Her membership is that of a private individual, and in so far as the prestige of her name and the use of the money which was subscribed is of value to the cause of international peace, she is glad, no doubt, to be identified with the Association.

Mrs. Eddy's true relationship to the peace movement is not bounded by membership in any association, nor is it through any agency of this kind that she takes rank as an advocate of peace. Her work as a religious leader has awakened in individual consciousness a truer concept of the teachings of the Master, and these teachings stand unequivocally for peace and the brotherhood of man. Her mission has been to implant the peace of God in the hearts of men, and as she has said in Science and Health (p. 141) of the healing work of the Master, so might she say of the coming of peace: "In healing the sick and sinning, Jesus elaborated the fact that the healing effect followed the understanding of the divine Principle and of the Christ-spirit which governed the corporeal Jesus. For this Principle there is no dynasty, no ecclesiastical monopoly."

ARCHIBALD MCLELLAN.

THE ROOTS OF BITTERNESS.

IT was a period of great events, as boys thought then, and as men think now, when the vast forests of the middle West succumbed to the woodman's axe. The mighty monarchs thundered their protest as they fell, but nature's appeal was all unheeded; the fires were lit, and winding-sheets of gray ash lent an added richness to the golden harvests which have since fed the world.

The cutting and burning of the great trees did not complete the settler's task, however, for every departed giant left a well-rooted relic behind him, which held on to mother earth with the strenuous grip of a bad habit. To rid the fields of stumps meant steady digging for many a year, and though some planting was done, despite their crowding presence, the crops were scant and unsatisfactory until the bulk of the stumps had been disposed of, and hence every thrifty farmer made the business of "stump-pulling" a permanent order of the day. It was the abiding "odd job" so long as there remained a single root to mar the landscape or foul the plow.

Those who are familiar with these frontier facts will hardly need to be reminded of the suggestive parallelism between the early settler's task and that to which every true Scientist is committed in his call and endeavor to control and transform his thought and habit. Like the children of Israel, we enter our promised land to find that it is very much occupied, and that if we are to come into practical possession of our inheritance the clearing out process must be immediately begun and faithfully continued. Sturdy prejudices, impulses, and beliefs must not only be cut down, —their unreality recognized and affirmed,—but every "root of bitterness" must be dug up and destroyed through that continuous right thinking and doing which is our part in Truth's regenerative work.

There are many instantaneous physical healings effected in Christian Science, and ofttimes mental maladies are dispelled even as Christ Jesus cast out demons with an authoritative word, but the redemption of human consciousness and character is accomplished, as a whole, only in keeping with the promise to our fathers: "And the Lord thy God will put out those nations before thee by little and little: thou mayest not consume them at once, lest the beasts of the field increase upon thee." The giving up of conscious wrong thinking and doing is called for, but this is not all. Unconscious predispositions and susceptibilities are the avenues by which unnumbered ills secure their entry, and this entire domain must be brought into subjection to the law of God, good.

If we are to become immune to error, Truth must be loved, laid hold upon and assimilated, until it has permeated and purged every plane and recess of mortal thought. Then no "root of bitterness" will remain to thwart the plow of spiritual purpose with which it is ours to cultivate all the fields of human capacity. So long as they remain these roots may prove even more patience-trying than the stumps, and for the reason that they are so hidden and unsuspected. Repeated plowings, however, reveal their presence, and at a moment when we are perchance congratulating ourselves over the depth and perfection of our furrow, we may come upon one and have the plow thrown clear out of the ground, if not out of our hands. These surprises of self-discovery sometimes amount well-nigh to a tragedy, and our humiliation and discouragement may precipitate many a tear before the sad remembrance is entirely washed away. If, however, we thereby learn the importance of thoroughness in disposing of our stumps, the experience will prove of value.

Every husbandman knows that his desire to clear up his land will amount to nothing if it does not take a more energetic form than that of an expressed willingness that some one else do the job for him; and equally true is it

Digitized by Google

that something more than consent to be treated is demanded of those who would be freed from mental and physical ills through Christian Science. While a charge of dynamite may help along, nothing tells on the roots of a stump like a good mattock in the hands of the fellow who very much wants the land it is monopolizing. Likewise the habits of false sense are most speedily cleared away, root and branch, when those who want to be freed from bondage contribute their own honest and faithful efforts to the undertaking.

The toughest, most unmanageable thing about a stump is its tap-root, and the belief of life, substance, and intelligence in matter sustains this relation to our every stumbling and sin. It is beneath and behind all the falsities and follies of human sense, and it explains the traditional tenacity of every baneful habit. Hence the vigor and persistence with which our Leader has addressed herself to this stronghold of error, a course which is entirely in keeping with Jesus' assertive words, "Now also the axe is laid unto the root of the trees," and "every plant, which my heavenly Father hath not planted, shall be rooted up."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Cincinnati, O., April 27, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—I am *en route* for Washington, Pa.,—delayed a few hours by a wreck on the road, which hurt no one.

Since January 1 I have been in New York, Michigan, Missouri, Kansas, Oklahoma, Texas, Arizona, Arkansas, California, Oregon, Washington, Nebraska, Wisconsin, Illinois, Kentucky, and Indiana, and lectured in all those States. In my opinion, based on what I have learned by a most careful observation in these extensive itineraries, the attacks which have been directed against Christian Science and its Founder and Leader have wholly miscarried of their purpose. Indeed they have been another instance in verification of the historical experience that the sufferings of its martyrs are the seed of the Church (to adapt the phraseology of the old saying so as to embrace modern methods of persecution). Everywhere I have found two significant manifestations, viz., A greater zeal on the part of your followers; and an awakened sense of fair play and a desire to investigate fairly from its own view-point the vital teachings of Christian Science, on the part of those who have heretofore given little or no heed to the subject. It is a very long step forward when indifferentism is supplanted by earnest inquiry; and in taking this important step the people have been unwittingly assisted by our opponents. The Cause of Science is growing as never before in its history,—and this is saying a great deal.

Of course there is a keen sense among your followers of the wrong which is attempted, and of loving sympathy for you in the ordeal; but every banner is uplifted higher, and every footstep is firmer.

Lovingly your follower,
CLARENCE A. BUSKIRK.

Los Angeles, Cal., March 17, 1907.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—I have had a box of oranges sent to you from Colton, Cal., by the grower, Mrs. Furgeson. These oranges are a small tribute from the "golden shore of Love;" I hope you may enjoy them. I enclose in this letter an extract from "Tent Life in Siberia," by George Kennan, which tells of a wonderful phenomenon, Feb. 26, 1866. The splendor of the Aurora Borealis seen on this night had not been equaled for "more than fifty years," and this to me is significant of the dates of your birth and of your discovery of this truth. Siberia typifies to me the "long cold night of discord," and the heavens divinely illumined told of the Light coming to the world again. The two arches mentioned by Mr. Kennan signified to me the first and second appearing of Truth. For years I have wondered if some physical phenomenon which we had been too much asleep to appreciate had not heralded this second appearing of Truth. I have been loth to trespass upon your time, and have waited nearly two years before telling you this, but now more than ever before my heart goes out to you in this hour of trial. I know you are enduring this because of your great love for humanity, for you yourself do not need the fiery baptism. Enoch and Elijah walked with God and departed, but Jesus, whose teachings you are emphasizing, demonstrated the way of Life for the world. How I thank you for the changes as they appear in our dear text-book! I had been trying to realize God's omnipotence for some time when on a Sabbath, during the prayer, came the change, "God is omnipotent, supreme!" It filled me with joy; also the words, "If your fidelity is half equal to the truth of your plea,"—these words search every thought and motive and repeat themselves over and over again.

The hopelessness of human measures to benefit mankind has given place to gladdened effort since my complete healing from many ills through the reading of your priceless book, Science and Health. Seven years ago, after receiving your precious letter, I was so strengthened that a case of cancer, for which a patient had been operated upon seven or eight times, was soon healed and the woman has remained well.

Dearest Leader, I have greatly desired to be with you in your home to serve you in any capacity, and even then I could not repay you for all you have done for me and mine; but this I know, I am with you if I live truly and reflect divine Love. Ever yours lovingly,

MRS. MARY E. BACKUS.

[Mr. Kennan's graphic description of the wonderful phenomenon to which Mrs. Backus refers will be found on page 675 of this issue.—EDITOR.]

Toronto, Canada, April 26, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The members of First Church of Christ, Scientist, Toronto, at a special meeting held this evening, unitedly express their gratitude to and affection for you, for the unity, progress, and prosperity in this field, made apparent by obedience to the law of Love as presented in our text-book, "Science and Health with Key to the Scriptures." They deeply realize the injustice and cruelty of the recent attacks made without cause against you and the gospel of Christian Science, and desire humbly to strive to follow your demonstration of intelligence in repelling the shafts of hate and malice with love and peace, confident that "the wrath of man shall praise" Him who is Life, and elevate the divine idea of Love presented by you to the zenith of demonstration, resulting in an enlarged appreciation of the motive and beneficence of your life-work—the salvation of mankind through Christian Science.

Their present church building proving inadequate on account of rapidly increasing attendance and membership, they at this meeting decided to erect a church edifice in this city, with a seating capacity of about fifteen hundred people, at a cost approximating one hundred and fifty thousand dollars.

The members of this branch of the Vine hasten to ac-

Digitized by Google

knowledge their love for you, their loyal obedience, and their determination to consecrate life by following, as they may, your footsteps up the hill of Science to rest and peace, —to God. Lovingly yours,

J. KNOX LESLIE, Chairman.

Dorchester, Mass., April 27, 1907.

My Dear Mrs. Eddy:—Will you pardon me for taking a few minutes of your precious time just to express a bit of my gratitude to you for all that Christian Science has done for me in the past ten years—but I cannot put it in words after all. When I really turned to Christian Science for help, and went for my first treatment, the only thought I was conscious of as I left the practitioner was, "There *is* a God after all!" and this truth has never left me nor grown dim, but God and the Bible are more real to me every day; and this has been made possible by your self-sacrificing life—your example, your teachings in "Science and Health with Key to the Scriptures," and your other works. In these "stormy" times I am more than glad that I am a worker at "headquarters" and am privileged every day to be laboring directly in this Cause, and in proportion to the honesty of my labors do I show my real gratitude to Truth for all I have received. I am privileged to know something of the grandeur of the characters of those in charge here, who are working so faithfully under your direction. Their purity of purpose, their Christianly Scientific bearing under all circumstances, is an object-lesson that is helpful to me daily, and I know that they, and you, and the faithful ones with you at Pleasant View, feel no unquietness in these troublous days of mortal mind. I know that Love blesses you all hourly and that the peace "that passeth understanding" is yours.

Faithfully and lovingly,

A. FLORENCE GRANT.

Roxbury, Mass., April 9, 1907.

Beloved Leader:—This church, at its recent quarterly meeting, sends to you, our guide and friend, its boundless love, unwavering allegiance, and profound gratitude. Our hearts overflow with deepest appreciation for your untiring love for the world, again expressed by the late edition of Science and Health. We recognize that this work is but another bugle-call, awakening us to a clearer vision of the living Christ, enabling us to do better the works you expect of us—the overcoming of sin and sickness. Through your teachings and by your life, we know the truth of the Scripture, "If God be for us, who can be against us?" So all Christian Scientists stand in this hour with you, God's faithful Messenger, conscious of the ultimate victory of justice.

With abiding love from the church,

M. ETHEL WHITCOMB, SARAH C. LINSCOTT,
ALICE E. LINNELL, *Committee.*

Orange, N. J., April 9, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—First Church of Christ, Scientist, in Orange, N. J., in annual meeting assembled, extends to you its full measure of gratitude for and appreciation of your wonderful spiritual understanding and love of God that gave it birth. The members of this church individually and collectively rejoice in the evidences of the healing Christ as revealed in Christian Science; they have been brought out of the bondage of sickness and sin, and some of them released from the fear of imminent death; therefore in love, loyalty, and deep-toned joy they greet you upon this occasion. They draw very near to you in your hour of the world's persecution, and pray for grace to be worthy to follow in meekness, reverence, and pureness your steps Godward and heavenward; strewing the ascending pathway, as you have done before them, with deeds of healing of the sick, words of comfort to the sorrowing, of hope to the repentant sinner, thus filling their hearts and lives with the holy aspiration to keep this church an undimmed star in your dear-bought crown of rejoicing.

By order of the church,

ALBERT S. PARMELEE, *Clerk.*

Atlanta, Ga., April 26, 1907.

Beloved Leader:—I have just sent to you a little bit of Charleston, a corner of Dr. Manigault's lovely piazza—he was a distinguished scholar and archaeologist, and this fine substantial house was in existence during your short stay in Charleston. It is a pretty little piece of water-color painting and I trust it will give a little pleasure. I am working on a paragraph on page 177, Science and Health, which seems necessary for us all to work on,—"Nor can a lie hold the preponderance of power in any direction against God, Spirit and Truth." We do so deeply love and enjoy the new edition, it must tremendously spiritualize our thought and greatly increase our already inexpressible debt to you. My heart is greatly rejoiced at what you say about my article, and I will sacredly keep it for the auspicious hour. Devotedly yours,

SUE H. MIMS.

Charleston, S. C., April 21, 1907.

To Our Dear Leader:—We, the members of First Church of Christ, Scientist, Charleston, S. C., assembled in our regular quarterly meeting, as our first act beg to send you a message of love from this quaint old city of the Palmetto State, which we like to remember is associated with you by the tenderest recollections of your young womanhood. We thank you for the revelation of Truth, as found in your writings. May our lives attest our apprehension and appreciation of it. We recognize that your perfect poise, serene courage, and Christlike attitude, at this time of ordeal, comes only from your dwelling "in the secret place of the most High," and it is an inspiration to us all. We cannot find words to tell you all that fills our hearts to overflowing, but we want you to know that never before have we felt so grateful, so loyal, or so loving towards you, never before so desirous of laying "aside every weight, and the sin which doth so easily beset us." In this work, and in this hour of trial, these words of yours [Miscellaneous Writings, p. 389] give us joy and peace:—

> Wait, and love more for every hate, and fear
> No ill,—since God is good, and loss is gain.

May we love more, and thus prove our gratitude.

Loyally and lovingly yours,

VILLA MILLS GRANT, *First Reader.*
FLORENCE MARIA HENEREY, *Second Reader.*
ROBERT Q. GRANT, *Clerk.*

Pittsfield, Mass., April 5, 1907.

Mrs. Mary Baker Eddy, Concord, N. H.

Beloved Leader:—I am deeply grateful to you for your loving letter to me, and trust I may always merit God's love, and yours, by being "the cheerful giver." I was glad to learn that you had found one who was qualified to aid you in your important work for humanity. If you should need me at any time in the future I shall be most happy to serve you.

Lovingly and gratefully your student,

ARCHIE E. VAN OSTRAND.

AMONG THE CHURCHES.

SABULA, IA.

Easter Sunday marked the opening of their new church home by the Christian Science Society of this city. This body of religious workers has made a steady and substantial growth in the ten or twelve years since the first Sunday meeting was held. The attendance at the opening service taxed the capacity of the church, a number being present from Savanna and Mt. Carroll.

The Sabula Gazette.

SCRANTON, PA.

First and Second Churches of Christ, Scientist, in Scranton, have united their congregations. First Church expressed by letter a desire for a union of the churches, which was unanimously accepted by Second Church, and the united congregations are now holding services. Much joy has been expressed over this demonstration of the truth, and the cause of Christian Science in Scranton has thereby received an added impetus.—*Correspondence.*

BUFFALO, N. Y.

The following items from the manager's report of the Reading Room of First Church of Christ, Scientist, Buffalo, N. Y., for the year 1906, will be of interest:—

Total number of calls at Reading Room, 8,683; calls by those who are not students or church members, but who have called at Reading Room before, 3,060; number of first calls, 974.

Some one remarked recently in the presence of a friend of ours that she had just come from the Christian Science Reading Room, and that no matter how dark and miserable the day seemed outside, there it was always warm, bright, and cheerful. And she was right. God's presence is surely felt there, for it is His room, consecrated to His Cause; and when we are cold, dull, and discordant, we seek its calm and quiet.

This has been the greatest year by far for the sale and distribution of literature that we have ever had, and we can all be on the alert to place literature where it will do good. Happily we have all kinds to meet all needs, and we should circulate it.

We wish to make special mention of the evening work at our Reading Room, for here marked progress has been made. Here may be seen anywhere from fifteen to twenty people, every chair occupied and more being added. It is good to see these people all quietly reading, to feel the sweet peace pervading the room, and to know that many of them, coming from a day of labor and unrest, have been fed and rested in this haven of refuge, and are going home with the peace of God in their hearts, and that other lives which touch theirs will feel this peace. An influence has gone out from a holy environment, an influence which will make home a sweeter, better place and fit men to adorn it. A high standard has been set for us. May it inspire us to nobler efforts, to still nobler ends.

CHARLES D. HOLCOMBE, *Manager.*

CINCINNATI, O.

Our work in the distribution of literature during the past year has broadened many old avenues and opened new ones through which to reach the people. The public library asked for six additional copies of Science and Health, making sixteeen now in circulation. The Mercantile Library needed two additional copies, making three in circulation, and the Covington Library added one copy, making two in circulation. We have also placed two in the Carnegie Library, Walnut Hills, one in Lockland Library, one in Xenia Library, and a copy was given the managing editor of the *Cincinnati Enquirer*, making fourteen copies of Science and Health distributed last year.

Subscriptions of *Journals* and *Sentinels* at Work House, House of Refuge, Public, Mercantile, Covington, and Newport Libraries have been renewed, and subscriptions entered for *Sentinel* to Lockland Library, and *Journal* to the Carnegie Library, Walnut Hills.

Distribution racks for *Sentinels*, bearing invitations to the public to take one, have been established in five traction stations and six railroad stations. These racks are visited weekly and refilling is usually necessary. Thirty-four places in or near Cincinnati are now furnished with Christian Science literature, and our committee of three is aided by seven assistants in distributing the hundreds of *Journals* and *Sentinels* needed in this work.

The wisdom of placing Christian Science literature in stations, hotels, department stores, etc., is illustrated by the following incidents. The reading of a *Sentinel* by a farmer, while waiting in a traction station, led him to ask for treatment for his eyes, which he received and was healed.

Recently a lady wrote to a practitioner: "Several months ago, while waiting between trains on my way to a distant city, sick with chronic stomach trouble and nervous prostration, I sat discouraged—when my eyes fell on a magazine on the table which proved to be a *Christian Science Sentinel*. Becoming interested, I lost all sense of the tedious hours until my train was called, and from that hour I was healed. I bought a copy of Science and Health, which I study daily, and I am a subscriber to the *Journal*."

One evening a lady stepped into the reception-room of the Burnet House and seeing a *Christian Science Journal* on the table carelessly turned over the pages and then began marking it up. The gentleman with her, a lover of books, begged her not to deface the magazine. "Oh, it's no account," she flippantly answered, "it is only a *Christian Science Journal*." But the gentleman picked up the abused book and carrying it to his room read it through. He saw the truth it contained and was convinced it was just what he wanted. This led him to attend the Christian Science services and to buy all the literature. We understand that he is to-day a member of one of the Eastern churches.

A Jewess picked up a *Christian Science Journal* in one of our hotels. She became engrossed, and soon after visited the Christian Science Reading Room to gain further information, and to-day is happy in her new-found treasure, the Bible and Science and Health, through which she has gained perfect health. Another story of the seed that fell into good ground and brought forth fruit is of a woman who, while reading a *Sentinel* from one of the racks, was healed of a fibroid tumor from which she had suffered two years. She and her husband now attend church. This healing was considered so remarkable that others have become interested to the extent that three people have placed themselves under Christian Science treatment.

Correspondence.

NOTICE.

Christian Science Churches and Societies must have the name and address of the duly elected Clerk on file with The Christian Science Publishing Society, and communications from the Church or Society should be signed by the Clerk. Notifications and directions coming from other persons will be held until corroborated by the Clerk whose name is on file, or by order of the Board of Directors of the Church or Society. When a new Clerk is elected by the Church or Society, the Publishing Society should be notified at once.

TESTIMONIES OF HEALING.

When I first heard of Christian Science I had been afflicted for nine years with a very painful disease of the bowels, which four physicians failed even to diagnose, all giving different causes for the dreadful sufferings I endured. The last physician advised me to take no more medicine for these attacks, as drugs would not reach the cause or do any good. About this time I heard of Christian Science, and had the opportunity of reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, a few minutes every day for about a week, and I was thereby healed. In looking back I found I had not suffered in the least from the time I began reading this book. It has been nearly seventeen years since this wonderful healing, and I have had no return of the disease. My gratitude is endless and can be best expressed by striving mightily to walk in the path our Leader has so lovingly shown us in Science and Health.

MRS. JENNIE W. COPWELL, Scranton, Pa.

About nine years have passed since I quit taking medicine and began to rely entirely on God for healing. I had heard of Christian Science some time before I ever thought of trying it, but I did not know it was a religion. When I decided to investigate it I borrowed a copy of Science and Health from a neighbor and commenced to read it. That night I slept well, but I did not give the book credit for my sweet rest. The following day I continued to read the book, and that night my rest was again peaceful and refreshing; then I knew that Science and Health had helped me, as before this I had been troubled with sleeplessness, also stomach trouble. I had been for several years a nervous, irritable woman, always looking for trouble, and I got what I was looking for. My weight had gone down to less than one hundred pounds—now I weigh one hundred and fifty. From the reading of Science and Health, and the study of the weekly Lessons, I was made a new woman, in disposition and in health, without any treatments, and was able to eat whatever I wanted. I am growing stronger each day in this understanding of the Christ-healing, and am so glad to be able to help my brothers and sisters in time of trouble and sickness. I have had many demonstrations over sickness and accidents, for my children, who were quite small when I came into Science. They are both Scientists and were with me at the dedication of The Mother Church last June.

I cannot close this testimony without expressing my deepest love and gratitude to Mrs. Eddy, for having lived so close to God as to be able to give us this scientific way of working out our life-problems. I am striving to reach the pinnacle she has attained.

LIZZIE A. MCDOWELL, Memphis, Tenn.

About twenty-two years ago I was operated upon in a hospital in New York City, and a so-called malignant growth was removed. Four years later, in a hospital in Cleveland, O., a second operation was performed for the same disease. I did not fully recover from this second operation, though able to leave the hospital and return to my home in Mason City, Ia., and soon began to fail rapidly. I was pronounced incurable by my physicians, who said my system was permeated with the disease, and they told my family that I had but a short time to live; that it was only a "question of time," and a very short time. It was then I first heard of Christian Science, was persuaded to try it, and was completely healed of the disease in ten days. I did not, however, accept Christian Science at that time, nor did I care to investigate it, but always had Christian Science treatment for any ills that attacked me, desiring the physical healing only. I was a member of an orthodox church, and bitterly opposed what was misrepresented to me as Christian Science, and when a third malignant growth appeared, I turned back to *materia medica* for help. My physician said there was no help for me, that he could do nothing but try to improve the condition of my blood. I continued under medical treatment for about six months without improvement, when I was taken violently ill with lung trouble. I again sent for a Christian Scientist, and was brought out of that condition in less than twenty-four hours; but many other ailments attacked me in quick succession, culminating in a rheumatic trouble that confined me to my room for three weeks. During this time my suffering was so acute that the growth was forgotten, and when it again came into my thought, I looked for it, but it had disappeared. I could not believe it. I even took a magnifying-glass and examined the place where it had been, but there was no trace of it, and there never has been from that time (March, 1890) to this.

I was thus convinced that Christian Science is the truth that makes us free, and I have since relied upon it entirely. I could then see that in my hatred and persecution of Christian Scientists I had cherished "an army of conspirators against health, happiness, and success" (Science and Health, p. 405). I had made a reality of disease, giving it a power above God, until its disappearance showed me its nothingness and "the somethingness—yea, the allness—of Truth" (Science and Health, p. 346). I cannot enumerate a tithe of the blessings Christian Science has given me, nor can I sufficiently express my gratitude to its Discoverer and Founder, our beloved Leader.

MRS. M. IOWA CLARK, Painesville, O.

I am a man of middle age, and until June, 1900, I was continually under the care of doctors. Some of my ailments dated back as far as 1870, and as they became chronic I lost much time from my occupation. Later on I grew very feeble, although I tried all kinds of medical treatment. The doctors pronounced my ailments liver, kidney, and heart troubles, besides numerous other diseases, until I landed at the city hospital, which was then considered the ending of my earthly career. My wife, however, prevailed upon our family physician to have me taken to my home, which was done later in the week. This happened in January, 1900. The doctors then advised me to take a trip abroad, or to Colorado and California, which was out of the question for various reasons, but I made frequent trips to Atlantic City, only to return the worse for it. Finally our physician asked me to employ a Philadelphia specialist, and I was under his treatment until June, 1900, when he advised me to return to my home. This made me feel that I should not get well, for I had long thought I had a malignant disease, and my mind was also becoming affected.

It was then that my wife heard of the wonderful healing done by Christian Science and prevailed upon me to try it, which I did under protest, because I knew little or nothing about it; but I am happy to say that the relief was almost immediate. I had only three present treatments, and would have been able to return to my business after the third one, but I waited until the tenth day, when I felt perfectly strong and well and have been so ever since. For over five years I have taken no material remedies. I am certainly well and happy, a changed man mentally and spiritually; and I am trying to apply this truth to the best of my understanding in my life and in my business. I am also glad to say that my wife and children have come into Christian Science since my healing. My wife has had some beautiful cases of healing since taking up this Science, of which she is a thorough student. Besides my own healing, I have seen the sick and sinful healed, the lame made to walk

Digitized by Google

and the blind to see, and to me it is the sweetest story ever told.

I am truly grateful for Christian Science and its teachings, and to our dear Leader for the message of Truth, Life, and Love which she has so effectively translated for all mankind. We now know that all things work together for good to them that love God, to them who are called according to His purpose.

C. GEORGE MILLER, Pottsville, Pa.

[Translated from the German.]

With a grateful heart I testify to the blessings I have experienced through Christian Science. Since childhood I had suffered from a bowel trouble for which every possible remedy had been tried, but without lasting results; on the contrary, it became more obstinate. After trying everything that *materia medica* could offer, I turned to hygiene, vegetarianism, etc. This seemed to bring me relief for a time, and consequently I became an enthusiastic dietarian, but after a little this too proved a failure, and I was left worse than before, for other ailments were added to the original trouble. For five months I had been suffering from a very serious throat trouble. I was under medical treatment, but received no permanent relief. Conditions finally became much aggravated and at this point all my belief in hygiene vanished and I decided to turn to Christian Science. I went with a strong faith to a practitioner, and after the first treatment the bowel trouble from which I had suffered for about fifty years disappeared. With about ten treatments my throat was well. My family, and especially myself, could hardly realize what had happened, and words cannot express our thanks to God.

From childhood I had also been often troubled with rheumatic difficulty, and every spring for the past ten years I had suffered greatly from slight attacks of a serious form of this disease. This spring, thanks to the knowledge of Truth, I have also been freed from this. Quite lately I had another manifestation of the power of Truth. A heavy oil painting fell from the wall, and as I tried to catch it the corner of it struck me on the upper lip. For the moment I thought all my front teeth were knocked out. The pain was very severe. My first thought afterwards was regret that on account of a swollen face I would be prevented from attending our Wednesday meeting that evening, but as soon as this fear came into my thought I cast it out, knowing that in divine Principle no ill could happen to me. I washed the wound and there was not the slightest trace of a swelling, and in a few days it was quite healed.

In my household I experience daily the power of Truth, but the greatest gain is the moral and spiritual uplifting. We owe Mrs. Eddy, the Founder of Christian Science, great thanks for the blessings we are continually receiving through the understanding of Truth. May my gratitude express itself in earnest striving to support this divine work in increasing understanding and capability to demonstrate this truth.

FRAU BERTA EGG-LEINER, Zurich, Switzerland.

In August, 1903, I was taken suddenly ill with a trouble which several different physicians afterwards diagnosed as rheumatic and nervous trouble, originating with a stomach difficulty. For three years I suffered indescribably from pain and sleeplessness. I was able to eat very little, and lost during the three years sixty-five pounds of flesh. I was attended by six different physicians, but no one of them afforded me more than a slight degree of relief, and that only temporarily. Gradually I grew worse. The fifth physician that I employed treated me eight months, and then virtually gave up the case. He acknowledged that he had done me no good, and said that it was impossible that I would ever be well again, and doubtful if I would ever be any better. The last doctor who treated me was a specialist, and employed electricity. After a time he told a friend of mine that there was no use of treating me any longer, that I had not vitality enough to rally, and that I would not live long. In July, 1905, I called in a Christian Science practitioner, and in four weeks was made completely well. I am now in the sixty-seventh year of my age, but I feel actually as well and as strong as at any time in my life when I considered myself perfectly well. I have a vigorous appetite, sleep like a child, work all day long when occasion requires, walk five miles in a day without fatigue, and withal have a sense of peace and buoyancy of mind such as I had never known at any previous period of my life. I live alone, and there are many perplexing tangles in my worldly affairs which must be unraveled, but I feel that divine Love will show the way, and "none of these things move me," or disturb the "peace of God, which passeth all understanding," that is in the heart.

When my practitioner began to treat me, I was dwelling in a sense of weakness, pain, despondency, and foreboding, and it seemed to me that there could be nothing more for me in life, even if I were healed of my physical ails, but the practitioner smilingly said to me: "You probably will not believe me now, but you will shortly enjoy life as well as when you were a young woman." I was absolutely incredulous, yet in four weeks the prophecy was fulfilled, and more than fulfilled, because, in addition to being made perfectly well, I was brought to such a sense of God and His constant, loving care, that my happiness is such as I never even conceived of before. It is impossible for me to express my gratitude to "the giver of every good and perfect gift," and to the Soul-inspired woman through whom the healing truth has come to my fellow-men and to me.—MRS. JOAN E. BOWEN, Fitchburg, Mass.

Four years ago I was healed by Christian Science of severe stomach trouble. I had doctored and had taken many kinds of medicines, none of which helped to give me any relief. I was advised by my father to try Christian Science, and I read Science and Health, which greatly appealed to me from the start. I had read about a dozen pages of the wonderful book, when I noticed that I had been reading without my glasses. Previous to this time I had been wearing glasses for the past seventeen years. Since reading Science and Health, four years ago, I have not worn my glasses, and am glad to say that I can do the very finest lace work and read the smallest print. I took one treatment for the stomach trouble and received help at once. I now can eat anything I want and have no fear, as I well know that there is no power in food to harm me. I study the Lesson-Sermon daily and find it is a great help to me. I am also glad to have my husband and son interested in this blessed Science, and hope to have my entire family with us before long. I thank God for the understanding that I have of the truth, and also feel deeply grateful to our dear Leader, Mrs. Eddy, for discovering the truth.

MRS. H. OLCOVICH, San Francisco, Cal.

When Christian Science was first presented to me, about eight years ago, it was through the healing of a friend, and although I was not antagonistic I did not then feel interested enough to read the text-book. After continued suffering, however, I was persuaded to take treatment, and my healing began with the first visit from a practitioner. In a few days I was well, and have never spent one day in bed since that time, for which I thank our Father-Mother God. Old things are indeed passing away, and all things are becoming new. Since

Digitized by Google

taking up Christian Science I have known something of the "peace of God, which passeth all understanding," and while I have had many battles to fight with error, I have learned that each trial of my faith in God has been a stepping-stone to higher understanding. I am daily striving to learn more of the truth that makes us free, and I know that "where the Spirit of the Lord is, there is liberty." I am thankful for my physical freedom, but for the awakening to a true knowledge of God I am most grateful. I offer my heartfelt gratitude to God, and to our Leader, for what has come to me through Christian Science.—NETTIE S. ALLEN, Worcester, Mass.

It is now over three years that I have been interested in Christian Science. At the first service which I attended, I felt such peace and comfort that I knew immediately Christian Science was what I had been seeking for a long time. I began at once to study the Lesson-Sermons, and they are a great help to me daily. Two and a half years ago, with the help of a Christian Scientist, I was healed of a painful and troublesome throat affection, and have had no sense of it since. It was a year and a half after I began to study before I could say I knew that Christian Science was the truth. Christian Science is a constant help to me in my work as a school teacher. Every inharmony to which the truth has been earnestly applied, has yielded. The honest and intelligent application of the truth to every problem in the home and school life has proven a great blessing to me daily. I know that I am better in every way. I am very grateful for the wonderful physical and spiritual healing I have experienced thus far, and know that I shall receive more in proportion to my seeking. I wish also to express my sincere gratitude to Mrs. Eddy, and I am trying each day to show true gratitude by living the truth.

FRANCES L. TRAYSER, Milwaukee, Wis.

For fifteen years I was a sufferer from stomach trouble, which became acute and led to rheumatic trouble of the worst kind. After spending a great deal of money with different doctors, trying to get relief, but without results, I went to some hot springs where I felt sure I would get help, but with the same effect. Two months after coming home I was worse than ever, and it seemed as if I could not possibly endure the pain any longer. I was then asked to try Christian Science, and after three weeks' treatment I found a very noticeable change in my condition. This occurred seven years ago, and I have been in the enjoyment of good health ever since and am stronger in every particular. I am better able to do my work than I was for many years previous to my coming into an understanding of Christian Science, the Science of healing as well as of knowing.

My present health is all that could be desired, but that is not the greatest blessing. It is small as compared with the spiritual advance, which gives a joy and comfort and satisfaction that comes only to God's children.

JAMES ANDERSON, Brandon, Man.

For twenty years I was a great sufferer. I was in constant pain, and was given opium for eighteen years, in which time I had ten physicians. Each one thought he could help me, but without success; all they did do was to increase the doses of opium. I then learned of Christian Science through an old friend who had been wonderfully healed, and a practitioner was called. The opium habit was destroyed in two weeks. Afterwards a swelling appeared on my elbow, which discharged later on, without pain. It was said to have been caused by poisons. This was healed in Christian Science, and I am glad to give my testimony to the public, hoping it will bring encouragement to others in trouble. It is over eight years since my healing and I am well and happy.

MRS. ELIZA TAYLOR, Big Beaver, Mich.

I wish to make an acknowledgment of what Christian Science has done for me. I had a very bad attack of fever last summer, which continued three weeks. I then returned to the city, saw a practitioner, and at the fourth treatment the disease entirely disappeared. It is with a grateful heart that I make this acknowledgment. Words fail to express my thankfulness to God, and to Mrs. Eddy, for this healing truth.

MARY H. DUNDY, New York, N. Y.

About six years ago our three children were taken very ill. A physician who was called in pronounced the case a dangerous throat trouble, and said our oldest boy would not live; but he did, although he was left in a terrible condition. We then decided to write to a Christian Scientist for help. When the Scientist took his case the child was helpless; he could not lift either hand to his head, nor walk, and could not even turn himself over in bed. He was unable to swallow anything, and could not speak aloud. Besides this his eyes had become distorted and he could see but little. He seemed to be near the end when, on Friday, I sent a letter to a Christian Science practitioner, which I expected he would get on Saturday afternoon.

About six o'clock Saturday evening I stood beside the bed, looking at the child, and hoping for light and help, for I knew that if a Scientist who had a clear enough understanding of the truth could treat him, he would get well. I had left the bed and gone to see about the supper, when the child called out, loud and clear, "O mamma, I feel so much better!" He then began to jump around on the bed and was soon speaking perfectly clear and plain. He got up early the next morning, and walked across the floor, and in about five weeks he was entirely healed; even his eyes were straight, and their natural color had returned.

This is only one of the many wonderful proofs of healing through Christian Science which we have had in our home. Our boy was seven years old at that time, and he is now a picture of health and a living witness to the power of Truth to heal and save. My husband and I feel very grateful for the spiritual awakening that has come to us through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy.

MRS. M. ELIZABETH BOTTORFF, Aspen, Col.

About five years ago I had a very severe attack of abdominal trouble. The attending physician told me I had narrowly escaped an operation, and that I would be liable to a return of the attack at any time. This led me to be very watchful as to my diet, and the fear of a second attack never left me. Some time before this illness, while talking with a friend, Christian Science was defined to me as "simple, scientific Christian living." Those four words often came to me as I realized how far I was from living a whole, harmonious, Christian life. I hungered and thirsted for the knowledge that would free me from the bondage of worry, impatience, and discontent, but not until seven months ago did I turn to Science for freedom. At that time I did not need physical healing so much as mental relief, but the dreaded attack of illness soon made itself felt. For two days I struggled to overcome the suffering, but my knowledge of Truth was not sufficient. As the symptoms were so aggravated, my friends grew alarmed and insisted upon my calling a physician. I feared that an operation would be considered the only means of relief.

Digitized by Google

and I determined to give Science a trial, although my family felt I was running a great risk. A telephone call was sent to a faithful helper, but on account of other work she could not come at that time, and another Christian Science practitioner, whom I knew but slightly, was sent for. During the first treatment the fever subsided, and I fell into a restful sleep from which I did not awaken until morning. The next afternoon, however, the pain returned with renewed force, and the practitioner whom I had first called was summoned. After two treatments the pain, inflammation, and fever which had seemed so real were entirely gone; also the fear which had possessed me.

While I had sought only for the spiritual uplift which Science gives, I had received "more abundantly" than I had asked. I have since had many demonstrations of God's allness and of the sustaining power of Love, and I am deeply grateful to our Leader for the light she has shed upon Bible truths, and for every experience which has led me into a fuller knowledge of Truth.

MRS. L. R. HARRAH, La Fayette, Ind.

Until about eight years ago, when Christian Science was first presented to me, I had never known the meaning of the word happiness. The few bright places were overshadowed by the constant dread of impending calamity. Having always been considered delicate, I was afraid of the different conditions of the atmosphere, of what I ate and what I drank, and I was in a state of constant pain and depression, which terminated in severe nervous and spinal trouble. Unable to become reconciled to the God whom I had been taught to serve, yet hungering and thirsting after righteousness, I was without hope or God in the world. This mental blindness was manifested physically, my sight continually growing poorer. After the first Christian Science treatment I never again needed my glasses, and while striving for the Mind "which was also in Christ Jesus" the ills of the flesh have vanished into their native nothingness, and I have found that peace which passeth all understanding, which the world can neither give nor take away. Words are inadequate to express my boundless gratitude, so I can only strive to follow the pattern shown on the mount—choosing to serve the God revealed to us through the purity and wonderful understanding of our beloved Leader, Mrs. Eddy.

MISS MARIE L. ARMSTRONG, Crafton, Pa.

February, 1896, found me in Ames, Ia., bedfast, and with the sentence of death passed upon me by physicians. My case was a complicated one, the supposedly incurable diseases being lung trouble and an abnormal growth. Many severe trials we had to pass through, the comforts of the home having gone one by one to satisfy the appetite for drink which had held my husband in bondage for several years. The thought of dying and leaving my two dear little girls was more than a mother's heart could endure, and I cried unto God for relief from this crushing burden. I could hear voices of friends in the adjacent room saying, "Yes, she is still alive, but cannot possibly live until morning." Then one came with the cheering message that a lady living in the other end of the city, who had lain at death's door many months with the same dread disease,—given up by physicians and church,—had just been healed. Her husband, hearing of a new doctrine,—Christian Science,—had telegraphed to Des Moines, Ia., and a practitioner had come at once. Could not I see her? Would she not come to me? Yes, she did come; and a glorious day it was when she entered that sad home. I never shall forget the beautiful words she spoke to me: "God does not know sickness, sin and death, but He healeth all our diseases." Those dear words turned my thought, and I was healed almost instantaneously. My fear of a growth had always been very great, as my mother had passed away with that ailment, and lung trouble was also an heirloom in our family. When I heard that "every law of matter or the body, supposed to govern man, is rendered null and void by the law of Life, God" (Science and Health, p. 380), the mortal law of heredity was destroyed for me and I was indeed free. The growth vanished into nothingness under the healing rays of Truth.

I had been an anxious mother, especially after a little daughter had been taken from us with throat trouble years before. My eldest daughter, then nine years of age, drank in every word uttered by the Scientist during each visit of that memorable week. She was happy over her mother's restoration and realized how much this blessed truth had done for me during these few days. My fear over her had been so great that I would not allow her to go out of doors without wrapping her throat up carefully, and on Sunday morning, when the Scientist asked the child to go with her to the reading of the Lesson-Sermon, from force of habit I tied the muffler around her throat. For a moment she stood still, then untied the muffler and threw it on a chair, saying, "I shall not wear this muffler; God's child cannot be sick." Thus she took her stand for Truth, and she has continued to grow in the understanding daily. God's loving care, manifested through dear friends,—His avenues,—has opened the way for her to use that throat with which to sing His praises here and abroad. In a few months after I was healed we moved to Des Moines. Much had to be overcome, but "day by day the manna fell;" strength was given me to do whatever my hands found to do for the support of my family, as my husband had not then given up his cups. My first earnings paid for a copy of Science and Health, which is truly my ever-present guide.

The dear practitioner who had treated me was ever ready to help and encourage, and a year after I was healed she led my husband to drink "of the fountain of the water of life," and from that day to this no intoxicants have passed his lips. He was healed, and Truth has transformed our home to a heaven on earth. The passage of Scripture, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," means much to me. I truly appreciate the added things, as I try to realize that God is good and does supply all our needs. I strive to be obedient and to follow our dear Leader, who has so unselfishly revealed the truth to this age. I am very grateful that the truth was given to me pure and clear, and it has been a means of constant growth all these years. It would take much space to tell all the good Christian Science has brought me and my family. My gratitude to God, and to our beloved Leader, Mrs. Eddy, grows continually, and the way grows brighter each day. I am enjoying good health and feel grateful for all my blessings. I am beginning to realize that all things are possible with God; that He does not know sickness, sin, and death; and that for us to know Truth makes us free and keeps us free.—ELLA GINN CORD, Des Moines, Ia.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

FROM OUR EXCHANGES.

[Senator Albert J. Beveridge as quoted in *The Advance*.]

I have views on preaching, and they are simple ones. Four years ago, on my way to Colorado, at different times and places, I met four preachers of different denominations. They were out for their health. To each of these I presented the same questions and asked that the answer be yes or no. "Do you believe in God, a person, a definite and personal existence?" Each one in his answer began to qualify. "Do you believe that Jesus Christ was His Son, sent by Him to save the world?" And again the answer was not direct. "Do you believe that when you and I are dead our definite consciousness will still live, so that we shall know who we are?" "Upon that subject," the answer began, "the latest is"—and from not one of them could I get a straight answer. I said, "You are talking about the decadence in church attendance. How do you expect to Christianize the world when you are engaging in metaphysical speculations and in entertaining an audience?"

[*The Examiner*.]

Neither conservatism nor liberalism settles anything. Each is only an attitude of the mind towards the old or the new. The truth itself is the great and deciding power. The new may come in like a flood, but is likely to be followed by an ebb, though while it lasts it may seem to carry all before it. The old, simply because it has lasted for ages, may be the very foundation we need when everything seems to be tottering; but because it has lasted for ages is no sure guarantee that it will last forever. Because truth is eternal it is always new and always old, or being eternal it may be said to be neither new nor old. The only foundation on which any man can afford to build, or on which he should be content to stand, is the foundation of truth. True progress consists in "conserving the old in so far as it is true," and in "adopting the new as far as it is true."

[*Pacific Christian Advocate*.]

We believe there are more men trying to-day to square their lives by God's will and purposes than ever before, proportionately more. Possibly not so many are pious; possibly not so many are attending church; possibly not so many are reading their Bibles; possibly not so many are trying to understand the mysteries of theology. But more are giving heed to the voice of God in their own consciences. More are recognizing their individual responsibility to high heaven. He who mixes and mingles with men, in their business and in their social life, may discover a positive desire in most of them to do right, to curb their wicked tendencies, to shape their conduct into harmony with the true principles of right. They may also discover that such men recognize God as the ground of right, as the true rule of right. And discovering these things, they must admit the all-pervading immanency of God in the affairs of men.

[*Zion's Herald*.]

The circumstances and happenings of the present, trivial or trying as some of them may seem to be, are the shadows of better things to come. Men and events have their *penumbræ*, which are significant of spiritual verities and heavenly relations. Not even the shadow of a consecrated worker passing by in history can be despised. The world is better to-day for every good man that has journeyed through it, from the time of Abel down. Be a Peter, and your influence for good will be perennial. Live like Paul, and you will live forever. Love like John, and life for others, because of you, will be the more apocalyptic.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MISCELLANEOUS PUBLICATIONS

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. Single copy, 20 cents; twelve copies to one address, $1.75.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

COMMUNION HYMN. "Saw ye my Saviour?" The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Published in two keys, G and E, for high and low voice. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy; $9.00 per dozen.

CHRIST MY REFUGE. A hymn for voice and piano, with suggestions for organ registration. The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Arrangement for high and low voice in same copy. Price, 75 cents; $7.00 per dozen.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Printed from new plates and containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75
Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration will be found on the wrapper. No other notice will be given.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

In all other countries, six cents per copy, postpaid to any address; twenty-five copies, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The steam shovel men at work at the Panama Canal on March 1 last applied to Secretary Taft for increases as follows: Engineers from $210 to $300 per month, crane men from $185 to $250 per month, firemen from $83.33 to $110 per month. In reaching the conclusion that the present rates of pay are liberal ones, Secretary Taft says that the average pay in the United States is $163 for engineers, $110 for crane men, and $71 for firemen. Taking into consideration the hardships, and the advantages of free rent, free medical attendance, and supplies at cost, he believes the pay of the men is question is sufficient. A number of steam shovel men are entitled to three per cent increases under the plan to make these increases yearly. The demand for construction locomotive engineers for an increase in pay is also denied. Construction train conductors he raises from $170 to $190 a month.

Secretary of the Treasury Cortelyou has undertaken the solution of the difficult problem of equitably distributing the deposits of Government moneys in the National banks of the country,—how to get them out of politics and handle them systematically. He has appointed a commission of five: United States Treasurer Treat, chairman; Director Roberts of the Mint, Comptroller of the Currency Ridgley, E. W. Huntington of the Division of Loans and Currency, and E. B. Daskem of the Division of Public Moneys of the Treasury Department. There are about six thousand National banks in the United States, and of these about twelve hundred and fifty have been designated as banks in which public money is placed on deposit on giving the Treasury adequate security in the form of Government bonds or some other acceptable bonds.

Secretary Root has made public the names of eight architects who will be invited to furnish plans for the new Bureau of American Republics Building or Palace of Peace. Each of these firms will be paid $1,000 for the plans submitted and the plans will be entered in the general competition. In addition to the eight invited to compete one hundred and twenty-six other firms have registered for the competition. The building is to cost $600,000 and the interior finishings $150,000. The site, which is to be the historic Van Ness Park, has already been selected at a cost of $250,000. The Government appropriated $250,000, and Andrew Carnegie donated $750,000, with the condition that the building be known as the Pan-American Palace of Peace.

The thirteenth annual meeting of the Lake Mohonk Conference on International Arbitration will be held May 22 to 24. Coming so closely after the National Arbitration and Peace Congress just closed in New York, the Mohonk Conference will devote much time to the primal object of that gathering—the consideration of subjects for discussion by the coming Hague Conference. Doubtless the three propositions urged by the Mohonk Conference of last year, the chief of which was that The Hague or a like Conference be made a permanent and periodic assembly, will be reaffirmed in decided tones.

The Legislature of Missouri has passed a resolution providing for the proper pronunciation of the name of the State, which reads as follows: "That the only true pronunciation of the name of the State, in the opinion of this body, is that received from the native Indians, and that it should be pronounced in three syllables, accented on the second syllable. The vowel in the first syllable is short 'i,' in the second syllable long 'o,' in the third syllable short 'i.' 'S' in the two syllables in which it occurs has the sound of 's' and not 'z.'"

An Alaska-Yukon-Pacific Exposition is to be held in Seattle in the summer of 1909. The territory cost the United States $7,200,000. It has returned to the United States over $100,000,000 in gold, $11,000,000 in revenue taxes, $80,000,000 in furs, and $96,000,000 in fish. Besides all this it has the largest and richest copper veins in the world, the ore being the highest grade yet found.

The so-called "drug trust" was perpetually enjoined last week from continuing its operations by the entering of a decree in the United States Circuit Court for the district of Indiana. The defendants, ninety-two in number, are perpetually enjoined from combining and conspiring to restrain trade in drugs, fix prices by agreement, blacklist retailers who cut prices, or who refuse to sell to any retailer on equal terms.

The old frigate Saratoga, built at Kittery, Me., in 1842, now tied up at the League Island yard, has made her last sea voyage, as she is found to be in parts beyond repair. She may be used as a receiving ship.

On May 1 there were in operation 37,597 rural postal routes, served by 37,447 regular carriers.

The Department of Justice has decided to make an investigation of the so-called watch trust.

Foreign.

Excavations in the ancient Greek city of Pæstum, in Italy, have brought to light a magnificent roadway twenty-five feet wide and flanked by sidewalks. The pavement is of large stone blocks, which show deep ruts worn by the wheels of heavy chariots. A beautiful Doric temple to Neptune, a very ancient specimen of Greek art, has been uncovered for a distance of one hundred and twenty feet. The excavations now being carried on on the Palatine Hill of Rome resulted recently in the discovery of the ruins of a church of the fifth century, built originally as a private chapel and used by the first Christian Emperors of Rome.

The Duke of Abruzzi has solved a geographical riddle by ascending all the peaks of the Ruwenzgori range. These were duly located by Ptolemy as the Mountains of the Moon between the lakes that feed the Nile; but, because usually rendered invisible by the fogs surrounding them, they were removed from the map by more modern geographers skeptical of Alexandrian science, and not until 1889, when Sir Henry Stanley climbed one of the northwestern spurs to the height of 10,677 feet, and gave to the mountains the name of Ruwenzgori, which means "Rainmaker," were they restored to their place on the map.

The experiment with a lot of American cotton seed sent for planting in the Italian province of Eritrea in Africa some months ago by Italian Consul Sottile, was so successful that it has been decided to raise cotton on a large scale, and many hundred pounds of seed will be bought in the United States and sent to the Italian province.

Newspaper statistics just published give the number of sentences imposed in Russia under the drumhead court-martial law, which has now expired. It appears that 1,144 persons were executed, 79 were sent to the mines for life, 710 were condemned to minor terms of imprisonment, and 71 were acquitted.

Iceland, the chief dependency of Denmark, is reported as wanting a special Icelandic flag and as contemplating the use of one during the expected visit to Iceland of the King of Denmark. Denmark is said to maintain that so long as Iceland is a Danish colony the Danish flag must be supreme.

All arrangements have been perfected for the opening of the new training school for aeronauts at Chemnitz, Germany. The authorities have given their official approval of the institution and of its curriculum of studies. The director, Herr Paul Spiegel, has made over six hundred ascents.

Industrial and Commercial.

Little is being done at present in the way of recovering the sunken logs in Michigan streams and putting them to commercial uses, because of adverse court decisions, which have held that the sunken logs belonged to the owners of the river banks and not to the lumbermen who lost the timber as it was being driven down the streams to the mills years ago. As it was necessary now to come to some agreement with farmers and other possessors of riparian rights, the plans of the companies that had been organized to recover the logs have been seriously deranged. It is estimated that there are fully one hundred million feet of timber lying at the bottom of Saginaw River and its tributaries alone. There are large quantities of sunken logs in the Muskegon, Rifle, Au Sable, Au Gres, and other rivers.

Massachusetts as a manufacturing State stands first in cotton goods, woolen goods, worsted goods, boots and shoes; second in leather, paper and wood pulp, rubber and elastic goods; third in confectionery, carpets and rugs, jewelry, musical instruments, canning and preserving fish; fourth in electrical machinery; fifth in women's clothing, silk and silk goods, slaughtering and meat packing; eighth in malt liquors, carriages and wagons, cigars and cigarettes.

The State of Connecticut contains fourteen thousand miles of public road, of which nearly two thousand miles are surfaced with gravel and about five hundred miles with stone. About six hundred miles of these roads were constructed under the State aid plan.

J. V. Thompson, president of the First National Bank of Uniontown, Pa., is said to be the largest individual owner of bituminous coal lands in the United States. His holdings aggregate about $20,000,000 in value in western Pennsylvania and West Virginia.

Negotiations to consolidate the Intercontinental Rubber Company and the United States Rubber Company have failed, and the scheme has been abandoned.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE TRUE CONVERSION.

CLARENCE W. CHADWICK.

THE true conversion rests not upon the plane of mere profession of faith. It is not a thing of the letter which killeth, but of the Spirit that giveth life and vitality to religion. It consists not in making good resolutions through fear of future punishment, and then failing to live up to them. The individual who through fear of a literal hell is driven to acknowledge that Jesus Christ is his Saviour, may be led to believe that he is converted from infidelity to Christianity, but unless he can prove his faith by his works there is no practical evidence of true conversion. According to Webster, real conversion "is not confined to speculation alone, but affects the whole current of one's feelings, and the tenor of his actions." In other words, it means a deep-seated conviction founded upon knowledge gained from experience, such as characterizes the new man in Christ, Truth. Practical conversion is practical reformation, brought about not through fear of an evil power, but through the love of good, or God's omnipotence.

The turning from that which is erroneous or evil means something more than the mere exchange of one human belief for another. The true convert to Christianity must necessarily relinquish all faith and belief in evil, else he will find himself in the embarrassing position of professing to believe in God's omnipotence and omniscience while also believing that evil has both power and intelligence. If truly converted he will be in a position to deny scientifically the existence of any power opposed to God; in fact, this may be said to be one of the first signs indicative of conversion or reformation on his part. If he still believes that God is the author of matter or evil; if he still clings to the idolatry of matter in the use of drugs, he certainly does not know that Christ, Truth, is his Saviour, for his own actions invalidate such a claim.

Here is where countless thousands of religionists stand in their attitude towards the Christian religion. Unconsciously they are holding to the supposed reality of that which the great Teacher of divine metaphysics taught and proved to be temporal and powerless. They permit themselves to be mesmerized into the belief that "God blesses the means," which is equivalent to saying that God sanctions evil and recommends it for human use. In the case of the man "blind from his birth," where Jesus "spat on the ground and made clay of the spittle" to show his contempt for material methods of healing, according to a recognized custom of the Jews, are we to conclude that the Master was doing something contrary to the will of his Father, or that he was but expressing the divine disapproval of such means? The moment the man washed the clay from his eyes, in other words, dispensed with material means, he regained his sight. So it is with other mortals,—when they are truly converted they will recognize the healing power of divine Mind and gladly dispense with material methods.

The apostle Peter, after nearly three years of companionship with his Master, no doubt thought he was thoroughly converted to the faith, and yet, just prior to the tragedy of the cross, we find Jesus saying to him: "Simon, Simon, behold, Satan hath desired to have you, that he may sift you as wheat: but I have prayed for thee, that thy faith fail not: and when thou art converted, strengthen thy brethren." Peter replied that he was ready to go with his Master "both into prison, and to death;" whereupon Jesus informed him of the approaching hour when he would thrice deny that he had ever known his Lord and Master. All are familiar with the truthfulness of the Master's prediction. Again, after the resurrection, Peter was subjected to a most searching examination by his Master, who thrice asked him, "Lovest thou me?" And Peter each time assured him of his love and devotion. Jesus' command to him, "Feed my sheep," is clear evidence of the fact that Peter's profession of conversion and of love for his Master was not sufficient evidence of his being "right with God." He had yet to prove his faith by his actions.

Later on we find Peter healing the sick and even raising the dead, proof positive that he finally rose to the standard demanded by the Master. This gave him power to speak with authority concerning the mission of the Christ. In the third chapter of Acts he is quoted as saying to the people who had witnessed the healing of the lame man: "Repent ye therefore, and be converted, that your sins may be blotted out," words which would indicate that conversion is one step beyond repentance. Peter was in a position to realize the truth of this statement. He knew from actual experience that zeal without knowledge, or profession without works, does not make a true disciple. Peter's real "change of heart" came only when he could give to the world some tangible, practical proof of his ability to reflect Divine power in the healing of sickness and sin. So must it come to all professing Christians. The student of mathematics is not really loyal or devoted to the science of numbers until he acquires an understanding of how to work out the problems that are given him. Neither is the student of Divine Science converted to Christianity before he learns to prove the omnipotence of God in the overcoming of mental and bodily discord.

Christian healing was side-tracked when the true Christ standard of conversion was lost sight of; and it is opposed to-day by professing Christians only because they are not truly converted to the Christianity taught by Christ Jesus. They are not scientifically trained to understand that most important of metaphysical propositions, that God is all-powerful and ever-present, the truth of which they admit but do not prove. They believe that God is omnipotent, but not understanding its practical significance to humanity, they are quite likely to look for the manifestation or expression of God in the death-dealing effects of cyclones, earthquakes, and floods. Believing thus in a God of anger and wrath, in a God who willingly inflicts His people with incurable diseases and other unbearable tor-

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

ments, such as no human parent would ever dream of bringing upon his offspring, it is perhaps not strange that such people should discredit the statement that God is not in the whirlwind, but that He is manifest in love, peace, joy, happiness, and good will toward men; that He has a message of health, strength, and vitality for both mind and body, at all times and under all circumstances; that because He "thinketh no evil," He has none to bestow upon man; that because He is infinitely good, He can express himself through goodness only.

Such is the affirmation of Christian Science, that God is good, and God is all; and because it offers to the world practical and unmistakable proof of this assertion, because it is striving earnestly and prayerfully to eliminate from human consciousness every suggestion of evil that would obscure the image and likeness of God, thereby preventing a complete conversion to the supremacy of good, it is ridiculed and even maligned by those who say they love God. If with the tongue "bless we God, even the Father; and therewith curse we men," if "out of the same mouth proceedeth blessing and cursing," whom are we converting and to what are they being converted? How many sinners are being saved and what are they being saved from? These are questions that come home to thinking people when witnessing the manifest lack of true Christian charity and toleration for other people's religious views, on the part of some would-be leaders of religious thought in their intimidating efforts to convert sinners from the error of their ways.

Suppose we look within our own hearts and see if the love of God, good, is there; see if we are doing as we would be done by; see if we are not giving power to evil and so denying the all-power of good; see if we are not partaking of the forbidden fruit of knowledge of two supposed powers, and trying to convert others to this knowledge, which means death and not life to our fellow-man. Far better would it be for us and for all mankind if each were converted to a true knowledge or understanding of the living God, and were to go forth impelled by the law of Love, clothed with the garments of praise and thanksgiving, rejoicing in the conscious recognition of the all-power and reality of good, divinely prepared to preach the gospel which heals the sick and reforms the sinner. To strive to be converted to a higher and more spiritual idea of God is to fit ourselves to convert others, and not so much by words as by works. No man can bestow a greater service upon his fellow-man than in showing him by example rather than by precept how to "get right with God." If we ourselves are right with Him,—at one with our Maker,—the lame, the halt, and the blind will come to us for healing, and the power of divine Love will find its natural and lawful expression through our own chastened thought, bringing surcease from pain and freedom from the shackles of sin and infidelity. Only in this way can the realization of Christ's true conversion be brought about, and the kingdom of heaven be made manifest in thought, word, and deed. Said Shakespeare,—

> This above all: to thine own self be true,
> And it must follow, as the night the day,
> Thou canst not then be false to any man.

MEDICAL LEGISLATION IN THE PROVINCE OF QUEBEC.

A BILL emanating from the medical faculties of the Universities of Laval at Quebec and of McGill at Montreal, was introduced in the Legislature for the Province of Quebec, recently in session at Quebec City. The last feature of the bill was a direct menace to Christian Science practitioners and our Cause as well, but so insidiously was it phrased that it had received its second reading before the attention of the Christian Scientists in Montreal and the Eastern townships was directed to it through a local evening paper of Friday, the 1st of March.

Upon inquiry it was found that the third reading of the bill would be on the following Monday, so that between Saturday and Monday morning there was not much time to lose. By wiring to Quebec the lawyers engaged to look after the interests of the Scientists arranged to have the third reading postponed for one day. On Sunday night the attorneys representing First and Second Churches of Christ, Scientist, Montreal, went to Quebec City, followed on the Monday by deputations from both churches. On Tuesday the hearing took place, and the attorneys placed the case in a strong light and referred to an old French law by which the liberty of conscience of the subject in matters of his religion must not be interfered with.

The deputations from the Christian Science churches were well received and were listened to very respectfully. The Cabinet is composed principally of the French element, who inherit the characteristic of politeness in presence of and towards ladies. Suffice it to say, the obnoxious clause met its quietus, and the bill was practically killed.

The following excerpts from the report of Mr. Busteed, one of the legal representatives of the Christian Scientists, will be read with interest.—EDITOR.]

Considerable literature was given me for perusal, including the "Hearing on Proposed Medical Bills" before some of the Legislatures in the United States, articles from the February and March numbers of the *Cosmopolitan* and from *The Christian Science Journal;* all of which I carefully read during my leisure time at Quebec. Needless to say, I was deeply impressed, not only with the history and remarkable growth of Christian Science in nearly all civilized countries, but with the broad Christian principles and sound reasoning on which it is founded.

On arrival at Quebec, I learned that the bill, which had passed the second reading in the House of Assembly, had then been referred to a special committee of seventeen or eighteen members, of whom eight were doctors of medicine; it had been reported on favorably by this committee, and was to come up for its third reading either that or the following day. The section which most deeply affected not only Christian Scientists, but all those who practised the healing art who were not members of the college, read as follows:—

"Every person not registered in this Province, who is convicted, on the oath of one or more witnesses, of having practised medicine, surgery, or obstetrics, *or any other art of healing* in the Province, in contravention of the dispositions of the present section, either for hire or for money, merchandise, or effects generally, or in the hope of receiving recompense, or who is recompensed in any manner whatever, as having practised medicine, surgery, obstetrics, or any other art of healing, shall incur a penalty of fifty dollars."

On my first interview with the Premier, I was given to understand that it was too late to oppose the bill in the Assembly, and that our objections should be made in Committee of the Council. This would have been a severe rebuff at the outset, if carried into effect. However, on consideration, and with the hearty approval of some of the members of the Cabinet, a hearing of the objections to the bill was fixed for the next day at eleven o'clock. At the hour appointed we were graciously received by the Premier and several members of his Cabinet, due no doubt, to some extent, to the presence of several ladies and other members of First and Second Churches of Montreal, who had taken the trip to Quebec specially to oppose the bill. I may mention that the members of First Church were also accompanied by their counsel. I was accorded a most attentive hearing for about half an hour. Without at-

Digitized by Google

tempting to do more than give a mere outline of my argument, I may note some of the points I endeavored to make:

1. With the aid of Judge Clifford P. Smith's article in *The Christian Science Journal* of October, 1905, and other items gleaned from the books given me, I shortly outlined what I conceived Christian Science to be, and quoted figures to show its enormous growth and development in recent years; its foundation, the teaching of the gospel, could only lead its followers to "do good and follow after it;" also that its claims to heal the sick were indissolubly bound up with its tenets.

2. That all knowledge did not begin and end with medical science, as evidenced by the radical changes introduced in the treatment of diseases within the memory of many present, as well as by the fact that on our statute book, side by side with the act relating to physicians and surgeons, was the act governing the erstwhile despised and much reviled homeopaths.

3. That science was opening up new modes of healing and no one could say what changes would be introduced in the healing art from day to day, and while Christian Scientists were not opposed to the requirement that those who professed to practise medicine, surgery, and obstetrics, should prove their skill, knowledge, and ability to do so in accordance with the laws and rules of medical science, they decidedly objected to the idea that all knowledge of healing began and ended there.

4. That the bill was too sweeping in its claims, in that it shut out all believers in the art of healing, unless practised by a regular licentiate of the college, and that it infringed on and prohibited all means of healing by others for any sort or manner of reward or recompense.

5. That it was a gross infringement on, and curtailment of, the rights of the subject, who would be prevented and prohibited from using any means of alleviation from suffering, even at the hands of those whom, in his heart of hearts, he believed competent and capable of affording him relief.

Citations were also made from proceedings before legislative committees in several of the States of the Union, where similar tentative legislation had been successfully opposed, to the great satisfaction of every one, even of the legislators themselves. We were assured that the claims of the Christian Scientists would receive consideration, and were informed later, either that the objectionable clause would be stricken out or an exception made in their favor. This was actually done at the final reading of the bill in the Assembly, when the objectionable clause was struck out. When the bill came before the committee of the Upper House, it was met by so many objections and was so changed that its promoters would scarcely have recognized it. Among other changes the objectionable clause was stricken out *in toto*. I have read the bill as finally assented to, and have pleasure in assuring you that there is nothing in it which interferes in any way with the rights of the Christian Scientists, or infringes on the liberty, which we, in common with all law-abiding citizens and loyal subjects, enjoy.

This is the first attempt to violate the rights of Christian Scientists in the Province of Quebec, and we have every reason to express thankfulness to divine Mind for guidance and protecting care over our interests and those of our Cause.—*Correspondence.*

WHY?

A. WILLIS PAINE, M.D.

IT is no longer asked whether Christian Science is attracting public attention, but rather, Why is it? This religious teaching has drawn and is drawing to itself adherents from every walk and condition of life. The rich and the poor, the learned and the unlearned, the believer and the skeptic are becoming interested in Christian Science, and why? Not merely because it proffers physical healing. The claim that it is of God, that it gives a spiritual understanding of Him, has been demonstrated to many, to the extent that their hearts cry out for closer relationship with the one Mind.

It is now well known, and usually admitted, that he whose physical ills are alleviated through Christian Science must, in a degree, be spiritually uplifted. "Whatever guides thought spiritually benefits mind and body" (Science and Health, p. 149). The adherents to this religion are largely those who have been brought up out of great physical tribulation, who have lost faith in other methods of cure, and have found in Christian Science not only relief from physical suffering, but guidance into a closer communion with God.

While mankind seem to be engrossed in selfish, mercenary pursuits, led on by self-will, the lust of the flesh, the lust of the eyes, there is underlying all this a yearning for something higher, purer, and nobler. Like one of old they are seeking peace, happiness, and health in the wind, earthquake, and fire,—the material pandemonium of social and business turmoil. But like Elijah they will find it in the "still, small, voice," Christian Science, which has come to this generation through our revered Leader, the one whose purity of character, devotion, and research have prepared her to lead humanity out of the wilderness of material sense, sickness, and sin. While the masses come primarily to Christian Science for physical healing, its ultimate is the Christianization of humanity. It cannot be superficially acquired, it must be absorbed and become a consciousness, manifesting itself in love and good will toward all mankind. He who loves God loves his fellow-man.

The devotees of Christian Science are finding in it that which makes life sweet, harmonious, and worth living. It makes good neighbors, friends, and associates; it makes kind and loving fathers, mothers, and children; it makes honest, industrious, and trustworthy business men and women. It brings together and sweetens the lives of employer and employe; it brings health, happiness, and prosperity into homes that heretofore have known only disease, discord, and poverty. It raises the inebriate from the depths of degradation and sets his feet on a solid foundation. For this, if for nothing else, should the world call her blessed who has brought Christian Science to this generation. It raises men above the groveling belief in matter, and gives them a glimpse of man's true relationship to the Father. Christian Science teaches love and kindness toward all the world, and forbearance toward all who speak unkindly of it or its adherents. As a religion Christian Science stands unique. It has never encouraged the breaking of any law of our land; never spoken ill of any system of religion or its adherents; never urged any one to accept its teachings; never taught men to do or say unkind things; never taught men to do aught apart from the teachings of the great Master.

Christian Science churches are very largely made up of people who have been healed of some dread disease, many of them having been pronounced incurable by medical men. Christian Scientists express happiness and are happy. The joy depicted in their countenances does not all arise from physical healing, but is in a marked degree due to their resurrection from the obscurity of material speculation into a knowledge of Him whom to know aright is life eternal. Their hearts have been warmed into a love for God and man. "Whoso trusteth in the Lord, happy is he." Christian Science is rapidly becoming known and appreciated, and rallying to its standard are judges, lawyers, pious and devoted church people, statesmen, philosophers, teachers, and laymen, all anxious to learn more of its deep significance. Need we ask why?

SELECTED ARTICLES.

[Judge J. W. Deane in the *Goldfield* (Nev.) *Tribune*.]

Stand on the steps of one of these superb edifices any Sunday or Wednesday and face the intelligent people eagerly and seasonably attending service, despite storm or weather stress! Watch the leisurely outpouring audience. Take note of their intelligence, manifested in countenance and bearing! They have not heard sermon or dissertation, they have not been carried up to super-heights by entrancing oratory. They have heard antiphonal reading. Verses of Scripture have been read by a man, responded to by a woman with paragraphs from Science and Health. There has been silent prayer and concerted repetition of the Lord's Prayer. Interspersed have been solos and the congregational singing of hymns. Every member knew every line of that Sabbath ceremonial before he left his home. Mark Twain says he does not understand it—do you?

How happens it that failure becomes success, dependence breaks loose from bonds? Misfits find their way into places. Is it mere matter of jest that thousands of excellent people, above average intellectualism, embracing all professions and pursuits, thus concur upon these topics of main concern, erect great and conspicuously beautiful temples, paying every dollar ahead of dedication, and when soon crowded to overflow, build a beautiful other? They do no proselyting. They attack no institutions of civilized men. They read the same Bible that is read throughout the world, and at no time in America has that ever been so generally read as it is now, for in many an office, in many a desk, is a copy of the Bible, and in the homes of this land this great book occupies its old place, when it was a public boast that the foundation of this government was "faith in God and in His Word."

In the magazines are running denunciations and the defense that denunciations ever call forth. It is sought to show that ideas of such exaltation could not have come from a source so humble as this pain-distracted woman, whose experiences in life were in the main harsh and cruel. It is attempted to present her in almost any stage between that of fool and monster. Her admitted authority in the church she founded provokes the charge of "despot." Without proof that a sentence put forth by her had ever been written or uttered by another human being, she is charged with plagiarism and imposture. The serenity and sanctity of age in no way shelter. Enemies make tools of relatives and beneficiaries seek the exploitation of her private affairs in the courts.

Meanwhile Christian Science is organizing societies and churches at the rate of "one in four days." If we can believe anything human, its testimonies are unshakable. When since the days that Saul, on the way to Damascus, was surrounded by "a light from heaven, above the brightness of the sun," has there been such a public testimony for the religion of Christ as that of Charles Klein, foremost playwright of our day? Saul of Tarsus, man of the world, an experienced, an educated Jew, was chiefest among those who sought to put to death, to compel to abjure and to blaspheme. Klein, man of the world, misanthrope, careless of life, an educated Jew, no more seeking knowledge of Christ than sought Saul, was no less suddenly converted and absolutely healed. Saul, with oratory perhaps never equaled, preached and bore testimony. Klein puts forth a statement, the truth of which no man can doubt, so simple as to make it a literary example.

Who of us has not a score of friends whose lives have been recast, who have gone from dishonor to honor, because of this faith? Who of us does not know a dozen whose bodily ills cried out continually—physical wrecks, now regenerate and blooming? The testimony of those who have been halted at the grave, whose feet were on the threshold of the tomb, is such a mass of cumulative evidence as never has been adduced in support of any faith, in all the world. Knowing Judge Septimus J. Hanna for a lifetime, can I doubt his healing or its manner? Associated with I. L. Johnson for years, realizing the plight he was in, does it lie with me to dispute his physical and spiritual regeneration? I saw it. Others near and dear have been "loosed from these bonds." Yet with all these evidences about me, I have never read Science and Health. I have attended the beautifully simple services. I have heard and have weighed testimonials. I have heard what seemed absurdity of absurdities, but having known those whom medicine condemned to short earthly shrift, whom surgery claimed ability to afford the sole, dangerous chance; having seen them, talked with them, hoped and despaired for them, can I dispute apparent health and that they have experienced what they assert? Can I doubt him who has turned from evil to righteousness? Has he not been "healed" who from worthlessness becomes worthy?

Subjected to analysis the hostility of Mark Twain is pitifully ludicrous. The admissions he is compelled to make nullify the argument he plies. "This, my son, was dead and is alive again" forever convinced those who knew the facts. "Whereas I was blind, now I see." Could you argue faith out of that man? Does sophistry refute the statements of Judge Ewing? What does the supercilious criticism of early grammar and of composition amount to, coming from Mark Twain, against the avalanche of testimony of unimpugnable men and women, whose minds and bodies have been healed?

There is a potentiality in this irresistible spread that has not been exploited, viz., that it will abolish caste. The denominational churches have not brought to common brotherhood either the masses or the classes, and should this be the grand distinctive mission of Christian Science it will not only "spread over half the world in fifty years" as Mark Twain predicts (unless his excessive mentality shall check it), but it will within fifty years dominate Christendom. Well, what if it does?

I predict that Mark Twain will eventually profess the faith against which he shows his impotency. As persecution bred martyrs and begat saints of the early church and assured the spread of doctrine, even so contumely is now informing widely and insult is bringing mastery—not to defend, for of defense there is no need—but to resent slurs and detraction sought to be placed upon those of our neighbors and friends who believe that pure living and high thinking, based upon faith in God, will do what no other power can do, and whose condition proves the truth at least to them.

A religion which concerns itself less with the heathen and more with the health of its individuals, their spiritual health evidenced by physical repairment; which sends men and women strong, confident, happy, to the tasks and toils of life; which begs from none, incurs no debts, carries no mortgages; which marks its spread by glorious temples; which demands nothing, exacts nothing, in no way interferes or infringes upon civilized rights; whose exponents grandly override care and beam with good cheer; whose every article of faith is spread for the whole world to view; whose major tenets intellectual lands concur in; whose contention that in the body natural, as in bodies municipal, social, or for whatever purpose created, regeneration and reformation must proceed from within (and all *materia medica* claims of potency is to "aid nature in its efforts at recovery," thus proclaiming the unnaturalness of disease and asserting physical hostility toward it); whose first manifestation is in greater reliance and in surer accomplishment in affairs,—truly even timid Goldfield need not shiver should Christian Science attempt to establish itself here.

should its happy faces beam amidst many cares, and should a paid-for temple flash to morning sun or silhouette the evening sky.

[Capt. Geoffrey Wilkinson in *The Onlooker*, London, England.]

[Captain Geoffrey Wilkinson, who contributes the article on Christian Science to our issue of to-day, is the son of the late Colonel Wilkinson, of the Bengal Staff Corps. He passed into Woolwich nine years ago, and obtained his commission in the Royal Engineers. He first came in contact with Christian Scientists while serving at Peshawa, on the Afghan frontier. On his return to England he passed for the Staff College, but a year later he resigned his commission to devote his entire time to Christian Science.—EDITOR *Onlooker*.]

The first aspect of the subject which whetted my curiosity was the assurance that Christian Science is a demonstrable religion—an assurance which subsequent experience has abundantly justified. The claim that it could be applied to all the problems of life was, moreover, one which certainly courted investigation. At the time that Christian Science found me, I was—like, I suppose, the majority of people nowadays—an agnostic—one who did not know what to believe. It seemed to me that the belief one held was merely a matter of birth and education. The believer in any given religion would consider his the only true faith, and all who differed from him would fall into the natural category of heretics. All could not be right. If not, which was? And if one faith was right, what proof could it offer of the truth of its teaching? In no case, however, did proof seem to be forthcoming, and so, like many another, I was content to leave the whole puzzling subject severely alone.

It was in 1903, on my return from foreign service, that Christian Science was first brought to my notice. My first talk with a Christian Scientist convinced me that it was a very beautiful religion, but—that it was extremely absurd. Before my next conversation I prepared a list of objections which, as far as I could see, demolished the whole fabric of its teaching. When, however, I came to urge these objections, a point of view was disclosed which seemed altogether novel, viz., the alleged unreliability of the testimony of the physical senses. The logic of Christian Science in its reasoning from its premise—the allness of God—was perfect; but the conclusions arrived at were entirely opposed to what seemed the ordinary phenomena of existence. After all, however, had one any reason, beyond the fact of one's education on these lines, to assume that the testimony of the physical senses formed the standard of absolute truth? The cures wrought by Christian Science certainly upset this testimony, and pointed to the correctness of the deductions from its premise. But were these cures genuine? They could scarcely be otherwise, for it was hard to suppose that people—and seemingly respectable, earnest, intelligent people—would get up at a public meeting and deliberately lie for no rhyme or reason. Assuming, therefore, that these testimonies were true, it seemed to me that the matter called for investigation. So I purchased the text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, and commenced its study a few days later, on arrival at the station to which I had been newly posted. At that period there were no Christian Scientists at this place, and consequently no one to help me. And I wanted help badly, for the text-book appeared to me to consist largely of dogmatic assertions entirely opposed to reason, constant repetitions, and endless contradictions. Yet in spite of this there was much that appealed to me. Something that I had read seemed to have cured a physical ailment from which I had been suffering for about a year, and for which one of the leading London specialists to whom I had gone could offer no remedy, and though in the course of the next year the work I was doing was calculated to aggravate the trouble more than ever, I still kept free from it. In some slight way I had begun to understand what Jesus meant when he said, "Ye shall know the truth, and the truth shall make you free." One other thing the first reading of Science and Health undoubtedly did for me—it showed me that material health laws were mere mortal beliefs, lacking divine authority, and that fear brought the results of fear. Said Job, "The thing which I greatly feared is come upon me." As a result of my newly-found knowledge I gave up the diet which was considered a *sine qua non* in another—and very serious—physical ailment from which I was suffering, and was cured (although material means offered little or no hope) by the power of Truth alone, in spite of this utter disregard of the material law which supposedly governed the case.

Meanwhile I had commenced the second reading of the text-book. This time I took a pencil, and as I read I covcovered the margin with objections and queries, all of which I had the trouble of removing later on, as I came to understand the author's point of view. There was something about this book which irritated me exceedingly, yet I felt there was much that was true. One thing that particularly upset me was the constant quotation of Scripture in support of the statements advanced. I would signify my disapproval of this by the remark, "But this is no proof," in the margin. After some months, however, I got leave and came to town. Here I was able to talk matters over with a Christian Scientist, and it was not long before things began to clear up. The intense irritation I felt against Mrs. Eddy changed gradually into a feeling of increasing admiration and respect, in proportion as I grew to understand her meaning. I saw that the dogmatic assertions were made on the strength of both logic and demonstration, that the constant repetition was due to the continual examination of the many aspects of physical testimony and its replacement by spiritual truth, and that the contradictions arose from my blindness in failing to discern where the author was referring to the spiritual fact, and where to the material seeming. I grew to understand that the book was written to meet every possible type of human thought, whether religious, medical, or scientific—hence the many references to the Scriptures. I found, too, that these, and especially the Gospels, became increasingly illumined in proportion as the revelation contained in Science and Health grew clearer and clearer. Conditions that before would have led to disease of various kinds were proved to be harmless. If any ailment ever effected a lodgment, it was overcome with a speed and thoroughness that in the old thought would have seemed incredible, and this without any resort to material means whatsoever. With increasing understanding came increasing health, harmony, and peace of mind. Christian Science clearly shows that we make our own heaven as surely as we make our own hell. It is for us to decide which it is to be.

The more we understand the Science of Christianity, the more we are able to apply it to every problem of existence with increasing faith in the harmonious action of Truth; and one has not to advance very far before it becomes plain that in this Science is found the solution of all those problems—medical, religious, social, and economic—which confront and perplex humanity to-day.

[Editorial in the *Sandusky* (O.) *Journal*.]

Christian Science, as a form of religious belief, stands in exactly the same attitude toward the public as does any other religious body. It has its basic Principle of belief, and upon that Principle it has reared its own structure of doctrine and practice. It makes known its Principle and its doctrine to all who will listen, and it welcomes to its fold all who are willing to adopt its beliefs. Its object is to do good in the world, and it seeks the co-operation of all who can consistently and conscientiously work with it in the accomplishment of that result. This is true of every other creed and denomination in

Digitized by Google

Christendom. In its own way, and to those who have accepted its doctrines, Christian Science has done much good. Whether more or less than other equally sincere and equally energetic organizations, is not important at this time. It is sufficient that it has filled its niche in the religious world, that it has done its work faithfully and to the best of its ability, that it has been tolerant and kind to other religious bodies, and that it has not sought to force its belief into unwilling minds and hearts.

[Max Jagerhuber in the *Continental Times*.]

As a member of The Mother Church and First Church of Christ, Scientist, of New York, and head of a family of sincere Christian Scientists, I most earnestly protest against the use of your pages against Christian Science. The case you refer to is not in any way connected with the teachings of Christian Science, and no Christian Scientist who has honestly learned the first lesson of the Christ-principle and healing, is capable of committing such a deed as that reported in the daily papers. Christian Science is fast awakening a sinful world from its sleep; its influence is felt all over the world, notably among unnumbered thousands of the most intelligent English-speaking peoples. It teaches what it practises and practises what it teaches: Love thy neighbor as thyself. Honor thy country, its laws and its honorable lawgivers. Christian Scientists believe in one God, and their only preacher is the Bible and their text-book, Science and Health by Mrs. Eddy. Lawyers, judges, professors, teachers and philosophers, as well as ministers of the gospel and doctors of medicine, are among its disciples, and if we admit that the work of Christian Scientists can only be judged by its results,—its fruits,—then indeed is this revelation an illumination of the human consciousness.

Christian Science is not *Gesundbeten*, but the exact Science of Jesus, "the most scientific man that ever trod the globe" (Science and Health, p. 313). Christian Science redeems and elevates even the infidel, the worst sinner; its influence is widening and growing in all parts of the world, and Berlin is no exception, the Germanistic thought being most receptive to this great ideal movement. Christian Science makes men happy and holy; it unites families in one harmony and peace, it proves the nothingness of fear, it enlarges man's possibilities in business, it destroys the belief in limitation, it purifies where other means fail, it proves man's birthright and his real relation to his God, it ministers bread where formerly only a stone rewarded mankind's prayers; it teaches the unity of man with God; it requires the strictest honesty; it makes man a true patriot, a genuine father, brother, and son, and no man holds citizenship in higher respect than does the Christian Scientist.

Great men have made efforts to become Christian Scientists, but the study of the letter avails nothing if the spirit be lacking; verily, little children are often our wayshowers, while intellectualism may become a stumbling-block to the understanding of spiritual Truth which delivers men from bondage. How can the modern scribe be expected to understand this Science by simply reading newspapers, when of old they saw even the great Master's works and yet doubted and ridiculed him?

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

THE LECTURES.

LONDON, ENGLAND.

Tuesday, April 23, was St. George's Day. At the Guild Hall there was a conference on Imperial education; at the Colonial Office the Prime Ministers of the Empire were discussing Imperial defense; it was the opening day of the Shakespearian Festival, and in the midst of all this people were asking how it came to pass that, for the first time in years, there was no celebration in the Albert Hall, and instead of the English Ballad Concert there was a lecture on Christian Science, and no one seemed able to answer them.

When London found there was to be a Christian Science lecture in the Albert Hall, London smiled, and asked who was going to fill it. The question was answered when the time came. The inspector in charge of the police outside the hall, when he saw the crowd collecting, declared he had never anticipated anything like it, or he would have had many more men; however, he had no need for them. The attendants inside thought it in the nature of a hardship that the doors were opened so long before the time. They smiled and said all the people who would come could easily get in much later. When the doors were opened and the audience began to surge in by thousands, they altered their minds. For the next hour they were kept busy trying to find seats for the crowd at the doors. Long before the organ ceased to play every available seat was filled, and numbers of people were going disconsolately away.

Inside the hall the scene was striking. With the exception of some seats held by private individuals, every place was occupied. Tier after tier of people stretched up to the roof, and all round the promenade at the top appeared a thick line of spectators. With the exception of the space on the platform, roped off with great palms and banks of flowers, the whole of the vast orchestra was packed with listeners. And when the organ stopped, and Lord Dunmore and Mr. Bicknell Young walked to their chairs, there were some ninety-nine hundred spectators present.

Lord Dunmore briefly introduced the lecturer, and then amidst a shout of applause Mr. Young spoke. For an hour and a half, without a note or a moment of hesitation,—as one who was present but who was not a Christian Scientist said,—but with a voice reaching into every gallery and nook of the huge hall, Mr. Young poured out his message. He was listened to with the keenest attention, with constant bursts of applause, at times in almost breathless silence. Such a moment occurred when, after stating the claims of Christian Scientists to the name of Christians, he asked suddenly if any one in the hall dare deny them, and then after waiting for a few seconds, in a silence that could be heard, passed to another point. There were moments too of laughter, as when he demanded whether the man who, resting his arms on the key-board, jarred the whole organ into discord had a right to require an explanation of the origin of discord before he had grasped anything of harmony.

It was when he spoke of Mrs. Eddy, however, that the greatest moment came, and the applause swelled to its highest. Then the end came quickly. He spoke of the mission of Christian Science, and how in the light of its teaching, "old things are passed away; behold, all things are become new." And then amidst a final roar of applause the lecture came to an end, and as the organ again pealed out the audience passed into the street.—*Correspondence*.

The London Christian Scientists held a great demonstration at the Albert Hall last night [April 23], when Mr. Bicknell Young, a member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass., gave an eloquent address.

Digitized by Google

The great hall was crowded in every part, and the leading members of the movement in London were present. Lord Dunmore presided over the gathering, and briefly introduced the lecturer, a remarkably fluent orator with a strong and sympathetic voice. Standing at the front of the orchestra, which was embowered in palms and flowering plants, Mr. Young traversed every phase of Christian Science in the most eloquent manner, and frequently raised the great gathering to enthusiastic applause, his closing references to Mrs. Eddy being greeted with notable fervor. Mr. Young said:—

The world is somewhat accustomed to Christian Science to-day, and it is a welcome subject in many circles, and its wonderful and blessed achievements are generally acknowledged, but there was a time when Mrs. Eddy was the only Christian Scientist on earth, when she stood absolutely alone with God before the whole world and incurred the ridicule of ignorance and the hostility of theoretical forms of religion and material modes of medicine because of her discovery of Christian Science. No hope of material reward, no worldly ambition, could have touched or tainted the consciousness of the one whose thought was high and pure enough to discover Christian Science, fraught with the divine possibilities of infinite blessings for mankind. Mrs Eddy knew that the Christ method had appeared to her. On page 108 of her book, "Science and Health with Key to the Scriptures," she speaks of this experience particularly. She knew that it had come to her through no selfish desire, but through striving to be good and to do good. That this spiritual light should appear to her was unquestionably a God-given privilege, but it entailed untold sacrifice and self-abnegation, for not otherwise could it be made available to suffering and sinful humanity.

Is this discovery less in the nature of true science than systems which are usually associated with that word, because it deals purely with thought and involves righteousness? Nay, is it not more in the nature of science or truth because of those facts? We respect, admire, and revere the great scientific discoverers of the world, such men as Newton and Franklin, and hundreds of others, and we do well in that; yet their discoveries relate to the material world, and to laws deduced from the observation of its phenomena. If we respect these discoverers, what shall we say of the discoverer of that which relates to the truth of Being, and to the spiritual, primary, and natural law of health and harmony? If we speak of material discoveries as great, who shall be able to employ a word to adequately describe the discovery of Christian Science? Even the thousands who have experienced its beneficent influence, who come out of sorrow and disease and great tribulation, realize but faintly the might, majesty, and power which have come to earth through the blessed teachings of Mrs. Eddy. Few even of the beneficiaries of Christian Science realize what it has meant for Mrs. Eddy to be the Discoverer and Founder of Christian Science, and the Leader of this great movement. With humility, strength, and persistence born of the Christ-spirit, Mrs. Eddy has iterated and reiterated that the highest way is the only way whereby mankind can gain harmony, the true basis of health and satisfaction. She has indicated the pure, unadulterated Christ way, and has stood for it in the face of all contumely and in spite of the resistance which evil ever offers to good, and she still stands, a figure unique in the history of modern times.

The Tribune.

OAKLAND, CAL.

The Christian Science church was filled to overflowing Sunday afternoon [April 7] with a cultured and eager audience of fully twelve hundred people, who listened to an address on Christian Science by Francis J. Fluno, M.D. The introduction by Mr. John A. Plummer, a prominent attorney of Stockton, was in part as follows:—

The world needs Christian Science, needs the kindly thought which goes out on its mission to heal and to save, that carries to sick, distressed, and overburdened humanity a message of love and hope and good will, that finds its way into the consciousness of man as silently and gently as the falling of the dew, and teaches him how to know and understand, how to take into his daily life something deeper and higher and wider and more inclusive than the mere hand-fashioned things of men, how to break down the moss-covered walls of prejudice, how to obliterate the inhumanities of men to each other by teaching them man's true relation to God.

For nineteen centuries the world waited this second coming, waited for release from the hard and fast laws of human opinion, waited for a realization of its "peace, be still." And now as then, that same world would mangle and rend it in pieces were it not founded on the eternal rock. O'er this fair land of ours and reaching out to countries beyond the seas, are thousands of living witnesses to this healing, uplifting, strength-giving truth, each one a willing volunteer, each one ready to stand up and answer aye. The shafts of malice, the arrows of ridicule awaken more of pity than resentment in those who know the mental peace here vouchsafed to soul-weary, fear-tormented men. Marshaled in support of immutable right, the powers of love stand above human harm, are as fixed as the continuance of time, and as unchanging as the God that cannot pass away.

Oakland Tribune.

MOLINE, ILL.

Rev. Arthur R. Vosburgh lectured on Christian Science April 8 at the Moline Theater. He was introduced by George A. Townsend, Jr., who said in part,—

When I was asked to introduce the lecturer to-night I must confess that I felt like declining the invitation and putting this responsibility on another's shoulders. I realized, however, that a "shirker" had never yet been found at the forefront of battle, and accepted. Before I looked into Christian Science I was a scoffer of its followers. I treated them scornfully and to my fellow-companions made them seem ridiculous. I had been raised in the Methodist Church, confirmed in the Episcopal faith, and joined, by letter, the Congregational Church. I have always been more or less of a seeker after truth. I found in these churches a God of fear, who sent us sin, sickness, and death in order to test our faith. This was not truth to me. I was looking, always looking, for a God of love, who felt toward His children at least as humanely as an earthly father. Imagine my surprise and delight when one day I read only the short Preface of Mrs. Eddy's "Science and Health with Key to the Scriptures" and found I was on the right track.

The other night I had the good fortune to hear Mr. William Jennings Bryan lecture on his trip abroad. Among the many good things he said was one which struck me very forcibly. He said that he had noticed all over the world a decided change in the trend of religious thought. Heretofore men had been searching the Scriptures to prove with fine-spun theories the immortality of the soul and how to prepare for the life after death. Now they were searching the Scriptures for information how to live each day for the betterment of their fellow-man and how to love their neighbor as themselves. I believe that Christian Science shows us clearer and better than anything else how to possess that Mind which was in Christ Jesus, and thus helps us to solve the problem.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

A LETTER FROM LONDON.

[THE following letter to Mrs. Eddy from one of the churches in London shows that the Christian Science movement is growing with great rapidity in conservative England. The writer of this letter estimates the number who heard Mr. Young's lecture at eight thousand, but we are informed that the actual attendance was ninety-nine hundred. When this great audience is contrasted with the few who attended the first public meeting of Christian Scientists in the same city eleven years ago, it will be realized that only through tangible evidence of the truth of Christian Science could this great advance have been made. The sick have been healed and the sinful have been reformed through Mrs. Eddy's teachings, and these works are being appreciated.—EDITOR.]

London W., April 27, 1907.

Beloved Leader:—It is our pleasure to report to you that the success of our annual lecture, delivered by Mr. Bicknell Young on the 23d of April, was phenomenal. The lecturer was introduced by Lord Dunmore to an assembly of nearly eight thousand people. The audience followed with close and respectful attention whilst the lecturer told of the revelation which has come to humanity through your teaching. The lecturer's perception of the needs of this audience was to us particularly impressive and the comments of members of the public and the interest already awakened point unmistakably to good results.

As evidence of co-operation, the lecture was given under the auspices of the three branch churches in this city. In the necessary work Second Church has been lovingly aided by First and Third Churches, and in fact our brethren in all parts of the European Field, both far and near, co-operated. We rejoice that the individual and collective work has been so blessed.

In the face of that audience, it was startling to realize that only in March, 1896, the first public meeting was held in Great Britain in connection with Christian Science and was attended by forty people, mostly enquirers who came to hear the Lesson-Sermon. This fact illustrated for us that it is "not by might, nor by power, but by my spirit" that the hearts of men are touched.

The audience keenly appreciated Mr. Bicknell Young's eloquent references to your aims, hopes, and ruling desire for the benediction of mankind; and this appreciation was in thousands of instances based on actual experience of the effective working of divine Love.

Second Church hopes that this demonstration may speak to you of work and fruitage and sound for you a note of joy. When evil seeks to injure you and your life's work, this Church would fain sufficiently realize that God is and therefore you are.

We remain yours, with gratitude and love,

E. BLANCHE WARD, *Chairman of Directors.*
WARD COLDRIDGE, *Chairman of Trustees.*

For Second Church of Christ, Scientist, London, Eng.

NO LARGE GATHERING IN BOSTON THIS YEAR.

UNDER the By-law of The Mother Church which has been in force for almost a year, there will be no large gathering of Christian Scientists in Boston this year. This By-law provides for a general Communion service in The Mother Church in Boston every third year, and as this service was held in 1906, the next general Communion will be held in 1909.

HOSPITALITY TO TRUTH.

WE are all more or less familiar with the opinion that the Briton is by nature cautious and conservative, that he does not readily accept new ideas—in short, that he insists upon proving things before endorsing them. It is therefore hardly possible to overestimate the significance of the recent gathering in London of nearly ten thousand people to listen to a lecture on Christian Science, as reported in this issue of the *Sentinel*. As we read of the deep interest and the eager enthusiasm evidenced on this occasion, we are reminded that England has taken some eleven years of sober thinking in which to mature her thought respecting Christian Science, and that as a result of this thinking Albert Hall was filled with an immense audience to listen to the message of the Christ-healing. It is well to remember in this connection, that it was no unproved theory to which the thousands listened on this occasion, nor was the interest due to mere hearsay. On the contrary, it is safe to say that in the audience there were hundreds who had either been healed themselves through Christian Science, or whose dear ones had thus been healed, and that, too, "when other helpers" had failed and when hope was well-nigh dead.

As we read what the newspapers have to say of this event, we remember with deep joy that this is the land where the Holy Scriptures were first given to all the people, but a few centuries ago, and where the right of every man to interpret them in the light of reason and conscience was maintained in the face of prison and fagot; that it is the land of Wyclif, of Cranmer, of Ridley, of a "great cloud of witnesses" to the power of Truth. Here in this great republic we think with pride upon our Anglo-Saxon heritage of free thought, which is inseparable from a desire to know the truth, and who can estimate the power of truth known and practised!

As we read of the welcome given to Christian Science on this occasion, we recall by contrast the words of Christ Jesus as he wept over Jerusalem, foretelling its destruction, "Because thou knewest not the time of thy visitation." He also said, "Verily I say unto you, Ye shall not see me, until the time come when ye shall say, Blessed is he that cometh in the name of the Lord." Christian Science has come to humanity in the name of God and His Christ, with signs following as in the olden day, and we may well rejoice that so many in all lands know the time of their "visitation."—that they hear and heed the call of Christ, Truth. There are no more mournful words than those which Robert Browning in one of his poems makes an old Jew utter,—

> Thou! if thou wast he, who at midnight came,
> By the starlight, naming a dubious name!
> And if, too heavy with sleep—too rash
> With fear—O thou, if that martyr-gash
> Fell on thee coming to take thine own,
> And we gave the Cross, when we owed the Throne. . . .
> We withstood Christ then? Be mindful how
> At least we withstand Barabbas now!

When the Christ calls we must either choose to follow, or choose "Barabbas,"—the robber who would steal from us the God-given treasures of health and holiness. Christian Science honors God by ascribing to Him all power and glory, and it never robs humanity but shows how we may possess our divine inheritance—the dominion which begins with the government of the body and extends to the whole universe of God.

Digitized by Google

We read that at this lecture our revered Leader's name was greeted with glad acclaim, and did not Christ Jesus say of his faithful followers, "He that receiveth you receiveth me, and he that receiveth me receiveth him that sent me." In speaking of the spread of Christian Science in other lands, Mrs. Eddy says (Pulpit and Press, p. 31), "When the doctrinal barriers between the churches are broken, and the bonds of peace are cemented by spiritual understanding and Love, there will be unity of spirit, and the healing power of Christ will prevail."

ANNIE M. KNOTT.

"CONSIDER THE LILIES."

The beauties and sublimities of nature "point to the invisible intelligence above them."—MRS. EDDY.

THE frequency with which Christ Jesus alluded to the phenomena of nature in the illustration and enforcement of his teaching, and the explicit counsel which he gave his hearers that they think upon the birds and flowers,—these facts leave no question as to his attitude toward the gentle and beautiful things about us, nor as to what our attitude should be. His words mean more than the suggestion of a privilege; they define an obligation, and indicate a need. The beauty and beneficence of the divine Mind is to come to us not as an abstract proposition, but as a practical manifestation and appeal.

To-day the counsel of the Master is being revoiced in every nook of our Northland, and as the sweet call of the cowslips and violets is heard from the hillside and meadow-brook we would all fain enter upon their study, for with these children of the fields spring has brought us the children of the air, and they would be our choristers, and Christ our Priest as we

> Go forth under the open sky, and list
> To nature's teaching.

And how shall we "consider the lilies"? Shall it be with the botanist, who studies their order and form and relation, their niceties of adjustment to place and purpose, their wonders of variation and development? Or shall it be with the beauty-lover, who revels in the wealth of their shadings, the splendor of their vestures, the delicacy of their effects? All these aspects of the flowers may be considered with profit as well as pleasure, if their treasures of color and form and fragrance but tell us of a yet more wondrous Presence. When, through spiritual aspiration and ascent, we enter the "temple not made with hands," the impulses of holy thought are no longer tethered by materiality. When the splendors of the real break through the mists of sense, then nature is seen to be indeed "the vicar of Almighty God," and in a sense far higher and nobler than Chaucer dreamed. Then the simplicity, beauty, and truth of nature appear as they have not before, and we are shown its kinship to the Christ, that rightly viewed it is a manifestation of Spirit, and forever apart from materiality.

Thus apprehended, the glories of the garden immediately relate themselves to our religious life. The study of the lilies is now a stimulus and inspiration, their companionship begets a new sense of freedom and of strength, and we perceive the true tests of right apprehension, namely, its at-one-ment with Spirit and its healing power. Thus too we attain "those higher conceptions of loveliness which transcend all material sense" (Science and Health, p. 247). We learn that the realization of the divine nearness and activity supplies the only condition under which nature may be studied with spiritual profit. We begin to understand the relation of purity to the higher intuitions, of character to true discovery. When we come to know that truth and beauty are indissolubly united in God, the naturalness of their union in His every manifestation, including man, at once appears, and the study of nature becomes a help to spiritual self-recognition and true living. This is the gain of that poetic perception through which "the sights and sounds of unmarred nature rouse the human soul."

The botanist may acquire a treasury of most interesting facts, the artist be gladdened by beauties which others cannot ken, but he who would "consider the lilies" in the spirit of the Master's injunction must gain that spiritual insight which identifies the true poet and the true Christian. He alone reaches that exaltation of thought which found expression in our Leader's declaration, "It is Love that paints the petal with myriad hues."

Every peer into the realm of the real begets that reflex uplift of consciousness wherein it is revealed that the whole circle of nature is "one vast picture which God paints on the instant eternity for the contemplation of the soul." To discern the beauty of the handiwork of omnipresent Love is to expand and enrich spiritual consciousness so that the gentleness of the lilies has become our strength.

JOHN B. WILLIS.

THE MAY MAGAZINES.

OF the May magazines which contain articles on Christian Science it is difficult to select any particular one as most useful for circulation by Christian Scientists, but *The Cosmopolitan* will, we think, naturally appeal to them as being valuable for this purpose because of the character of Mr. Kimball's article. This article deals with a criticism of our Cause and its Leader which has been diligently advertised and exploited, and Mr. Kimball's handling of the subject clearly points out the inconsistency of the critic and the animus of his attack. *The Arena* and *Success* also contain articles which should be widely circulated.

LETTERS TO OUR LEADER.

Boston, Mass., May 10, 1907.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—The Directors have received the Peace flag which you so kindly sent to them to be held by The Mother Church for all the branch churches. They thank you for this memorable, beautiful flag, and for your loving words which accompanied it. They loyally accept the trust which you have reposed in them, and will keep the flag as a heritage of the Church. Your teachings have made all your true followers ardent disciples of peace, and thus you are recognized as a practical and consistent worker for the cause of universal brotherhood and for peace among nations.

Lovingly your students,
THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.
WILLIAM B. JOHNSON, *Secretary.*

Buffalo, N. Y., May 9, 1907.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Teacher:—It was a great privilege to lecture in the new auditorium of The Mother Church, that immense room being filled to its utmost capacity. I trust I have the grace to appreciate it all, but one feels himself to be small indeed under such circumstances, and can more easily understand the Master's saying, when referring to the merely human or mortal: "Of myself I can do nothing." Unguided and unsustained by the one Power, we could not do these things. I want to tell you of the kindly sayings of some ministers who have recently introduced me. One, a minister of the Christian denomination, said before the lecture, "Well, I have read your Christian Science text-

Digitized by Google

book, and more or less of your other literature, and the only criticism I have to make is, 'If it isn't true it's a pity.'" After the lecture he said, "Well, the only criticism I have to make of your lecture is to emphasize my previous remark, 'If it isn't true it's a pity.'" A Methodist minister who introduced me, after the lecture grasped me warmly by the hand and said, "You didn't say a word I wouldn't have been only too glad to say if I had known how."

These are but examples of many other evidences of a great change on the part of the abler and broader clergymen. At a place in Maine I lectured in a Baptist church and was introduced by the pastor in a most liberal and kindly way. At the close of the lecture, the pastor called upon the Universalist minister, who was in the audience, to come forward and pronounce the benediction, and he did so in a most felicitous way.

Day before yesterday I had the pleasure of dining with the leading physician of a city near here. In the parlor and dining-room of his home hang photographs of you. Here also I saw the "little book" and our other literature. The doctor, though one of the most genial of men, spoke in terms of severe condemnation of the silly and malicious attacks upon you, at the same time expressing his high admiration for your Christianly treatment of your assailants. The doctor is not a retired physician, but in active practice, helping his fellow-beings as best he can in his way.

Knowing how delighted you are by such experiences, I have taken the liberty of mentioning these pleasant incidents, trusting I have not taken too much of your time. The better sentiment of the public is rapidly growing in respect for and appreciation of your great work. This is becoming daily more apparent.

In truth and love, your student,

SEPTIMUS J. HANNA.

Roxbury, Mass., May 1, 1907.

Beloved Teacher and Leader:—To me was accorded the honor of introducing Judge Hanna at the lecture in The Mother Church last evening. As usual the great auditorium was filled to overflowing, and I am sure the word spoken will bring forth fruit abundantly. I have never heard a more earnest appeal, or a more logical and convincing presentation of Scriptural authority for Christian healing. Those who were unfamiliar with Christian Science must have been deeply impressed with the manifest sincerity of the speaker as he "reasoned with them out of the scriptures." Those of us who know from experience the truth of your teachings, realized, as never before, how much we are indebted to you for your unceasing labor of love; and we returned to our homes with a clearer realization of the ever-presence of that God "who forgiveth all thine iniquities; who healeth all thy diseases." It is our sincere desire that we may be found faithful servants of the Master, following our Leader only as she follows Christ.

Most sincerely and lovingly your student,

WILLIS F. GROSS.

Cambridge, Mass., May 3, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The Christian Science Society of Harvard University wishes at this, its fourth annual meeting, to send to you a message of love, and to express to you its gratitude for the privilege of this organization. We recognize that these organizations, authorized by you through the Church Manual, are thereby incorporated as an integral part of the Christian Science movement. We appreciate the privilege and its responsibilities. Our opportunity for usefulness is large. As an embassy of Truth, the fellowship of this Society is strengthening to the active members, and to the graduate members the Society is a most valued tie to bind them to the university.

One of our Harvard professors recently spoke of certain buildings in Boston, the new Harvard Medical School, the public library, and the new Christian Science Temple, as representing three leading influences in modern thought, the scientific, the intellectual, and the advanced religious thought. As students of the arts and sciences of the first university of our land, we recognize that the Science of sciences is set forth in the text-book, "Science and Health with Key to the Scriptures," that example of original and masterful English prose composition of which you are the author, and that the Art of arts is to demonstrate this Science in daily living.

We appreciate the devotion of your life-purpose to the furtherance of the world's peace, significant as it stands in bold parallelism to the seventh spiritual precept of the Master, "Blessed are the peacemakers: for they shall be called the children of God."

In love and loyalty,

The Christian Science Society of Harvard University.
C. FRANKLIN STEVENS, BLISS KNAPP,
C. LEWIS LAWRENCE, *Committee.*

Berkeley, Cal., April 29, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—I wish to express to you my gratitude for the good I have received from reading your wonderful book, "Science and Health with Key to the Scriptures," although my study has covered the period of one year only. With the little understanding I have I can appreciate deeply, dear Mrs. Eddy, your efforts for the good of mankind, and if those who speak so harshly and so unkindly of your great work might know and understand even a little of this great truth, they would see that it is in a spirit of thankfulness and not worship that we cling to you and your great work. My constant prayer shall be that I may know more of our God, who I now know is Love, and that your scroll, whereon is written the message of Love and freedom, may continue to unfold. May your labor have God's richest blessings.

Yours in love,

MRS. M. D. BALDWIN.

Ithaca, N. Y., March 31, 1907.

Our Beloved Leader:—It is with a sense of the deepest gratitude, that we, the members of First Church of Christ, Scientist, of Ithaca, N. Y., write you to-day, to assure you of the loving loyalty of our little band of workers. Your example of infinite patience and love, under the many persecutions which have arisen, only to beat harmlessly against the armor of your righteousness,—and destroy themselves,—has been to us as a "pillar of light." Our church is small, but most harmonious and faithful in following your teachings. Among our members are young men and women from Cornell University, who a year ago availed themselves of the privilege given by Art. XXVI., Section 13, of the Church Manual, and formed an Association for the spreading of the truth among the student body. They have recently given a lecture at the college, by Mr. Young, which was largely attended by representatives of the city and university. There is to be another given very soon under the auspices of our church.

To you, who have brought the truth to us in this age, we feel that we owe a debt of gratitude, which we can only repay by following humbly and lovingly in your footsteps.

Loyally and gratefully,

LAURA C. WOODRUFF,
MARY AGNES PHILES.
Committee for the Church.

EXTRACTS FROM A BUSINESS MAN'S CORRESPONDENCE.

[The following extracts from letters were sent us for publication by Mr. Clarence H. Howard of St. Louis, Mo., he having received the writer's permission to do so. Mr. Howard writes that during the year following the second letter he had quite a correspondence with and a number of visits from Mr. Ford, which go to explain the wonderful transformation of thought so apparent in the third letter. He adds that this friend has since that time been "a very earnest, ardent worker in the Cause."—EDITOR.]

Postscript to a business letter written from Chicago, March 20, 1898:—

Dear Howard:—I understand Mr. H. is taking Christian Science treatment, and I am amazed at it. They will do him no good. They are fakirs, and I want you to use your influence to get him to stop this at once and let me send my doctor to him. This is important, and it is a shame to leave him in their hands, for they will let him die without giving him any medicine.

Chicago, Ill., March 25, 1898.

My Dear Howard:—Your letter relative to your new-found happiness was duly received, and your reply to my remark about Mr. H. was read with much interest. I considered it such a beautiful epistle that I took the liberty of showing it to several of my friends, all of whom thought as I did about it. You certainly do not need to go to heaven, for you apparently, so far as I can judge, are as happy now as you might be there. I hope it may continue. . . . I may some day attend the church you speak of, but I do not see why the Methodist or any other order of religion may not be as nice as the one you speak of, provided it is lived up to. When I see people left to die because they need medical attention, and to die abandoned by their dearest friends, it makes my blood run cold; and this is repeatedly done by the adherents of this faith. The Lord never meant this to happen, or he would not have caused physicians to people the earth, and I think some day you may find that while the faith, if lived up to, is satisfying to you, yet your bones will ache just as hard, and your physical system will give out and require earthly treatment just the same as others.

Chicago, Ill., May 18, 1899.

My Dear Clarence:—I want again to express to you my sincere thanks and deep gratitude for the many favors you have extended to us, and especially am I indebted to you most deeply for all I now enjoy in Christian Science. My wife and I are too happy in the abiding faith and understanding which has come to us, all through your ministrations and testimonials of Love and Truth, and it is with unspeakable happiness that I extend to you my heartfelt love and thanks, my dear Howard, for the peace and quiet which Christian Science has given me, the perfect health, the blessings untold, and the bliss and happiness I had ached to know for years. My darling wife, too, is so happy and changed, yet she was always a loving wife. . . .

I have ever been grateful for having such a dear and warm friend as "Howard," but if it gives you the happiness to know the result of your labors—after experiencing many bitter and unpardonable things emanating from my personality in the past—that it gives me to be one of God's people, we are both grateful and thankful, as well as happy in Love and Truth. Perhaps you have looked for some expression of this character from me heretofore, but I have felt that I did not wish to speak until I could know and feel that I had accomplished, in part at least, the results to be attained from daily study of Science and Health and the Scriptures. . . . I wake nights, thinking of this beautiful religion and its benefits. I think of it all the time, and carry Science and Health with me daily. . . .

Let me thank you again, and let me tell you that I hold the warmest place in my heart for you. You, speaking the truth, have added years to my life,—years of brightness,—and together we can walk in the paths of righteousness to the glory of God.

Affectionately in truth and love,

S. FORD.

AMONG THE CHURCHES.

MILWAUKEE, WIS.

A building permit was issued yesterday for First Church of Christ, Scientist, at the southwest corner of Prospect Avenue and Keene Street. The cost of the new church will be seventy-five thousand dollars.—*Milwaukee Sentinel.*

NEWARK, N. J.

The Boards of Trustees of First and Second Churches of Christ, Scientist, of this city, in obedience to divine Principle and Love, as revealed to us through our honored Leader, Rev. Mary Baker G. Eddy, and acting for the good of the Cause of Christian Science in Newark, have taken action resulting in the union of the two organizations. In accordance with the legal requirements Second Church has been officially dissolved and the members thereof have been received as members of First Church.

Correspondence.

NEW ALBANY, IND.

The purchase of the First National Bank Building, at Bank and Main Streets, New Albany, was closed yesterday [April 22], and the congregation of First Church of Christ, Scientist, in that city, is now owner of the fine old building. The congregation will take possession at once, and as soon as the interior is slightly remodeled and pews installed, regular services will be held. In a few days the Reading Room connected with the church will be installed in the directors' room of the building. With slight changes the building will be admirably suited for a house of worship. The building was erected over sixty years ago, and was one of the five branches of the State Bank of Indiana.

Louisville (Ky.) *Courier Journal.*

NEW BRITAIN, CONN.

The new chapel of First Church of Christ, Scientist, is nearly ready for occupancy and will be used for services in a few weeks. The chapel has been built on a lot at the corner of West Main Street and Park Place. It is a sightly spot within a few minutes' walk from the center of the city. The chapel is built of wood, and contains a pleasant auditorium, which will seat three hundred and fifty, with a Reading Room and Sunday School room opening from the wings. These rooms can be thrown open so as to form a portion of the auditorium, giving it a seating capacity of four hundred and twenty-five. The chapel and grounds represent an expenditure of about fifteen thousand dollars. The Christian Science movement is recent in New Britain. They first organized as a society, and last November formed a church with forty charter members, and now have a congregation of about eighty.

The Hartford (Ct.) *Courant.*

TESTIMONIES OF HEALING.

Most gladly and gratefully I pass on this little word of hope. Over four and a half years ago, when almost a constant invalid, Mrs. Eddy's remarkable book, "Science and Health with Key to the Scriptures," was lovingly brought to my notice, and I somewhat doubtingly began its study. Hitherto, acting under medical advice, I had tried many modes of treatment at home and abroad, but none brought me release from the nervous or rheumatic trouble from which I was said to be suffering. Kindness, skill, and many prayers had been equally unavailing; yet, with the first dawn of Truth on my awakened thought, I was released from the old bondage. Since the red-letter day on which I began to read Science and Health I have not spent one day on a bed of pain, where for ten years previous much of my time had been passed. Mineral baths, electricity, massage, hot air, and countless medicines at once passed out of my life. I had begun to learn that "the might of omnipotent Spirit shares not its strength with matter" (Science and Health, p. 194).

The work thus begun goes on. In the gradual uplifting of thoughts, motives, and desires, in wonderful spiritual and mental enlightenment and many physical benefits, I have proof beyond all doubt of the holiness of the ground on which I stand. Christian Science alone taught me how to avail myself of God, as the one ever-present healer of sickness as well as of sin. I always believed that the weapons of our warfare were spiritual, but I never knew before how to wield them effectually. Our text-book, that immortal message of Truth and Love, has thrown such a flood of spiritual light upon the Scriptures that through their joint study every problem of human existence is at last being solved. Truly I have great cause for gratitude to our dear Leader, through whose loving self-sacrifice, under divine Love, I have touched the hem of the seamless robe of the healing, eternal Christ.

EDITH S. GRANT, St. Saviour's, Jersey, Channel Isles.

In 1862 I suffered severely by reason of sunstroke, and for the next twenty years my health was greatly impaired. In 1882 symptoms appeared which seemed to indicate a severe lesion of the brain. It took three years to bring about this condition, which was accompanied by intense suffering and great weakness, and I was almost helpless all of that time. The terrible suffering continued for more than twelve years, despite all that *materia medica* attempted on my behalf. I was under the care of ten different doctors, and consulted twice as many more, their diagnoses differing widely. Being a physician myself, I tried the best reputed remedies in the whole world. My house has been the home of many ministers, and many eminent men have prayed for my healing, one of whom is now a bishop. I prayed for help till I could pray no longer, and in my awful anguish I would repeat, "O God! O God!" until my good wife would lovingly chide me for taking His name in vain.

The more we prayed, and the more medicine I took, the worse I seemed to suffer. I am not criticising those who prayed for me,—they meant well,—but I was not healed. The frequent paroxysms of pain could only be alleviated by hypodermic injections of morphine, but I could neither eat, sleep, nor have any visceral action while under its influence. Finally morphine failed to give even temporary relief, and all hope fled; I saw nothing but suffering before me till I died. I had to give up my practice; I could not read or write; I was confined to my room and bed, not able to dress myself, from six to ten months out of the twelve, during all those years. In time other complications arose, until I was indeed sorely afflicted. When I had about exhausted *materia medica*, a preacher advised me to take treatment of a Spiritualist medium. While giving her a history of my case she lost consciousness and began an incoherent muttering, and Isaiah's words concerning the wizards that "peep and mutter" came to me then. This will show to what an extremity I was driven in my efforts to find even a hope of relief, but this mediumship did me no good.

When I at length turned to Christian Science, the trouble in my head was healed instantly, but all my fears were not overcome. I slept eleven hours the first night after taking Christian Science treatment, and arose the next morning and dressed myself, a thing I had not been able to do for ten months. I had been taught to believe that when one has been sick a long time he must be a long time recuperating. I believed the lie, and had to suffer the penalty of that belief. I procured a copy of Science and Health and began reading it. I was soon able to read by the hour, and I grew stronger all the time. At the end of seven weeks I was able to dismiss the practitioner, having gained from our text-book sufficient understanding to conduct my own case. I was healed in 1893, and barring a few slight attacks soon after, I have now for over twelve years enjoyed perfect health. I am sixty-six years old, but when I recall forty-five years of my life, I am young again. When about fourteen years old I had an attack of lung trouble which left a condition that for forty years troubled me at times, but since my healing in Christian Science it has entirely disappeared. I was raised in an orthodox church, and at the age of thirty became a member, but the concept of God which I there gained could not and did not heal me. I consider my physical healing the least part of what I have received in Christian Science. The spiritual uplift more than compensates and rewards me for the suffering I have endured.—DR. E. N. TULL, Fairland, Ind.

I have often felt a desire to tell the Field of the proofs I have had during the past seven years of God's willingness and power to help in every time of need, but they have been so many and so wonderful that I have not known where to begin, for time and space would not permit me to tell all. I was in delicate health from childhood, being a constant sufferer from spinal trouble, supposedly caused by a fall. Until I was eighteen there were very few months which were not spent partly in bed, under the doctor's care, or taking medicine of some kind. At the age of eighteen I was cured of the spinal trouble through faith and prayer. This one devil was driven out and the house swept and garnished; but not being filled with the understanding which makes and keeps us free, there came in many other evils, worse than the first, and during the next twelve years I suffered more than ever before.

For many weeks at a time I suffered greatly from complicated conditions, and on one occasion a doctor kept me under the influence of morphine for ten weeks, saying it was all that could be done for me. For seventeen weeks at another time I was not able to stand on my feet, but through it all I constantly held to the one ray of light I had had, that God is able to heal. It seemed that every attack of illness left me in a worse condition than it found me, until I began to feel that it would soon end my life, and I sometimes hoped it might do so. I would not bring back to memory all those years of suffering but to contrast them with the seven years of freedom I have enjoyed since I began reading "Science and Health with Key to the Scriptures" by Mrs. Eddy.

In the spring of 1898 my sister, who had been a great sufferer from kidney and bladder trouble for four years,

Digitized by Google

was healed by Christian Science in a very few weeks. She bought a copy of Science and Health and of "Miscellaneous Writings" by Mrs. Eddy, and offered to lend me Science and Health while she read the other. Having been brought up by Christian parents, I had always been taught that God was a prayer-hearing and prayer-answering God, and I was hungering and thirsting for more understanding of the power of God that saves to the uttermost. I had read only a few pages of Science and Health when I discovered that it contained a revelation of "God with us" such as I had never known of before. Oh, how eagerly I read it! I forgot self and all my surroundings. I read every moment I could get, night and day. At that time we were living at Attica, N. Y., and as I knew nothing of any other literature on Christian Science, I read and reread Science and Health, and it was nearly a year before I even saw a Christian Scientist or had any help excepting from the book. After a few months I began to notice how strong and well I felt, and when I remembered how long it had been since I had had a sick spell I was astonished. I have not spent one day in bed since,—nearly seven years and a half. With a desire to "prove all things," and "hold fast that which is good," I read some other books and papers on mental healing, but I soon found that I could not continue this kind of reading and follow the admonition of the last part of the verse. I found that Mrs. Eddy's teaching contained the truth, the whole truth, and nothing but the truth, and I felt that I did not want to partake of the knowledge of good and evil, so I have confined my religious reading entirely to the Bible and the works of our Leader.

After having been so wonderfully delivered from the bondage of suffering and mental darkness, is it any wonder that my greatest desire was to spread this truth and be used of God in helping others. I have had the great pleasure of seeing many homes and lives made brighter, purer, and healthier, by the coming of Christian Science. Words are inadequate to express my love and gratitude to Mrs. Eddy, and to all the faithful workers for the advancement of God's kingdom on earth.

MRS. JULIA E. RICHMOND, Austin, Pa.

In September, 1896, my youngest child, then about nine months old, was stricken with a very severe attack of lung trouble. I did not know much about Christian Science at the time, although my wife had been healed of several diseases of long standing through its agency. We called in our family physician, who said it was a very serious case. He prescribed some medicine, which I was to put up, as I had been in the drug business about twelve years; but before giving the medicine my wife wanted to telephone to the Christian Science practitioner who had helped her. I consented, then took up the baby, who seemed in a very serious condition. In a very few minutes after my wife had telephoned the practitioner, the child was breathing freely; but in a few hours the same trouble appeared in a worse form. We called the practitioner and in a very short time the baby was entirely healed without the use of material means, and with no recurrence of the trouble. About two years later this same child tripped and fell, and a piece of an orange peel which she had in her mouth lodged in her throat. After my wife had tried every physical means to remove the obstruction, but without avail, she carried the child to a neighboring house, where this same practitioner was visiting a patient. I was called at the same time, and when I reached there the child looked to the senses to be lifeless, but through the application of Christian Science she was in a short time restored, the peel being removed without any material effort. She is now in the best of health.—F. W. FRANZ, Sioux City, Ia.

Christian Science has proved to me, as it has to many others, the reality of God, good, and the unreality of sin and disease, by the healing of disease and destruction of sin. Through the understanding of this truth I was healed not only of serious abdominal trouble, but of many other ills. I found in Christian Science that there is no pleasure in sin, that God is the Comforter, and that He does supply our needs. As I began to realize man's God-given dominion, the way grew brighter with the closing of each day. No pen can express my gratitude for what Christian Science has done and is doing daily for me. I am deeply grateful to our dear Leader for this blessed truth.

ROLLO L. WRIGHT, Chicago, Ill.

When I first heard of Christian Science, three years ago, it seemed more than I should ever understand; but with the knowledge gained I have been able to make several good demonstrations, one over an ailment which seemed as if it would be a bad case, but which was instantly healed. Before knowing of Christian Science I found it very difficult to live with so little coming in and so many to keep, but now my wants are always supplied. I had a beautiful experience of the healing power of Christian Science when my last baby was born. I was quite alone, but I had no fear, for "perfect love casteth out fear." I was able to sit up and be about my work in a week; feeling none the worse after the experience. I feel very grateful to God for the many blessings I have received. My thanks are also due to Mrs. Eddy, who brought us to know more of God's loving and watchful care for us.—MRS. HARTUP, Bedford, England.

Probably ninety per cent of our Christian Science literature falls into the hands of those who as yet know little of this new-old healing truth. From the time I was fifteen until I was nearly thirty, I proved to the entire satisfaction of all, especially the medical faculty, the truth of Mrs. Eddy's statement that sickness is the result of sin. I became interested in Christian Science about four years ago, through a young man who saw that I was in need of "a cup of cold water" and who was not afraid to give it to me. I sent home for my Bible, and found the marker in Hebrews, where I had stopped reading a daily chapter nearly fifteen years before, although I had been a constant church-goer and took more or less interest in missions.

I am an engineer and have been out of employment on several occasions. At one such time I read Science and Health almost all day for several weeks, as I had nothing else to do and had not read the book before. One evening, as I was sitting at a hotel table, a telegram was telephoned to me from an entirely unknown quarter; and on three occasions since then, work has turned up for me almost as soon as it was convenient to accept it. I have been entirely healed of catarrhal trouble for which I had tried many remedies, but the principal things that I have been helped to overcome are the thoughts and faults that I then did not know were the cause of my sicknesses. I was plainly in need of a cup of cold water, but the young man who had the courage to give it to me would never have done so had not Mrs. Eddy had the courage to say that sickness is the result of sin. I have not taken any medicine in the past three years, and although my healing has been slow I am learning that health comes as we cease sinning.

REGINALD B. EVANS, Toronto, Canada.

I am glad to tell what Christian Science has done for me. It came to me after three years of suffering from a rheumatic trouble that was almost more than I could bear. The condition was pronounced incurable by two of our best physicians, and a number of others who were consulted concerning the case. One physician told my father there was no known remedy for the disease. The joints in both hands and feet were very much deformed. I was obliged to wear felt shoes, and I could walk but very little, as my feet were terribly swollen. What I endured could never be told. Everything was tried, and no expense spared; still I grew worse. It was in this condition two years ago last April that I accepted help from Christian Science. My mother became interested, having seen a case of healing a number of years ago, and she had hopes that I might receive help. The rest of the family bitterly opposed it. My mother met the expense of three weeks' treatment, and this helped me wonderfully. Since that time I have studied the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and have never been obliged to ask for help. I am now helping my husband in his photographic studio. We walk twelve blocks every morning and night. I wear a heavy-soled street shoe, and can remove a ring from my finger that we expected would have to be filed off. Not only am I free from suffering, but my joints are gradually becoming their natural size. I am out in all kinds of weather, and it does not affect me in the least. I owe my life to this wonderful truth that Mrs. Eddy has given us, and for it all I am very grateful.

MRS. GRACE E. BECKER, Flint, Mich.

For seven years after the birth of my son, from April, 1891, till January, 1898, I was continuously under the care of our family physician, with only temporary relief, and was gradually growing worse, till consultation with noted specialists decided me to try for a cure by means of surgery. The conditions were such that the physicians stated it was remarkable that I could walk at all, and the suffering had so affected the nervous system that insanity was feared. There was serious bowel trouble, and the heart action was very irregular. At the time of the operation the surgeons found conditions that were most distressing, and some of these continued the same as before the operation, the suffering at times being intense. This state of affairs continued till I began to read the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I soon began to realize that a change for the better was taking place, and one day, after about three months of reading this book and without any treatment, I suddenly became conscious that in the side of the body which had been constantly in pain, something seemed to break away, and then what surgery had failed to do, the truth did for me. My healing of all these troubles was then complete, including the laying aside of glasses; and it has so continued, now more than four years.

LOURAINE R. TAYLOR, Logansport, Ind.

Christian Science has blessed me in so many ways that I feel I must express my gratitude to the Field. One year ago last May I went to one of the best oculists in Hornellsville, N. Y., to get some new glasses fitted to my eyes. He made a thorough examination, and said that there was no use trying to fit the left eye as it was in a very serious condition; that the other was also affected, but that he could fit a glass to that eye so I could see for a while, and was sorry to say that I was liable to be blind in a short time. But, thanks be to God, help was close at hand. I went direct from his office to see a Christian Scientist, who took my case at once. In three weeks I could see to read and sew, and I could read without glasses where before I could not distinguish one letter from another, the letters looking like straight black lines. I was also healed at the same time of a deformity which had developed when I was three years old. At that time I had a severe illness, and there was no physical growth for a year afterward; then the growth was not normal, one limb being two and a half inches smaller around than the other. Then, after fifty-seven years of such a condition, Christian Science healed me. When I made the discovery that the demonstration was made, that my limbs, feet, and hands were of the same length, and that the shrunken limb had developed to equal size with the other, it seemed as if I were standing in God's very presence, and I feel that I can never be grateful enough to God, and to dear Mrs. Eddy, our Leader and the Discoverer of this truth.

MISS MARY A. FOSTER, Bath, N. Y.

It gives me great pleasure to testify in behalf of the truth, when I think of the many benefits I have received through Christian Science, both mental and physical. My heart overflows with gratitude to God, and to our dear Leader, who has made the way so clear to one who was far from the truth. For fifteen years I was a great sufferer from rheumatic trouble, employing eminent physicians both in this country and abroad, spending many thousands of dollars and never receiving any benefit, and with no encouragement of relief from pain, but that I must expect to be a cripple. About seven years ago I had a fall, which resulted in serious injury to the hip and ankle. When I arose from my bed I found the right leg was considerably shorter than the other. I was obliged to walk on a shoe having a sole four and three quarters inches high, and also used crutches for some six years. My sufferings at times were almost unbearable. It was impossible for me to lie down, and what little sleep I had was taken in a very uncomfortable position.

Since I accepted Christian Science, all is changed. I am no longer on crutches; I have laid aside my high shoe, and am walking on my feet with slight difficulty. Each day brings its own improvement, for which I am very thankful, particularly as I had been told by so many physicians that I could never walk again. Sometimes, when thinking over the wonderful change wrought in my case,—all through Christian Science,—I feel I should like to be able to proclaim its truth to all who are in distress, whether bodily or mental, to let them know and feel the nearness of God, who is the only healer of our sorrows and diseases.

SARAH JANE KELLEY, Brooklyn, N. Y.

In loving gratitude for the many blessings which Christian Science has brought into my life, I write this testimony. I cannot remember when I was not taking some kind of a remedy for some kind of a disease, up to the time I took my first treatment from a Christian Science practitioner, which is over eleven years ago. Since then I have taken nothing, not even a drink of hot water, as a remedy. I had become convinced that material remedies were useless in my case, which rendered me more fit to receive something "better, higher, holier" (Science and Health, p. 258), something which, besides giving me a God I could understand, has healed all my diseases. My mother relates that when I was an infant our home was burned to the ground one cold night in winter. She says I caught a cold that night which the combined efforts of the best doctors and the grandmas of the neighborhood could not cure. She also declares that thereafter the only season of the year when I was free from a cold was during the hot months. This I know, I coughed from my earliest recollections.

When I was about fourteen years old she became alarmed at my condition and took me to an eminent physician in

Digitized by Google

Boston. After making a thorough examination he remarked that if he had been consulted when I was a child he might have cured me, as it was he could only prescribe something to relieve me when coughing violently. This prescription, which he handed my mother with many warnings, proved to be chloroform. Notwithstanding the fact that I was bundled in flannels the greater part of the time, and always doctoring, I continued to catch cold and to cough. It was not for this trouble, however, that I sought healing through Christian Science. The victim of an accident, I was brought very near to death's door, recovering only sufficiently to feel that death would have been preferable to such a state of existence. Nervous and spinal disease with a severe form of stomach trouble were just a few of the diseases from which I suffered.

The understanding gained through the study of the Christian Science text-book, in connection with the Bible, has made it possible for me to realize to such an extent what Jesus meant when he said, "Is not the life more than meat?" and "Nothing shall by any means hurt you," that I can eat anything that is set before me. I never asked help from a practitioner for relief from colds, feeling confident that this with other troubles would be overcome as I learned more of divine Truth. It was not overcome at once; some might call it slow to yield—but to me that phrase "slow healing" seems absurd when spoken of in connection with a malady which the doctors have pronounced incurable, and I am surely learning that just as soon as I am "ready for the blessing" (Science and Health, p. 570), I receive it. One lovely spring morning I awakened to the realization that I had not had a cold nor coughed all winter, and I believe I had been exposed to the cold more that winter than in all my life previous to this. Since that time, if such a suggestion comes to me, I think of what Mrs. Eddy tells us in Science and Health, p. 384, beginning with line 16, regarding "symptoms," and when I read her conclusion, "If you are a Christian Scientist, such symptoms are not apt to follow exposure," I ask myself, "Where art thou?" and a little time consecrated to God causes the unwelcome guest to depart. But the physical healing is the very least part of what I have to rejoice over, for whereas my body was always before my thought, it is now the farthest removed, while my time is occupied with trying to live aright, and to live aright we must think aright.

Am I grateful? None but those who have been bound by the fetters of disease and sin as I have been can ever know how grateful. Grateful first to God and next to that loving watchful guide who has made the way so plain that none who wish to walk therein need stumble or fall.

ANNA CHAMBERS SUNDERMAN, Port Huron, Mich.

It will soon be six years since I first heard of Christian Science. At that time, having just recovered from a long and serious illness, I felt very ready and willing to accept this "new" teaching. The Principle was manifested to me in one happy experience after another, and I imagined at that time that my task was accomplished. I soon learned, however, that this was not the case, for all kinds of temptations came to prove me. Broken commands, sinful thoughts,—although not put into action,—hindered my progress. Selfishness, envy, and dissatisfaction still held me in bondage, so much so that I often got discouraged when I saw I had not yet mastered them; then Christian Science taught me that without the actual repentance there is no atonement with God. About a year ago I found out that my knowledge of Christian Science had been simply "patchwork," and that I had much work to do before becoming a real Christian Scientist. Later I felt a great change come over me. My thoughts were freer and purer, and through a deep and earnest study of the Bible, our text-book, the Lesson-Sermons, and other Christian Science literature, the darkness was dispelled by discernment of the truth that makes us free. Besides this I have to express my gratitude for several financial benefits. I am deeply grateful to God, and to Mrs. Eddy for all the good that has come to me through Christian Science.

ULRICH FREY, Zurich, Switzerland.

My heart goes out in unspeakable gratitude to God for His great gift to us, through our beloved and revered Leader, Mrs. Eddy, whose inspired thought, inscribed in our text-book, "Science and Health with Key to the Scriptures," has indeed unlocked the treasures of the kingdom of heaven within us. I am glad to add my testimony to the many cases of impersonal healing effected by the power of God manifest in our services. Nearly eight years ago I was entirely and permanently cured, while attending for the first time the Sunday morning service at First Church of Christ, Scientist, New York, of a condition which had made me a cripple for three years. I had been injured in a street car, and being at the time a medical student, had the best medical and surgical care. At the end of the three years I was suffering from chronic sciatic trouble, and was said to have incipient hip disease. I could not bear my weight on my left leg without great pain, and my nervous system—according to the physicians—was badly shattered. All these conditions were entirely removed by the power of divine Love, reflected at that memorable service, and I went out of the church perfectly free from the disease. During these eight years I have had many opportunities of proving the truth of the divine Principle taught us in Christian Science, and I have never known the truth to fail when honestly and persistently applied.

I am especially grateful for the method of mental diagnosis, which has enabled me to see that self-love, self-righteousness, and all the other fruits of the carnal mind in one's own consciousness are the producing cause of "the ills to which flesh is heir," and I am again grateful to Mrs. Eddy for showing us the way out of this bondage into the land of peace, where we realize in our daily living the beauty of holiness.

MRS. NELLIE WELLES PROBST, New York, N. Y.

In the year 1897 I suffered from an internal injury caused by over-exercise. I was treated by one of the best physicians of this city for three months, but he told me there was no help for me except through an operation. As I had great fear of the operation, I would not submit to it, but applied to a practitioner of this city for Christian Science treatment. My healing was "slow but sure." At the end of one year I realized perfect health. It is now nine years since I was healed, and during this time I have relied wholly upon God. I feel very thankful for Christian Science.—MISS ELIZABETH F. DAVIES, Rochester, N. Y.

[Written for the *Sentinel*.]

THE UPWARD LOOK.

"JAC" LOWELL.

LIFT up thine eyes!
The act alone will give thee strength
To brave the trying grief-time's length,
To meet thy woes,
To find a peace 'mid worldly strife,
And win the race of human life,
In spite of foes!

A world within the action lies,—
Lift up thine eyes!

FROM OUR EXCHANGES.

[*The Congregationalist.*]

The ferment in England over Rev. R. J. Campbell's championship of the new theology and the eagerness with which the matured expression of his opinions through his just published book has been awaited on both sides the Atlantic, reveal something far deeper than a sensational and transient interest in a conspicuous individual who has become the target for much criticism. Influential and picturesque as Mr. Campbell's figure before the eyes of the world just now is, he could not have made theology a theme of general discussion among all classes and in all sorts of publications, were there not a movement of the public mind toward the things of the Spirit. And when the smoke of controversy has cleared away, it may be seen that the greatest service Mr. Campbell has rendered the Church has been the stimulation of this already latent interest in Christian truth. He has undertaken to map out a positive and orderly system of thought. He may be greatly in error in some of his premises and conclusions; but he has sought to state his views in definite terms, and unquestionably has influenced that increasing number of persons in the community who want to know just where a Christian preacher and teacher stands, and who also want a surer footing for themselves.

[*The New York Observer.*]

The Lord Christ is with men to-day. He has gone from earth, and yet he is here. Jesus of Nazareth passeth by as truly as he once did among the Galilean highways. He is still accosting men alike in their sin and their godliness—he has a look, a scrutiny, and an offering for men of all classes and conditions. As he stopped to open the eyes of a blind man or to cleanse the lepers in Judea, so now he waits to be gracious to modern men who, though they think they see, are yet blind, and though they pretend to know are dead in the corruption of sin. The truth to be preached to men to-day is that Jesus is near —that he has a question for every conscience, and knocks at the door of every heart. We must preach a present Christ, or we have no Christ at all to preach.

[Prof. C. S. Nash, D.D., in the *Hartford* (Conn.) *Seminary Record.*]

There are limits to the changes of opinion which the churches can allow in their schools. They must, indeed, stop forbidding their teachers to follow the light. They must learn to welcome all new truth and applaud its discoverers. They must cease to fear. They must exchange creed tests for tests of life and efficiency. They must give all pioneers time to substantiate their discoveries. They must so hold the practical aim of producing the denominational ministry as to make their teachers feel unfettered.

[J. Wolfenden, in *The Standard.*]

There is to-day [in England] a more diligent search after the grand elements of faith than there has been for many a long day, because of the dogmatism of what is called the "new theology." Men may heap hard epithets upon the pastor of the city temple, but I am sure his deliverances are being used by God to produce clear discrimination between real faith in Jesus Christ and much of empty pretension and formalism.

[*The Universalist Leader.*]

That is the finest enthusiasm which shines forth out of a soul without noise or fury, speaking its word temperately, doing its work heroically, serene in its satisfaction, never striving to be heard but always intent on faithfulness to the cause it loves.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science.

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

MISCELLANEOUS PUBLICATIONS

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. Single copy, 20 cents; twelve copies to one address, $1.75.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

COMMUNION HYMN. "Saw ye my Saviour?" The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Published in two keys, G and E, for high and low voice. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy; $9.00 per dozen.

CHRIST MY REFUGE. A hymn for voice and piano, with suggestions for organ registration. The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Arrangement for high and low voice in same copy. Price, 75 cents; $7.00 per dozen.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents: a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Printed from new plates and containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75
Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration will be found on the wrapper. No other notice will be given.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

In all other countries, six cents per copy, postpaid to any address; twenty-five copies, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Postmaster General Meyer announces that he is considering the advisability of extending the "sea post offices" on at least two more of the transatlantic steamship lines. This branch of the postal service has already been established on the White Star, Hamburg-American, and North German Lloyd lines and the experiment has proved satisfactory. Mail sent from the United States to foreign countries and mail coming from Europe to this country reaches its final destination about twelve hours earlier than under the old system, as it is assorted on board the steamers and is ready to be turned over to the carriers for distribution when the steamers reach port. The lines on which the additional post offices will be established probably will be the Cunard line and the General Transatlantique Transportation Company.

Pursuant to an act of the last session of Congress, Postmaster General Meyer has issued an order that on and after July 1 next, if there is attached to any letter or package of mail matter ten cents worth of stamps of any denomination, with the words "special delivery" written or printed on the envelope or covering, in addition to the postage required for ordinary delivery, such article will be handled as if it bore a regulation special delivery stamp.

The recent decision of Judge Artman of Indiana, in which he declared that the business of selling intoxicating liquors is *per se* a nuisance and an offense under the statutes, has made that official famous. This decision has called out editorial comment here and abroad and appears to have touched a popular chord. If it holds in the final courts, this Indiana judge has fame for all time to come.

Princeton has received a gift of $1,200,000 from an unannounced donor. It is understood that $600,000 will be utilized for the erection of physical science laboratories,—$400,000 for the erection and $200,000 for their maintenance,—and the balance of the gift will be used for the erection of geological and biological museums and laboratories.

The Return Postage Association of New York City has been incorporated to advocate the institution by the Government of a system of return postage.

Foreign.

The long standing controversies between the United States and Turkey, growing out of discriminations against American schools and American importers, and the restriction against American cottonseed oil, have been apparently settled after many years of negotiation. Official advices state that the Sublime Porte, sanctioned by an irade of the Sultan, has finally agreed to grant the rights so long contended for by the State Department.

The Master Builders' Association of Berlin, Germany, and its suburbs, has decided unanimously to lock out all masons and bricklayers assisting building workmen on May 18. Over one hundred thousand men are affected by this decision. This proposed strike arises from the demand of the men for an eight instead of a nine-hour day.

Owing to continued unrest among the Hindus of India, the Government has placed certain areas of Eastern Bengal and Assam, as well as the Punjab, under special regulations.

Three or four years ago the Pekin Government gave orders to all the provinces that in future the census must be carefully taken every year. Incomplete returns indicate that the population must be well over 400,000,000.

The Council of the Empire, of the Russian Upper House of Parliament, on the 15th inst. rejected the bill of the Lower House abolishing trials by drum-head court-martial, which was passed by the latter body April 30.

There is some expectation that the question of the annexation of the Congo Independent State to Belgium will come up in the Chamber of Deputies very soon.

Industrial and Commercial.

The country as a whole is consuming every year between three and four times more wood than all of the forests of the United States grow in the meantime. Since 1880 more than 700,000,000,000 feet of timber have been cut for lumber alone, including 80,000,000,000 feet of coniferous timber in excess of the total coniferous stumpage estimate of the census of 1880. Unless steps are promptly taken to prevent waste in use and to increase the growth rate of every acre of forest in the United States, the result must be a timber famine. This country, says Circular 97 of the Forest Service, is to-day in the same position with regard to forest resources as was Germany one hundred and fifty years ago. During this period of one hundred and fifty years such German States as Saxony and Prussia, particularly the latter, have applied a policy of Government control and regulation which has immensely increased the productivity of their forests. At present but one-fifth of the total forest area of the United States is embraced in national forests. The remaining four-fifths have already passed or are most likely to pass into private hands.

The use of California Coast redwood is now about one and a half per cent of the total consumption of lumber. It is estimated that the forests of California have about 75,000,000,000 feet of standing redwood timber and the wise use of these products by conservative lumbering will in a degree make up for the greatly lessened supply of other useful woods. The Redwood Association has recently requested the Forest Service of the United States Department of Agriculture to make a complete study of the physical and mechanical properties of this lumber in order to obtain reliable information concerning its properties. The Forest Service has decided to comply with this request. Redwood timber for a long time has had extensive use in California, but not until recently has it entered the Eastern markets.

The San Francisco conflagration of April, 1906, swept away not only every dollar of profit previously made by the insurance companies out of underwriting since 1860, but cost them $79,708,174 besides, according to a statement made by President George W. Burchell of the National Board of Underwriters, at the annual meeting recently held in New York. Carefully compiled figures showed the total property loss by the catastrophe to have been in round numbers $350,000,000. The underwriting balance sheet for the year 1906, marine and fire branches together, showed a loss of over $114,000,000.

The Adriatic, newest and greatest of the White Star liners, arrived at New York on her maiden voyage from Liverpool last week, making the voyage of 2,890 miles at an average speed of 17.02 knots. She is 725 feet 9 inches long, 75 feet 6 inches beam, and about 50 feet deep; her gross tonnage is about 25,000, and her displacement exceeds 40,000 tons. She has nine steel decks, with accommodations for 3,000 passengers, besides officers, engineers, and crew, amounting to about 350.

According to advices from the leading cotton mill centers of southern New England fully eighty-five thousand operatives will have their wages advanced about ten per cent, beginning May 27.

It is reported that the Cunard Steamship Company is about to order the construction of two steamers equal in size to the new Adriatic of the White Star Line, and fitted with turbine engines.

Twenty-three ostriches were recently shipped from Phœnix, Ariz., to Havana, where an ostrich farm is to be established.

General.

Murderous millinery is what a writer in *Littell's* calls the decoration of women's hats with the spoils of the bird hunters, and an appalling array of figures, says an exchange, shows something of the extent of the sacrifice of bird-life which the city of London alone demands, the feathers of one hundred and fifty thousand herons and egrets and forty thousands birds of paradise being sold last year. All for what? Not for food or warmth, comfort or welfare, but just a gratification of vanity. And it could all be stopped in one season, and in a few seasons the forests could be again filled with beauty and song, if only the women, tender-hearted, sympathetic women, would say the word. But they will not. They do not see the flutter of the bird, nor hear the cry of pain; all that is in the depths of the forest. They only see the grace and delicacy of ornament which no cunning of man can imitate, and covet it as a personal decoration. Who can awaken the sensitiveness of woman?

The total bonded debt of the United States, says the *New Broadway Magazine*, is only $925,000,000, and that of New York city is already more than half that of the National Government. At the present rate of increase the metropolis will have the larger indebtedness in five years. The total debts of all the States of the Union amount only to $234,314,190, less than half that of the single city of New York. The total State, county, and city indebtedness of the entire United States is less than three times that of New York.

That the paper collar is still popular was proved recently, when a Massachusetts paper company received a shipment of eight tons of button-holes, as the little pieces of paper which come from the button-hole punches in the collars are called. These "button-holes" are used in the manufacture of certain grades of tissue paper.

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

AFFIDAVITS FILED IN CONCORD.

THE following affidavits were filed in the Superior Court at Concord on May 17 and 18. They relate to and are in support of the motion of the Trustees to intervene and become plaintiffs in the proceedings begun in that Court by the so-called "next friends."

STATE OF NEW HAMPSHIRE.

Merrimack, ss.

In the Suit Entitled Eddy vs. Frye et als.

(Motion of the Trustees for Leave to Intervene and Become Plaintiffs.)

STATEMENT OF HARVEY CHASE & COMPANY, ACCOUNTANTS, MADE BY HARVEY S. CHASE, SENIOR MEMBER OF SAID FIRM.

I, Harvey S. Chase, doing business as an expert accountant at 27 State Street, Boston, Mass., and elsewhere, and residing in the city of Newton, Mass., say:—

That I am the senior member of the firm of Harvey Chase & Company, Public Accountants and Auditors, with principal offices at 27 State Street, Boston, Mass.

I have been engaged in the practice of public accounting and auditing in Boston and vicinity for ten years or more, and during that time have made examinations and reports upon the books and accounts of a number of hundred corporations, firms, banks, etc., including many municipalities and States; such as the City of Boston accounts, State of Massachusetts accounts, State of Ohio Municipal Accounting Bureau accounts, Boston Consolidated Gas Company, New England Telephone and Telegraph Company, etc., etc. I am a member of the Board of Trustees of the American Association of Public Accountants, which is the national body of expert accountants, and during the year 1906–7 was president of the Incorporated Public Accountants of Massachusetts. I am also a "Certified Public Accountant" under the laws of the State of Rhode Island.

My firm has been engaged by Henry M. Baker, Archibald McLellan, and Josiah E. Fernald (Trustees under a trust deed from Mary Baker G. Eddy, dated March 6, 1907) to examine Mrs. Eddy's books of account covering a series of years. We have been engaged for some weeks past upon this work and are still engaged upon it.

The books and papers delivered to us for this examination were as follows: Cash books running from May 16, 1887, to March 6, 1907; bond ledgers running from Feb. 18, 1898, to March 6, 1907; check-book stubs or checks running from 1900 to 1907; reports from publishers running from March 10, 1893, to March, 1907, together with various other miscellaneous books, statements, reports, papers, etc., etc. The examination which we have thus far made covers the books and accounts from March 10, 1893, to March 6, 1907. We divide this into two periods, namely, (1) March 10, 1893, to Jan. 1, 1899, and (2) Jan. 1, 1899, to March 6, 1907.

Early in 1898 Mr. Fred N. Ladd, treasurer of the Loan and Trust Savings Bank, was employed by Mrs. Eddy to audit her books and accounts as kept by Calvin A. Frye, and on Jan. 30, 1899, Mr. Ladd made a report to Mrs. Eddy (a copy of which was exhibited to us), stating that he had examined all the bonds in the safety deposit boxes of Mrs. Eddy at the First National Bank of Concord, and found a total of $236,200, par value, and that $100,000 of these were in trust for the building fund of the Christian Science church in Concord. We found no statement of Mrs. Eddy's total possessions prior to this date, but we were informed that when her securities were brought from Boston and placed in the safety deposit boxes of the First National Bank in Concord, on March 10, 1893, they then amounted to $100,000.

The statement of the auditor in January, 1899 (verified by our examination of the books), that the total bonds amounted to $236,200 ($136,200 of her own personally, and $100,000 previously donated by her and held in trust for the Christian Science church building in Concord) established a starting-point, from which we proceeded to verify subsequent transactions down to March 6, 1907, and working backward from the same date we also verified the prior transactions back to March 10, 1893, the date of the transfer of the securities to Concord.

We find from these books and accounts that, aside from the real estate, and a promissory note amounting on March 6, 1907, to $50,000 and some interest, Mrs. Eddy's securities consisted entirely of United States, State, city (including the State of New Hampshire and City of Concord), municipal, and other bonds, and that during these years from 1893 to 1907 she owned no shares of stock in corporations. Her property on March 6, 1907, consisted of bonds of the character described, the $50,000 promissory note, three savings bank books with total deposits amounting to $8,614.64, balances in national banks, together with cash on hand and cash items, all of which were turned over to the Trustees.

We find also that Mr. Frye kept Mrs. Eddy's books and accounts from March 10, 1893, until March 6, 1907. He had also kept the books for some years previous to 1893.

We further find from the books and accounts that Mrs. Eddy's income since March 10, 1893, has been derived almost entirely from the monthly remittances of her publishers, from interest on her bond investments, and from the rents of her Commonwealth Avenue houses. Receipts from other sources than these were relatively small in amount.

First Period—March 10, 1893, to Jan. 1, 1899.

During this period all the purchases and sales of bonds were not recorded upon the cash book, some bonds having been paid for by Mrs. Eddy through checks which were not reported to Mr. Frye, or at least were not recorded by

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

him in the cash books. Mrs. Eddy's check books and checks prior to 1899 are no longer extant, and therefore the purchase and sale of additional bonds during this period cannot now be verified directly from the record of the transactions in her books. The total of the bonds purchased and entered in the cash books amounts to $112,000 (par value) during this period.

From the cash book record of coupons collected, and from other data, we have been able to establish the fact that $72,400 of additional bonds (par value) were purchased during this period, and that $48,300 of bonds matured or were sold, with the result that there must have been on hand March 10, 1893, a total of $100,000 bonds at par. Our examination of the books and accounts of this first period completely satisfies us that Mrs. Eddy's total bonds March 10, 1893, were in fact $100,100, and that the interest collections from the bonds held by her between those dates have been correctly entered in the cash book and duly accounted for.

Receipts from Publishers—Both Periods.

We have also verified the monthly receipts from the sales of Mrs. Eddy's writings, as set forth in the cash books, by the monthly reports from Mrs. Eddy's publisher, Mr. Joseph Armstrong, between Aug. 26, 1896, and March 6, 1907. Each monthly statement of the publisher was accompanied by a check covering the balance due to Mrs. Eddy, and we have found that these checks were promptly deposited in the bank to her account. The only error in this account during this period was a difference of $3.00 in an item, which was correctly deposited in the bank but wrongly entered in the cash book. We are therefore able to certify that all the remittances from the publisher between August, 1896, and March, 1907, are fully and properly accounted for.

Prior to Aug. 26, 1896, Mrs. Eddy's receipts from the sales of her writings were through royalties, and her publisher from March, 1893, to March, 1896, was E. J. Foster Eddy, whose remittances on this account were made monthly. We find that the amounts entered upon the cash books and accounted for by Mr. Frye from March 10, 1893, to Aug. 26, 1896, agree with the amounts set forth in the monthly statements received from Dr. Eddy, with the exception of an item of $2.60 over-accounted for by Mr. Frye.

Conclusion as to First Period—March 10, 1893, to Jan. 1, 1899.

As a result of our examination, therefore, we certify that we have verified the books and accounts kept by Calvin A. Frye from March 10, 1893, to Jan. 1, 1899, so far as the purchase and the sale of bonds, the receipts from interest on bonds and receipts from sales of Mrs. Eddy's writings are concerned, and that the same have been fully accounted for by Mr. Frye.

While the absence of Mrs. Eddy's canceled checks and check stubs has prevented us from completing our verification of the disbursements in detail during this period, still our examination of the books and such other data as were accessible has led us to the opinion that the books were honestly kept by Mr. Frye during the period and that the total receipts have been properly accounted for.

Second Period—Jan. 1, 1899, to March 6, 1907.

For the period from Jan. 1, 1899, to March 6, 1907, in addition to the cash books, we have examined three "bond ledgers," labeled "Volume I," "Volume II," and "Trustees Building Fund," Christian Science Church in Concord. These bond books were opened by Mr. Frye under date of Feb. 18, 1898, and purport to set forth all of Mrs. Eddy's transactions in bonds, each purchase being entered on a separate page, with the date when bought, premium, and accrued interest paid, etc.; also on the same page are entered the amounts due on subsequent coupons, and the amount received on each coupon, with the date of receipt. It was not difficult, therefore, for us to verify absolutely the items in the "bond ledgers" subsequent to January, 1899 (the date of Mr. Ladd's certificate of the amount of bonds on hand), by the corresponding entries of receipts and payments for bonds and coupons in the cash books kept by Mr. Frye.

This verification we accomplished to our complete satisfaction. Every bond was accounted for, and every coupon or other interest payment which should have been deposited during this period, was in fact deposited. To this statement we can certify without qualification other than that various minor clerical errors are evident and that in two cases coupons of $50 were omitted from the cash book, although deposited to Mrs. Eddy's account in the bank. Many other clerical errors appear upon these cash books, but taken altogether the balance of errors is in Mr. Frye's favor; that is to say, Mr. Frye has made more errors against himself than against Mrs. Eddy, so that the latter or her Trustees will have to pay over a balance of cash to Mr. Frye when the time for final adjustment of these accounts arrives. From the examination thus far made, it appears that the balance due from the Trustees to Mr. Frye will amount to $677.41. From our entire examination of these books we have been necessarily convinced that Mr. Frye was an honest agent for Mrs. Eddy, although mathematically a poor accountant.

The amount of bonds turned over to the Trustees on March 6, 1907, was $788,770 (par value). There was also turned over a promissory note, on which was due a balance of $50,000, and some interest; also three savings bank books, on which was due $8,614.64; and cash and cash items amounting to $24,476.82,—making a total of $871,861.46. We have made no account of the real estate turned over.

Conclusions to Second Period—Jan. 1, 1899, to March 6, 1907.

For the period from Jan. 1, 1899, to March 6, 1907, we certify that the books and accounts kept by Mr. Frye accurately reflect the actual receipts and disbursements of Mrs. Eddy's accounts during those years, with the exception of clerical errors to which we have referred, and that the amounts of bonds, note, savings bank deposits, cash in bank, and cash items which were in fact turned over to the Trustees on March 6, 1907, were the amounts which should have been so turned over, except that owing to the said clerical errors and to the non-payment of cash advanced by Mr. Frye out of his own funds, we find that there was an excess of cash delivered by Mr. Frye to the Trustees amounting to $677.41, and that the Trustees should now repay this sum to Mr. Frye.

We also certify that on Tuesday, May 16, 1907, at the request of the said Trustees and in the presence of Trustees Baker and Fernald, my associate, Mr. Charles H. Tuttle, and myself examined all of the bonds, both coupon and registered, and compared the same with our lists showing bonds which should have been on hand, and found they were in agreement with the total amount of $788,770 turned over on March 6, 1907, except one item, $2,500 of bonds, which matured April 1, 1907, and was then paid and the amount duly entered in the cash book of the Trustees, which was exhibited to us.

We also found that an item of $5,000, City of Philadelphia bonds, were at the Farmers and Mechanics National Bank of Philadelphia, Pa., for transfer of registration to the name of the Trustees.

HARVEY S. CHASE.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this seventeenth day of May, 1907, personally appearing the said Harvey S. Chase made oath that the foregoing statements made by him as of his own knowledge are true and the statements made upon belief are in his belief true.

Before me: FRANK S. STREETER,
Justice of the Peace.

STATE OF NEW HAMPSHIRE.

Merrimack, ss.

In the Suit Entitled Eddy vs. Frye et als.

(Motion of the Trustees for Leave to Intervene and Become Plaintiffs.)

STATEMENT OF FRED N. LADD.

I, Fred N. Ladd, of Concord, N. H., make the following statement:—

I am forty-eight years of age and have always lived in Concord. I have been connected with the Loan and Trust Savings Bank of Concord for twenty-eight years and have been treasurer of said savings bank since January, 1897. I have personally known Mrs. Eddy since about 1892. Mrs. Eddy and my mother were second cousins and girlhood friends. They lived near each other, and after Mrs. Eddy came to Concord and moved to Pleasant View, I came to know her.

Mrs. Eddy kept her general bank account at the National State Capital Bank, located in the same rooms as the savings bank until seven or eight years ago and now in adjoining rooms, making deposits in the savings bank from time to time and withdrawing them. Mr. Frye acted as messenger or clerk for Mrs. Eddy in making the deposits, but, prior to 1898, all checks and orders on her accounts, either in the national bank or in the savings bank, so far as I had knowledge, were signed by her personally, and from the time I began to audit her accounts, in March, 1898, to Oct. 8, 1906 (the date of my last audit), I know that all checks and orders on her bank accounts were signed by Mrs. Eddy personally and by nobody else.

About the first of 1898 Mr. Frye wanted me to look over his books and accounts, to be sure he was correct; and wanted me to advise him about keeping his books, both he and Mrs. Eddy telling me that he had never had any experience or knowledge of book-keeping. Mrs. Eddy told me that she did not care anything about having the accounts audited, that she knew Mr. Frye thoroughly and had perfect confidence in him, but that Mr. Frye wanted his accounts audited and, if it was to be done, she would like to have me do it. Mr. Frye also told me that Mrs. Eddy did not care to have the accounts audited, but that he wanted it done for his own protection. I told him I would do it.

Mr. Frye sent or brought the books into the bank some time before March, 1898, and I examined the accounts and vouchers from March, 1898, back to Jan. 1, 1893, and wrote my certificate on the cash book under date of March 22, 1898, as follows:—

"This is to certifiy that I have examined the cash book of Mary B. G. Eddy, as kept by Calvin A. Frye from Jan. 1, 1893, to Jan. 1, 1898, and find that he has accounted for all moneys received and has proper vouchers for disbursements."

I found some small errors and, excepting one error which was afterwards explained, I made the following certificate with reference to the books and accounts from March, 1893, to March, 1898.

"I have been able to trace the disposition of the income as shown by the cash book and have found that the funds have been properly placed to Mrs. Eddy's accounts, with few exceptions, which, on account of the book-keeping system, I could not verify; but these cases were of minor importance and I am satisfied were all right. I have also seen and verified all the bonds as shown by the bond book."

The statements in that certificate and all other certificates by me were accurately made. My recollection is that the bond book had been recently opened at my suggestion.

I made a second audit under date of Jan. 30, 1899, and made a certificate upon the books similar to the foregoing but covering the year 1898 only. On the same day I wrote Mrs. Eddy as follows:—

"*My Dear Mrs. Eddy:*—On the fourth inst. I began to audit Mr. Frye's accounts for the year 1898, and on that date, in presence of Mr. Moore, I examined the bonds in your box at the First National Bank vault and found bonds to the amount of one hundred thirty-six thousand two hundred dollars, par value, and Mr. Frye's accounts show that the income from same, also income from other sources, have been properly accounted for. I found only one error which needs correcting, and that was made in closing his December account, amounting to about one hundred twenty-five dollars, which Mr. Frye will explain to you. I have suggested to Mr. Frye that he keep a regular cash account, which I explained to him Saturday; he will find it very simple and it will not take any more of his time. Friday the 27th inst. Mr. Moore and I examined the box containing the trust fund and we found one hundred thousand dollars in bonds, as shown by the trustees bond book.

"Very sincerely,
"FRED N. LADD."

By "regular cash account," I meant a distribution of the disbursements under various heads, and Mr. Frye subsequently undertook so to keep the cash account as I suggested. On Feb. 3, 1900, I made a personal report in writing to Mrs. Eddy that I had carefully examined her accounts as kept by Mr. Frye, and reported the details of my examination. I examined Mr. Frye's accounts each year thereafter, and made personal reports in writing to Mrs. Eddy of the results of my examination on Feb. 13, 1901; Aug. 22, 1902; Nov. 23, 1903; Oct. 28, 1904; Nov. 8, 1905; Oct. 23, 1906; reporting each year that Mr. Frye had accounted for all moneys received. The last report, under date of Oct. 23, 1906, was as follows:—

"I have the honor to report to you my findings in reference to auditing Mr. Frye's accounts, and I hereby certify that he has accounted for all money received and has proper vouchers for money expended. This audit covers a period from Oct. 17, 1905, to Oct. 8, 1906."

In making these annual audits I found frequent clerical errors in Mr. Frye's book-keeping, but from my examination of the accounts and vouchers it was apparent that such errors were unintentional, and I always satisfied myself that Mrs. Eddy's securities, money, and income had been properly accounted for before I made my annual report to her. In these various annual reports I accurately stated to her in writing the errors which I had discovered, or marked such errors on the cash book.

Since I began to audit Mrs. Eddy's accounts in 1898, she has never owned any stocks in corporations. Her securities always consisted of United States, State, city (including the State of New Hampshire and City of Concord), municipal, and other bonds. She also had savings bank deposits and promissory notes.

On Jan. 4, 1899, I audited her bonds in the First National Bank safety deposit vaults, and found that she then had $136,200 (par value), and on Jan. 27, 1899, I also audited the bonds kept in another box in the same safety

Digitized by Google

deposit vaults, containing the trust fund of $100,000 which Mrs. Eddy had donated for the purpose of erecting the Christian Science church in Concord, and on Jan. 30, 1899, reported to her in writing these amounts of bonds as I have heretofore stated. I had also verified the bonds the year before.

The bonds in the deposit vaults were also verified by me each year thereafter. I first compared the entries on the bond books with the corresponding entries upon the cash books, and I found each year that the receipts of income on bonds, and for maturing or sold bonds, and the amounts paid for bonds purchased were properly entered upon the cash book, and I also had before me the statements of the bond houses through whom bonds had been bought or sold during the year by Mrs. Eddy. Having verified the bond books, I then examined the bonds, and found each year that the amounts called for by the bond books were actually in the safety deposit box, and upon that examination I made my report. The safety deposit box was in the name of Mrs. Eddy and I always had from her a written order signed by her personally when I went to make my examination of the bonds. She also sent the key to me each time.

On March 6, 1907, I was present at the execution of the trust deed by her to Mr. Baker, Mr. McLellan, and Mr. Fernald. There were also present the three Trustees, Mr. Streeter, and Mr. Frye. We all went into Mrs. Eddy's room at the same time. I understood she had requested me to be present. There were two originals. Mrs. Eddy greeted us all most cordially and invited us to be seated. There was some general talk and then Mr. Streeter handed to Mrs. Eddy one of the two duplicates of the trust deed and handed the other to Mr. Baker. As I recollect, Mrs. Eddy said, "Shall I read this?" and Mr. Streeter suggested that she do so. Mrs. Eddy then said: "Shall I read it out loud?" and Mr. Streeter said he thought she would better. She then proceeded to read the deed aloud, word for word, from the beginning to the end, and her manner of reading showed that she thoroughly understood all its provisions. During the reading she paused from time to time and made comments on certain of the provisions and expressed her views. I remember that when she had read Article Fourth, as follows:—

"*Fourth:* At the termination of my earthly life, this trust shall terminate, and all the personal estate then held by my said trustees shall pass to the executor of my last will and the codicils thereto, to be disposed of in accordance with the provisions thereof."

she stopped, and with emphatic voice and gesture said, "That is just what I want." I remember that once she stopped and said, "You will note that I am reading this without glasses, and I do not have to hold it way off either." After she had finished reading, she made the remark, in substance, that she understood she was putting all her property out of her hands, and then said, "I will sign that;" and she signed both originals and Mr. Streeter and I then signed as witnesses, and the three Trustees signed the statement at the end of each deed accepting the trust. This was all in her presence.

The foregoing is an accurate statement as near as I can remember of what occurred. There was no suggestion by anybody with reference to her signing the deed. When she had finished reading, and made the remark above stated, she said in substance, "I understand the document and I am ready to sign it." She executed an order, a copy of which is as follows:—

"Pleasant View, Concord, N. H., March 6, 1907.

"I hereby appoint Fred N. Ladd my attorney to take all papers and all the contents of my safe boxes at First National Bank in Concord, N. H., and transfer them to the Trustees that I have to-day selected, namely, Hon. Henry M. Baker of Bow, N. H., Archibald McLellan of Boston, Mass., and Josiah E. Fernald of Concord, New Hampshire.

MARY BAKER G. EDDY."

Mr. Frye turned over the books and papers to the Trustees and they were brought down to the National State Capital Bank on our return from Pleasant View. I took the order signed by Mrs. Eddy and went almost directly to the vaults of the First National Bank. Mr. Baker, Mr. McLellan, Mr. Fernald, and Mr. Streeter also came. The box was delivered to the Trustees by me, and the three Trustees examined the securities. As the bonds were examined and called off by Mr. Baker or Mr. McLellan, Mr. Fernald checked from the bond books and I also checked from a memoranda or register showing the name and amount of the bonds and the month when the coupons became due.

The bonds in the box as they were called exactly corresponded with the bond books which were checked by Mr. Fernald and also with the list in the register checked by me. The total par value of the bonds then delivered to the Trustees on this afternoon of March 6, 1907, was $788,770. There was also then turned over to the Trustees a promissory note on which there was due $50,000, and some unpaid interest; and, at about the same time, there were also delivered three savings bank books on which was due $8,614.64. From my annual audits, covering a period of fourteen years, from March, 1893, to October, 1906, and my examination of the accounts to March 6, 1907, I know that the foregoing amount of bonds turned over to the Trustees was the exact amount that belonged to Mrs. Eddy as shown by her books.

From my knowledge of Mrs. Eddy's actual income and disbursements during said fourteen years, and my examination of her books and accounts showing the same and the lists of her securities examined by me from time to time, I can confidently state that no moneys or securities have been wrongfully misappropriated or diverted from Mrs. Eddy's property by Calvin A. Frye, Alfred Farlow, Irving C. Tomlinson, Ira O. Knapp, William B. Johnson, Stephen A. Chase, Joseph Armstrong, Edward A. Kimball, Hermann S. Hering, Lewis C. Strang, or by anybody else.

I also have reason to believe and do believe that except Mr. Frye, none of said ten men have ever had anything to do with the management, control, or disposition of any of Mrs. Eddy's income or securities or other property, or information about the same except in the most general way, and that no one outside of herself, Mr. Frye, and myself, during the last nine years, has had any specific information regarding her property, her income, or disbursements, or her accounts.

FRED N. LADD.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this seventeenth day of May, 1907, personally appearing the said Fred N. Ladd made oath that the foregoing statements made by him as of his own knowledge are true and that the statements made upon belief are in his belief true.

Before me: ALLEN HOLLIS,
Justice of the Peace.

In the Suit Entitled Eddy vs. Frye et als.

(Motion of the Trustees for Leave to Intervene and Become Plaintiffs.)

STATEMENT OF HENRY M. BAKER.

I, Henry M. Baker, of Bow, N. H., make the following statement:—

Digitized by Google

I am sixty-six years old. I was born in Bow, N. H., and my legal residence has always there remained, but I have lived in Washington a part of the time since 1863 and during most of the years have remained there during the winter, and during that time have been engaged in the practice of law.

I was a Member of Congress from New Hampshire from March, 1893, to March, 1897, being the Fifty-third and Fifty-fourth Congresses.

Mrs. Mary Baker G. Eddy is a cousin of my father and was born on the Baker homestead in Bow, where I was born, but her father, with his family, removed from Bow before my birth, and I did not personally meet her until she returned to Concord to live, some eighteen or twenty years ago. Since that time I have become quite intimately acquainted with Mrs. Eddy, have been at her house several times each year, and on several occasions have transacted legal and other business for her at her request. During these years she has talked with me more or less confidentially about various matters, and our relations have been very friendly.

On Monday, March 4, 1907, I was informed by her counsel, Mr. Streeter, that she desired me to act as one of the Trustees of her property, and about the same time I received a message from her, asking me to go to Pleasant View to see her. When I arrived there she said she had decided to place her property and business affairs in the hands of three Trustees, and asked me if I would serve as one of them. She said that she wanted to be relieved of the care of her property. I replied that I would do in that regard whatever she desired.

On the afternoon of March 6, by appointment, I went out to Mrs. Eddy's with Mr. McLellan and Mr. Streeter, and was present with them, Mr. Josiah E. Fernald, and Mr. Fred N. Ladd, when she executed the trust deed. I think Mr. Frye was present a part if not all the time. When we went into the room Mrs. Eddy greeted us all and asked us to be seated. Mr. Streeter handed her one of the duplicate deeds and me the other, and she read the document aloud from beginning to end, I following her reading with the copy that I had. She paused several times during the reading and commented upon the provisions of the deed, stating emphatically that she approved. When she finished reading the deed, she said in substance that she understood she was finally disposing of the control of her property, but she wanted to sign that deed and asked Mr. Streeter where she should sign. He pointed out, and she signed one copy, whereupon I passed her the other and she signed the other. When I came to sign, some fun at my signature was made, in which she laughingly joined and commented upon it.

From her statements to me on Monday, the 4th, as to her purposes, and from all that occurred during the execution of this deed, I know that she desired to transfer this property and that the execution of the deed by her was entirely voluntary and carried out her own views.

After a few moments spent in conversation, we all retired, taking with us two or three packages of books and papers which Mr. Frye gathered together and delivered to the Trustees, and Mr. Fernald took them to the State Capital Bank.

The three Trustees, Mr. Streeter, and Mr. Ladd then went to the safety deposit boxes at the First National Bank. Mr. Ladd had a written order from Mrs. Eddy to transfer the boxes to us. The boxes were opened. All the securities, with the exception of the promissory note and the papers relating to copyrights, were in the large box. I examined the other box, and its contents were mainly with reference to Christian Science and personal matters. The promissory note and papers relating to copyrights were transferred to the larger box. After we were through with the examination of both boxes, the keys of the small box were sent back to Mrs. Eddy, that box then containing no papers of monetary value. We examined all of the securities. Mr. McLellan and I handled them one by one and called them off, and as called off they were checked by both Mr. Ladd and Mr. Fernald on lists which they had.

A statement of the property transferred by Mrs. Eddy to the three Trustees is set forth in the affidavits of Mr. Harvey S. Chase and Mr. Fred N. Ladd. The Trustees, acting under the authority conferred by said trust deed, have since March 6, 1907, held and managed all said property as required by their trust, and now have in their possession all of said funds and property and such additions as have arisen from the income thereof.

The Trustees organized by the election of myself as chairman, Mr. Fernald as treasurer, and appointed Mr. Fred N. Ladd secretary. Frequent meetings have been held and records of the transactions of the Trustees have been kept. The Trustees also adopted a rule that the safety deposit box should not be opened except in the presence of two Trustees, a copy of which rule and agreement is on file with the safe deposit company.

I further state that, during all the time I have been intimately acquainted with Mrs. Mary Baker G. Eddy, she has been and now is fully capable of managing all her affairs, and that she did so with wisdom and discretion.

With reference to the letter said to have been signed by George W. Glover in Washington, under date of Feb. 25, 1907, a copy of which is filed with the affidavit of Mr. Chandler, senior counsel for the "next friends," if reference thereto is material, I have to say that I went to Pleasant View on request of Mrs. Eddy on March 1, as I now recall the date, and by her was shown the said letter and given a copy of it. Mrs. Eddy asked me what it meant and said that "George could not write that letter," that "the letter was written by an educated man who was skilled in the use of language." I replied that the letter had such evident earmarks that unquestionably some hostile action was contemplated, and that she would have to await whatever proceedings were intended.

I further state that the several deeds and assignment filed in court under the affidavits of DeWitt C. Howe represent completed transactions only, and that no part of the property covered thereby is now in the possession of Calvin A. Frye or other defendants, and that the same are now vested in the Trustees under the trust deed dated March 6, 1907, a copy of which is on file in this honorable court.

I hereto annex true copies of the following instruments: 1. Declaration of Trust of Real Estate by Mary Baker G. Eddy to Calvin A. Frye, Trustee, dated Feb. 12, 1898, and Amendment of same, dated Aug. 1, 1899. 2. Transfer in Trust of Personal Property, etc., Mary Baker G. Eddy to Calvin A. Frye, Trustee, dated Aug. 11, 1899.

I depose that said instruments are the identical Declaration of Trust, Amendment thereto, and Transfer in Trust specified in deed of Calvin A. Frye to Mary Baker G. Eddy, dated Sept. 5, 1901, and recorded in Merrimack County Registry of Deeds, libro 330, folio 522.

I further state that Mrs. Eddy has several times consulted me in regard to her assignments of copyrights, and I especially remember her doing so in regard to the assignments to Mr. Calvin A. Frye and to Mr. Edward A. Kimball, and I examined the papers relative thereto. These assignments were made for a special purpose, having regard to the propagation of the Christian Science doctrine, and in each instance were determinable at her

Digitized by Google

will and in each instance were determined by her, and are now held by her Trustees under the trust deed of March 6, 1907.

By the trust deed all actions, including the one now pending, and causes of action existing or arising in favor of Mrs. Eddy, were assigned to said Trustees, and it is the duty of the Trustees under said deed of trust to prosecute the same according to their merits. In connection with my associate Trustees I am ready to perform that duty. If any evidence can be obtained by the Trustees, or furnished them by the "next friends" or anybody else, that the defendants have misappropriated or diverted any funds or property of Mrs. Eddy, the Trustees will prosecute this action as vigorously as the evidence may warrant.

HENRY M. BAKER.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this seventeenth day of May, 1907, personally appearing the said Henry M. Baker made oath that the foregoing statements made by him as of his own knowledge are true and the statements made upon belief are in his belief true.

Before me: FRANK S. STREETER,
Justice of the Peace.

COPY.

Whereas I, Mary Baker G. Eddy, of Concord, New Hampshire, have conveyed, remised, released, and quitclaimed, by my deed of even date herewith, to Calvin A. Frye, trustee, of said Concord, certain real estate and personal property thereon, situated in said Concord and known as "Pleasant View," in consideration of one dollar and of his agreement to hold the same for the objects and purposes and upon the terms, conditions, and trusts herein provided: Now, therefore, it is hereby stipulated and agreed on as follows, to wit:—

1. Said Frye is to hold said real estate and personal property during the term of my life here, subject to my free and unrestrained use, occupation, enjoyment, and improvement, in the same manner as though I was the absolute owner thereof.

2. After my demise said Frye shall hold said real estate during the term of his natural life as a home and residence for himself, keeping the buildings and grounds in as good and suitable condition as they are now in, at his own expense, and shall at all times keep said premises open for the reception of such students in Christian Science as may desire to resort thereto for brief calls. He shall not sell or convey his estate in said property, nor rent or lease it, nor permit it to be occupied by boarders or roomers, except my grandchildren for the purpose named in my will. He shall not devote said property, or any part of it, to any other use or purpose than that of a home and residence for himself and a reception place for Christian Science visitors. Said personal property shall be kept and used on said premises, except my jewelry; that shall not be used, but remain in this house unless I dispose of it.

3. I reserve the right to make such changes in this trust from time to time as I may desire, or to revoke the same in full; and upon written notice to said Frye of such changes or of such revocation, he shall execute such legal papers as may be necessary to fully effectuate the same. His death before my decease shall be deemed a complete revocation of this trust.

4. The acceptance of this trust and said deed of conveyance shall be deemed an agreement on the part of said Frye to hold said real estate upon the terms and conditions aforesaid and to perform all things herein contained by him to be performed.

Witness my hand and seal this twelfth day of February, 1898.

MARY BAKER G. EDDY.

[Seal]

Whereas since the execution of the above declaration of trust I have purchased two lots of land adjoining Pleasant View, which I have conveyed to said Frye, trustee, by deed of even date herewith, to hold upon the trusts and conditions specified in said declaration. Now, therefore, in accordance with the terms of said declaration, I hereby so change and enlarge the same as to make said trust apply to and include said two lots of land in addition to the real estate named therein, hereby confirming and ratifying all the terms and conditions of said trust as modified and enlarged as aforesaid.

Witness my hand and seal this first day of August, 1899.

MARY BAKER G. EDDY.

[Seal]

COPY.

Be it known that I, Mary Baker G. Eddy, of Concord, New Hampshire, do hereby transfer, set over, and convey to Calvin A. Frye of said Concord, all and singular, my personal property and chattels which I now own or which I may hereafter possess, not included in and transferred to him by my trust agreement of Feb. 12, 1898, upon the following strict trust and confidence: Said Frye shall use his best skill and judgment in the management and disposition of said property, and, whenever it is desirable to make an investment of any of said property, including stocks, bonds, and other securities, he shall make the same in reasonably safe and prudent manner; so much of the income accruing from said property, however obtained, as I may desire to otherwise appropriate, shall be paid over to me or to my order, and the balance, if any, said Frye shall reinvest as above provided, except so much as I may allow him as compensation for his services. I hereby authorize and empower said Frye, as my agent and attorney, to execute such transfers or releases, in my name, as may be necessary to enable him to fully and completely execute and perform this trust. This trust shall continue during the time of my natural life, unless I shall exercise the power, which is hereby reserved, of revoking this trust agreement.

At all times, upon a reasonable notice from me, said Frye shall exhibit to me a full and faithful account of his management of the property hereby transferred to him as aforesaid.

The object of this trust agreement is to relieve me of the trouble and inconvenience necessarily connected with the management of my business affairs.

Witness my hand and seal this eleventh day of August, 1899.

MARY BAKER G. EDDY.

[Seal]

I hereby accept the above trust reposed in me.

CALVIN A. FRYE.

(Motion of the Trustees for Leave to Intervene and Become Plaintiffs.)

STATEMENT OF ARCHIBALD McLELLAN.

I, Archibald McLellan, doing business at 250 Hunt-

Digitized by Google

ington Avenue, Boston, Mass., and residing in Brookline, Mass., say as follows:—

I am forty-nine years of age, and for about five years I have been editor of *The Christian Science Journal*, *Christian Science Sentinel*, and also editor of *Der Herold der Christian Science* since its publication began about four years ago. I have been a director of The First Church of Christ, Scientist, in Boston, somewhat more than four years.

I first saw Mrs. Eddy in Chicago in 1888, and later had some correspondence with her. I first met Mrs. Eddy to talk with her, about four years ago, at her home at Pleasant View, and since that date have met and talked with her at least a dozen times, and have had considerable correspondence with her. My talks and correspondence with her have been largely with reference to the Christian Science publications of which I am the editor, and also about matters connected with The First Church of Christ, Scientist, in Boston, and about the Christian Science movement of which she is the Leader.

On Tuesday, March 5, 1907, I was informed by Mrs. Eddy's counsel, Mr. Streeter, that she desired me to serve as one of the Trustees of her property under the deed which was executed the following day, March 6. About two o'clock in the afternoon, March 6, with General Baker and Mr. Streeter, I drove to Pleasant View. We there met Mr. Josiah E. Fernald and Mr. Fred N. Ladd. After a short time we all went together to Mrs. Eddy's sitting room, and all remained there until after the execution of the deed. Mr. Frye was present a part of the time at least. Mrs. Eddy was sitting beside her desk. Mrs. Eddy arose and greeted all of us most cordially by name, and on her invitation we all took seats. After some general conversation Mr. Streeter handed her one of the two duplicate deeds and handed the other to General Baker. Mrs. Eddy asked Mr. Streeter if she should read the deed, and he said, "Yes." She then asked if she should read it aloud. I think Mr. Streeter at first suggested that she did not need to, and she began reading it to herself; then Mr. Streeter interrupted, saying, "Perhaps you had better read it aloud, if you would like to." She then read the entire paper aloud with emphasis and understanding. I particularly recall that after she had read Article 4, she said, "That is just what I want." At other places during the reading she stopped and commented upon the provisions of the paper, expressing her approval, and then went on with the reading. I know that she expressed herself very forcibly that she understood that by this act she was depriving herself of her property, and I think this was just after she had finished reading. I remember she asked Mr. Streeter where she should sign, and he told her. She then signed both the originals, and she made some comment about her hand trembling, and turned to General Baker and said, laughing, "Now, cousin, you are a young man, your hand should not tremble." After she signed, Mr. Streeter and Mr. Ladd signed as witnesses, and then each one of the Trustees signed the acceptance of the trust on both papers. When General Baker signed, Mr. Streeter with some pleasantry called Mrs. Eddy's attention to his signature, and that he could not write as well as she did. She laughed and made some fun of General Baker's not being able to write as well as she could. She expressed her confidence in Mr. Frye and greatly extolled his honesty and integrity, and my recollection is that this occurred during one of the pauses in her reading of the deed.

The foregoing is a correct statement of what occurred at the execution of this deed as near as I can recall it. There was no suggestion from anybody in my presence that she execute the deed. Her statements and her appearance indicated that she executed it of her own free will, and she seemed very much pleased to have it done.

While Mr. Fernald was signing and the papers were being picked up, I stepped around to her side and had a short talk with her. She told me how much she appreciated the present of a vicuna robe which had recently been sent to her by Mr. Cox of Chicago through me. She spoke of its beauty and said that she had written Mr. Cox thanking him for it. She also very warmly expressed her thanks to me for consenting to act as one of her Trustees.

After we left Mrs. Eddy, Mr. Frye turned over to Mr. Fernald for the Trustees two packages of books and papers. These were brought by Mr. Fernald and Mr. Ladd to the National State Capital Bank. Before we left Mrs. Eddy gave Mr. Ladd a written order, signed by herself, to transfer all papers and all the contents of her safety deposit boxes at the First National Bank to the Trustees. Mr. Ladd, with this written order, Mr. Baker, Mr. Fernald, Mr. Streeter, and I went to the bank vaults that afternoon, and Mr. Ladd delivered to us two boxes. All of the bonds and valuable papers relating to money affairs were in the large box, except that a promissory note on which $50,000 of principal was due was in the smaller box. We examined the smaller box and found that, except the note and the copyright deeds, the papers therein were mainly personal and with reference to religious matters. Mr. Fernald took the bond books which had been kept by Mr. Frye, and Mr. Ladd took another book containing lists showing when the coupons were due. Mr. Baker handed the bonds out to me; I called them off one by one, and Mr. Fernald and Mr. Ladd each checked on their respective books, and when we got through both Mr. Ladd and Mr. Fernald said that the bonds corresponded to the lists on which they were checking. The savings bank books were turned over to us immediately afterwards. Before leaving the bank vaults, Mr. Baker, Mr. Fernald, and I signed an agreement between ourselves, and an order to the safe deposit company, that the box was not to be opened except in the presence of two Trustees, which order is on file with the safe deposit company.

The promissory note and the copyright papers were removed from the smaller box, leaving only personal papers and writings, etc., of Mrs. Eddy therein, and the keys of that box were sent back to Mrs. Eddy by Mr. Ladd.

The Trustees organized by electing General Baker as chairman, Mr. Fernald as treasurer, and appointing Mr. Fred N. Ladd as secretary, who accepted the appointment and was duly sworn, and has recorded the proceedings at the various meetings of the Board.

The Trustees have been managing the funds since March 6, 1907, and now have in their possession all of the said funds and property and such additions as have arisen from the income thereof.

By the trust deed all actions and causes of action, existing or arising in favor of Mrs. Eddy, were assigned to said Trustees, and it is the duty of the Trustees under said deed of trust to prosecute the same according to their merits. In connection with my associate Trustees, I am ready to perform that duty. If any evidence can be obtained by the Trustees, or furnished them by the "next friends" or anybody else, that the defendants have misappropriated or diverted any funds or property of Mrs. Eddy, the Trustees will prosecute this action as vigorously as the evidence may warrant.

From my acquaintance and talks with Mrs. Eddy, including the talk of March 6, 1907, above referred to, and from my correspondence with her during the last four years, I state unqualifiedly that she always has been and

Digitized by Google

is now fully capable of managing all her affairs, and that she executed the deed of March 6 with a full understanding of its import and purpose, and because she personally desired to do it.

ARCHIBALD MCLELLAN.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this seventeenth day of May, 1907, personally appearing the said Archibald McLellan made oath that the foregoing statements made by him as of his own knowledge are true and the statements made upon belief are in his behalf true.

Before me: FRANK S. STREETER,
Justice of the Peace.

In the Suit Entitled Eddy vs. Frye et als.

(Motion of the Trustees for Leave to Intervene and Become Plaintiffs.)

STATEMENT OF JOSIAH E. FERNALD.

I, Josiah E. Fernald, have resided in Concord, N. H., since 1875. I am fifty years of age and have been connected with the National State Capital Bank of Concord, N. H., since March, 1875. I was elected cashier of the bank in 1882 and was elected president in 1905, and have so continued ever since. I have been a member of the board of trustees, vice-president, and member of the investment committee of the Loan and Trust Savings Bank for many years. I am treasurer of the Capital Fire Insurance Company of Concord, N. H., and have been since 1880 also a member of the executive committee of the board of directors of that company. I am treasurer of the New Hampshire Centennial Home for the Aged in Concord.

Mrs. Mary Baker G. Eddy became a depositor in the National State Capital Bank on May 16, 1890, while I was cashier, and has continued her banking business with said bank up to the present time. I became personally acquainted with Mrs. Eddy through her relations with our bank. I have called on her at various times at her request on business matters. During all Mrs. Eddy's business relations with the bank, she has personally signed every check drawn on her account and has personally endorsed all checks deposited by her.

On the morning of March 6, 1907, General Streeter called at the bank, and in the presence of Fred N. Ladd informed me that Mrs. Eddy had selected me to become one of her Trustees. Mr. Streeter showed me a slip of paper, on which was written in Mrs. Eddy's own handwriting, "H. M. Baker, A. McLellan, —— Fernald for my Trustees. Mary B. G. Eddy. March 6, 1907," and he then stated the terms of the trust deed, and asked if I would serve Mrs. Eddy as one of the Trustees. I told him I would accept the position. He then told me that Mrs. Eddy would like to execute the trust deed at about two o'clock that afternoon, and informed Mr. Ladd that she wished him to be present as a witness, to which he assented. I told Mr. Streeter I would go out in my team and take Mr. Ladd.

Mr. Ladd and I got there about two o'clock, there met General Baker, Mr. McLellan, and Mr. Streeter, and we all went in together. After a few moments we all went together to Mrs. Eddy's office or sitting room. Mrs. Eddy rose from her chair and gave us each a pleasant and cordial greeting, and requested that we be seated. She resumed her seat beside the desk. After some general talk Mr. Streeter handed Mrs. Eddy one of the two original trust deeds which he had prepared, and handed the other to General Baker. Mrs. Eddy then said, "Shall I read it?" Mr. Streeter answered yes. She began to read the document, and then asked if she should read it aloud. Mr. Streeter answered, "Perhaps you had better, if you would like to." She then read the trust deed aloud from beginning to end, stopping sometimes and saying, "That is what I wish," or "That is all right," or using other expressions of approval. When the clause with reference to the ultimate disposition of her property, according to the terms of her last will, was reached, she said very emphatically, "That is just as I want it." After reading the clause referring to the provision for a bond of $500,000 for the Trustees, she said, "That is all right, I approve of that," or some expression indicating approval. I also remember that during the reading, or at the end,—I think it was at the end,—she said in substance, "I understand that I am giving up the control of all my property, but I want to sign this deed," and asked Mr. Streeter where she should sign. He pointed out the place on the paper, and she signed each of the two originals, remarking as she did so, something to the effect that her hand was not quite as steady to-day as usual. Mr. Streeter and Mr. Ladd then signed as witnesses to Mrs. Eddy's signature. The trustees then signed their acceptance of the terms of the trust. After General Baker signed the acceptance her attention was called to his signature, and she joked him because he could not write as well as she could. I think it was during the reading that she stopped and expressed a very high opinion of Mr. Frye and what he had done for her, praising his honesty and integrity. At the very last part, and I think while I was signing, Mr. McLellan stepped around beside her desk and had a little talk with her. I was near them, and I remember her expressing to Mr. McLellan her gratification at the receipt of a vicuna robe and thanking him for the part he had taken in it.

Mrs. Eddy signed and gave to Mr. Ladd an order for him to transfer to the Trustees the contents of the safety deposit boxes. Mr. Frye had made two bundles of books and papers, which Mr. Ladd and I brought with us to the State Capital Bank. Immediately after our return General Baker, Mr. McLellan, Mr. Ladd, Mr. Streeter, and I went to the First National Bank, and Mr. Ladd deposited the order signed by Mrs. Eddy and delivered the boxes to us. There were two of them, one larger than the other. All of the bonds were in the larger box. In the smaller box the only papers having a money value were those relating to copyrights and a promissory note on which was due $50,000 with some interest. The other papers in that box were personal to Mrs. Eddy, or relating to Christian Science matters, and after removing the copyright papers and the note to the larger box, the keys of the smaller box were sent back to Mrs. Eddy. The bonds were handled and called off by Mr. Baker and Mr. McLellan. I had the two bond books on which Mr. Frye had kept the account with each individual purchase of bonds. Mr. Ladd took the list showing when the coupons on each bond became due. As they called off I checked from the bond books, and Mr. Ladd checked from the book which he had, and when this was finished, every bond called for by the bond book had been found, and every bond found in the boxes was found to be accurately recorded on the bond books and was checked by me. Each of the three Trustees put his name on the signature card used by safe deposit vaults, directing that a record be made that the boxes should be opened only in the presence of two

Digitized by Google

Trustees, and that order is now on file and in force and will continue in force.

The Trustees organized by electing Mr. Baker chairman, myself treasurer, and appointing Mr. Ladd secretary. Assignments of all her copyrights from Mrs. Eddy to the Trustees were prepared in legal form by counsel and were subsequently executed by Mrs. Eddy, and the same have been recorded and are in my possession for the Trustees.

There were quite a large number of registered bonds, and it became necessary to have Mrs. Eddy's personal signature for the transfer. With reference to these and other matters I have seen and talked with Mrs. Eddy several times. I am quite sure that I conferred with her on March 13, March 16, and March 18. Each time I got there Mrs. Eddy seemed glad to see me and was ready to sign the transfers necessary to the completing of the transfer of the different registered bonds from herself to the Trustees. I did not explain to her about the necessity of signing the transfers of the registered bonds, for she knew all about it. I had been out there several times before for similar purposes and she fully understood what was required, and upon my calling attention, upon the dates named, to the bonds which I had brought for transfer to the Trustees, she proceeded to sign them. There must have been more than fifty of her signatures required for these transfers, and she made these signatures without hesitation and with a full understanding of what she was doing.

From my acquaintance with Mrs. Eddy during all these years, my personal business dealings and conferences with her at various times, my observation of her and what she said at the execution of the deeds on March 6, and at business conferences before and since that date, her understanding of business and the way in which she has transacted her business, I can unqualifiedly state that Mrs. Eddy has been and now is fully capable of managing all her affairs, and that she has managed all her business affairs to my knowledge with intelligence and judgment.

The Trustees have been managing the funds and property delivered to them on March 6 ever since that date, and now have in their possession all of the same, with such additions as have arisen from the income thereof.

By trust deed all actions (including the action now pending) and causes of action existing or arising in favor of Mrs. Eddy, were assigned to the Trustees, and it is the duty of the Trustees under said deed of trust to prosecute the same according to their merits. In connection with my associate Trustees I am ready to perform that duty. If any evidence can be obtained by the Trustees, or furnished them by the "next friends" or anybody else, that the defendants have misappropriated any funds or property of Mrs. Eddy, the Trustees will prosecute this action as vigorously as the evidence may warrant; and in order to inform ourselves how Mr. Frye had been conducting the business of Mrs. Eddy, we have employed the services of expert and public accountants, Harvey Chase & Company, who have carefully gone over all the books, accounts, papers, and memoranda from March, 1893, to March 6, 1907, and have personally examined and verified the personal property transferred to the Trustees on March 6, and the affidavit of Mr. Harvey S. Chase, the senior member of that firm, will be filed in this motion in connection with the affidavit of the Trustees.

JOSIAH E. FERNALD.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On the eighteenth day of May, 1907, personally appearing said Josiah E. Fernald made oath that the foregoing statements made by him as of his own knowledge are true and the statements made upon belief are in his belief true.

Merrimack, ss.

In the Suit Entitled Eddy vs. Frye et als.

(Motion of the Trustees for Leave to Intervene and Become Plaintiffs.)

STATEMENT OF CALVIN A. FRYE.

I, Calvin A. Frye, of Concord, New Hampshire, on oath depose and say, that I have been in the employ of Mary Baker G. Eddy since 1882; that a part of my duties while so employed was to keep the accounts relating to the business transactions of Mrs. Eddy, except for about two years, when said accounts were kept by Dr. Foster (E. J. Foster Eddy); that during all the aforesaid time Mrs. Eddy managed and controlled her business, personally directing the investment and disbursement of her money, without interference by myself or any other person, my position in the administration of her affairs being that of an agent and servant, without authority to act except as directed by her. Mrs. Eddy has, during all the time of my said employment, personally signed all checks drawn upon her funds, and all her money has been deposited and kept in her name, except sums of money allowed by her for household and current expenses, which were paid by me out of the money so allowed, and for which I subsequently accounted to her.

I have never converted to my own use, nor to my knowledge has any one else converted to his own use, any money or other property of Mrs. Eddy. Neither Alfred Farlow, Irving C. Tomlinson, Ira O. Knapp, William B. Johnson, Stephen A. Chase, Joseph Armstrong, Edward A. Kimball, Hermann S. Hering, Lewis C. Strang, nor anybody else, aside from Mrs. Eddy and myself acting as her servant and under her direction, have had anything whatever to do with the management, control, or disposition of any of the funds or property of Mrs. Eddy at any time, except as herein stated.

I further state that, so far as I have any knowledge, no one of said persons, nor anybody else, except Mr. Fred N. Ladd as auditor, and to some extent Mr. George H. Moore, who examined the boxes at the bank with Mr. Ladd, had any information in respect to the nature and extent of Mrs. Eddy's property, except E. J. Foster Eddy when he was keeping her accounts. Mrs. Eddy has always charged me to keep her business affairs to myself, and so far as I know and believe, she has not communicated her business affairs to others excepting as herein stated.

I knew of the so-called trust deed at the time of its execution and was present when Mrs. Eddy signed the same; but I did not nor did any one else influence her in any way to make and execute the same; she then was and always has been competent to act and decide for herself in all her affairs. All the property of Mrs. Eddy as included in said deed has been turned over to said Trustees.

Mrs. Eddy's securities, at her request, were moved from Boston to Concord, March 10, 1893, and they then amounted to about $100,000. In 1898 her property had considerably increased, and my responsibility with reference thereto was such that I asked her to choose an auditor,

Digitized by Google

and Mrs. Eddy selected Mr. Fred N. Ladd to act in this capacity, she being acquainted with him; and he has so acted ever since.

I further depose and say, that for twenty-five years I have faithfully devoted all my time and energies to the promotion of Mrs. Eddy's interests, principally not on account of pecuniary consideration but because I fully believe in her and the doctrine which she discovered and formulated and is teaching for the benefit of mankind. As a pecuniary consideration and salary, from 1882 to 1900 I received on account of my said employment from ten to twelve dollars a week with board; from October, 1900, to April, 1903, I was paid one thousand dollars per year and board; and from April, 1903, to March 1, 1907, I have received one hundred dollars per month and board. In addition to the wages paid me as above stated, during the twenty-five years I have been in her employ, Mrs. Eddy has made unsolicited presents to me of money and jewelry, in all to the amount of not exceeding seventy-three hundred dollars. I never received anything else from her.

In 1896 Mrs. Eddy assigned to me certain copyrights of her publications, she reserving the control and the right to have them re-assigned to her whenever she so desired. I received no pecuniary benefit whatsoever therefor, and all the income therefrom, as before and since, continued to be received by her; and subsequently, in 1899, these copyrights were formally re-assigned by me to Mrs. Eddy at her request.

By deed of Feb. 12, 1898, Mrs. Eddy conveyed to me in trust her homestead known as Pleasant View, to which was added by deed of Aug. 1, 1899, two additional lots purchased subsequent to Feb. 12, 1898, and forming a part of Pleasant View. At the time of said transfers Mrs. Eddy executed the declaration of trust and amendment thereto, copies of which are attached to the deposition of Henry M. Baker. On Aug. 11, 1899, Mrs. Eddy also made an assignment of her personal property and chattels to me in trust, a copy of said assignment being annexed to Mr. Baker's affidavit.

My only connection with said transactions was to accept the conveyances and assignments at Mrs. Eddy's request. I was not informed as to the purpose of the arrangement except so far as appears in the papers themselves. While I held title to the property no change was made in the management thereof and the properties were all treated as Mrs. Eddy's, precisely as they were prior to and have been since that time. As I recall, R. E. Walker, now judge of the Supreme Court, drew the papers for Mrs. Eddy and advised her in regard to the legal questions involved therein.

By deed of Sept. 5, 1901, I re-conveyed all the property, both real and personal, to Mrs. Eddy at her request, the trust being then terminated in accordance with the terms thereof. As I recall, Mr. Streeter drew the deed and had charge of the legal matters pertaining to the termination of the trust.

In regard to the conveyance by Mrs. Eddy to Moore, Buswell, and myself, dated Jan. 31, 1898, and the conveyance by Buswell to Ladd, Moore, and myself, dated Jan. 19, 1899, I recall that the premises described in said deeds consisted of the Russell property on the southwest corner of School and State Streets in Concord, which was purchased by Mrs. Eddy as a place of worship for the First Church of Christ, Scientist, in Concord, and was held by the grantees named in the foregoing deeds, in trust for the benefit of said Church. Mrs. Eddy paid for the necessary alterations to said buildings, and they continued to be occupied as aforesaid until demolished to make place for the new Christian Science church. I held title as trustee until May 7, 1903, when I resigned and was succeeded by J. Wesley Plummer, and I conveyed the title held by me to the other trustees, by deed dated May 7, 1903. As I recall, Mr. Streeter and his partners, acting for Mrs. Eddy, drew the deeds, resignations, and trust papers above referred to, and advised Mrs. Eddy in regard to the legal steps pertaining thereto. I derived no pecuniary benefit from either of the above-mentioned trusts, excepting about five hundred dollars paid me as treasurer of the board of trustees for the building fund, to cover my services as such.

The entire accumulation of my twenty-five years of service amounts to less than eleven thousand dollars, represented by deposits in savings banks, bonds, and notes secured by mortgage, which I am ready to exhibit to the Trustees whenever thereto required.

CALVIN A. FRYE.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this eighteenth day of May, 1907, personally appearing the said Calvin A. Frye made oath that the foregoing statements made by him as of his own knowledge are true and the statements made upon belief are in his belief true.

Before me: FRANK S STREETER,
Justice of the Peace.

In the Suit Entitled Eddy vs. Frye et als.

(Motion of the Trustees for Leave to Intervene and Become Plaintiffs).

SECOND AFFIDAVIT OF FRED N. LADD.

I, Fred N. Ladd, of Concord, New Hampshire, on oath depose and say:—

I am the Fred N. Ladd named as a grantee in the deed of Ezra M. Buswell to Fred N. Ladd *et als.*, dated Jan. 19, 1899, and recorded in Merrimack County Registry of Deeds, liber 326, folio 455; and as such grantee I became one of the trustees for the Christian Science church in Concord, N. H. The premises described in said deed were used as a place of worship by First Church of Christ, Scientist, in Concord, until the buildings then standing thereon were demolished, when the new church building was erected upon said premises.

Calvin A. Frye resigned as trustee and J. Wesley Plummer, of Concord, now Deputy State Treasurer for New Hampshire, was appointed in his stead on May 7, 1903; and thereupon said Frye conveyed all his interests as trustee to said Plummer by deed dated May 7, 1903, and recorded in Merrimack County Registry of Deeds, vol. 352, page 486.

George H. Moore resigned as trustee and Josiah E. Dwight, of Concord, was appointed in his stead on May 7, 1903; and thereupon said Moore conveyed all his interests as trustee to said Dwight by deed dated May 7, 1903, and recorded in said Registry, vol. 352, page 487.

Said new church was completed in 1904 and has ever since been occupied by said First Church.

FRED N. LADD.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this seventeenth day of May, 1907, personally appearing the said Fred N. Ladd made oath that the foregoing statements made by him are true.

Before me: ALLEN HOLLIS,
Justice of the Peace.

DEFENDANTS' ANSWERS TO PLAINTIFFS' SUPPLEMENTAL BILL.

STATE OF NEW HAMPSHIRE.

SUPERIOR COURT.

Merrimack, ss. April Term, 1907.

MARY BAKER G. EDDY, *vs.* CALVIN A. FRYE, *et als.*
By her next friends,
GEORGE W. GLOVER,
MARY BAKER GLOVER,
GEORGE W. BAKER,

ANSWER OF THE DEFENDANTS FARLOW, KNAPP, JOHNSON, CHASE, ARMSTRONG, AND KIMBALL TO THE PLAINTIFFS' SUPPLEMENTAL BILL.

1. These defendants have duly appeared and answered the plaintiffs' original bill, and answering the second paragraph of the supplemental bill these defendants deny that the defendants to said original bill, or any of them, and in particular these defendants, procured or induced the said Mary Baker G. Eddy to execute the deed referred to in said second paragraph, and say that they knew nothing about it until after the execution thereof.

2. In answer to the third paragraph, they deny that the said Baker, McLellan, and Fernald, or either of them, are the agents and attorneys of the defendants to the original bill, or any of them, or are subject to their control, or a part of any combination whatever; and these defendants deny the allegation in said third paragraph and that there is abundant or any reason to believe they, or any one else, have wrongfully misappropriated or unlawfully diverted any money or property of the said Mary Baker G. Eddy, either as set forth in said original bill or in any other way.

3. These defendants deny the allegations of the fourth paragraph, specifically and in detail, and further answering, repeat their allegation in their answer to the original bill, that neither said bill nor this supplemental bill is brought in good faith or for the purposes set forth in said bill, but aver that both said bill and supplemental bill have been instigated by certain evil-minded persons who are fomenting this litigation for their own evil purposes.

Wherefore, these defendants pray that they may be hence dismissed, with their costs in this matter wrongfully incurred.

ALFRED FARLOW,
IRA O. KNAPP,
WILLIAM B. JOHNSON,
STEPHEN A. CHASE,
JOSEPH ARMSTRONG.

COMMONWEALTH OF MASSACHUSETTS, Suffolk, ss.

Then personally appeared the above-named defendants, Alfred Farlow, Ira O. Knapp, William B. Johnson, Stephen A. Chase, and Joseph Armstrong, defendant Kimball being absent from this jurisdiction, and made oath that they have read the foregoing answer to the plaintiffs' supplemental bill, and that the statements therein are true to the best of their knowledge and belief.

Before me: WILLIAM A. MORSE,
Justice of the Peace.

IN THE SUPERIOR COURT.

Merrimack, ss.

MARY BAKER G. EDDY, *vs.* CALVIN A. FRYE, *et als.*
By her next friends,
GEORGE W. GLOVER, *et als.*

THE ANSWER OF DEFENDANTS CALVIN A. FRYE, IRVING C. TOMLINSON, LEWIS C. STRANG, AND HERMANN S. HERING, TO PLAINTIFFS' SUPPLEMENTAL BILL.

The said defendants, severally answering the said plaintiffs' supplemental bill, severally say that they have duly answered plaintiffs' original bill, and answering the II. paragraph of said supplemental bill, these defendants severally deny that the defendants to said original bill, or any of them, and in particular these defendants, procured or induced the said Mary B. G. Eddy to execute the deed referred to in said II. paragraph, and, except said Frye, say that they knew nothing about it until after the execution thereof, and the said Tomlinson and Hering knew nothing about it until several weeks thereafter.

And in answer to the III. paragraph of said supplemental bill, the said defendants, Frye, Strang, Tomlinson, and Hering, severally deny that the said defendants, Baker, McLellan, and Fernald, or either of them, are the agents and attorneys of the defendants in plaintiffs' original bill, and they deny that said Baker, McLellan, and Fernald are subject to the control of said original defendants or any or either of them; and they severally deny that there is any combination whatever to surround and seclude the person of the said Mary B. G. Eddy, or to take charge, possession, and control of her property and business and manage the same solely according to their own will and pleasure, by or on the part of any persons named as defendants in said original or supplemental bill; and they severally deny that there is abundant or any reason whatever to believe that any persons named in said original or supplemental bills, or their associates, have wrongfully misappropriated or unlawfully diverted large sums of money and large amounts of property, or any money or property, of the said Mary B. G. Eddy.

These defendants severally deny the allegations of the IV. paragraph, specifically and in detail, and further answering, repeat their allegation in their answer to the original bill, that neither said bill nor this supplemental is brought in good faith, or for the purposes set forth in said bill, but aver that said bill and supplemental bill have been instigated by certain evil-minded persons who are promoting this litigation for their own evil purposes; wherefore, these defendants pray that they may be hence dismissed in this matter wrongfully incurred.

CALVIN A. FRYE, LEWIS C. STRANG,
IRVING C. TOMLINSON, HERMANN S. HERING.

EASTMAN, SCAMMON & GARDNER, *Solicitors.*

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this 15th day of May, 1907, personally appearing the said Calvin A. Frye, Irving C. Tomlinson, Lewis C. Strang, and Hermann S. Hering made oath that the facts set forth in the foregoing are true, and that the allegations in their answer to the original bill, that neither the said bill nor this supplemental bill is brought in good faith, are in their belief true.

Before me: FRED C. DEMOND,
Notary Public for New Hampshire.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

MRS. EDDY'S AFFIDAVIT.

THE following affidavit, in the form of a letter from Mrs. Eddy to Judge Robert N. Chamberlin of the Superior Court, was filed in the office of the Clerk of the Court, Saturday, May 18. *The Boston Globe*, referring to this document, speaks of it as, "in the main, an example of crisp, clear, plain-speaking English." The entire letter is in Mrs. Eddy's own handwriting and is characteristic in both substance and penmanship:—

Pleasant View, Concord, N. H., May 16, 1907.

Hon. Judge Chamberlin, Concord, N. H.

Respected Sir:—It is over forty years that I have attended personally to my secular affairs, to my income, investments, deposits, expenditures, and to my employees. I have personally selected all my investments, except in one or two instances, and have paid for the same.

The increasing demands upon my time, labors, and thought, and yearning for more peace and to have my property and affairs carefully taken care of for the persons and purposes I have designated by my last will, influenced me to select a Board of Trustees to take charge of my property, namely, Hon. Henry M. Baker, Mr. Archibald McLellan, Mr. Josiah E. Fernald. I had contemplated doing this before the present proceedings were brought or I knew aught about them, and I had consulted Lawyer Streeter about the method. I selected said Trustees because I had implicit confidence in each one of them as to honesty and business capacity. No person influenced me to make this selection. I find myself able to select the Trustees I need without the help of others. I gave them my property to take care of because I wanted it protected and myself relieved of the burden of doing this. They have agreed with me to take care of my property and I consider this agreement a great benefit to me already.

This suit was brought without my knowledge and is being carried on contrary to my wishes. I feel that it is not for my benefit in any way, but for my injury, and I know it was not needed to protect my person or property. The present proceedings test my trust in divine Love. My personal reputation is assailed and some of my students and trusted personal friends are cruelly, unjustly, and wrongfully accused.

Mr. Calvin A. Frye and other students often ask me to receive persons whom I desire to see but decline to receive solely because I find that I cannot "serve two masters." I cannot be a Christian Scientist except I leave all for Christ.

Trusting that I have not exceeded the bounds of propriety in the statements herein made by me,

I remain most respectfully yours,

MARY BAKER G. EDDY.

STATE OF NEW HAMPSHIRE, Merrimack, ss.

On this sixteenth day of May, 1907, personally appeared Mary Baker G. Eddy and made oath that the statements contained in the annexed letter directed to Honorable Judge Chamberlin and dated May 16, 1907, are true.

Before me: ALLEN HOLLIS, *Justice of the Peace.*

IMPORTANT DOCUMENTS.

WE are printing in this issue of the *Sentinel* the full text of the affidavits filed in the Court in Concord on Friday and Saturday of last week, and as these documents occupy considerable space we have been compelled to increase our number of pages to twenty-eight for this issue. These affidavits go to the very root of the matter now pending and we are sure that our readers will appreciate the opportunity to read them in full. It is not our purpose to pass judgment upon the evidence presented, nor to comment upon the proceedings to date, for that would be to trench upon the privilege which belongs solely to the Court, but it will not be out of place to say that there probably never was a case about which so much that is entirely irrelevant, improper, and untrue, has been printed. That there is an attempt, still going on, to try the case in the newspapers instead of in the court, must be patent to even the least keen observer, and we are glad to see that Christian Scientists are not lending themselves to anything of the kind.

ARCHIBALD MCLELLAN.

THE SCRIPTURES OPENED.

Did not our heart burn within us, while he talked with us by the way, and while he opened to us the scriptures?—LUKE, 24 : 32.

As time rolls on, the expanding thought of mankind goes back with greater eagerness than ever to that momentous time when God was revealed to men through the one who knew Him so well that he could speak with authority respecting His nature, His law, and His kingdom. While Christ Jesus was not dependent for his knowledge of God upon any written word, he nevertheless appealed to the Scriptures in support of his teachings, knowing that there must ever be an absolute basis of agreement between all those who in any age had a clear vision of God and spiritual reality, and he directed his students to the recorded utterances of the great spiritual thinkers of the past.

Whatsoever may be said of Jesus' contemporaries, no one can well charge them with indifference to religion. There were numerous schools of theology, and thousands of zealous adherents thereto, but the gentle Master's characterization of their teaching tells the whole story of formal and materialistic religion; he said, "Woe unto you, . . . for ye shut up the kingdom of heaven against men: for ye neither go in yourselves, neither suffer ye them that are entering to go in." Again, he charged them with having "taken away the key of knowledge," and thus hindered many who were about to enter, and his condemnation of this offense against human rights was unmeasured. He did not, however, stop with the condemnation of the error; he "opened" their understanding of the Scriptures and led them into the kingdom of God from which false belief had so long excluded the race. What it meant to those who were thus aroused we gather from the Gospels,—the sick were healed, the sinful transformed, and the dead raised. What his teaching means to the world to-day let each answer for himself.

All those who study our revered Leader's writings with a sincere desire to know the truth are compelled to admit that in a most wonderful way she, too, has "opened to us the scriptures," and given to us "the key of knowledge" to which the great Teacher referred, and by which we may enter the kingdom of heaven here and now. Many have experienced this awakening when like the vanishing of a cloud some distressing ailment has disappeared, and the meaning of life has dawned almost in resurrection splendor. Then the great storehouse of the Scriptures began to yield the gathered treasures of the ages,—the hope, the joy, the certainty that God is, and that He is good.

There are those among the members of The Mother

Digitized by Google

Church who remember the occasions when Mrs. Eddy administered the sacrament to her Church,—not with outward symbols, but "in spirit and in truth,"—so that the hearts of those present burned within them, as did the hearts of Jesus' disciples at that earlier day. Since the time when our beloved Leader preached to her followers, she has reached almost limitless audiences the world over through her writings, especially through the healing, purifying message of Science and Health. That this message is the truth which Christ Jesus offered to the world, is clearly seen as we gain the spiritual sense of the Scriptures—a sense which creed and dogma had failed to reveal. The greatness of Mrs. Eddy's work consists in the bringing to mankind of "this spiritual perception of Scripture, which lifts humanity out of disease and death and inspires faith" (Science and Health, p. 547). That the Bible is practically closed to material sense we have abundant evidence, but as this false sense is taken away we all, "reflecting as a mirror the glory of the Lord, are transformed into the same image from glory to glory" (Rev. Ver.).

ANNIE M. KNOTT.

THE TRUE WAY TO PEACE.

THE professed disciple of Christ Jesus who insists that war is a necessary evil, evidences that he has not only forgotten the example and injunction of the Master respecting a Christian's attitude toward his enemies, but that he has failed to apprehend the vital and eternal truth that evil is not overcome by resisting personality, by taking life, but solely by the realization and demonstration of good. Thoughtful students of the Old Testament will be impressed with the many evidences that patriarchs and prophets had not yet reached this sense of truth. Elijah hesitated not to slaughter the priests of Baal, and it was only after experiences so trying as to lead him to wish he were dead, that he learned that God is manifested neither in the destructive convulsions of nature nor in the murderous human passions which they symbolize, but only in that love whose gentleness is as "a still, small voice." Moses, Joshua, and other leaders of the children of Israel authorized with a "thus saith the Lord" very many acts and enterprises which would be condemned by the most ordinary sense of right to-day, and it would be difficult to name a deed in the whole category of cruelties which has not been committed during the Christian centuries by those who have found a self-satisfying authorization for their sensual and sanguinary impulses in the declarations and habits of "Bible heroes."

Over against this unideal sense of divine purpose and human privilege Christian Science places that exalted spiritual concept of the character of God and the duty of men which is expressed in the law of love. Both the conduct and the counsels of Christ Jesus give unquestionable warrant for the teaching of our Leader when she says, "Truth, Life, and Love are the only legitimate and eternal demands on man" (Science and Health, p. 184). By these alone is good to be achieved and the passions that lead to mortal strife to be resisted. He who is impelled to strike at personality has not yet recognized his enemy. At the moment when Peter was ready to slay and be slain for him, Jesus said, "Put up thy sword," and when his friends would have annihilated the offending Samaritans he kindly but firmly rebuked them.

This error of identifying evil with personality has anticipated every horror of history, and to-day it directly conduces to all the backbiting and bitterness, the contention and tragedy of men and of nations. That it has always handicapped Christian effort to better human conditions and bring about peace is made clear in Christian Science, and its correction in thought will not only put an end to war, but it will mark the dawn of humanity's redemption. The true Christian Scientist has come to understand that to refer a contention to the arbitrament of physical force is to ally one's self with all that is opposed to the spiritual life. He has learned that the way to vanquish those who count themselves his enemies is by knowing the truth and loving the misguided; that the dethronement and defeat of evil without, is accomplished only as Truth is permitted to destroy error within; that the enemy with which we most have to reckon is the temptation to entertain a false sense of what constitutes our enemy, and that strength and overcoming are found in knowing good only,—in the persistent refusal to think of evil as personal or real.

The reversal of the teaching of Christ Jesus respecting evil, which has led some of his professed followers so far afield that they are found championing the art of human slaughter as a means of resisting evil, seems very shocking, and yet this is no more incongruous surely, and no more lamentable in its results, than that reversal of his teaching respecting sickness and its cure which characterizes the great bulk of religious teaching in all the world. Christian Scientists rejoice that to-day one has come to call humanity back to the old paths of right sense and spiritual efficiency, both in healing sickness and in overcoming all evil, and they are proving that all who will follow are led in the true way to peace.

JOHN B. WILLIS.

[From the *Concord* (N. H.) *Daily Patriot*.]

MEMORIAL DAY SERVICES.

George E. Wood, commander of E. E. Sturtevant Post, G.A.R., has issued the following circular of information:—

Comrades:—In response to the most cordial of invitations from the Rev. Mary Baker G. Eddy, the Post, with members of kindred organizations and auxiliaries, will join in attendance on divine service at First Church of Christ, Scientist, at 4.30 o'clock P.M., on Sunday, May 26.

Comrades of the Post, Sons of Veterans, and Spanish War Veterans, will assemble at Grand Army Hall at 4 o'clock P.M., wearing dark clothes, white gloves, and badges, and march in a body to the church.

On Memorial Day the following comrades and gentlemen have been designated and will assume the duties and parts assigned them: President of the day, Past Commander Frank Battles; chaplain of the day, Prof. Hermann S. Hering; orator, Mayor Charles R. Corning; chief marshal, James E. Randlett.

LETTERS TO OUR LEADER.

Rutherford College,
Burke County, N. C., April 13, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—I beg to acknowledge, with personal thanks and expressions of the gratitude of the entire community, your esteemed favor of recent date, with enclosure of your check for two hundred and fifty dollars for the Carnegie Free Library of Rutherford College. I beg to apologize for the delay in acknowledging this magnificent liberality on your part, as I wished to await a meeting of our town commissioners to acquaint them with the donation. They join me in expressing their great appreciation of this gift, and assure you that your goodness in this matter will never be forgotten by the town officials nor the citizens.

With assurances of personal appreciation and esteem, I am

Very truly yours,

T. L. SIGMON, *Mayor*.

Digitized by Google

Boston, Mass., May 9, 1907.

Mrs. Mary Baker G. Eddy.

My Beloved Teacher:—The Bible Lesson Committee think it is about time to prepare a Lesson for Communion Sunday in June, for The Mother Church. We shall be very thankful if you can find it convenient to give us a subject for this Communion Lesson, as you have done on all previous occasions. The subject which you gave us last year was "Adam, where art thou?" The members of the Bible Committee are working harmoniously together and they feel they can rejoice in some degree of progress in this very important branch of Christian Science work, which you have established for the good of the whole world. We are thankful to you, as the servant of God, for leading us in the "straight" and scientific way of righteousness which leads into all truth. It is becoming clearer to me that God is exposing, through His appointed way of Christian Science, the false conceptions which have so long darkened the earth. Many prophets have seen the end of all error and the establishment of God's kingdom on earth. This spiritual light is already covering the earth, and blessed are they who can discern the signs of this time through the revelation of Divine Science.

Lovingly yours in Christ,

IRA O. KNAPP.

Wilmington, N. C., May 6, 1907.

Beloved Leader:—I cannot leave Wilmington without sending you a few lines,—you who here took up the cross and cast your burdens all on God, divine Love. The corner-stone of your precious church in this city was laid this morning at half past seven, as you have heard from the dear ones here. It was an occasion of sacred moment. May the dear God of peace, love, and holy, healing power, bless and prosper this movement to the wedding of your faithful heart to "those things which are above;" and may we build on this truth and follow you. "Other foundation can no man lay than that is laid, which is Jesus Christ." My heart is full, and I cannot help telling you how much I love you, and how deeply grateful I am to you for our priceless text-book, which you have recently made more precious and unmistakable than ever. The spiritual interpretation of the first commandment shines through all your words and deeds, and will redeem—is redeeming—all mankind from every error of the carnal mind. God alone is All in all,—the one God, divine Love, "of whom, and through whom, and to whom are all things."

I think all we North Carolina Scientists feel that this step in your heavenward demonstration is hallowed ground, and we are praying and striving to remove the heavy shoes of materiality from off our feet, that we may more readily and sincerely follow you, and turn forever from earth to heaven.

With grateful, tender love to you ever,

ELIZABETH EARL JONES.

Chicago, Ill., May 6, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Ever since I was elected First Reader in Seventh Church of Christ, Scientist, of Chicago, the heart has yearned to write you a few lines. The head has seemed to withhold action, but I now give way to the heart, for I am sure that the affectionate impulse is nearer right. As I review the unfoldment which has brought Seventh Church out of Second Church (as I understand it, the first Seventh Church organized in any community of the world), it has seemed like the budding and blossoming of the rose—deliberate, orderly, beautiful, and sweetly fragrant. The development has ever been attended with well-directed zeal, wisdom, and loving unity, with the example and earnest desires of our dearly loved Leader ever in mind and heart. I have taken up my humble share in the work joyously, yet feeling mindful of how modest my own demonstrations have been—how much I yet need to put on "the new man" so necessary to this work in the Father's vineyard. I would add that I have perfect confidence in your wisdom and unquestionable ability to continue the direction of the great Cause which you so firmly founded, and which you have directed to the present period of wonderful success.

I believe that it is the sincere desire of Seventh Church to proceed immediately to the erection of a church edifice, that its members and loving friends in Chicago may thus attest their practical gratitude to God for Christian Science, and their undeviating loyalty to you as His Messenger and our Leader. With most tender love,

Sincerely,

ERNEST C. MOSES.

Hornsea, England, April 27, 1907.

Beloved Leader:—We, the members of First Church of Christ, Scientist, Hornsea, Yorkshire, on the occasion of our first lecture, given to a crowded audience by Mr. Bicknell Young in the Public Rooms here, wish to send our loving thanks to you for your wisdom and watchfulness in providing for the needs of the great Cause of Christian Science in this way. We have been helped in many ways by this lecture, and feel sure that the good seed sown will produce much good fruit. Words cannot express our appreciation of your wise and unselfish leadership, and our great desire is to follow obediently, and so lighten in some small degree the burdens you are carrying for the good of humanity. In loving gratitude,

META HAWORTH-BOOTH, *Clerk.*

Los Angeles, Cal., April 24, 1907.

Dearly Beloved Leader:—Three years ago on Easter Sunday the glorious light of Christian Science dawned upon my receptive thought. Your book "Science and Health with Key to the Scriptures" was read at the same time by a member of my family, who likened it to a jewel casket filled with rare gems. From the depth of a sincere heart I thank you for the happiness that has been shed across my pathway by applying the teaching which your life proves. Without question I accept your loving admonition in all things, and my highest aim is to show my gratitude to you by "signs following."

Very lovingly,

LENA BEERS KIMBERLEY.

Concord, N. H., May 5, 1907.

Dear Mrs. Eddy:—The children unite with me in thanking you for the beautiful presents, also the booklets which you sent to them. It gives them great pleasure to gather wild flowers for you, and each year they plan to give the first nice ones to you. Your message of love has made them very happy.

Thanking you again for your loving kindness, I remain

Most respectfully,

MRS. E. L. GLICK.

New York, N. Y., May 11, 1907.

Mrs. Mary Baker G. Eddy.

Dear Mrs. Eddy:—I feel sure that you will be pleased to know that the beautiful motto you sent to me for the Actors Fund Fair was sold for two hundred dollars through Mr. Henry Jewett for Mrs. C. H. Dale. I thank you, and the members of the Actors Fund are deeply grateful.

Very sincerely yours,

MAUD MADISON.

THE LESSON SERMONS.

REV. G. A. KRATZER.

IT is usually difficult for beginners in Christian Science properly to appreciate the great courage and wisdom of our Leader in departing from established customs of public worship and giving to the Christian Science Church the Lesson-Sermons by which it has so greatly profited, and some may not value the Sermons themselves at their true worth for daily study and for Sunday service. Perhaps the following thoughts and conclusions of one who for years was in the habit of preaching sermons, but who for two years has been studying and observing the Christian Science order of service, may be helpful to others.

The Lesson-Sermons almost entirely remove the element of personality from the public worship of the Science churches, and this is a great gain in many ways. Instead of the thought being directed to the minister, as is usually the case, whether his work be good or bad, the thought is turned to God and to the truth set forth, very little being bestowed upon those who are reading the Lesson from the desk. This is of benefit religiously, as it removes the element of adulation or mental criticism of the speaker, and brings in the worship of God, Truth. Under personal leadership the success of a church, in its attendance, its finances, and its spiritual attainment, depends very largely on the popularity of the minister; but in the Science churches the Readers, unless they are markedly incompetent, command very little attention, and each church goes on its even way of growth and progress in all lines of its work. Again, among the churches of a given denomination, under the historic method there is sometimes a detrimental spirit of unrest. Smaller churches are tempted to be envious—in a sense—of the larger ones, which are able to hire pastors who are so much more eloquent and capable than their own. People are prone to say, "Oh, if we could only have such and such a man for a minister, how much better we would get along;" and the minister whom they do have, more or less senses these comparisons. In the Science churches all this is avoided. The smallest church in the country is as well satisfied with its Sunday service as the largest church in the city —at least so far as the sermon is concerned; and that this satisfaction is genuine is evidenced by the attendance and by the interest displayed in the smaller churches. No other churches, as a class, are so regularly attended by their adherents, and in none are the congregations so uniformly "wide-awake." One of the chief commendations of the Lesson-Sermon plan is that it is not only theoretically good, but that it works admirably in practice; though nine persons in ten would have said, in advance of a trial, that it would be a practical failure. Here the far-seeing wisdom of Mrs. Eddy is displayed.

There are, however, deeper reasons for our satisfaction with the Lesson-Sermons, reasons to be found in the nature of their subject-matter, which consists wholly of selections from the two greatest religious books of all time, the Bible, and the Christian Science text-book, "Science and Health with Key to the Scriptures." The Bible, on the divine side, is the product of the Holy Spirit. On the human side it is the best product of a race specially gifted in the interpretation and application of the things of the Spirit. As the Egyptians were great in architecture, the Greeks in art and literature, the Romans in law and government, so the Jews were great in spiritual discernment and poetic sense. Out of all the religious writings of this race thus specially endowed, only the choicest works of the greatest prophets and apostles have come down to us in the Bible. That which was able to stand the test of time alone has endured.

Another convincing reason for this Sermon study of the Bible and Science and Health appears upon consideration. To illustrate, let me refer to President Lincoln's Gettysburg speech. This speech, which is considered a specimen of the purest English and one of the greatest pieces of oratory extant, was called forth by a great occasion, and was struck out at white heat. Had Lincoln been called upon to write speeches to be delivered in any one place or any number of places at the rate of one or two per week, he could not have come anywhere near maintaining the same level of excellence. Thus all the great orations of the past, and practically all the great literatures of every kind, have been called forth and shaped at white heat under the stress of great occasions. A people in captivity were to be inspired to throw off the yoke of physical and mental bondage, and to return to their native land that they might worship the true God; or a nation apostate and sunk in sin was to be aroused to righteousness; or those who had been sitting at the feet of Jesus were to recount the story of his life and teachings, lest it be lost to future generations; or a church founded with infinite pains by an apostle was to be counseled and instructed and kept from straying from the straight and narrow path; or a great seer, inspired with the supreme spiritual exaltation and insight of a lifetime filled with great works, must give utterance to what he saw of "a new heaven and a new earth."

Thus also was Science and Health written, under the inspiration and stress of a great experience, by one who all her life had been impelled by deep spiritual aspiration. Healed by prayer when at death's door, Mrs. Eddy called to mind the marvelous cases of spiritual healing recorded in the Bible, and was led to see that by earnest study and prayer she, too, might discern the Principle and the orderly method which she knew must underlie these works of healing, since they were of God, and all God's works must be in harmony with unchanging law. Quickened and inspired by this realization, she gave herself wholly to the solution of this great discovery, and Science and Health is the inspired result of her endeavor. What Mrs. Eddy has since written for publication finds its authority in the original volume. For the most part she has written only when special occasions demanded it, and for the purpose of showing how the truth must be applied to present human conditions, so as to make true progress possible.

People who take up religion from the social side, or who go to church because it is the correct thing, or the most entertaining way of passing Sunday morning, or because they feel that they have a religious duty to perform, —such people, like the Athenians, are always seeking for some new thing, and if they are not supplied, they are not satisfied. Actions speak louder than words. In the average congregation the people have as a whole a stolid, respectful expression while the Scripture is being read; not until the minister gets up to preach do their faces begin to show interest. Those, however, who give themselves to religion seriously, as a matter of daily business, if they are given the right ideal to start with, come to love the Bible and Science and Health more than they did the old-fashioned sermon; and a sermon made up of selections from these two books is proving both more useful and more interesting to them.

The Bible and Science and Health were written by those who were masters in the art of doing, in the art of applying to the relief of human want the divine truth spiritually apprehended. Sermons for the most part are preached by those who believe that Christ Jesus' practical works, such as healing the sick, are no longer to be done through the power of Spirit, and it is not difficult to see that the listener is more likely to imbibe the truth that heals and uplifts, from a sermon made up of selections from that literature of which it is said, "He sent his word, and healed them," than from

Digitized by Google

the preaching of even the most earnest and eloquent minister who does not believe in the present availability of the Christ-truth to strengthen and heal.

We all need to realize that the Bible and Science and Health represent the acme of the world's religious literature, that they are veritably the word of Life; then we shall more nearly appreciate the Lesson-Sermons at their true worth. Now that religion has been discovered to be an exact and demonstrable Science, there is no need for human opinions about it, and by eliminating such opinions from the services of the churches, the conditions for the keeping of "the unity of the Spirit in the bond of peace" are distinctly improved, since the chief occasion for schism has been wholly removed. This plan, moreover, conduces to true progress in religion: *i.e.*, to the continuous and ever enlarging unfoldment of truth in human consciousness. Progress on our part is but an entering into the spirit of revealed truth, and its manifestation in our lives.

A YOUNG SCIENTIST'S LESSON PROBLEM.

C. W. JENNINGS.

In the present state of human advancement, when scarcely a week passes without a new "wonderful" discovery being announced, it is the ambition of the average man to know everything. As there is so much to keep in touch with, he is forced to adopt the cramming habit, devouring the main features of his morning paper as he swallows his breakfast and rides to his place of business, and devoting most of his evenings and Sundays to scanning the magazines and cumulative weeklies, that he may be posted on all the happenings of the day. Therefore, when you meet him, he is ready to discuss *in extenso* the latest exploit to reach the North Pole in an airship, or the chemical production of "life" from beef-juice, or the substitution of the spiral theory for the nebular hypothesis. He has not time to look studiously into the topics; but in his untroubled superficiality is contented with his smattering.

The habit of forming decided opinions upon subjects of which he knows little is a natural consequent of this method of acquiring knowledge: for the human being would lose his chief enjoyment if he could not have opinions and express them—he must have opinions, with or without wisdom. Thus, when a new system of thought comes up, the average man gets a crammed view of it, generally from somebody or some source that knows no more than he, and presto! he thinks he knows all about it.

The writer went through some of this experience prior to coming into Christian Science, and it was only after several months of earnest endeavor afterward that he was able to cast it off entirely. In the enthusiasm of his acceptance of this remarkable new rule for understanding reality, and with the remains of the old habit still clinging to him, he hastily crammed himself with practically all the Christian Science literature published. Then, still following the old method, with no other publications to devour except the *Sentinel*, which he read in about twenty minutes each week, and the *Journal*, which required only an hour a month, and seeking something new to occupy him, he set about revising the *Lesson Quarterly*.

It seemed to him the height of folly for one to "waste" so much time in clerical routine by going over the same Lesson every day for a week, and looking up the same references time after time. Why did not the Publishing Society print the text of the Lessons, instead of requiring the thousands of searchers to devote so much time to "needless" work? He thereupon engaged a stenographer to transcribe all the references every Monday morning, so that he could have them in "readable" form. He was on the eve of instituting a great improvement, he thought, and went to much trouble in securing printer's estimates of cost, number of pages, etc., of printing the text of the Lessons in quarterly pamphlets; then drafted a long letter to the Publishing Society, informing them of the advantage that would come from changing their method.

The writer's teacher was watching all this proceeding (he thought at the time with amusement, but learned later that it was with loving consciousness that what had been thought out had to be worked out), helping him when he asked her, but gently suggesting from time to time that probably Mrs. Eddy and the Publishing Society knew what they were doing. It was this last hint that brought a change in his attitude, for he began to wonder if after all the compilers did not have some reason for preparing the Lessons in the form given. So he decided to give them another test: to put himself in an attitude of meekness, and use the references as did others. It was enough; for, having eliminated all spirit of criticism and cynicism, his short hour of honest endeavor was returned to him in an hundred-fold. He went from verse to verse of the Bible, with increasing appreciation of the value of reading each one in its own place, and similarly with the explanatory references in Science and Health. As he did this every day, on Sunday at church he experienced the climactic awakening of the week, and he then understood the wisdom of the compilers.

The letter to the Publishing Society was consigned to the waste-basket, for now he knew from personal experience that Mrs. Eddy and those in charge of the publications had carefully considered every movement before acting upon it, and that if any changes were needed for the good of the Cause they would be the first to see and adopt them. Then came a feeling of gratitude toward our dear Leader for opening to him the way to heaven, and toward the workers in Boston for so painstakingly carrying out her directions in the compilation of the Lessons. In this chastened spirit, and realizing that everything they did was the best that could be done, the writer has since pursued his study. What an unfolding there has been! The old thought of criticism is gone, and in the new realization he sees how puerile and unreasonable was his former attitude. He is thankful now for the experience, for it gave him a new knowledge of the foolishness of the ways of mortal man and an understanding that the ways of the world are not the ways of Divine Science.

[Written for the *Sentinel*.]

"BE STILL, AND KNOW."

HAROLD SUSMAN.

THE day no more seems gay and glad,
Instead, the time is sorry, sad,
And full of woe.
Upon the dark and dismal day
'Tis time for you to watch and pray,—
"Be still, and know."

If striving seem well nigh in vain,
And pleasure e'er gives way to pain,—
Reliance show.
Talk not of fortune nor of fate.
Be brave and strong, in patience wait,—
"Be still, and know."

Although by fearful odds beset,
Hold ever faster, firmer yet;
Fear not the foe.
For Love will meet your ev'ry need,
Within the Holy Book we read—
"Be still, and know."

Digitized by Google

SELECTED ARTICLES.

[From the *Chicago Tribune*.]

"There are on an average four thousand doctors graduated every year by the medical colleges of the country, and about three fourths of these are utterly incompetent and should never be permitted to practise medicine. Certain medical colleges are lacking in proper equipment, the instructors are wanting in the necessary ability for their task, and their examination methods are useless." These startling statements were made yesterday at a meeting of the council on medical education of the American Medical Association, a council composed of members of the various State boards of medical examiners and delegates from the State medical societies. "Some men qualified as medical practitioners," said Dr. Means, "are deficient in knowledge. I have written to twenty-five State boards, and I find that fifty-eight per cent of the men who fail at their final examination pass on a second examination a few weeks after. In the few days intervening where did they get their knowledge? They did not get it. They were simply crammed with the answers to those questions which it was expected they would be asked, and they answered as parrots, not knowing what they were saying."

The project of State ownership of the colleges was broached by Dr. W. T. Gott, secretary of the State board of Indiana. Doctor Gott was emphatic in his denunciation of certain medical colleges, which he declared were unworthy of existence. A specific instance of the evil that is wrought by the admittance of unqualified persons to the medical profession was given by Dr. R. H. Grube, delegate from the State Medical Society of Ohio. Doctor Grube was one of the few members who indorsed the suggestion of State ownership. He pointed to the so-called "museums of anatomy" which flourish along Clark Street, placarded with suggestive pictures, and which are run by men who style themselves "Dr." and who actually possess diplomas. Chancellor J. H. Kirkland of Vanderbilt University, Nashville, Tenn., stated that there were many so-called colleges in the South which conferred degrees upon men who were scarcely capable of spelling their own names correctly. "I have rejected students who applied for admission to the university, who were so ignorant that they could not have graduated from the high school. Yet these men have been admitted to a medical college not one hundred miles away from me."

In spite of the slashing attacks which were made upon certain classes of medical schools, there could not be found a single doctor present who would undertake their defense. The opinion seemed to be unanimous that there was something wrong, but no definite remedy was agreed upon.

Speaking editorially of the above, the *Tribune* says.—

When physicians assemble to criticise their own institutions and score their own methods the layman may be pardoned if he pricks up his ears and becomes an interested and anxious listener. When a doctor, high in medical councils, declares that medical colleges graduate every year four thousand doctors who are incompetent and should not be permitted to practise medicine, the faith cure begins to assume imposing proportions. Happily it is not for the layman to arraign the medical profession; the profession is abundantly able and willing to perform that function for itself. . . .

The fact that the fraternity has been so violently assailed by its own associates, with the further fact that in the council of physicians "the opinion seemed to be unanimous that there was something wrong," makes it important for the honor of the profession and the safety of the public that something should be done. This is a matter that lies wholly within the discretion of the fraternity, and to the doctors the public must look for correction of their own evils. If medical colleges are as faulty and criminally careless as is asserted, and if thousands of ignorant practitioners are annually turned loose to prey on an unfortunate community, it is to the interest of competent and honorable physicians to see that these abuses are ended. The public has no alternative; it must judge the profession from the standpoint of its own criticisms and its own confessions. If ignorance is to be checked and malpractice averted the physicians must take the initiative; they must begin their own housecleaning.

[John E. G. Sandford in *The Western Press*, Bristol, England.]

Yesterday [March 26] at St. Nicholas church, in this city, the Rev. J. Gamble delivered an address on "The Church and Christian Science," upon which I beg leave to make some comment. First, I would like to say that it is a matter for rejoicing among Christian Scientists that thoughtful men in the Church are beginning to discover that they have some good reasons for the faith that is in them; and next, I wish to thank Mr. Gamble for the temperate tone of his address. When he stated that Christian Scientists believe that only the pure in heart can see God, he at least gave us credit for the acceptance of a fundamental Christian truth. . . .

In stating that Christian Science regards all disease as the result of sin, he was saying what is strictly correct, but he failed to explain what Christian Science includes under that term. In the first chapter of Genesis we read that "God created man in his own image, . . . male and female created he them;" also that "God saw every thing that he had made, and, behold, it was very good." Now Christian Science regards all disease as the result of humanity's failure to realize God's standard of perfection, and such failure as disobedience to divine law, and therefore sin. . . .

Our critic was also at issue with Christian Science because, as he said, it teaches us "to concentrate on spirit, and ignore matter." Truly, this is the "hard saying," which few can hear (understand); but history is only repeating itself once more, for in the sixth chapter of St. John's Gospel we find our Master saying, "Doth this offend you? . . . It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life," and we are told that from that time many of his disciples went back, and walked no more with him. Christian Scientists believe that they are following his teaching, and that, in seeking to realize a spiritual condition of mind, and ignoring all discordant material conditions, they are walking, to some extent, with him and are proving by their fruits that they understand somewhat at least of the great truth he came to teach mankind. . . .

Lastly, Mr. Gamble asserted that "Christian Science teaches us to discredit the testimony of experience, and tends to weaken human compassion." Let me ask where the world would be to-day if there had not been found thinkers, in every age, ready to "discredit the testimony of experience," and to rise into higher planes of thought? Do we not owe every great discovery to those who shook off the testimony of experience and sought for the new thing in the unknown? Experience is only useful in so far as it teaches us to advance, and should be discarded as soon as it is outgrown. St. Paul said, "When I was a child, I spake as a child, I understood as a child, I thought as a child: but when I became a man, I put away childish things."

Christian Science certainly does not weaken human compassion, much rather does it strengthen it; but it does teach us to separate the sin from the sinner and the disease from the patient; to have no pity for the sin, no

Digitized by Google

sympathy for the disease; yet to have compassion for the sinner and the sufferer. Christian Scientists believe with St. John that he that loveth not his brother whom he hath seen, cannot love God whom he hath not seen, and that unless their hearts are filled to overflowing with love in the highest spiritual sense, they can neither heal the sick nor bring salvation to the sinner.

[Peter E. Mackay in the *London* (Ont.) *Free Press.*]

Christian Scientists believe in right thinking, in right acting, and in so ordering their lives that they will make the world brighter and better than they found it, and render it more of a paradise for having lived in it. They believe also in keeping bright by constant practice the Golden Rule, "As ye would that men should do to you, do ye also to them likewise;" in daily drinking from the cup of Christian charity, and in habitually lifting without a murmur the cross of loving unselfishly, even their enemies—a task which sometimes resolves itself into a sore struggle, putting to a severe test the Christian's duty to God and man by requiring the exercise of all the grace that he possesses. To briefly summarize his religion: The Christian Scientist believes in living the "beauty of holiness," and in acknowledging in thought and deed the fatherhood of God and the brotherhood of man. On what broader, grander basis can any one stand, than on that which embraces the parent of the universe and His beloved offspring? Standing as he does on the platform which recognizes the creator and His creatures as one whole, harmonious family, inseparably bound together by the kindred spirit of eternal Love, the Christian Scientist can extend his hand to every man, and say from the heart to the heart, "Shake, my brother! We meet on common, yet consecrated ground. There exist no outstanding differences for us to settle. We are mutually agreed as to life and its manifold activities. Our aims and interests are identical; your welfare is my happiness; our hopes and aspirations are forever the same. Come, then, shake! We stand as one in aspiring to divine sonship; that we may know God as our Father, heaven our home."

Perhaps the best way for the inquirer to inform himself on the subject of Christian Science and its healing efficacy is to attend the Wednesday evening testimonial meeting in any Christian Science church. The investigator can behold for himself at this regular weekly meeting an attendance of intelligent, well-dressed men and women, representing every profession and station in life, who listen with rapt attention, or, it may be, endeavor to tell with faces all aglow of marvelous cures wrought by Christian Science. When one sees a strong, intellectual, self-reliant man, a man not easily shaken by emotional feelings, and hears him testify with tear-filled eyes and with a sincerity and earnestness born of truth and gratitude, it persuades one, even though a skeptic, that the testimony of such a speaker is not the ebullition of mere sentiment, nor a profession of faith put on for public occasions. To the contrary, it furnishes convincing proof that Christian Science is based on a curative Principle, which saves the sinner from a hell of wickedness and vice, and snatches the helpless victim of suffering from the brink of an untimely grave.

[A Truth Student in the *Indianapolis* (Ind.) *News.*]

A critic who had listened to the address on Christian Science by Hon. Clarence A. Buskirk in the Caleb Mills Hall, at once entered one of our city pulpits and gave a lecture on what he had heard. He began with the admission, among other things, that the Christian Scientist defined God as Spirit, Love, Truth, which was practically the same understanding that he himself had, with the exception that the Christian Scientist had also said that God is Principle, and to him principle was such a thing or condition that he would just as soon pray to the Constitution of the United States, presumably so far as the good it would do.

It is possible that our critic has not had his spiritual eyes sufficiently opened to know or realize that there is an all-pervading something that can be perceived throughout all things. . . . Does it matter whether one calls it Principle or God, so that he has a clear conception of it? Why quibble about words when the true meaning is what we desire? Why strain at the word Principle until we are sure that it means something quite different from our present idea? Again, should it be difficult to understand that matters which are spiritual must be seen or known by or through the spiritual senses, and that matters which are temporal are to be seen and known through the material or mortal senses, and consequently matters that pertain to one are not of the other; that sin, sickness, etc., are of the temporal and are not lasting? This being so, why should the Christian Scientist be rebuked for saying there is no matter, when he speaks from the spiritual standpoint? There surely is no materiality in Spirit. . . .

There is now being made a great effort to establish a universal language; why not add to the effort the establishing of a universal religion or understanding? Why not make a greater attempt to find the similarities among all beliefs, rather than to hunt out the differences and to elaborate on them? Would not this bring greater peace and harmony among us all? Why not first seek the kingdom of God? The words God and good in their highest sense are synonymous. Then seek this, and you will find yourself in the realm.

[B. Fair in the *Quincy* (Mass.) *Ledger.*]

The struggle between the angel and the beast will continue as long as mortals recognize both good and evil. Any religious system which lessens the wear and tear of the struggle should be welcomed, not antagonized. No religion has yet succeeded in monopolizing God or confining Him within the four walls of a church. No religion has yet succeeded in shutting off non-members from communication with their creator. Religious storms do not interfere with the operation of the wireless, even when the wires of the old routes are grounded or lack the vital fluid. The millennium will have arrived when humility takes the place of pride, when the desire to serve replaces the ambition to rule, when men recognize their universal brotherhood regardless of color, nationality, creed, or station, when love shall cast out fear and evil shall find no abiding-place in the heart. All this is taught by Christian Science, and the teaching is bearing fruit.

Christ commanded that we love our neighbor as ourselves. Abraham Lincoln paraphrased this by counseling charity toward all, malice towards none. Both had the spirit of God, both loved their fellow-men, both were maligned, misrepresented, and murdered. If we cannot obey the Saviour's command, let us at least give Mrs. Eddy the benefit of our charitable thought if she needs it, bottle up our malice, and refuse to burn the flag of liberty with the acid of religious persecution. .

[Editorial in he *Paterson* (N. J.) *Press.*]

The Legislature has taken the liberal and sensible course in rejecting the proposition to forbid the practice of healing by other than regular physicians. The force behind the proposed bill was hostility to the Christian Science cult; but the fundamental principle involved is the right of the person who is sick or in pain to seek relief where he thinks he can get it. This is an affair of personal liberty.

THE LECTURES.

LIVERPOOL, ENGLAND.

The teachings of Christian Science were last night [April 8] explained to a considerable audience in Hope Hall by Mr. Bicknell Young, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, U.S.A. Lieut.-Col. Hobart, who presided, remarked that this was the first occasion on which a lecture on Christian Science had been presented in Liverpool. He (the chairman) stood there as one who, through a small measure only of understanding of the truth of man's divine Principle, God, had derived untold mercies and had been the recipient of many individual and family blessings. Christian Science was not aggressive, nor were Christian Scientists. They did not aspire to convert any one, or to force their views on any individual. They show forbearance and Christian love towards everybody,—to all clergymen, to all medical gentlemen of whatever school, to all nurses and hospitals and institutions for the benefit of the human race, and for the destruction and overcoming of sin and sickness,—and that spirit of forbearance they looked for and expected from all others.

Liverpool Courier.

SHEFFIELD, ENGLAND.

The Earl of Dunmore's daughter, Lady Victoria Murray, Mrs. Ward (London), Mrs. Brimner, Miss Coutts Fowlie, Maurice Sanderson, Mr. Lewis Firth, and a number of other well-known persons, including a sprinkling of clergymen, were among the large audience that gathered at the Montgomery Hall last night [April 15] to hear the lecture on Christian Science given by Mr. Bicknell Young, a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass. Dr. Wilding, the Manchester gentleman who gave up his medical practice on account of his conversion to Christian Science, presided over the meeting, and said that many years of his life had been spent in the study and practice of medicine, and when he reached the conviction that Christian Science was the only true method of healing and the same as shown by Jesus, he forsook all material systems for this healing Christ.

His experience during the transitional period proved conclusively to him that it was not possible to combine the two, medicine and Christian Science. So in his study of Christian Science he found that the fundamentals of its teaching were higher than those of the teaching of medicine, just as the heavens were higher than the earth. He was engaged in the active practice of a profession which he really loved, and after trying every means which medicine advocated for the disease his daughter was suffering from —namely, tubercular disease of both hip joints and consumption of the lungs—and failing to alleviate or check the disease by those methods, until she was brought to the verge of the grave, he was persuaded to try Christian Science for her; and although he had no faith in Christian Science, he was ready to try anything to avert her approaching death. From the first Christian Science treatment all active disease ceased, and he could now tell them, with a heart overflowing with gratitude, that his daughter was perfectly healed. From that day, more than six years ago, to this she had never spent an hour in bed through sickness.

Several patients in his then medical practice, suffering from organic diseases which most medical men would have recognized as incurable, were healed without any material aid by Christian Science prayer. Since becoming a Christian Scientist he had seen many other so-called incurable diseases healed by this new-old Christ-power. One woman was recommended by her medical attendant—not himself—to try Christian Science, he telling her honestly and frankly that he knew of nothing in his profession which could any longer help her, and his prognosis was that she would never be any better, but was likely to get rapidly worse—altogether it was a hopeless outlook. It was a case of paralysis of twenty years' history, which had originated in the lower limbs, and at the time that the doctor recommended her to try Christian Science the whole body was more or less affected. When she was well enough to leave her bed at all she had to be carried downstairs in the morning and up again at night, being quite unable to help herself.

The result of Christian Science treatment was the immediate return of movement in the paralyzed limbs; within a few hours she was able to walk unaided about her room, and within a week was walking out of doors, completely liberated from the old bondage. This was over three years ago, since which time she had been in the enjoyment of perfect health. This practical religion, revealed to this age forty years ago, performs works which medicine, with its history of forty centuries of theories, accumulated experiences, and self-sacrificing lives, recognized and recorded as impossible. It must and did strongly attract the helpless and hopeless sufferer, and rightly so, because the fruits of its teaching were manifest in healing all manner of sickness and disease, in healing sin in oneself, in purifying one's character, in bringing one nearer to God, and showing us how it is possible, here and now, to begin to love one's neighbor as one's self.—*Sheffield Independent.*

BRISTOL, ENGLAND.

At the Lesser Colston Hall last evening [April 12], Mr. Bicknell Young delivered a lecture on Christian Science. Dr. F. Alex. Barton, who presided over a large attendance, said that of all the creeds and sects of religious thought in England, probably none was receiving more attention than the "new theology" and Christian Science. The "new theology" was in its infancy, but Christian Science, with which alone they had to deal that evening, had for forty years been before the public, and had stood most severe and critical tests. It was probably due to the phenomenal success which had attended Christian Science, and the rapidity with which it had made advance both in America and the United Kingdom, that it not only had strong adherents, but strong opponents, and some of the articles which had appeared in the press were by their opponents. Christian Scientists were not in the least afraid of those articles, which did not worry them in any way at all. Indeed, it was an extraordinary thing that such articles had often been the cause of people looking into the subject of Christian Science when they would otherwise not have been attracted to it at all. Strangely enough, in England it was from their friends rather than from their foes that danger sometimes arose; for in answering questions, owing to the fact that they had only been acquainted with Christian Science for a short time, and had only an elementary knowledge, they often created an erroneous and misleading impression. Christian Science was not at all difficult to understand. Owing to the purity of their thought, children were sometimes more successful in their practice of it than grown-up folk, but an intimate knowledge of the whole subject was required before Christian Science could be explained clearly and precisely to other people. Therefore, the authorities had decided that only well-qualified people should deliver public lectures upon the subject. He asked those present not to be hasty in judging what they heard, but to look carefully into Christian Science.

TESTIMONIES OF HEALING.

It is just one year ago that I found this grand and blessed life-giving truth,—Christian Science. It has given me a year full of blessings and a peace and joy that tongue cannot express; it has turned this old world, that I once thought was only full of disappointments, sorrows, and hardships, into a heaven for me. I did not take up Science for the physical healing for myself, but for my son, eleven years of age, who had been a sufferer since he was a baby; also because it seemed to satisfy a hungering I had for spiritual food. The first Christian Science literature I ever read was given to me by a dear friend who had been healed in Science of a dreaded disease. She loaned me a copy of Science and Health, and before I opened the book I prayed God to give me wisdom and understanding in reading it. I had not read many hours in it when I knew it was sent from God. I devoured it as a starved child would take something to eat; it was what I had been hungering for. The second day I had the book I was reading the chapter "Prayer" to my son. I asked him if he did not think he could be healed through the understanding we got from that chapter. He said, "Yes, mamma, I believe I can," and he took off his truss and went to school. I must say that for six months or more before this he could not stand up without having it on; I was afraid to ask him how he was until about the third day, and when I did, he said he was well. I must say I was surprised! I knew then that Christian Science is from God and I accepted it as sent from God through our dear Leader, Mrs. Eddy. I cannot begin to express half the peace and love and joy that filled my heart to overflowing. We have had many more beautiful demonstrations in our family of five children. We find quick and sure relief through Christian Science from every difficulty. My five children go with me to the Science church and love the truth taught there, and my husband is becoming interested. I am very thankful for the *Sentinel* and *Journal*, also the Lessons from the *Quarterly*, which is my spiritual food. My heart is full of thankfulness to God, and to our Leader whom He has given us, and I pray that I may try to pay the debt of love I owe by being obedient and humble at the feet of Truth.

MRS. RUBA DAVIS, Watertown, S. D.

I came into Christian Science seven years ago. I had heard of it as a healing agency several years previous to this time, but had been unable to gain an understanding of it for lack of literature. My condition at the time of my appeal to the Science for help seemed hopeless. I was suffering from catarrhal affection of the head, stomach, and bowels, and the conditions, as several physicians declared, were fast becoming very serious. I also had a trouble which one doctor pronounced an abnormal growth, and for which he urged an operation. Another physician diagnosed the trouble differently, but he also said that my life depended upon an operation. In addition I was suffering from an injured spine, my family physician saying that it would be necessary to have the piece of broken vertebra removed before I could walk. At this time I found my remedy in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Heavy doctor bills were cut short, and divine Truth has been my physician ever since. I can truthfully say that I am now perfectly free from any ailment, and I am filled with gratitude to our dear Leader for showing us "the way."

MRS. LENA SMALL, Wabash, Ind.

I wish to express my gratitude and thanks to Mrs. Eddy for what Christian Science has brought to me. For three years I was a very heavy drinker, so much so that it almost wrecked me and my home; and, as in many other cases, it broke the heart of a loving wife and mother, weakened ties that bind the father to his child, and took from us the necessities of life. I shall never be able to satisfy the cravings of my heart to thank adequately the great power that heals, the power through which I have been entirely freed from the curse of drink. Christian Science is of the greatest help to me in my every-day life; I feel like a new and different person. It seems to me to be the greatest gift of God to the afflicted. It was the power of Christian Science that healed me in a moment's time while being treated. This occurred in January, 1906, and it was a wonderful experience to me, for I had been striving to be cured of this curse by Christian Science for four years previously. I sincerely hope that all who desire relief may heed my experience and profit by my cure through this marvelous power of divine Truth. Words can never express the wonderful miracle Christian Science has wrought. I am only one of the many, and shall ever be glad to answer any and all inquiries that may reach me, as I am a living proof of this great and glorious power.

ABNER BROWN, Grand Forks, N. D.

I desire to make a just acknowledgment of what Christian Science has done for me, and because others have expressed their gratitude that does not excuse me from showing some sign that I have not lost sight of what I have received through the work and self-sacrifice of our Leader, Mrs. Eddy. In the year 1886 I consulted several of the best physicians in Grand Rapids, Mich. I could not and did not want to believe that the diagnosis of my case was correct, but each diagnosed it as very serious lung trouble. They all advised a change of climate at once, and in two weeks' time I was in Colorado. The change of climate seemed to arrest the disease. I stayed in Colorado a year, during which time I gained in flesh but was still in bondage. During my stay in Denver I became interested in the study of so-called "mental science," and I felt that my understanding would enable me to return home and meet the change of climate. I had been home but a few weeks when I discovered I was losing ground, and although I vigorously applied the teaching which I had received, I could not demonstrate anything with it. Feeling obliged to go to the doctors, I was again advised to return to Colorado to live permanently, as soon as I was able to go, which I did in a few months. I was more comfortable in the high altitude but not free from pain or the cough.

Three years later I was taken very ill. The attack lasted several weeks and left me in a serious condition. I was being treated by a prominent physician in Denver, but without any relief and was constantly growing weaker. I was at the point of giving up when a friend advised me to try Christian Science, against which I was strongly prejudiced. That "man's extremity is God's opportunity" was proven in my case, for the first treatment in Christian Science so relieved the terrible cough that I slept soundly all night for the first time in weeks. After two weeks' treatment I was so restored that my friends were amazed at the change in me. Since that time I have been free from the disease and have spent three winters in Michigan with only good results. The first winter was a severe test, as I was subjected to bitter cold weather; but there were no bad effects, even to the extent of a cold. This destroyed the belief of my friends that I could not live in any climate if I so desired. I weigh forty pounds more than I did when I was healed.

I am grateful for the physical healing that Christian Science has given me, but the greatest benefit has been the

Digitized by Google

spiritual uplifting that has come from the study of "Science and Health with Key to the Scriptures" and other writings of Mrs. Eddy. That gratitude grows at every demonstration made either for myself or for others. We know that we have a text-book which reveals a Principle and gives us rules by which to work out every problem of our lives. The understanding of this Principle has opened the Scriptures for me and has shown me the way to prove the promises of God to His children.

It was my privilege to be one of the large gathering at the home of Mrs. Eddy in Concord, N. H., in 1903. It was one of the most helpful experiences of my life. Seeing the demonstration of order and obedience; feeling the love and gratitude going out to our beloved Leader who has been instrumental in bringing all these blessings into our lives; hearing those loving words of admonition, "Trust in Truth, and have no other trusts" [*Sentinel*, July 4, 1903],—this made up an experience which was a little glimpse of what it will be when "we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."—MRS. EMILY L. CAMERON, Denver, Col.

[Translated from the German.]

When I came to Christian Science, about a year and a half ago, I was so ill that no physician could help me. After a careful examination, the specialist whom I consulted said that my heart was badly affected, and all those who had previously examined me had declared that they had never met with a case like mine. I was greatly discouraged when I heard that there was no help for me, although the physician tried to comfort me. There was much pain, also difficulty in breathing, and I could not speak aloud. One day when I was feeling especially sad I heard of Christian Science. I clung to this ray of hope with all my strength and asked for treatment. After the first treatment I had a few hours' sleep, something which I had not enjoyed for weeks. I became more calm, the anxiety about breathing diminished, and I improved rapidly. To-day I am a well man; those evil times have vanished like a bad dream. I never think of my heart, but rather realize with joy that I can again take up my profession, which I had to give up on account of illness.

Although my physical healing has been wonderful, it seems small in comparison to my growth within. I am truly grateful for all the good that Christian Science has brought me. I shall always strive to be a real Scientist.

CHRISTIAN HEZEL, Dresden, Germany.

Christian Science came to me about seven years ago, when I was in the depths of despair, having found no help in medicine. Then I turned to the one Mind, God, and was healed. From childhood I had been called very delicate and had taken a great deal of medicine. As five of my family had passed away with lung trouble, this gave me great fear for myself; and the trouble was soon manifested. Finally I called upon our family physician for an examination and his candid opinion. He told me there was a very serious affection of both lungs, and said that with my family history he could give me little hope. I had been a member of an orthodox church for several years, and was honestly searching for God, often lying awake all night to pray for forgiveness and a release from the mental trouble, though without any expectation of physical help.

My first relief came from a friend, who knew just enough of Christian Science to deny silently my appearance and condition without mentioning Science to me; but I began to feel well and happy, and believing that God had healed me, I testified to this effect in a church meeting. About that time I was called upon to take care of a niece, who passed away with lung trouble. Having then no knowledge of how to protect myself, all the old symptoms reappeared, but I asked for help in Christian Science and received it very quickly. I began the study of Science and Health, where I found the "Key to the Scriptures," and the healing truth that gave me a sense of the peace that passeth understanding. Other ailments were overcome, among which was an ovarian trouble for which I had been ordered to have a surgical operation.

Our home, during these seven years since my healing, has been like a new place to us. Christian Science has brought us help, physically, spiritually, and financially; and by helping others as I have been helped, I am trying to express in deeds my gratitude to God, and to dear Mrs. Eddy.

MRS. PHEOBE GLENN, Saginaw, Mich.

For the encouragement of any who may hesitate about undertaking to help those who know no English, I give my experience. I am a school teacher in a community of Finns. None but the children who attend school can speak, read, write, or understand English, and I cannot speak to the people except through the children as interpreters. Two years ago the information was conveyed to me that a woman who is the mother of six children was in a bad condition from a disease in the breast. One Saturday afternoon I went to see her. She had given up all medicine, as the doctor had told her that nothing could help her. I asked her, through her daughter, if she had ever heard of the people who are made well by God's love and power, without medicine. She never had. I said, "Do you believe in God?" "Oh, yes," came the reply through our young interpreter. I explained as simply as possible that I had been taught in Christian Science how to ask help from God for sick people, and added, "Would you like to have me ask for you?" "Oh, yes," she said again. I went to work, trusting divine Love to meet "every human need" (Science and Health, p. 494). I did not go again to see her, and I made no inquiries, for I had asked her to "tell no man." A few weeks passed; then I met the daughter. As soon as she saw me she said, "Mamma is almost well." I said aloud, "Praise God!" Not long afterward I met the mother at the house of a neighbor and got this question to her, "Are you all right?" She smiled and replied, "All right." I pointed upward and said, "You thank God!"

MRS. LOUISE LOWELL, Onota, Mich.

[The simple testimony which follows is translated from the Finnish language and tells of gratitude for the healing mentioned above.—EDITOR.]

I thank God, and this teacher for what she did for me when I was having great pain. She said she would help me if I wanted her to, so I turned toward her, for I believed in God and in what she said, and God made me well without any kind of medicine. When I believed her words God made me well in a few weeks. I never thought any one could help me, because the trouble was so bad. I know that any one can be made well who trusts in God, and believes what He says. I thank God very much for this.—MRS. MARIA BLAKE, Deerton, Mich.

Words fail me when I try to tell of all the blessings that have come to me through Christian Science. It came to me in an hour of great darkness and need, for I was a physical and mental wreck, as from childhood I had been very delicate and suffered from severe attacks of illness. When I came to Christian Science I was suffering from lung, heart, and spinal trouble, and had been treated by twenty doctors, four of whom were specialists, who

Digitized by Google

said I would be an invalid for the rest of my life, as I had no constitution; and I then became very depressed. In 1903 I was visiting some friends in the south of England and they spoke to me about Christian Science, but it did not appeal to me, as I thought I was satisfied with my own religion. Still, I thought it might help others, so took the address of a practitioner. I wrote to her shortly after and asked for an appointment, and at my first interview I was healed of the heart trouble, weakness, and severe stomach trouble from which I had suffered for twenty years. I had four weeks' treatment and the other ailments left me by degrees. I soon found that I had to work out my own salvation, so I studied the Bible and Science and Health, and in about six months I saw the light and that the Scriptures contained this truth. I knew what had healed me, and I saw clearly that sickness is not sent by our heavenly Father, but is the result of wrong thoughts. I am now a free woman—free from all my old troubles, and it is two years since I took any medicine. The physical healing was a great blessing, but the spiritual uplifting is the greatest of all.

The wonderful new understanding of Truth has taught me to know more of God and the real man. I am deeply grateful to Mrs. Eddy for her noble and self-sacrificing life. My prayer is that I may be able to shed abroad the light that has come to me and which gave me freedom from bondage.

Miss Martha Milnes, Birkdale, Lancashire, England.

About seven years ago I took my first treatment in Christian Science. I was a physical wreck, having suffered for forty years from a very bad case of bowel trouble. I was perfectly healed of this very painful and distressing disease in my first treatment and I have never had a return of it in these seven years. I had suffered very much from sleeplessness, and in one week I was healed of this; also I had suffered for a long time with stomach and rheumatic trouble. These gradually disappeared through the application of Christian Science. I had been under a noted physician's care for over twenty years, and grew worse all the time until I came to Christian Science. Though I am now in my sixty-sixth year, I feel like a young girl, and have better health than I ever had. I am now endeavoring to help others in this wondrous truth, and my heart is filled with love to God and gratitude to our beloved Leader, Mrs. Eddy, for all that she has done for me and mine.

Mrs. Anna L. Cameron, St. Louis, Mo.

It always helps others to know that some one was really healed through Christian Science. I was healed of a complication of diseases after I had taken medicines for twenty years. As I still suffered, a good Christian Scientist told me about Christian Science. I had never heard of it and it sounded so good to me when she told me of that "true Light, which lighteth every man that cometh into the world." It certainly was a light to me! I am so thankful that I found this truth. I quit taking medicine, took Science treatment and was healed. That was over five years ago, and I have never taken any medicine since, and we have had many demonstrations in our family. I am ever grateful to God, and to dear Mrs. Eddy for the many blessings we have received through this wonderful truth. I have learned that God, "who forgiveth all thine iniquities; who healeth all thy diseases," is ever ready to help His children in their every need; that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." My prayer is to have faith in God and to serve Him to the best of my ability.

Laura J. Whitaker, Petersburg, Ind.

I have been studying Christian Science four years, and I now give my testimony with the hope that it may help some other one who has tried material remedies in vain. I had two of the best doctors in the State, and would improve for a time, only to find myself again going down hill. Among the many ailments from which I suffered were heart and stomach trouble, weak eyes, etc. I had read my Bible from childhood, but did not understand it. I joined one of the orthodox churches when very young, but never found the peace I sought until I began the study of Christian Science. I can never be grateful enough to Mrs. Eddy for Christian Science, which has done so much for me and mine, for I feel that it has not only saved my life but my reason. The text-book is truly the "Key to the Scriptures." It has unlocked many passages in the Bible to me, and by the study of these books I have been able to overcome many ailments for myself and little ones. My three children are healthy, for which I am most grateful to God and to Christian Science.

Mrs. Lucy C. Moore, Winterville, N. C.

The realization that even the physical structure which we call the body depends upon our understanding of the spiritual, came to me in a practical way during the building of Second Church of Christ, Scientist, of Minneapolis, Minn. As a member of the subscription committee I studied our Leader's definition of Church, on page 583 of Science and Health, until I understood in some degree the spiritual meaning of the "structure of Truth and Love," and found that in proportion as we dwell upon and reflect the thought that the abode of Truth is on a firm foundation, a change goes on in our body. My physical troubles gradually disappeared, until I was made anew. Then as the work went on with the new edifice of The Mother Church, this realization grew, and as I turned from self to infinite Truth for my every need my consciousness also was renewed, and thus was demonstrated the last half of that beautiful definition of Church. For this I am most grateful to God, and to our beloved Leader.

Mrs. W. K. Pennell, Minneapolis, Minn.

Three years ago I came to Christian Science—helpless and hopeless. To-day I am restored to a life of usefulness, and have a growing knowledge of God. I was a sufferer from nervous and stomach trouble, having been an invalid for two years or more, and had sought help from every school of medicine, also hygiene, osteopathy, etc. I came to Christian Science as a last resort, and came doubting, fearing, yet hoping; but I am very thankful that my feet were led in the path of Christian healing, for it has brought me new life, peace, moral and spiritual uplifting, and a desire to know and do the will of God. Mine was a case of slow healing, the first year being practically spent in overcoming intense fear and a still lingering faith in and dependence upon material remedies. At the end of a year I went to Houston to a practitioner, and boarded with a Scientist, whose kind, mother-hearted care of me—a stranger—strengthened my courage. I spent almost my entire time talking with Scientists, attending the three regular services each week, and in this atmosphere of love and harmony I soon improved, returning home at the end of two and a half months greatly strengthened in mind and body. I continued to take absent treatment, the effectiveness of which I was now willing to trust. My interest in Christian Science being so awakened, my search for spiritual understanding almost made my desire for physical help take secondary place, and of course my body grew stronger as I assimilated the truth in trying to live a better life.

When I came to Christian Science I had an ignorant

Digitized by Google

prejudice against that dear woman, our Leader, of which I almost shrink from speaking, only that the fact that I now revere and love her, and in a measure comprehend the greatness and goodness of her life of consecration, wisdom, strength, and purity, is a proof of my own spiritual growth. I owe her endless gratitude, for through her revelation of Truth to this age has my salvation come. All along my search for health I have been so helped with love, patience, and good cheer, that my heart is very full of love and gratitude. I am thankful to the great giver of all gifts for what He has done for me, and for the gift of His son, Christ Jesus, who brought the healing truth to sick, sinning humanity ages ago. The *Sentinel*, which bears that loving admonition of our Master, "What I say unto you, I say unto all, Watch!" with its words of helpfulness and instruction, has grown to be a friend.

EMMA H. SAYLES, Abilene, Texas.

I have realized for some time that I should express gratitude for the blessings that have come to me through Christian Science. I have been freed from a morbid, unhappy condition; glasses which had been worn for years have been given up, and my eyes are growing stronger every day. My children also have received much help from Science. My thanks are due for the help given me to overcome fear and doubt. It is wonderful the way the articles in the *Sentinel* and *Journal* meet the need of the hour. I have received help from them many times and I am most grateful to Mrs. Eddy for giving this truth to the world.

MRS. C. C. NEWELL, Hinsdale, Ill.

Mrs. Eddy says, "Truth is the real; error is the unreal. You will gather the importance of this saying, when sorrow seems to come, if you will look on the bright side; for sorrow endureth but for the night, and joy cometh with the light" (Christian Healing, p. 10). This brought to my thought an experience of some years ago, when I was in deep sorrow that seemed to be "a living death." I was about to leave my home city to visit relatives in another State, and before my departure, my heart said, "This sorrow shall never darken the lives of my friends." This thought silenced sorrow, and made glad and joyous my visit. Christian Science came to me in an hour of direst need, when even suicide was in my thought. Scholastic theology had failed to give comfort in that hour of sorrow, and *materia medica* had no healing lotion for the suffering body. Then it was that divine Truth came to me as a mother awaking the child upon her bosom from its troubled dream. My hungry heart partook eagerly of the heavenly manna and was refreshed. The way has seemed steep, but the higher we rise the clearer and more glorious view we have of the new heaven and the new earth. My chief aim and purpose since the light of Christian Science dawned upon me has been to prove those words of our dear Leader, "Truth is the real; error is the unreal."

HANNAH M. EVANS, Wolfboro, N. H.

I was appointed sanitary officer in June, 1901, and the next fall, when our city had quite an epidemic of a so-called contagious disease, I was asked if I would enter a house supposed to be infected, my superiors knowing that I was a Christian Scientist. I readily said that I would, and at once set to work, disinfecting the house and taking the patients to the pest-house, being exposed perhaps more than any other person in the city. By constant demonstration of the truth I overcame the belief of contagion; but a change occurred in the city administration, and the new board did not altogether approve of my method, recommending that I resort to material means to prevent the spread of the disease. To satisfy them I sterilized my clothing, etc., and on the ninth day following the disinfection of the next house I was taken down with a very malignant type of the disease. (This was in March, 1902.) I called in a Christian Science practitioner, through whose understanding of Truth I was enabled to resume my duties on the following Monday, being absent from my work only four days.

HALLOCK HILL, Topeka, Kan.

I was healed through Christian Science of a bowel trouble which had baffled all efforts of doctors for over twenty-five years. When it first appeared it was not serious, but grew steadily worse from year to year, until it greatly affected my general health and finally arrived at that stage where something must be done. The doctors told me there was no way out of the trouble except through an operation, which would be of a delicate and dangerous nature. I applied to a hospital for admission, but was informed that I must wait some ten days before they could give me a private room, as they were full at that time. I was suffering severely and was very impatient of the delay. While I was waiting for them to send me word when they would be ready for me, Christian Science was suggested by my wife, and by others who had been healed. After a time I yielded to their wishes, and allowed a practitioner to take up my case. My belief at that time was such that I did not think it possible for a case of that nature and of such long standing to be healed by this method; however, I was finally willing to make the effort, which was a success from the start, and in a few months I was perfectly healed. My general health has since been good and I have had no return of the old trouble. It is needless to say that my gratitude to Mrs. Eddy, the Discoverer of Christian Science, is unbounded, not only because of my physical healing but also for the great spiritual benefit I have received.

D. J. SWEET, Towanda, Pa.

I cannot find words fitly to express the gratitude I feel for the many benefits I have received through Christian Science, in fact I am just beginning to learn the meaning of the word gratitude; neither can I enumerate the daily blessings which this wonderful truth is unfolding to me. For the realization of the ever-presence and protection of God I am most grateful. Many times both myself and baby have had seemingly narrow escapes from accident, so near that I can only liken them to a flying missile which passes so closely and so swiftly that you feel the stir in the atmosphere; but, as the psalmist has said, "Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day;" for "there shall no evil befall thee." I have paused and thought, as Jacob of old, "Surely the Lord is in this place; and I knew it not." With the aid of a practitioner, neuralgia, fear of childbirth, and discordant conditions of many kinds have been overcome, and I experienced harmonious delivery and perfect healing.

I am grateful to God, and to our beloved Leader, Mrs. Eddy. I am also grateful to those whose remarks cheer us in the Wednesday evening meetings, and to those who contribute to the Christian Science periodicals, for many times, when I have been in the valley of depression, they have in this way extended me a helping hand and elevated my thought above the despondency and discouragement which seemed to beset me, thus proving the words of our Leader. "Divine Love always has met and always will meet every human need (Science and Health, p. 494).

MRS. LUELLA NIXON MOWRY, Roxbury, Mass.

Very few of us will have the chance of heroic self-devotion; but every day brings the petty, wearing sacrifice which weighs full weight in God's scales.

SAMUEL OSGOOD.

FROM OUR EXCHANGES.

[Robert W. Vankirk in *The Standard*.]

The Old Testament is the record of the religious experience of the best men among the Hebrew people. Their communion with God, their aspirations after holiness, their dreams and visions, their ecstasies and raptures, were all manifestations of the divine life in their souls finding outward expression. . . . The New Testament marks an advance upon the revelation of the Old, because it furnishes the record of this higher revelation. In the Gospels we have the story of Jesus' earthly life, his doings and teachings, through which he revealed the mind and heart of God. . . .

In the Acts and Epistles we have the record of the religious experience of the earliest disciples of Jesus—those to whom Jesus had become "the way, the truth, and the life" in their search for God. If we seek to formulate from these writings an external revelation or law, which is to be forever regulative and binding upon Christian life, we shall misconceive their aim and misdirect their message; but, on the other hand, if we shall see in them the records of an exalted religious experience which we are to seek to reproduce and even surpass in our own souls, and if we shall find in them an inspiration which gives a clearer view of God and a closer fellowship with Him, then indeed will they prove themselves to be a veritable revelation from God.

[Rev. S. G. Barnes in the *Hartford* (Conn.) *Seminary Record*.]

One man there was who understood this, who reported himself as in heaven even while he was on earth. He saw the truth and beauty and goodness of things, the benignity of law and the beneficence of Providence, because he ever looked on the face of the Father. He embodied for us the fulness of man, being himself the universal man, combining in himself every human power and virtue, furnishing in himself the perfect and absolutely satisfying model for man, woman, and child, in all ages and countries. He embodied for us the fulness of God, making clear God's estimate of values, revealing the limitless and inexhaustible love of God, and bringing into human history all the power of God for our salvation.

[*The Christian Standard*.]

That the publicist, rather than the theologian, leads today in preaching that righteousness exalteth a nation, but that sin is a reproach to any people, is a most reassuring sign of public health, however hard the situation may bear upon our ecclesiastical leaders. Men who are supposed to give themselves entirely to the ministry of love and truth should have a clearer spiritual vision and a more unerring ethical sense than their fellows in secular pursuits. But at the present time this does not seem to be the case.

[*The Christian Register*.]

The effects of religious revivalism are beginning to be well understood in the churches of all denominations, and there is a growing tendency to set aside hypnotic influences and substitute for them the slower, but more permanent, results of steadfast efforts, training, and the building of character.

[Rev. Frederick E. Dewhurst in *The Congregationalist*.]

The more you get beyond your narrow and selfish individuality, the more of an individual you become. Life everywhere grows in dignity and worth as it ceases to be ephemeral. In proportion as life is projected upon a large scale does it acquire interest and value.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science.

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Herbert Knox, Commissioner of Corporations, has reported to the President regarding the Standard Oil investigation, and appears to make out a serious case. He alleges, in substance, that the history and present operation of the Standard interests show throughout the past thirty-five years a substantial monopolization of the petroleum industry of the country, a deliberate destruction of competition, and a consequent control of that industry by less than a dozen men, who have reaped enormous profits therefrom. The commercial efficiency of the Standard, while very great, has been consistently directed, not at reducing prices to the public, and thus maintaining its predominant position through superior service, but rather at crippling existing rivals and preventing the rise of new ones by vexatious and oppressive attacks upon them, and by securing for itself most unfair and wide-reaching discriminations in transportation facilities and rates, both by railroad and by pipe line, while refusing such facilities so far as possible to all competitors. Indictments exceeding eight thousand have been found against the Standard. At Chicago a conviction has been secured on 1,462 counts. None of the other cases has yet come to argument.

The Secretary of the Interior has approved the recommendation of the Commissioner of the General Land Office for the improvement of the efficiency of his office by the dismissal of old and inefficient clerks and the employment in their places of clerks who are able to meet the demands of the office. The first dismissals will be made in the division of the office in which land patents are proposed. The law provides for the typewriting there of the patents and the recorded copies of them. Many of the employes are elderly persons who have been on the rolls for a long time and who cannot use the typewriter. The lowest salary paid in the division is $900 per annum. Where possible, places paying less will be provided.

A definite effort is being made before the Interstate Commerce Commission to secure to the public a reduction in the rate of fare charged by the Pullman Company for its sleeping car accommodations. Three complaints have been filed against the company and various northwestern railroad lines, and it is prayed not only that the rates be materially reduced, but that the company be allowed to charge only half as much for an upper berth as for a lower berth. The complaints will open up the whole question of sleeping car rates, not only on the lines of roads mentioned specifically in the complaints, but throughout the country.

Judge Landis in Chicago has fined the general manager of the American Seating Company and the A. H. Andrews Company $5,000 each, and nine other furniture companies amounts ranging from $500 to $2,000 for violation of the anti-trust laws in forming a conspiracy in restraint of trade. The defendants pleaded guilty. Judge Landis preceded the delivery of sentence by a scathing denunciation of the methods adopted by the church and school furniture trust.

For the twelve months ended with April the imports of gold were $146,896,815, and the exports $31,981,947. The largest importations of gold ever occurring in any fiscal year were $120,391,674 in 1898 and $100,031,259 in 1881, while in no other fiscal year has the total of gold imports ever crossed the $100,000,000 line.

The mayor of San Francisco, who is on trial for extortion, has delegated his office to a committee of seven representing the five great commercial organizations of the city. His action is tantamount to a power of attorney.

A police census just completed gives the population of the District of Columbia as 329,591, of whom 96,188 are negroes.

Foreign.

An important step toward the establishment of just relations between capital and labor has been taken in the engineering industry of England. Hereafter union and non-union men will work together, while employers are prepared to recognize the unions under the new conditions. The mutual interests between capital and labor are also admitted, and elaborate arrangements are planned for the avoidance of disputes. Ten years ago the engineering trade unions were preparing a series of demands which brought on a general lockout and paralyzed the engineering and shipping industries of the country. When the great strike of 1897-98 came to an end it was upon a carefully elaborated and signed treaty which included provisions for the future working of the industry known as the "Terms of Settlement," and the effect of them has been to prevent strikes and serious disputes in the industry ever since. These conditions have just now been revised.

The subject of popular education in Russia was brought up in the Lower House of Parliament recently and a motion to create a commission to examine the various educational projects now before the House was made. This action presented the nearest approach to friendly working relations between the Douma and the Ministry that yet has been witnessed. Minister of Education Kaufman explained a measure which he said the Emperor had specifically authorized him to lay before the House. He declared that in no other country in the world did the number of illiterates reach such a large proportion as in Russia. He said the budget for the Ministry of Education, which now amounts to $8,000,000, would be increased sevenfold.

The building industry of Berlin and vicinity is seriously affected by the lockout of one hundred and twenty thousand bricklayers and masons which has just gone into effect. The cause of the lockout is the men's demand for an eight-hour day. It is expected that the lockout will affect another one hundred thousand belonging to affiliated trades.

Sydney Olivier, the new Governor of Jamaica, who succeeds Sir Alexander Swettenham, resigned, has arrived at Kingston and taken the oath of office, administered by the commanding officer of the troops.

Canadian immigration officials look for at least three hundred thousand new settlers in the Dominion during the current year. Last year the total immigration was two hundred and fifteen thousand.

Industrial and Commercial.

The Government's reports show that for the nine months following the publication of the Reynolds-Neill report exports of canned meats amounted only to twenty-eight per cent of the exports for the preceding nine months.

Germany is now building houses of soundproof blocks. These are made of a composition of gypsum, sawdust, and ashes. Much chemical skill is said to be required to make the compound.

The phenomenal prosperity of the fine goods cotton mills of New Bedford, Mass., is indicated by the fact that already this year extra dividends amounting to $610,000 have been declared.

An order for two hundred steel passenger cars to be used in the New York tunnel has been placed by the Pennsylvania Railroad.

The timber cut in Windham County, Vt., the past winter amounted to over thirty million feet.

General.

A well-known Saxon inventor and manufacturer, Herr Emil Claviez, has produced a paper yarn termed "xylolin," that has been successfully used in a wide range of textile fabrics. The thread is not brittle, it does not have a hard surface, and it neither shrinks nor stretches to any appreciable extent. Having certain resilient qualities, it cannot be readily crushed or dented like paper, and on it moisture has practically no effect. It is a serviceable substitute for cotton, jute, linen, and even silk. It can be readily dyed in delicate shades, which are not affected by strong light. Among the various fabrics in which the greatest amount of work has thus far been accomplished is the making of rugs and carpets. The spun paper fibre has been used in making outing hats, and "canvas" shoes and slippers. Last year alone seven million pieces were made and sold for toweling at about twenty-four cents a dozen. When used in garments for clothing of medium weight it possesses the advantage of lightness and warmth in comparison with an equal bulk of linen or cotton. The cost of the material for a full three-piece suit of clothes of average weight is not over one dollar.

Since the introduction of electric railways into Switzerland a new industry has been established in the Alpine districts in the quarrying of glacier ice for distribution in the large cities. Some of the Swiss communes having granted concessions for that purpose, considerable sums have been expended in constructing ice slides or troughs, in which the blocks of ice when blasted out of the glacier are transported to the vicinity of the stations, for conveyance in refrigerator cars to Lyons and other large cities somewhat remote from the Alps. Glacier ice, which is perfectly pure and transparent, commands a higher price than that obtained from ponds.

A plant grows in the Sahara Desert called the "coughing bean." It is said that when the dust settles thickly upon the leaves and clogs up the pores, a gas develops in the plant which finally produces sufficient pressure to cause a slight cough or explosion and throws off the enveloping mantle of dust.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SECRET SPRINGS OF TROUBLE.

SAMUEL GREENWOOD.

MANY persons shrink from a close or a frequent examination of themselves because of an instinctive reluctance to look upon their hidden mental deformities and moral inconsistencies, but the necessity of knowing what is enfolded in our sense of personality makes this an important factor in the working out of our salvation. We all need to "learn what we honestly are" (Science and Health, p. 8) in order to bring about what we should be. Keeping evil in the dark does not relieve us of its consequences. It is not necessary to reveal or describe our secret errors to others, but we do ourselves need to be aware of their asserted presence in order to neutralize their influence and expel them from our consciousness. To deceive ourselves into thinking that evil is not present because not aggressively evident, is to give it the larger opportunity to work unsuspected and unperceived.

The Scripture, "Be sure your sin will find you out," is especially illustrated in Christian Science practice, in which is exemplified the intimate relation of human mind and body, of sinful, erroneous thought and physical suffering. Any wrong thought cherished, instead of rejected, eventually makes its disturbing presence felt, although the sufferer may not trace the course between the erroneous cause and effect. When it becomes better understood that the mortal body can be improved only through improved states of thought, our systems of hygiene will be spiritual rather than material, and will consider moral rather than physical conditions.

It is well under every circumstance to deny disease, and to resist every temptation of physical suffering, because these conditions are not of God and therefore are not true; but the next and better step is to turn the searchlight of truth into the secret recesses of one's consciousness, to see if there is "any wicked way" in us. The mere passive denial of sin is not sufficient of itself, and may leave us in unconscious danger of becoming its victims; while to come face to face with our errors should result in their dismissal, if we are honest. Sin will become unreal to us only as we work out its nothingness through self-knowledge, repentance, and reformation, as our Leader has pointed out.

Unless we are wilful wrong-doers we should not shrink from this subject of secret sin, for our peace must come through purification. Because an error exists unseen it is not necessarily inactive, on the contrary it is the activity of concealed error that often brings us into undesirable experiences; whereas, if truth is kept active in us, the opposing error is forestalled. It is evident that evil can be active only as our sense of goodness is allowed to be idle, hence the possibility of working out our own salvation. It is possible for us to keep love so busy that hate has no opportunity to bring any effort to fruition, so far as we personally are concerned; and likewise with all the graces of Spirit. Because error is ever active in human belief we need to take especial care that truth shall always be uppermost and operative in our thoughts, and our freedom will be according to our diligence, our fidelity, and our love of good.

God, divine Principle, does not for a moment withhold the reward of goodness. The prophet Jeremiah declares that it is our sins which withhold good things from us; so that if there seems to be an obstacle between us and the realization of our right desires, we may be sure that self needs somewhere to be set right. It is safe at all times to look within and not without for any obstruction to our progress Godward. The belief that man can be wicked requires more attention from us than the belief that he can be sick, and in some instances it may be necessary to remove the results of the former before entire freedom from the latter is gained.

If we would know ourselves we must dig down through the crust of self-complacency, and with the torch of truth explore the hidden places of our thought. No good housekeeper will endure the presence of dirt or disorder, but may we not on the mental side be permitting the presence of many unclean, unrighteous things? Self-ignorance can be our only excuse for allowing any evil to operate through us, but the law of righteousness will not excuse us from the penalty attaching thereto. Instead of petulantly asking why we are not more quickly delivered from some discordant condition, would it not often be better to ask why we are so slow in loving our neighbor as ourselves, why we do not more quickly give up our resentment and forgive our wrongs, why we do not more readily forsake our jealousy, and pride, and self-will? In the parable of the prodigal, the father did not run to meet his son until the young man had recognized and abandoned his false way, and in humility and self-abasement had set out in earnest to seek his father.

It is well to declare that God is good, is All, and that there is none beside Him, for this is Scriptural teaching and is true; but it is not well if we use such statements to cover up errors that may be lurking undenied in our mentality. The logical sequence of Christian Science treatment is to bring our thoughts and experience into accord with the truths we declare. If there is a guest in our mental household that has not on a wedding garment, that is not clad in truth, we must turn him out. Or, if there are indications that an enemy is encamping in our dominions, our safety demands that we promptly remove him therefrom.

We need to be specific in our work. A cyclist who has punctured a tire does not cover the whole surface with a patch in order to repair it, nor does he stick on a patch here and there indiscriminately, but he locates the damage and the work is quickly done. The sense of bodily discord comes often as a danger signal, warning us that all is not right within, and if we would be wise we will turn on the light and locate the disturber

Digitized by Google

of our peace, not in matter but in thought. The fact is we are all too much in the dark as to our dominating mental conditions. We are all inclined to be too lenient and too sympathetic with self, judging ourselves too lightly, and expecting Truth to do likewise, and to deliver us from trouble, whether our prayers are few or many, whether our work has been well or poorly done. Truth does not make clean merely the outside. While "the things that defile" come from within, the work of purifying must begin within also, and extend outward, if the work is to be permanently done.

The cleaning up of our thought-dwellings is surely more important and necessary, even from a hygienic point of view, than the periodical cleansing of our houses. Whether one is a Christian Science patient or practitioner, the secret places of our thought need to be illumined, and the errors that may have hidden there be rebuked and destroyed, if we would gain more freedom and success in our work. Those who are sometimes impatient with their apparently slow progress, are often very patient and even indulgent with their faults and shortcomings. The mistake is in measuring one's progress by physical rather than by moral and spiritual conditions. One is apt to be more worried, for instance, over what he believes to be a troublesome case of corns, than over his indulgence of self-will, envy, or pride. Or he may cherish a resentful thought toward another, and not feel half so alarmed as over some sore spot in the flesh.

Would it not be wiser to reverse the case, so that we become more anxious because of the disturbing presence of selfishness, unkindness, resentment, or irritability, than over the seeming presence of physical pain? Will not God respond more quickly to our need when we are most concerned because of our failure to be Christlike and pure, than because of the failure of some physical organ to perform its functions? While our desire centers more strongly in the overcoming of bodily discord than in the overcoming of the errors that are making us unlike God, we have not risen to the true sense of our need, therefore our prayers are not always quickly answered.

While we would not minimize the importance and duty of healing disease, for Christian Science teaches that disease is an error, and so heals it with truth, yet Christian Science is more than a "doctor's shop," concerned wholly with making mortals better physically. While the healing of the sick and the alleviation of human suffering is a grand work in itself, and is indispensable in Christian work, Christian Scientists find their greatest glory and reward in the moral and spiritual reformation which results from their demonstration of Christian Science.

SINGLENESS OF VISION.

ELIZABETH EARL JONES.

THE story of Noah and the ark of refuge always stands out in memory as a symbol of the tender, protecting love of God in that mental habitation which ever floats above the waters of mortal sense. The description given in Genesis of the building of the ark, emphasizes one point that upon close study gives us the key to successful resistance and victory over the pressing claims of evil. Jesus, in preparing his students for their work against the seeming powers of darkness, said: "If therefore thine eye be single, thy whole body shall be full of light."

Following the same divine guidance of the Christ, Noah builded but one window in his ark, and it was "above," opening not upon the earth, but upon the heavens. Noah was wide-awake to the claims of evil, and was prepared to meet them and keep above them until the allness of good should be manifest. He knew the awful manner of its self-destruction, but he also knew that his own safety, and the safety of those with him, lay in contemplating only reality,—the works of God, good.

The storm was fearful beyond words, but Noah saw it not; the destruction on every side was appalling, yet Noah saw only Life. The suffering and dangers which might have overwhelmed and destroyed him, had he dwelt upon them or seen them as real, were not within the range of his upturned vision. He did not see the deluge, he saw only the fathomless heavens of peace and harmony, because his window was open only to "those things which are above;" therefore Noah and all who were with him in the ark were saved.

We have all struggled enough with old habits of wrong thinking and with false beliefs in the reality of both good and evil, to know in some degree the value of singleness of heart and vision. We know that whenever two views of any one question present themselves before us, we must choose and hold to one of these two. Sometimes the false and discordant view has seemed so real and irresistible that we have had to ask ourselves searchingly, In which do I have more faith, in evil or good? Which do I see as real, evil or good? Which should I see at all, evil or good? And we are bound to choose the good, and are saved and lifted above the deluge, rising as the waters rise, until we rest upon the heights of God. So long as Peter kept his gaze steadfast on the Christ before him, he walked the waves, but when he looked down and saw the angry waters surging all about him, when he began to measure the distance between himself and Christ, his faith failed him and he began to sink. In his extremity he cried out, "Lord, save me." Jesus rebuked him, saying, "O thou of little faith, wherefore didst thou doubt?"

When Jesus was journeying for the last time to Jerusalem, he saw that evil was about to nail him to the cross, but he also saw the resurrection. He might have reasoned that this shameful death and seeming defeat would disprove the divine origin and truth of his teachings and mighty works; that as he had said, "If a man keep my saying, he shall never see death," none of his words would be believed, and that all men would forsake him, repulsed by his seeming failure. But did he so reason? No; he never saw defeat,—he never saw the shame and failure, but with sublime faith in good and singleness of spiritual vision he exclaimed with joy, "And I, if I be lifted up from the earth, will draw all men unto me;" and death was swallowed up in victory.

To-day the world stands in wonder at the steady progress and almost superhuman ability of one lone, brave woman to resist every weapon that has been formed against her. The Discoverer and Founder of Christian Science has successfully withstood for forty years the onslaught of every invention of evil to silence good; and she has risen with these rising waves of human hate, risen to the exaltation of divine Love blessing its enemies, far beyond the reach of the destroyer, safe in God,—because her eye has been single to good. Mrs. Eddy has taught and demonstrated that there is but one reality, and that is God, good, and His ideas; she has been consistent with her premise, and also maintains and daily seeks to prove the unreality of all evil, sin, disease, and death. In all her writings, and in her example, one is strongly impressed with the fact of her absolute loyalty to God and His Word,—to good, to Life, Truth, and Love.

Christian Science affords an ark of refuge because its one window opens toward God, heaven, harmony,—toward

Digitized by Google

Love. Those who abide in this ark can never be overwhelmed, no matter how terrible the deluge, because they never see it. They are awake to the false claims of evil, and watchful unto the end,—but they refuse to turn away even for one moment from their steadfast contemplation of God and His glorious truth. They also know that the loud thunders of evil are a subtle subterfuge of the devil to tempt our gaze away from God. The light of ever-present Love, the sunshine of the risen, living Christ, pours through our open window, floods all within, without, with peace and joy and calm unspeakable; the waters begin to abate, and the ark rests on Ararat. The supremacy of good does prevail, and evil, hate, envy, revenge, and destruction fade away before this steadfast vision of a new heaven and a new earth—a world regenerated.

MEMORIAL SERVICES.

By special invitation of the Rev. Mary Baker G. Eddy, the Memorial service of the E. E. Sturtevant Post, No. 2, G.A.R., together with the allied organizations, Woman's Relief Corps, Daughters of Veterans, Sons of Veterans, and the Spanish War Veterans, was held yesterday (Sunday) afternoon at 4.30, in First Church of Christ, Scientist. It is said to be the first time in the history of the Church in this country that such an event has occurred.

The Post, the Sons of Veterans, and the Spanish War Veterans assembled at Grand Army Hall and marched in a body to the church. The Woman's Relief Corps and the Daughters of Veterans assembled in the Reading Room of the church, and at 4.30 took their places in the auditorium. National tunes were played on the beautiful chimes of the church for half an hour preceding the service. As the Post was marching from headquarters, "Onward, Christian Soldiers" was played, and was continued on the organ as they went to their seats.

Commander George E. Wood was at the head of the Post. President Mrs. Imogene Woodbury commanded the Woman's Relief Corps. Senior Vice President Elmira Critchett filled the same place with the Daughters of Veterans, Commander Leon Evans was with the Sons of Veterans, and Major Daniel K. Murphy was with the Spanish War Veterans. Among the distinguished and widely known officers present were Past Department Commander D. B. Newhall, Past Department Commander James E. Minot, General Frank Battles, Past Adjutant General of the National Department, and Past National President of the Relief Corps, Mrs. Fannie E. Minot.

The pulpit and chancel were handsomely decorated with palms, ferns, and a profusion of white flowers, which together with an artistic arrangement of the national colors added to the beauty of the noble church interior. Two of the flags in Mrs. Eddy's room were from the Peace Conference, and were provided for this occasion by one of the delegates.

Mrs. Cora Fuller Straw presided at the organ. The appropriate service consisted of: Organ voluntary; hymn, "Onward, Christian Soldiers;" Scripture reading, Philippians, 2 : 1–16; silent prayer, followed by the audible repetition of the Lord's Prayer, with its spiritual interpretation as given in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy; hymn, "Saw ye my Saviour?" words by Rev. Mary Baker G. Eddy; responsive reading, Psalm, 85 : 1–4, 6–13; remarks by the First Reader, Prof. Hermann S. Hering; reading of the Lesson-Sermon, consisting of selections from the Bible, with their correlative passages from the Christian Science text-book; also the correlative Scripture, according to 1 John, 3 : 1–3; benediction (Numbers, 6 : 24–26); organ voluntary.

The subject of the Lesson-Sermon was in harmony with the occasion, being, "Christian Warfare." The services were conducted by the First Reader, Prof. Hermann S. Hering, and the Second Reader, Miss Mabel C. Gage. Preceding the sermon, the First Reader gave the following able address:—

It is a pleasure to Mrs. Eddy to invite the esteemed members of the E. E. Sturtevant Post, No. 2, G.A.R., with the affiliated organizations, to hold its Memorial service this year in her church, and we consider it an honor and a privilege to welcome you here to-day and to be permitted to take part in assisting you to perpetuate the memory of your noble cause. We welcome also the auxiliary organizations, whose members have been so helpful to the veterans in the past and will be in the future. The work of the Woman's Relief Corps has been most noble and praiseworthy. Many were the wives, daughters, sweethearts, and relatives who made great sacrifices during the war to aid in relieving the suffering; and they have since been engaged in continuing this work by providing for the sick and needy and performing loving offices for the veterans and their families. In this noble work they are aided by the Daughters of Veterans, who together with the Sons of Veterans will follow in the footsteps of their ancestors for time to come and carry out these worthy precedents and customs. We also welcome the Spanish War Veterans, who so efficiently aided our Government to free a neighbor from the bondage of oppression.

The cause for which the Civil War veterans fought, and for which so many valiant lives were sacrificed, was indeed a noble cause, a most glorious one and a most vital one, not only in the history of our dear country, but of the entire world,—the cause of individual rights and personal liberty, the foundation or fundamental principle of progress. Personal animus and sectional feeling have so disappeared from the minds of the people that the great principle involved in the Civil War can be referred to without personal feeling, and indeed it is now understood and agreed to by very many who formerly thought differently. So also is the purpose of Memorial Day—a yearly reminder of this great moral struggle and of the faithful ones who sacrificed themselves on its behalf—a noble one, for it tends to emphasize the issue that was involved, educates the world to perceive its import, and gives opportunity for an expression of our deepest feelings, brotherly love, gratitude, and respect.

Mrs. Eddy, well known to us all as a most patriotic citizen, not only of this Commonwealth and city, but of our Nation, in many ways and for many years has shown her interest in this day and her sympathy with its purpose. In honor of this day her loyal heart unfurls the Stars and Stripes over her home, and her loving hands send to the Daughters of Veterans all the flowers in bloom on her estate.

It is most fitting, also, that a Memorial service is held at which the veterans and their friends may congregate for divine worship and lift up their thoughts to the infinite Father, the giver of all good, thanking Him for all His benefits and praying for more of that divine Life which makes them and all of us better soldiers of Christ. Gratitude to God for even a little good perceived is an acknowledgment, though feeble, of Him as the source of all being, and opens the heart to a great influx of that good.

The great struggle of which you beloved veterans are victorious survivors, and of which we all are the beneficiaries, was a struggle for principle and not for personality. The issue was the question of human freedom or human

Digitized by Google

slavery. This country has been the arena of many struggles for liberty, both political and religious, and seemed early destined to become the land of the free. It offered a home to the politically oppressed, and also to the Puritans, Quakers, and Pilgrims from other lands, who desired to worship God according to the dictates of their own conscience. On its sacred soil were fought the two great issues,—the Revolution, which resulted in national independence, and the Civil War, which preserved our integrity as a Nation and committed us to the cause of universal freedom. The tendency of the Government of our land has steadily been towards greater freedom, and under God's guidance and protection it will so progress.

Allow me now to turn your attention to the Lesson-Sermon, which tells us of still another conflict, the Christian warfare, in which we all have enlisted under the captain of our salvation, our great peacemaker, Christ Jesus. Mrs. Eddy has translated his orders to us in unmistakable language, showing us how to fight the good fight of faith, how to overcome our adversary, the evil one, how to gain the victory, how to establish peace.

At the conclusion of the impressive service, while the large congregation remained standing, the Post and affiliated organizations marched out, after visiting Mrs. Eddy's room in the church.

[A Reader in the *Indianapolis* (Ind.) *Star*.]

The writer hereof is not a Christian Scientist, neither is he a communicant of any orthodox institution, but having heard Clarence A. Buskirk's masterful and wholly dispassionate lecture on the teachings of Christian Science, and having also read a critic's attack upon the Christian Science tenets, he feels that a contrast of the work of the two men may not be amiss to *Star* readers who heard neither of these addresses.

In the first instance, one cannot help noting that Mr. Buskirk quoted continually from the New Testament, giving fully and explicitly the sayings and teachings of Jesus, showing conclusively that faith in God and belief in divine Love are entirely efficacious in healing the sick, in elevating and purifying the lives of all who accept the great Nazarene's philosophy. On the other hand, while the critic begins by making some unavoidable concessions to Christian Science, he invokes, not the Bible, in his efforts at confutation, but *McClure's Magazine*, which has not made an entirely unbiased report of the life and teachings of the Founder of Christian Science. The unprejudiced reader will be interested in comparing his "How it Works" with Mr. Buskirk's "Power of Prayer."

In line with this last I would ask who does not recall the significant language of Jesus, when, after unstopping deaf ears, opening blind eyes, cleansing lepers, healing paralytics, and raising the dead, he said of those who should believe on him: "Greater things than these shall he do." If, therefore, our Christian Science friends have wholly believed this and consistently made their churches temples of healing, it simply proves that they have solved the problem of the Christ-method, and should have credit for doing that in which the greater number of so-called Christian organizations have failed.

The race is looking for salvation that palpably saves here and now; it is demanding a knowledge of the truth which frees from error, sin, sickness, poverty, and death; it refuses, and rightly, to pin its faith to the sophistries of creed and dogma which have no higher reward to offer than a post-mortem salvation of which no tangible evidence exists. It is significant to note that the Christian Science following embodies the cultured and refined, and they are therefore capable of judging, in as great if not greater ratio than other Christian organizations of larger proportions.

[From *Svea*, the Swedish-American weekly, Worcester, Mass.]

The powerful esthetic religious movement which under the name of Christian Science has developed in North America and subsequently has spread to almost all the European countries, and England in particular, has now reached Sweden. Although as yet of comparatively small extent, it has obtained many followers, both in Stockholm and Gotheburg, but mostly in the aristocratic communities of Skania, the southern province of Sweden. The adherents of Christian Science, at least in Sweden, seem to come from the upper ten thousand, and this explains to some degree why the movement has developed without attracting popular attention. *Dagens Nyheter* (a Stockholm newspaper) has been in communication with some of the adherents of this faith in the capital city, for the purpose of obtaining reliable information concerning this system of ideas, its purpose and its development. . . .

Although the healing of the sick is by no means the main idea in Christian Science, it nevertheless is through this means that the cult hitherto has been spread and become known. It is also for the most part persons who have been healed in foreign countries that have become adherents of the faith in Sweden. These persons have not yet organized themselves into a church, nor are they holding meetings; they consider that Christian Science ought not to be spread through concrete agencies, which would be of no avail so long as the time is not ripe for the acceptance of the teachings. This calm and expectant attitude constitutes a feature that is as unusual as it is appealing in this sectarian movement that up to the present time is so little known in Sweden, but that soon may become powerful.

[Willard S. Mattox in *The San Francisco Examiner*.]

What is science? Is it not the orderly arrangement of ascertained facts? is it not knowing something; is not that the root meaning of the word? Yes. Then are we to conclude that the only thing we can know about is matter? Are there no ascertained facts about God which constitute Science, the Science of all existence, the Science of all sciences? Can any Christian minister afford to take the position that spiritual truths and spiritual laws do not constitute Science and that the use of that word in relation to spiritual phenomena is "calculated to mislead?"

Jesus knew something definite about God and His everlasting laws, about His perfect creation. What he knew was certainly Science, by every test that can be applied to that word. What he knew was precise, unfailing in its practice, and was always followed by results. What he knew and put into practice was Christian, surely. Then it was Christian knowing, or Christian practice, or Christian Science. St. Paul entreated his converts to have the same Mind which was in Christ Jesus. Christian Scientists believe that what Jesus knew, the Science he practised, may be known and practised by all, that the same Mind which informed and enlightened him is able and willing to do a like service for all who seek in the way Jesus has pointed out.

It is objected that Mrs. Eddy's biblical method of interpretation is allegorical and it is said that no one has "any moral right to give to the Bible any other meaning than that which belongs to it. And what is that? The meaning it had to those for whom it was written in the first place."

Mrs. Eddy does not claim that the fundamentals of Christian Science are original with her. She says that Christian Science is the word of God, and that it has existed forever, to be discerned and practised. She has simply reiterated what was voiced by the long line of prophets, culminating

Digitized by Google

in the career of Jesus, but the idealism of Christian Science is not akin to the occultism of India.

It is maintained that although Mrs. Eddy disclaims pantheistic tendencies, yet her theology is actually pantheism because she teaches that "God alone has reality." And then our critic asks, "Is this the teaching of the Bible? Far from it." In answer it may be said that Christian Science does most unequivocally teach that God alone has reality, and it glories in this teaching. If such doctrines be pantheism, then by all means let us all be pantheists, if under whatever name we can practically worship God as supreme and All in all. If the Christian Church does not teach that "God alone has reality," what, pray, does it teach, and upon what authority does it teach the existence of any other power or existence?

The premises and conclusion in the theology of Christian Science are at least as logical as the reasoning which has produced other creeds. The premise that God is One and infinite, inevitably leads to the conclusion that "God alone has reality," and it should be remembered that these premises are not original with Christian Science. They are, theoretically at least, the Scriptural premises from which all theological deductions are drawn. Mrs. Eddy has not shirked the conclusion, and this is surely as consistent, to say the least, as that theology which, starting with exactly the same premises, concludes that there can be an infinite One who is good and at the same time that there can be evil. The explanation that something was made from nothing, that God created a devil, or an angel who had within himself the power to change his nature completely, is not more readily digested than the Christian Science teaching that because God *is* and because there is "none beside him," there is in reality no opposite to God, and the belief that there is will disappear as we become more and more fully conscious of God's allness.

[Edward C. Butler in *The Mexican Herald*.]

One of the leading characteristics of the theology of Christian Science is adhesion to and love of the Holy Scriptures. "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). The critics of Christian Science would acknowledge this fact were they to read its text-book and its literature without prejudice. Without the Bible, Christian Science would fall to the ground. It could no more exist apart from the Word of God, than the science of mathematics apart from the multiplication table.

Under the egis of the American Constitution people in the United States enjoy religious freedom, each person working out his own salvation according to the dictates of his conscience. Under the sweeping protection of the splendid Federal Constitution of Mexico, the same priceless privilege is accorded. What the supreme law of the land allows, surely no one, especially a clergyman, ought to begrudge to any one else.

Jesus declared he did not come to the world to judge the world, but to save it; so no human being has divine warrant for judging another's religious belief. Christian Science can stand upon its own merits, and no good can result from attacking it or any other religion.

[Editorial in *The Tribune*, Kokomo, Ind.]

In view of the fact that the series of revival services just closed at the Alhambra fell short of results, not only of the reasonable expectations of the local Ministerial Association, but of church people generally, an analysis of the cause is interesting and perhaps not unprofitable. Nothing was lacking in the way of preparation for the success of the meetings. Largely advertised; a building of ample dimensions provided in the center of the town; propitious weather after the first few nights; a stageful of the best singers the city affords, comprising the choirs and the Oratorio Society and led by a noted singing evangelist of wonderful powers; an audience of fifteen hundred people to start with, and waiting only for the magic words that would stir the hearts of the careless and unlock for them heavenly treasures. A golden opportunity, it would seem, and yet the days glided into weeks, showing no appreciable awakening. . . .

Summing it up, it would appear that the disappointment regarding the late meetings was due mainly to the many violations of good taste shown in the disparaging comments made upon the character of our citizens, including the sneers cast at the Christian Scientists. The pastors of the Ministerial Assbciation were much chagrined at these *faux pas*, and felt that no audience would or could be otherwise than unresponsive under such unwise treatment; showing up the weaknesses and shortcomings of professed Christians, while in the same breath exhorting sinners to join the ranks of those in the church, being justly regarded by the ministers as a grave inconsistency. In short, such aggressive evangelistic methods were not suited to the temper of the audience. And this is not saying that the evangelist is not capable of doing good work elsewhere. Doubtless he is a man of large sympathies, but failed here to size up his hearers correctly and get in proper touch with them.

[A "College Graduate," as reported in the *Boston Transcript*.]

I am not interested in modern religion, on account of the intolerance shown toward others. It was this same spirit on the part of the Jewish clergy which rejected and persecuted Jesus. They had nothing against him personally; his works were good, but he presented something new, and this in religion is always a crime and heresy. Christ Jesus was condemned to death and crucified because he presented a new truth. Later on, after the establishment of the Catholic and Protestant churches, came the awful wars and persecutions each of the other. Blood was shed like water, and all in the name of Christ, who stood for peace and gentleness. To this country came the Puritans for freedom to worship God, and when once established they immediately began a systematic persecution of the Quakers because they differed from them, and the awful and inhuman experiences of that period will not soon be forgotten. Later came the establishment of the Universalist and Unitarian churches. This was another occasion for slander, vilification, and misrepresentation. The Unitarians were treated as if they were heathen.

Even at the present time this spirit of antagonism occasionally breaks forth and goes sweeping across the country, seeking to reopen a sore that is well-nigh healed. At the present time the Christian Scientists occupy the stage. They are seeking to worship God in accordance with their rights as American citizens, but the hose is now turned on them. We business men have learned to respect the rights of others; to live and let live, and to build our business up and keep it up; to study its improvement rather than try to tear down and destroy the other fellow. Religion will appeal to business men only when it gives a square deal.

[Editorial in the *Chicago Chronicle*.]

Discouragement is the dominant note in a good many religious bodies nowadays. It is declared that the people are falling away from the churches, and the defection is deemed inexplicable. Is it not easily enough explained, however? Of half a dozen sermons reported in last Monday's newspapers not one dealt with the doctrine of the Christian religion. They treated of any topic but that. Is it not possible that if Christian preachers were to return to teaching Christianity the churches would be better attended?

THE LECTURES.

MANCHESTER, ENGLAND.

Mr. Bicknell Young lectured on Christian Science in the Midland Hall, Manchester, England, April 9. He was introduced by Rev. Bertram Hawker, a clergyman of the Church of England, who said in part,—

Ladies and gentlemen, I have this evening the honor of presenting to you one who has come to speak upon a subject which is daily attracting more attention and commanding a wider field of interest. I have the more pleasure in doing so as Mr. Bicknell Young is an accredited exponent sent to England by the Christian Science Board of Lectureship of The Mother Church, Boston, Mass., to give to the increasing number of inquirers an authorized account of the tenets and character of Christian Science. It seems inevitable that when an unfamiliar idea is uncovered to the world two things invariably happen—it provokes opposition, and it is misrepresented. It is opposed by those who habitually regard the glimmerings of truth received through other channels as "the truth," and it suffers misrepresentation at the hands of those who have not understood it, and unwillingly sometimes by those who would be its advocates.

Whatever we may have heard of this religious movement, to-night we shall have an opportunity of forming an opinion directly upon first-hand information, and not from mere hearsay. But it is not always easy to form a fair opinion upon new themes even under favorable circumstances, and especially if they be religious. We have only to look to history to see how the exponents of new themes have been received, themes which to-day are the very substance of our lives. Socrates was rewarded with hemlock; the greeting of the Christ was, "Crucify him;" both were sentenced as criminals by the State. It is in the memory of living man that opinions for which Bishop Colenso was arraigned are to-day accepted as a matter of course by every one, and it is within a very few years that one of the authors of "Essays and Reviews," whose consecration as Bishop of Exeter was so vehemently opposed, died as Archbishop of Canterbury. So it is that what is regarded as heterodoxy in our generation may be the orthodoxy of the next. It does not of course follow that every new idea or interpretation becomes orthodox, even in time; but this is certain, that if orthodoxy is not invigorated by fresh ideas it becomes arid and lifeless, and, like all other things of terrestrial growth, when it ceases to expand it begins to decay. The records of the Jewish race as well as of the Christian Church abound in illustrations of the fact. The question is, Have we need of fresh ideals? In this age of triumphant materialism, when the conquest over the elements has been so astounding, when the ingenuity of man in harnessing the forces of nature for his service seems to know no bounds, when the means of production, transit, and communication have been so increased and the earth is unbosoming its treasures as it never has done before, are we satisfied? Has our progress raised us? If so, how is it that in this country, which claims the life of Christ as its example, our social problems are so stupendous; that the sweating system, like a noisome disease, is allowed to eat its way into the constitution of our race; that under the name of competition the weaker go to the wall and the slums receive them; that Herod in his fury no longer massacres the innocents by tens, but Christian England slays them by the thousand, coolly, systematically, yearly; that brotherhood and fellowship are sacrificed to baser things. Is it not time that we should look into our beliefs and see what are the ideals which animate our actions? "As is the God whom we worship so is the ideal we pursue."

If Christian Science can bring to man a higher conception of Truth and a keener sense of brotherhood among men, as I believe it will, there is room for it in the world, and we can say of it without irreverence that "if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it: lest haply ye be found even to fight against God."—*Correspondence.*

ROCHDALE, ENGLAND.

A lecture on Christian Science was delivered in the Rochdale Town Hall on Thursday night [April 4] by Mr. Bicknell Young, of Boston, U.S.A. Alderman J. J. Meakin, J.P., of Salford, presided. There was a large audience.

The chairman, in opening the meeting, stated how he became a Christian Scientist. About four years ago, he said, he was suffering from a severe illness. The doctors said he had heart disease and bronchial asthma, and that his nerves were in a very shattered condition. He had the advantage of the assistance of the best specialist in the country and recovered to some little extent. It was months, however, before he could do any kind of business. He was never able to lie down in bed, but had to be propped up with pillows. After several interviews with friends who were Christian Scientists he decided to try their treatment. Throughout the first night after he had submitted to Christian Science treatment he slept soundly for the first time during his illness. Since then he had slept well every night. He connected himself with the Manchester Christian Science Church, which had just then been founded, and from which have sprung many similar churches in the north of England. What was it that brought about his changed condition? He began to study the Bible with the assistance of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In the 8th chapter of St. John's Gospel we read that Jesus said, "Ye shall know the truth, and the truth shall make you free." Christian Science had taught him what this truth was, and was now teaching him how to apply this truth in order to obtain freedom from sin, sickness, and all discordant conditions. Christian Science and its Founder had been criticised, but the criticism was largely founded on misconception.—*Rochdale Observer.*

NEWCASTLE-ON-TYNE, ENGLAND.

A large audience assembled at the Geographical Institute, Newcastle, last night [April 19], to hear a lecture by Mr. Bicknell Young, who is a member of the Christian Science Board of Lectureship, on Christian Science.

Sir Wilfrid Lawson, who presided, said he had for many years taken a great interest in the subject of Christian Science, and he had proved its efficacy and seen others prove it. It could soothe, calm, and heal in various phases of human experience. Generally, it had given to him, as to others, the oil of joy for sadness and the garment of praise for the spirit of heaviness; and under its blessed influence his outlook had been broadened and deepened. He felt that he had got nearer and closer to the truth about God and man and the universe than he had ever before dreamed it possible to do. Nowadays there is a good deal of discussion about Christian Science. Surely all of them who were wishing and trying to get the true knowledge of the "cross of Christ" should go for that purpose to the fountain-head. Sir Wilfrid added that he was glad to think that they had with them an accredited representative of Christian Science, and he introduced Mr. Young in the belief that those present would act in the spirit of that good and safe rule which told them to prove all things, and to hold fast to that which is good.

ALDERSHOT, ENGLAND.

Few would have believed that an address upon Christian Science, delivered even by a lecturer from The First Church of Christ, Scientist, in Boston, could have attracted to Aldershot an audience that would fill the local theater, which seats eleven hundred people. And yet such was the case Wednesday afternoon last [April 24], and this despite the fact that the same lecturer and practically the same lecture drew a huge audience only one day earlier to the Albert Hall, in London. Motors and carriages brought throngs of well-dressed visitors to the theater, while shortly before the time fixed for the lecture a special train from London conveyed nearly three hundred Christian Scientists, who had traveled via London from Liverpool, Ireland, the north of Scotland, and even from the Continent.

Although the Theater Royal has at times housed a larger audience, we question whether at any time its gallery has been filled by exactly the same class of patrons. For the organizers of the meeting made no invidious distinctions, and the cushioned seats of the stalls were allotted to early arrivals, while later comers made their way uncomplainingly to the bare benches of the gallery. There was, however, just one exception to the general rule, and this, more than any words from the platform, served to show the spirit which underlies the Christian Science teaching. Visitors suffering from deafness were brought at once to the front row of the stalls, and although the seats were already filled, their occupants immediately abdicated in favor of their less fortunate fellows and made their way smilingly to seats in the rear.

The stage itself was converted into a veritable flower garden. The introduction of flags was something of a novelty at a Christian Science meeting, but there was more in their introduction than the mere desire to hide an empty space, for the banners appeared to convey some acknowledgment of the fact that the gathering was held in the largest military garrison of the United Kingdom.

Punctually to time General Sir Robert Low (the chairman) and the lecturer, Mr. Bicknell Young, a member of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, made their appearance on the stage, upon which were already seated several ladies and the following gentlemen: Col. Anstey, Col. Hubbard, Col. Sullivan, Major Standen, Capt. O'Malley, Capt. Cooke, and Capt. Cumberlege, while the wings contained many who failed to find places in the auditorium. In the boxes were Lady and Miss French and party, the Viscountess Fincastle, Lady Alec Kennedy, Lady Mildred Follett, Sir Gilbert and Lady King, the Honorable Mrs. Cecil Howard, and others, while other parts of the theater were filled by an audience that included clergymen of the Church of England, officers of both services, and in fact representatives of every profession and of every class.

Without preliminary of any kind, General Sir Robert Low, the chairman, advanced to the footlights, and said that when asked to introduce the lecturer he at once consented, although he was not a Christian Scientist. But he had every reason to be grateful to Christian Science in that a member of his own family was restored to health by its means (hear, hear). He had a very kindly feeling towards Christian Scientists because he believed that they were occupied in doing good works. And they had one specialty which always filled him with admiration, and which he thought many of his hearers must have observed for themselves—and that was that the Christian Scientists never scoffed at other denominations, and never had an ill-natured word to say against those who happened to differ in opinion from themselves (applause). The chairman then introduced the lecturer to his audience.

Sheldrake's Aldershot Military Gazette.

MANCHESTER, N. H.

Under the auspices of First Church of Christ, Scientist, Hon. Clarence A. Buskirk of St. Louis, Mo., appeared at the Universalist church [Sunday afternoon, May 5] and addressed a large audience on the subject of Christian Science. He spoke with eloquence and alluded to the bill in equity now pending against the estate of Mrs. Eddy in the following words:—

I recall that when I began to investigate Christian Science fourteen years ago, after my oldest daughter had been restored to health through its blessed ministry, the opponents of Christian Science denied that it really was instrumental in "healing the sick." Evidence soon accumulated, until they were driven from that denial. Then they claimed that its healing agency was confined to a limited class of ailments, but the evidence has become incontestable for many years past that it is truly healing all manner of sickness and all manner of disease. Now its opponents have practically abandoned their former denials, and are turning their attention to procuring yellow journalism to attack its Founder and Leader, the Rev. Mary Baker G. Eddy. They have left the field of fair argument and are appealing to prejudice with, *ad captandum*, personal attacks. This is an old stratagem in sophistry.

When the Pharisees and Sadducees could not longer deny the fact that Jesus did truly heal the sick by his spiritual process, they employed *ad captandum* sophistical appeal, prejudice, and attacked Jesus personally, saying that he associated with publicans and sinners, that he healed on the Sabbath day, and so on and so on. The apostle Stephen was stoned to death, Paul was beheaded, Jesus was crucified. Every great moral and religious leader whom the world has ever known has been made the target of envenomed assaults on the part of established business and sects which have deemed their interests to be threatened, and the Leader of the Christian Science movement, which has now become world-wide, has not been exempt from conspicuously active and aggressive assaults. They now theorize that because, as they say, she is over eighty-five years old, she must, therefore, be incapable of managing her own business affairs, and are petitioning the courts to be allowed to manage her property for her. They are daily filling the papers with artful, insinuative gossip and mendacious inventions. They are trying their case through the newspapers by means of anonymous evidence and fabricated facts; and are not able to point out a single fact showing wherein Mrs. Eddy has mismanaged her business, or sustaining their false averment that any one has done any wrongful act which they can specify in respect to her property.

In my humble opinion, Mrs. Eddy stands to-day the foremost woman and public benefactor of our age, because she has furnished to the world what all its gold and silver could never buy. During long years, misunderstood, misrepresented, too often falsely maligned and reviled, she has been sustained by the high consciousness that she is working for God and for humanity.

The Hon. Oliver E. Branch presided over the meeting, and in introducing the speaker said in part,—

That thousands of intelligent, fair-minded people have found in Christian Science a better solution of the tremendous mysteries of life, death, and the manifold manifestations of evil than has been disclosed in the old systems of theology and statements of faith, cannot be questioned; and if its claims are measurably true, in spite of misrepresentation, angry intolerance, and widely concerted hostile attacks, it will be a message of joy, consolation, and redemption to many other thousands throughout the world.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Concord* (N. H.) *Daily Patriot.*]

A CORRECTION.

Mr. Meehan.

Dear Editor:—In the issue of your good paper, *The Patriot*, May 21, when referring to the Memorial service of the E. E. Sturtevant Post held in my church building, it read, "It is said to be the first time in the history of the Church in this country that such an event has occurred." In your next issue please correct this mistake. Since my residence in Concord, 1889, the aforesaid Memorial service has been held annually in some church in Concord, N. H.

When the Veterans indicated their desire to assemble in my church building, I consented thereto only as other churches had done. But here let me say that I am absolutely and religiously opposed to war, whereas I do believe implicitly in the full efficacy of divine Love to conciliate by arbitration all quarrels between nations and peoples. MARY BAKER G. EDDY.

Concord, N. H., May 28, 1907.

"EXTRA GOOD RISKS."

THE question of whether or not Christian Science heals, is being steadily answered in the affirmative, even in the minds of those who have not yet accepted its teachings, and as an instance of this we quote the following editorial note from a recent issue of the well-known *Burlington* (Ia.) *Hawkeye*:—

A great life insurance company has instructed its agents by circular: "Christian Scientists are as a class extra good risks, and should be solicited." Now that must mean something. It is founded upon some vital principle. A peaceful mind, faith, hope, and contentment—these are regarded as conducive to health and longevity. When a great corporation, whose purpose is to make money, accepts that statement as a truth and adjusts its financial interests accordingly, the hard-headed, practical man cannot very well ignore the fact. The conclusion is, not that every one should become a Christian Scientist in his religious faith, but that the qualities and habits which produce such beneficent results ought to be fostered. Industry, sobriety, generous impulses, faith in God and man, service for others—these are all attributes of happiness and long life.

When it is taken into account that the great majority of those who now are Christian Scientists embraced their present faith when they were in a condition of health which would have debarred them from obtaining insurance in any company, it is somewhat of a tribute to the efficacy of Christian Science that its followers are now raised from the class of "rejected risks" to that of "extra good." This, however, is not all that Christian Science is doing for humanity. It is bringing men and women into a closer communion with God. It is uplifting their ideals, and making them better in every way. But even if the healing of disease were all that Christian Science is accomplishing, mankind would still be debtor to Mrs. Eddy. We doubt the ability of any one to convince the man mentioned in a despatch to the *Los Angeles Times* that Christian Science is not a beneficent force. We quote as follows:—

Fresno, May 13.—Thomas E. E. Hughes, more familiarly known as the "Father of Fresno," returned here from Mexico a few weeks ago in a serious condition, and his family believed his illness was mortal. Now, after a fortnight of "absent treatment" from a Christian Science healer in Mexico, he is hale and hearty and in his usual jovial spirits. The case is considered a most remarkable one because of the serious condition of Hughes when he left Mexico. He endured an eight-day trip, part of it by wagon from the mining district not far from the City of Mexico, while suffering from a severe case of grip, aggravated by dropsical complications. When he arrived in Fresno he was very weak, and the family was anxious to call a physician, but the patient stuck to his faith and trusted entirely to the healer. Hughes is over seventy years old, and his recovery in so short a time is regarded as most miraculous. Because of his request to be brought to the Hughes Hotel, the hostelry built by him in Fresno's early days, he has been there through his illness.

ARCHIBALD MCLELLAN.

"I WILL LIFT UP MINE EYES."

No aspect of mortal sense is more familiar, more intrusive, or more pitiful than that pettiness which finds expression in so much of human judgment and conduct. The selfishness that clings to its end seat, regardless, the habit of persistent fault-finding, the exhibition of ill-temper over trifling inconveniences, the disposition to speak disparagingly of competitors, the indulgence of little pretense, subterfuge, and acted dishonesties, the failure to distinguish between essentials and incidentals, the unwillingness to look at matters in a broad, all-round way,—how all these and kindred things speak for the narrowness that so needs to be saved from its miserable self.

To those who are dominated in any degree by ungracious, unblessed, and unhappy mortal sense, Christian Science appeals in the words of the prophets of old: Lift thine eyes, O lift thine eyes! It points to that vision of God and of man in His image which expands and inspires thought, and which begets both aptitude and enthusiasm for good, the impulse of all true greatness. Christ Jesus was ever calling the people away from their stunted, self-centered, and material sense of things, ever emphasizing for them the greatness and splendor of God, and the exaltation of man, His child. He tried to show them that apart from spiritual perception judgment is inevitably superficial and distorted, and he sought day by day to establish for them that spiritual perspective which is absolutely essential to the true understanding and estimate of things. Thus he said, "Call no man your father upon the earth: for one is your Father, which is in heaven." The recognition of the inspiring facts of being was to be brought into practical relation with every thought of self and of others, and prove a constant safeguard against superficiality and misjudgment, an antidote for all the narrowness which grows out of the identification of self with materiality.

St. Paul recognized and honored this teaching of the Master when he said to the early Church, "If ye then be risen with Christ, seek those things which are above. . . . Set your affection on things above, not on things on the earth;" and the inference is clear that freedom from the narrowness of human sense, the lean littleness by which choice and conduct are so often distinguished, is to be found in yielding our thought to the enlarging and ennobling influence of the divine idea, the realization of the dignity and privilege of man as the manifestation of "the glory of God." When Christian Scientists remember the emphasis which their Leader has laid upon this thought, the effulgence of the light which has illumined their path, they may well be overwhelmed with a sense of unworthiness and shame when they discover that some of their words and acts are presenting a sad contrast to the concept of the ideal which has been brought to them.

In Christian Science, not only the without but the within of daily experience is to be transformed through our hospitality to an enlarged and enlarging spiritual sense. Only he who has the vision of the ideal can perceive the elements of goodness, of truth, and of beauty which are found in association with circumstances and environments

Digitized by Google

that would otherwise be not only uninteresting but unendurable. The ploughboy's thought dwells upon the sights of the city, and the "homely country" has few charms for him; but to those who have acquired a keener vision his commonplace is an unfailing delight. The gamin of the slum is an offense, a bit of mortal débris to the many, but to a true mother who has left a nest of sweet and wholesome children at home, he makes a tremendous appeal; and for the reason that from her mount of vision she sights his possibilities, and this nobler sense, backed by love, would at once open for him the door to a larger life. When the impulses of love are prompted and guided by spiritual insight they neither falter nor fail. Inspiration gives a glorified sense of man "lifted up," while love links us to the yet unexalted and finds practical ways in which we may lift. The true minister must have the vision of a poet, the heart of a mother, and if our enthusiasm over the ideal does not deepen our interest in humanity and humanity's problems, its genuineness is open to question. It takes a large man to see the little things which are the minutiæ of Truth's manifestation.

The unmeasured gain of Christian Science is found in its constant prompting to the estimate and interpretation of things in their higher and deeper meanings, in the helpful suggestiveness of even the contraries and counterfeits which its light discloses. It persistently challenges and rebukes the well-nigh universal habit of looking at things and of interpreting experience in the terms of a very ordinary self instead of in the terms of God and man in His image, and this is its ground of rescue and of rejoicing for all who to-day will lift their eyes to its dawning light.

JOHN B. WILLIS.

REVISION OF CREEDS.

FOR a number of years the most strictly orthodox people, both in this country and in Great Britain, have been wrestling with the question of a restatement of doctrines, such as would make possible greater unity between the different religious bodies and be more in harmony with the spirit of the times than are the dogmas of the past. It is noteworthy that in a representative newspaper in Scotland, Calvinism is referred to as "archaic," and that, too, without a word of praise for what its teachings as a whole have done in promoting a love of the Scriptures and in showing the vital importance of their study. It seems that in the public schools of Scotland the Shorter Catechism has been replaced by another which claims to be simpler and more practical, although a well-known writer has humorously said, "Intellect with us had been brought to so fine an edge by the Shorter Catechism that it could detect endless distinctions, and was ever on the watch against inaccuracy."

It is claimed by those who have insisted upon this revision that the abstruse statements which the Catechism contained were merely memorized, not thought out, and that children especially should have simple and direct statements of the fundamental truths of the Bible—a proposition which no one would controvert; nevertheless this conveys the inference that it is not necessary to think profoundly upon the subject of religion—an opinion which should not be accepted for a moment. Does not the supreme intelligence forever give the invitation, "Come now, and let us reason together"? Such reasoning surely calls for an awakening to all man's God-bestowed capacities and powers.

In Christian Science we learn the necessity for holding a scientific concept of God and man, and of their relation to each other. It insists that our premises must be correct in order to insure progress, even as it is required that the youngest child shall be taught the fundamentals of mathematics as accurately as the older pupil studies and applies the more advanced rules. No one questions this in the case of mathematics, but many have denied the need of scientific accuracy with respect to that which we are commanded to seek "first;" although Professor Drummond asks, "Shall a mechanical experiment succeed infallibly, and the one vital experiment of humanity remain a chance? . . . If we cannot calculate to a certainty that the forces of religion will do their work, then is religion vain, and if we cannot express the law of these forces in simple words then is Christianity not the world's religion but the world's conundrum."

It is for this very thing,—a simple, scientific, and demonstrable statement of Christianity—that Mrs. Eddy has contended from the very start. She had to begin, as all must, where the truth found her; and in each case, as the truth of being was realized, old beliefs, which had not brought freedom from sin and suffering, were replaced by clearer views of Truth. In Christian Science we begin always with the idea of God as good and good only, and from the one perfect cause we reason to a perfect effect, since even physical science holds that effect can never be unlike its cause.

In spite of prejudice which is wholly due to a mistaken sense of Christian Science, its vital truths are now permeating all religious thought and statement, and thus preparing the way for that true unity which loves and obeys one God and His Christ. The recognition of God as divine Principle—the one Mind—is a mighty influence in quickening and purifying the intellectual activities as well as the moral nature; moreover it demonstrates the divine government of the body and establishes health. Best of all, the children grasp this truth! Did not the great Teacher say, "I thank thee, O Father, . . . because thou hast hid these things from the wise and prudent, and hast revealed them unto babes"?

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

New York, N. Y., May 17, 1907.

My Teacher and Leader, Dearest and Best Beloved:—I hope now I can write you a sane and sensible letter about the meeting of last Monday evening, of which I wired you. John and I have both written you of the determined effort our Second Church was making to pay its indebtedness. Last September we owed one hundred and sixty-four thousand dollars; it was not that this was such a large sum, for we had raised three hundred and forty-nine thousand dollars when we were quite a small church, but the church seemed asleep—they had become accustomed to being in debt. I had even heard it said that it was a good thing for a church to be in debt. Then, too, my relation to the church had changed. I was no longer their Reader, and while I was doing all I could to help them yet there were many things I had done before that I could not do now. Finally it was decided to have a church meeting the second Monday of each month until the debt was paid. Last Monday evening was the first of these meetings. We still had one hundred and ten thousand dollars to raise. John opened the meeting by a most eloquent tribute to his mother, who had been commissioned by you, our loved Leader, to start Second Church. At first everything seemed dark; then one dear woman gave fifty thousand dollars, and one after the other said what they would give, until the full amount was raised and Second Church drew its first free breath, for its burden had rolled off. These subscriptions are all perfectly good. It was after one o'clock that night when we sang the Doxology; then we sang your dear hymn, "Shepherd, show me how to go."

Next will come the dedication, and what a joyful day that will be! In August of 1891 you talked with me

Digitized by Google

about starting Second Church. Before I left the room, you prophesied for us a "glorious victory." This prophecy has sustained us through many dark discouraged hours. You have been our inspiration. To you we owe all that we are as a church, and we feel, now the load is lifted, that we shall be able to prove to you that we are at last wide-awake, watching and praying for the redemption of Israel. The church sends to you its grateful thanks and a "God bless you," knowing that "the eternal God is thy refuge, and underneath are the everlasting arms."

In behalf of the church,

Your loving, grateful student,

LAURA LATHROP.

Texarkana, Ark., May 17, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

My Dear Mrs. Eddy:—I thank you from my heart for your loving thought in sending me the picture which came safely some days ago, but I have been away, and just returned. I prize it very highly, and hope that it will always be to me an inspiration for good. I am earnestly striving to live my gratitude to you—having much to be thankful for—but especially in regard to my children, who have been so much benefited, and are developing into sweet characters, through the ministrations of Christian Science. It has indeed been a great blessing, and my heart goes out to you in dearest love. I just wanted to tell you this much.

Sincerely yours,

T. L. L. TEMPLE.

Boston, Mass., May 12, 1907.

Beloved Leader:—Thank you for the latest proof of the greatness of your love and the broadness of your charity in extending your hand to the theatrical profession through your gift to the Actors Fund Fair of the autographed copy of Science and Health and the card with a quotation therefrom. While in New York City last week, attending the Fair, my thought was carried back to my first reading of Science and Health, and how it was aroused by the all-embracing truth of your scientific statement of being. As I stood before the "Motto Booth," and saw displayed there this other great statement, written in your own handwriting,—"Having one infinite God unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture,"—I realized in some measure the vastness of its import to the world, and that only as the spirit of this statement is understood and demonstrated will universal harmony be established.

Sincerely your student,

HENRY JEWETT.

Sidney Sussex College,
Cambridge, England, April 3, 1907.

Dear Mrs. Eddy:—At the beginning of my term of office as First Reader here, I have such a sense of joyful self-consecration that I feel impelled to write and thank you again for opening up to us, through your selfless love and spiritual perception, this kingdom of heaven, this revelation of God's allness in Christian Science. To be called to be First Reader is such a help in getting away from the sense of personality; for who, as a person, could be equal to such a task? But to know that divine Principle has decided the matter is to know that divine Principle, infinite Mind, always does the work. And so one's work is to grow daily in the consciousness that the government is on His shoulders,—

'Tis He that works to will,
'Tis He that works to do;
His is the power by which we act,
His be the glory, too!

and that He strengthens and blesses and purifies every channel for His work.

It is such joy to know that the Cause must flourish here and everywhere, because "this leaven of Truth is ever at work. It must destroy the entire mass of error, and so be eternally glorified in man's spiritual freedom" (Science and Health, p. 118).

How can we ever be thankful enough, that through Science and Health and your Christly example (so especially emphasized by the way in which you have met and are meeting all these recent attacks on your work and life), we have such light on the Bible and on the life, work, and teaching of Christ Jesus! I can only pray that I may be able to show my gratitude by works rather than words.

With deep love and reverence, dear Leader,

Yours most gratefully,

ANNIE CHARLES SMITH.

Houston, Tex., April 26, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—In the year 1888 I first heard of Christian Science, and the same year, in June, heard you lecture in Chicago. It was after the lecture that I had the privilege of conversing with you, when you told me that God would lead me; and truly I have been led. I have passed through deep waters since then, but for fourteen years have been with the fold that is earnestly striving to follow you. I am serving First Church of Christ, Scientist, in the second year as librarian, and have watched the steady growth of Christian Science. It is wonderful, sublime! Each and every one is bountifully fed and satisfied by the truth that is given us through the study of Science and Health; disease and sin disappear, while health, happiness, and prosperity shine resplendent. The recent attacks on you, and the way they have fallen at your feet and have not harmed you, prove fully the protecting thought in the 91st Psalm, and show how wonderfully you have been protected. Your gentle manner in rebuking error, and your steadfastness to Truth has made you shine like the beautiful morning star watching through the night of error to lighten the weary mornless way. Lovingly and gratefully,

Your student's student,

MRS. ALMA FLATO YEAGER.

Englewood, N. J., May 15, 1907.

My Dear Mrs. Eddy:—We, the members of First Church of Christ, Scientist, of Englewood, N. J., wish to assure you of our love and loyalty, and to express more and more gratitude to you, our Leader, for the great truth which you have revealed to us. We earnestly pray that by our steadfastness we may "prove all things; hold fast that which is good."

Obediently yours,

FLORA S. VERMILYE.
ETHEL BLISS PLATT,
WM. A. CHILDS,
Committee.

Philadelphia, Pa., May 6, 1907.

Beloved Leader:—Yesterday I visited a lady who told me many interesting things of your life in Groton, and of the agony you must have endured in those days. The family belonged to the Congregational church of which you, too, were a member. She speaks most tenderly and lovingly of the helpful prayers which you so often made in the church meetings, and of the pleasurable memory of her acquaintance with you. She was about twenty at that time. We spent a pleasant hour talking over the past.

Faithfully yours,

ALBERT E. MILLER.

AMONG THE CHURCHES.

WILMINGTON, N. C.

Work has begun on the new First Church of Christ, Scientist, of this city. The location is Carolina Place. Plans have been made and a model constructed calling for a very handsome edifice, but as it was found that nearly two years would be necessary to complete this structure, a small building is to be erected for immediate occupancy. The larger church will be built later.

Raleigh (N. C.) *Times.*

NEW BERN, N. C.

First Church of Christ, Scientist, of this city has given out the contract for their church edifice, which is to be built at once on the very desirable lot at the junction of Middle and Broad Streets. The building will be simple, and although only erected for their present needs and therefore not a large one, it will be a great addition to that locality in point of architectural beauty. The design is purely colonial and in perfect accord with the best homes near it.

Raleigh (N. C.) *News and Courier.*

HOUSTON, TEX.

The growth of the Christian Science movement in this city is again indicated through the purchase during the past week of a building site by First Church of Christ, Scientist. The property purchased is known as the Giraud home and is situated on the corner of Main Street and Jefferson Avenue, the consideration being twelve thousand five hundred dollars. The location of this property is considered one of the choicest on Main Street, surrounded as it is by costly and beautiful homes, and the handsome edifice which this church will erect in the near future will add to the beauty of the surroundings. Several months ago it became apparent to the members of the church that their congregation had lately increased to such an extent as to necessitate either enlarging the church building they are at present occupying, corner Travis Street and McKinney Avenue, the renting of larger quarters, or the building of an edifice of their own which would be adequate for the accommodation of their growing congregation. The latter course was unanimously decided upon and the purchase of the Giraud property is the result.

Houston Post.

BALTIMORE, MD.

The work of the Committee on Publication for the year ending March 1, 1907, has greatly increased in volume and importance. Our debt of gratitude to our Leader has been deepened this year by the numerous times and ways that she has herself taken up the defense of the Cause. The local and State papers have developed a fairness that is especially welcome. Even in the telegraphic news they have given the defense of Christian Science and its Leader equal if not greater prominence than they gave the misstatements. They have in several instances refrained from publishing articles inimical to Science, when shown their falsity. One of our State editors, a former minister, has changed from an enemy to an open friend, and now declares that Christian Science is the most Biblical religion. A local paper which a few years ago delighted in denouncing Christian Science, recently published an editorial, "Is the world better or worse because this remarkable woman [Mrs. Eddy] has lived and worked in it? Decidedly the world is much better. . . . The result of her teachings has been to broaden the mind, to make strong the will, and to uplift the spirit. . . . There is no place for despondency in the religion as taught by Mrs. Eddy. For this alone she will receive the honor and love of countless thousands whenever her name is mentioned." An editor of another Baltimore paper, in replying to the question as to the doctrine of Christian Science, said, "As a religious denomination, Christian Scientists believe in God, in the inspiration of the Scriptures, in the divinity of Christ, in the supremacy of God as Spirit, in prayer without ceasing, and in all the essentials of Christianity, and claim that the prime office of Christian Science is to destroy evil and reform mankind. They believe that all evil will eventually be destroyed and become extinct."

The following figures, though they do not give much of an idea of the actual work, are an excellent showing; taking the cities and number of large papers into consideration, the comparison with other States is very favorable to Maryland: A total of 376 articles appeared in the Maryland papers during the last year. Those favorable to Christian Science, including replies and other articles published by your Committee, also replies by Christian Scientists and others, numbered 165; unfavorable, 78.

The attitude of the press has already been completely changed, and as it is the great influencer of public opinion, as well as being influenced by it, this checking of unfair and hurtful criticism is of untold value to the Cause, and nothing should be left undone that will facilitate this wholesale destruction of the erroneous estimate of Christian Science in the public mind. The distribution of Christian Science literature is another factor in overcoming the opposition. By substituting the word of Truth for false conceptions, and correcting erroneous impressions and published misstatements, it paved the way for a freer thought concerning Science and the way is opened to investigation. This campaign of refutation, by allowing the people to know the truth, cannot be waged too earnestly or pushed too strongly. We must protect the Cause to our utmost ability or be rightly accused of ingratitude to our Leader and of lacking appreciation of the benefits received from Christian Science.—*Correspondence.*

COOLGARDIE, WESTERN AUSTRALIA.

It will interest the readers of the *Sentinel* to know that the famous gold-fields of Western Australia has a little band of faithful students of Christian Science, who will shortly be formulated into a regular society. Already we conduct a service once on Sunday and Wednesday evening in a room owned by this nucleus association. It would take too long to tell of the many demonstrations which prove beyond doubt that in some measure we have grasped the understanding of Science. Perhaps the most beautiful demonstration of Truth over error was shown in our little army during the recent misrepresentation of our beloved Leader, Mrs. Eddy. Most of us were not aware that periodical attacks of this nature were the rule, and so the first shock produced this utterance: "If the whole thing were true, it could make no difference to Christian Science. We still have the Bible and Science and Health." I quote this to show that we are growing up to a proper realization of Principle, as opposed to person. If anything could have happened to have made us more loyal and loving to the dear woman who is leading us out of the land of bondage, then that very thing has been the recent cruel misrepresentation. We all felt we would like to have written to Mrs. Eddy and told her how much we thanked her for showing us how to love our enemies; but instead we "knew the truth," that the everlasting arms of Love protect His child. We know that the only real thanks to our Leader is to live so that we may be worthy to be called Christian Scientists.—Mrs. Alice M. Caporn.

TESTIMONIES OF HEALING.

One who has received physical healing and mental regeneration through the blessed influence of Christian Science, needs not the testimonies printed in our periodicals or told so feelingly at our Wednesday evening meetings, as an assurance for his faith. He has but to contrast those past days of disease, darkness, and despair, with the good health, real happiness, and joyful hopes of to-day, and with a heart overflowing with gratitude he has a message for all those burdened with the heavy load of ill health, for all those wandering in the misty shadows of doubt and fear and sin,—an assurance that God is indeed omnipotent and omnipresent, and that divine Love, infinite and immeasurable, will free the body from pain and disease, cleanse the heart from iniquity, still the inward storm of conflicting thoughts, and bring that peace "which passeth all understanding."

In the spring of 1904, through worry and anxiety over sickness in my family and the fear of losing my position, I became extremely restless and nervous. When word came that the office I held would soon be abolished, although informed with great kindness and consideration that such action was not attributable to any dissatisfaction with my work and due only to changed business conditions, I broke down completely. In the worldly ways of past years I had strayed far from the Father's house, and now I desired to return to His protecting care; but I did not then know the way—the one true way—the only highway through the dismal swamps of careless and thoughtless action. For physical health and mental strength I consulted a physician prominent in his profession and long a trusted adviser, but I did not receive the help sought for, and to extreme nervous conditions were added protracted and distressing sleeplessness, and a general derangement of the entire physical system. In August came complete nervous collapse, and I was compelled to resign a new position I had obtained without the loss of a day when my old one ended. From that time up to the end of February I began a vain search for health, courage, and mental peace. I tried homeopathic and allopathic treatment, osteopathy, and vibratory machines, and had the services and opinions of a conscientious specialist. All were willing and anxious to help me, yet all failed to cure. I appreciate now, more than I did then, their kindness and consideration. Whatever mental improvement or physical betterment resulted was but temporary, and I drove loving parents and a dear wife to the verge of distraction. In November a return to a position once filled with some credit and ability was tried, in the vain hope that easy work might accomplish, at least mentally, what medical skill had not.

Christian Science had been suggested to me, and even a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy placed in my hands. Kind friends and loyal Scientists endeavored to interest and assist me, and I shall always remember their loving efforts. I would read the book and then discard it—only to return again and again to its pages. Twice I visited a practitioner, poured into his patient ears my tale of woe, and took an absent treatment, for I was afraid of any other kind. I was greatly discouraged and disappointed because I was not instantly healed. On these two days, some weeks apart, I did not take any medicine, but I did not discharge the physician and they are the only two days from May to the following February that I was not acting entirely under some doctor's care and directions and depending on drugs. But God's love passes human understanding; at the right time came a dear, good Scientist, and his confident assurances and helpful talk influenced me to place my case in the hands of a practitioner. I soon realized that Christian Science was all or nothing—and I sincerely thank God that I found it all. My healing was slow, but I was surely and truly led through the maze of doubt and fear into the realization of health and strength. How much I have gained in these days of increasing happiness and hope! In the eight months previous to taking treatment failing eyesight had been one of my greatest troubles. Examinations by four of the best oculists in three of our western cities resulted in each prescribing glasses of increased focal strength, all agreeing that I must wear them constantly and have a pair still stronger for closer work. For over a year now I have worn none. I have gained about forty pounds in weight, and can eat and enjoy anything, although before I had no appetite even for the simplest foods. All desire for tobacco has left me, although I had been an incessant smoker for nearly twenty years.

With the gradual return of physical health and mental vigor came the desire to know more of God as divine Principle, of God as Life and Truth and Love. I have found my answer in the daily study of a long-unused Bible and our text-book. That word "our" is very dear to me. One of the blessings I now enjoy is membership in First Church of Christ, Scientist, Omaha, Neb., and it was my privilege to become a member of The Mother Church and attend the Communion and dedicatory services last June. This fellowship with "right thinking" I have found to be a "pearl without price." During my stay in Boston I visited the city of Lynn, and shall always remember that it was not in gilded palace or marble mansion, but in a small room of a plain frame building, with the light coming through a little window in the sloping roof,—in such unpretentious surroundings that Mrs. Eddy in humbleness and meekness drew near to the great omnipotent heart of divine Love and Truth and heard the message which illumines the pages of Science and Health.

In grateful acknowledgment of all that our Leader has done for us, in thankfulness to God for her boundless love for humanity, her clear vision and purity of thought, her noble example in forgiving attempts to ridicule and slander her, her unflinching fidelity and absolute loyalty to Truth; with all others may I watch constantly and pray unceasingly to be able to follow in her footsteps, climb where she has climbed, hear the angel songs she has heard, and know, as she knows, that there is "no physician but God. His everlasting arms are around about me. That is enough" (*Sentinel*, Nov. 3, 1906).

EDWIN H. ROTHERT, Council Bluffs, Ia.

One of the greatest blessings and privileges in my life was the opportunity afforded me of working for the building fund of The Mother Church. At first I did not understand why the branch churches should contribute to this fund, and I referred the matter to my practitioner. She was wholly loyal to The Mother Church, and the explanation she gave me of it, and of its relationship to the branch churches, was a burst of light that illumined my thought and dispersed the darkness in which I had been groping. With this illumination I gained a truer concept of Mrs. Eddy's life and work; of the work of the Directors, and of every auxiliary of the Church. I owe a great deal to the illumination which came to me at that time, and I have never lost a deep sense of gratitude for the love it awakened in my heart. I became healthier and stronger than I had ever been in my life. I was healed of neuralgic trouble which had been disturbing me for months previous, and I have never had a return of it. A bad habit of sleeping late in the morning was also broken up. It had always caused me great irritation to wake early, and I had never done so unless under compulsion, but the joy of working for our Cause was so great that I voluntarily made the

Digitized by Google

demonstration of early rising in order that I might have more time. I gained a reliance on God and an independence of character which I had never known before. Two vacations were entirely devoted to this work, and the gladness of heart I felt made them the happiest of holidays. One other result which I value exceedingly is that I learned how to become a more faithful member of our branch church here.

I love the Cause of Christian Science, and its text-book, "Science and Health with Key to the Scriptures," for it has brought me gladness. Soon after first hearing of Christian Science, a verse from the fourth chapter of Acts came into my thought: "Neither is there salvation in any other: for there is none other name under heaven given among men, whereby we must be saved." Its meaning became clear, and I realized that the truth contained in Science and Health was the same truth as that preached by Peter.

To Mrs. Eddy, whose life-work has made possible the manifestation of Truth in my life, I feel the deepest gratitude. Through Christian Science I have passed from darkness to light, and I do indeed thank God for it, and for its Discoverer and Founder.

FLORENCE MAKIN, Brisbane, Queensland, Australia.

I feel that to be healed of a sense of revenge and resentment, and to know how to forgive is more than to be healed of a physical ailment. Having recently been criticised, condemned, and misjudged, I could not seem to keep from harboring some resentment, but the old saying, "The least said is easiest mended," also love for our Cause and for our Leader, Mrs. Eddy, kept me from trying to clear myself. Until the healing truth came to me, however, the sense of resentment was not cleared away. Then Truth showed me that I was only reaping what I had sown,—criticism, condemnation, and erroneous judgment. As I looked backward, and saw how much condemnation and criticism I had reaped, I decided that I had consciously and unconsciously sown a vast amount of this kind of seed to reap such a harvest; that it was coming back to me "pressed down, and shaken together, and running over," for the Master said, "With what measure ye mete, it shall be measured to you again." Then what was there for me to do but to forgive as I had been forgiven? I remembered how I had judged and condemned a fellow-student of Christian Science for an erroneous statement I had heard, and how beautifully Christian Science had enabled her to forgive, and to manifest this forgiveness in her love, trust, and confidence toward me.

Now I have no desire to sow the seeds of error in my consciousness, but to know that I "possess sovereign power to think and act rightly" (Pulpit and Press, p. 5). Sometimes we are tempted to think that we have acted wrongly or suffered because of other people's thoughts, but this is not an excuse. Our text-book says, "Evil thoughts, lusts, and malicious purposes cannot go forth, like wandering pollen, from one human mind to another, finding unsuspected lodgment, if virtue and truth build a strong defense" (Science and Health, p. 234). For this healing and the healing of many other discordant conditions I am thankful, and I am more in earnest to keep my thought "from blemish free;" to obey the Golden Rule in thought, word, and action. I know that if I sow thoughts of kindness, love, joy, and peace, I shall also reap these conditions. I am thankful to our Father-Mother God for having given us our Leader; and thankful for her labor in giving to the world this book, "Science and Health with Key to the Scriptures," which shows us how to live and love; how to separate the tares from the wheat. Surely she will reap God's choicest blessings.

MRS. LILLIAN M. SHINE, Mace, Idaho.

I wish I might in some manner express the gratitude I feel for the benefits derived from the study and practice of the teachings of Science and Health, but as "our lives attest our sincerity" (Science and Health, p. 15), I hope in a measure to demonstrate its beautiful teachings in my daily life. Through the understanding that God is a God of love; that He is not the author of sickness and sin; that He knows only good and that man reflects His divine attributes, I have found comfort and health and happiness. I greatly appreciate the loving patience with which I was gently led from darkness to light and from sickness to health. I have been healed of several chronic diseases which according to *materia medica* were quite serious. While I am grateful for the physical healing, I am far more grateful for the spiritual understanding of the Bible as explained through the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

CLARA N. SHONDY, Ashland, Ore.

More than a year ago, in the eightieth year of my age, I was remarkably healed in Christian Science from trouble with my eyes and ears, and also from weakness of the kidneys. My sight and hearing both failed to a great extent, so that I heard with increasing difficulty and could read but a page or two in a book at a time. A physician said that my ear-drums had thickened, and that nothing could be done to help my hearing, and an oculist said that the failure of my eyes was due to old age, and that nothing could be done. I applied to a Christian Science practitioner, and in a few weeks I could hear as well as at any time in twenty years. My ability to see improved almost from the first, until I finally got so that I could read all that I had any occasion to. Last of all, I was relieved of the weakness of the kidneys. It is more than a year since I stopped treatment, but I have suffered no return of my former troubles. I am very grateful for the help which Christian Science has given me.—SANFORD M. MARTIN, Fitchburg, Mass.

As it was wholly due to Christian Science that I was able to overcome the liquor and tobacco habits, I feel that I ought to give this testimony of my experience, hoping that it may be helpful to others who may be struggling under the burden of either of these errors. My parents and grandmother often called me to fill and light their pipes for them when I was but a small boy, and I soon learned to love tobacco, the desire for it increasing as I grew older. At the age of eighteen I joined an orthodox church, but soon fell from grace, for I indulged in a so-called inherited appetite for liquor. Soon after my marriage I became a member of another orthodox church, believing that with this influence I could rise above these habits, for I always wanted to be a useful Christian man. I did begin to rise to a position of usefulness, but the craving for liquor and tobacco soon brought me into disgrace again. I sold my farm and went among strangers, thinking that I could take up church work again and be successful in overcoming these errors. I tried to attain to such a spiritual condition that I might gain my freedom from these temptations and the wretchedness they caused me and my family; but again I fell, and again I moved. The rising, falling, and moving continued for many years, and I became discouraged and reckless morally, and almost a wreck physically. Church work, prayers, doctors, so-called "cures," all failed to heal me. I searched the Scriptures, but failed to find what I needed because I could not understand them. I was told to have more faith in God, but was not taught how to get it. I was told that I must live a better life, but was not taught how to do so. I

Digitized by Google

was told to pray, and I did try, but I did not know how to pray, for I never received the answer I wanted so much. I studied the theories and opinions of men, called theology and other 'ologies, but they disagreed and reasoned so differently that their opinions only confused me. I was losing confidence in everything and everybody, for I had discovered that I did not know anything as a certainty, and nothing but discord appeared wherever I looked.

Thanks be to God for Christian Science! I found in it the spiritual help that I had searched for so diligently in all this experience. As I studied, and began to understand some of the truths it teaches, these habits began to leave me. Soon all appetite either for liquor or tobacco was destroyed, and I have had no desire for them in several years. Christian Science has taught me how to have more faith in God and how to live a better life; also how to come to God with my prayers. These teachings are becoming more and more clear and useful to me, and as I continue to be faithful and loyal to the means provided for our spiritual advancement, I shall continue to rise to higher elevations of thought and become more and more useful to my fellow-men. Christian Science is not mortal man's wisdom, but it is the wisdom of God.—CALVIN L. CARR, Toledo, O.

I am full to overflowing with thanksgiving to God, the giver of all good gifts, and to Mrs. Eddy, His interpreter and our beloved Leader, for the truth which has led me step by step to the throne of grace. More than a year ago I was brought to Science through bodily suffering, after every material remedy had failed. But it is not of that I wish to write, for it has been overshadowed by the love, peace, and rest found in the "secret place of the most High." After coming into Christian Science I asked that my name be erased from the membership list of an orthodox church to which I had belonged since childhood, for I had learned that the "new wine" could not be put into "old bottles" without bursting them. Since I have acknowledged the undivided garment of Truth it has been manifested to me very forcibly that God is the only Mind. Mrs. Eddy tells us in Science and Health (p. 31), that "pride and fear are unfit to bear the standard of Truth, and God will never place it in such hands."

MRS. ROBERT MOULTHROP, Eufaula, Ala.

I wish to express to Almighty God, and to His loving messenger, Mrs. Eddy, who has presented this truth to the world, my gratitude and joy for what Christian Science has done and is doing for me. I was in great need when a dear friend who had been healed loaned me a copy of "Science and Health with Key to the Scriptures" and other Christian Science literature. She also tenderly and lovingly helped me to overcome many fears through their careful study. Later, through Christian Science, I was healed in one treatment of a trouble with my eyes for which I had worn glasses eight or nine years. This was over two years ago and I have never required or used glasses since. In this same treatment a severe throat trouble was overcome. Another time perfect freedom was gained from the fear of going to town alone, or of going about at all. Such a great uplifting and sense of joy was experienced, as I had suffered many years from this bondage to fear.

I wish to express my thanks for all the benefits that Christian Science has brought to me. This means a decided step for me as I am the daughter of a physician and grandniece of the first American-born convert to homeopathy. I love to think of our dear Leader, and of the wonderful truth she has revealed to the world.

ANITA GRAY LINSZ, East Orange, N. J.

It is with a deep sense of gratitude that I testify to what Christian Science has done for me and mine. Although it is a good many years since I first heard of Christian Science, I became interested in it only about a year and a half ago, when my daughter was healed of a serious ailment in two days, after being treated by one of our best physicians for about three weeks and showing little or no improvement. I had been a great sufferer all my life, never having been able to remember the time when I was entirely free from pain. I had undergone one operation which cost me seven hundred dollars for the operation alone. I had tried several sanitariums and springs, change of climate, and several of our best physicians, with no relief, and no promise of relief unless I would submit to at least four other operations—said to be necessary by as many physicians. I suffered from a complication of diseases, some very serious, but in less than two weeks, by reading Science and Health and taking treatment, I was healed of all but one of these. This, a supposedly hereditary trouble, has seemed slow to yield, but I am sure that as I come into a better understanding of Truth, this, too, will disappear.

I am grateful to our dear Leader, who has given us "Science and Health with Key to the Scriptures." I am thankful to be able to prove the truth for myself and others almost daily. My daily desire is to be worthy of all the blessings that have come to me.

MARTHA WILTSHIRE RUFF, Chicago, Ill.

Fifteen years ago Christian Science came to me when I seemed to be filled with despair. The children were all sick, and one had been given up the day before as hopelessly ill. I had never heard of Christian Science, but a friend, knowing our desperate need of help, brought a Scientist to the home. The flood of love and renewed hope that was brought to us in that first visit has never left, although many hard things have had to be met since. The children were soon well; also a case of hip disease was healed. Three physicians had said the child could not live, and that if she did she could never walk; but through Christian Science she was able to walk in five months, and has been a healthy girl ever since. For these and many other proofs of healing I was very grateful to Christian Science, and to those who so lovingly helped me; but for a long time I was at war with conditions that surrounded me, and wondered why they seemed to get worse instead of better, until one day these words from Science and Health (p. 571) came to me with great force: "Know thyself, and God will supply the wisdom and the occasion for a victory over evil. Clad in the panoply of Love, human hatred cannot reach you." I saw more plainly than ever before that the work was with myself; so many thoughts were hidden away in my own consciousness that I had blamed others for; hard thoughts had been given, where loving ones should have been held. These words from our text-book showed me that first and last the work in Christian Science is within ourselves.

My heart is filled with gratitude to Mrs. Eddy for so patiently and lovingly showing us the way to apply this saving truth.

MRS. L. SPRINGALL, Salt Lake City, Utah.

Christian Science came to me as an answer to prayer and a sincere desire to know God aright. Some *Journals* were sent to me about seven years ago, which I read in the hope of finding healing for a distressing ailment; but the spiritual teaching appealed most to me, because I wanted to know how to make practical the teaching of Jesus. I desired to be a missionary, to work for the cause of Christ and humanity, and the Scriptural admonition to seek "first the kingdom of God, and his righteousness," and

Digitized by Google

to come out from the world and "be separate," often came to me. I have been encouraged by reading in our periodicals testimonies of slow growth by others. Each season the ailment is less, and through the study of Science and Health, and help from practitioners, I have been freed from other troubles. I hope to prove my gratitude to God, and to our dear Leader, by faithful daily work.

AMY GRACE WOLFE, Union Bridge, Md.

Jesus says, "Ye shall know the truth, and the truth shall make you free." How many times these encouraging words of our Master have been proven in our home since coming into Christian Science, over four years ago. I had been a sufferer for years, being confined to my bed four and five days at a time. I was subject to a cough for nine years and completely run down in every way. I was continually taking medicine and medical treatment; but was unable to attend to my household duties without suffering. In the spring of 1905 I was taken with lung trouble, and was carried to the home of a Christian Science practitioner in Batavia, N. Y. (a distance of seven miles); then followed a fever, kidney disease, with symptoms of paralytic trouble. After seven weeks of faithful work and loving care I was lifted out of bondage into "the glorious liberty of the children of God." A physician's wife who was in the home at the time, watched the case. After I returned to my home she said she never expected to see me leave that house only as I was carried out. My husband was healed of kidney trouble and an injury to his limb which he received while chopping wood. We have a family of seven children, and the blessings we have received through Christian Science I cannot number. They have been healed of throat trouble, colds, fever, and other ailments. Our last baby was born under Christian Science, and all was harmony. We had been unable to meet expenses, owing to misfortunes and doctor's bills, but have found that in divine Love is a supply for every need. We also find that God is the great Physician, and He is our guide in every walk of life. Christian Science shows us the way of life instead of death; of harmony instead of discord. We feel so thankful to our dear Leader, Mrs. Eddy, for the revelation of Truth that has come to us, and we want God to lead us each day in the path of righteousness.

HATTIE M. GOODMAN and JAMES GOODMAN,
Alexander, N. Y.

I have long felt a desire to tell what Christian Science has done for me. Five years ago last November Christian Science found me at what seemed to be death's door, owing to severe stomach and kidney trouble, extreme nervousness, ovarian trouble, and other ills too numerous to mention. The doctors told my husband that my condition was most serious. I was sick two and a half years and was treated by seven different physicians. I continued to grow worse steadily, and finally the doctor stated that he had done all that could be done for me, as my trouble had affected the spine and brain. I had at this time slept but little for six weeks, and could not lie down. I had a friend who had been healed through Christian Science, and she finally at this juncture prevailed upon me to accept treatment. She came and talked with me, and read from Science and Health, the text-book of Christian Science. As a result, I lay down that night for the first time in weeks, and rested well all night. My healing was slow from this time on, but I was never tempted to go back to material means. For the spiritual uplifting, and for the great joy of ministering to others by way of healing the sick and comforting the sorrowing through the understanding of the truth that healed me, I am deeply grateful to God, and to our beloved Leader.

MRS. MINNIE GRIBBIN, Franklin, Ind.

Before I was healed by Christian Science I had not known a well day for years. About two years ago I was taken down with a severe sickness. The first physician we called gave me no relief and he was dismissed. The second attended me eleven weeks, and I was gradually growing worse. My suffering was beyond description. All the rest I had was during the time I was under the influence of morphine. The physicians said I had an incurable kidney disease, with complications, and that my life was a question of but a few days. My family, friends, and neighbors realized the distressing conditions only too well. At this point we decided to try Christian Science treatment. My son telephoned to Des Moines to a practitioner, asking help for me. Within forty-eight hours I was absolutely free from pain and could sit up in bed, and within a few days I could walk. My gain was rapid and complete. I am a woman of sixty-three years, and am now strong and well. I stopped the use of morphine and all medicine the day the practitioner began to treat me. I will give the details of my case, and the names of the physicians who attended me to any person who may ask for them.

MRS. ANNA B. WELKER, Dale, N. D.

About ten years ago I turned to Christian Science for healing. I felt it was all that I myself would ever desire, but did not think I could rely upon it for the children. I have since learned, however, that God is the "Infinite Mother, who has borne and carried us all." I have a little girl nine years old who has been healed of several diseases through Christian Science, and I have three other children who rely entirely upon it for healing.

GERTRUDE EBERHARDT, St. Louis, Mo.

Some time ago I suffered from inward trouble, and after having tried all kinds of medicine and doctors, I at last turned to Christian Science. A friend had spoken to me about the wonderful things Christian Science had done for others, and what it would do for me. After a few treatments I awoke one morning entirely cured. I can never express in words my gratitude to God for my healing.

MISS C. G. FUNK, Brooklyn, N. Y.

[Written for the *Sentinel*

UPWARD.

EUGENE FLAGG VOORHEES.

A LITTLE thought in dark seclusion dwelt.
Above were frozen crusts of creed and greed, of selfishness and sin;
A mantle cold of insincerity spread over all;
The raging winds of passion fought for power,
And sickening clouds sank heavily upon the heart.
But warm south winds of Love prevailed,
And clouds of gathering doubt began to move away.
Even the hatred spots could not withstand that energy of Love!

The little thought, so long asleep,
Heard voices sweet which said,
"Awake and sing! Awake and sing!"
Then upward grew the perfect thought,—
Upward the truth to voice,
Upward that Life and Love might be made manifest.
And e'er the summer sun had run its course,
The fruitage of its deeds had blest the world.

FROM OUR EXCHANGES.

[*The Outlook.*]

Immortality is not a future state; it is a present condition. It is not a gift to be conferred hereafter; it is power inherent in the human soul. It is not a fact to be proved by logical demonstration any more than the reality of the life of which we are now conscious; it is not a truth to be revealed in some remote heaven; it is a fact to be accepted as life is accepted, and to be lived as life is lived, in thought, emotion, and action. If we would know immortality, we must write it on our hearts that we are now immortal; if we would get the peace and joy of it, we must rest securely in it; if we would have it become steadily more real, commanding, and inspiring, we must live as immortals.

[Rev. S. G. Barnes in the *Hartford* (Conn.) *Seminary Record.*]

Man's high and resistless ambitions are surely being spiritualized into divine aspirations. He is making himself at home in time and in eternity, in the thought of this world and of all worlds. He is learning to receive all things from God, and to give all things to God; he is learning to love God in all men, and to love all men in God. Without ceasing there comes to him the constraining and transforming appeal of the divine love, "Son, thou art ever with me, and all that I have is thine." For no less than this is the glorious destiny of man; it is the divine purpose that he shall be "filled unto all the fulness of God."

[*The Universalist Leader.*]

Have convictions and do not be afraid of them or for them. The only man who amounts to anything is the man who stands for something. Church creeds were once exaggerated to undue importance and are now lax to the point of inefficiency, but every one should have a personal creed, know it well, and stick to it loyally. This does not mean bigotry, for an article in every creed should provide for equality of mental freedom for all, but it does mean that we should mentally get somewhere, and know why we are there.

[*The British Congregationalist.*]

A man's actions are the best testimony to his beliefs. Hence it is above all things necessary that churches should show the largest liberty in regard to questions of creed. . . . The gravest heterodoxy were but a trifle in comparison with lack of charity, or with that temper of mind that would refuse to a Christian teacher the utmost freedom of thought and speech. Intellectual liberty is as essential to the life of a church as is political liberty to that of a nation.

[*The Christian Register.*]

Can we convince ourselves that Christianity is inherently and fundamentally a religion of peace? Our theology must coincide with the Sermon on the Mount, instead of using that sermon as a mere saddle on the back of a religion of savagery. There must be considerable courage in taking this position, but it is the only position of history as well as honor and sincerity.

[Rev. Christopher G. Hazard in *The New York Observer.*]

It is not revolution that society needs, but resurrection; not a new form, but a new spirit. Let fair dealing be the life of trade. Let labor depend upon merit and the demand for merit, not upon force and an attempted monopoly of work.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A long step toward the establishment of a broad boulevard extending from Boston to the White Mountains will be taken during the present year, in the construction of the so-called "Merrimack Valley trunk line," a highway authorized by the last session of the New Hampshire Legislature. This line, which will be a wide macadamized road extending from the Massachusetts State line at the southerly end of the city of Nashua, to the northerly end of the city of Laconia, on Lake Winnipesaukee, will be constructed jointly by the State and by the towns and cities through which it will pass. At its southern extremity it will connect with the Massachusetts State highway in Tyngsboro. The entire length of the trunk line will be approximately seventy miles. It will pass through the cities of Nashua, Manchester, Concord, Franklin, and Laconia and the towns of Merrimac, Bedford, Hooksett, Pembroke, Boscawen, Tilton, and Belmont.

Thirty thousand acres of choice public lands embraced in the Huntley irrigation project will be allotted at Billings, Mont., in June. The land is located about twelve miles east of Billings, and is crossed by the Northern Pacific and the Burlington railroad systems. The Government has built a highway parallel to the railroad, affording a direct line of travel up and down the valley, and at short distances along the railways has laid out town sites, so located that no farm is more than two and a half miles from a shipping point. The farms are small—forty and eighty acres.

The Governor of New York has won in his contest with the politicians through his appeal to public sentiment. Of the whole list of measures proposed in his initial message the Massachusetts ballot will be the only one to fail. These measures include the Public Utilities Bill, the bill ordering a recount of the ballots cast at the last election in New York city for the present mayor, the Reapportionment Bill, Corrupt Practices Bill, Municipal Court Bill for New York City, Child Labor Bill, National Guard Investigation, and the Omnibus Investigation Bill.

All records were broken during the month of April in the imports of iron ore and pig iron, because of the great demand for raw material used in the manufacture of steel. Through New York and other eastern seaboard points no less than 210,780 tons came from Cuba, Europe, and Africa, and some ore from Sweden for the first time.

In 1900 the population of Hawaii was 154,001. Of these there were of Hawaiians, 29,799; Caucasians, 28,819; Chinese, 25,767; half breed Hawaiians, 7,857; South Sea Islanders, 415; Negroes, 233; and Japanese, 61,111. In 1853 there were 70,036 native Hawaiians.

Four Kansas City ice companies have been fined an aggregate of $32,500 for violating the Missouri anti-trust law, and the largest company in the city has had its charter revoked and been prohibited from doing business in the State.

The officers and directors of the Brackett Bridge Company of Ohio and five other big bridge companies have been reindicted under three counts and held as individuals guilty of conspiracy against trade.

Foreign.

The Kaiser has just sanctioned a gigantic street improvement scheme in Berlin, Germany, involving the outlay of $37,500,000. Four German banks and one British bank will finance the undertaking. It is proposed to widen the narrowest part of Friedrichstrasse twenty feet and to replace the present insignificant houses and shops by a magnificent array of palaces, galleries, and hotels, making the street one of the grandest thoroughfares in the world.

The two hundredth anniversary of the birth of Carolus Linnæus, the celebrated Swedish botanist and naturalist, was celebrated with imposing ceremony at the University of Upsala, Sweden, on the 24th ult. The labors of Linnæus are inseparably associated with this university.

The Russian peasant deputies are said to be demanding expropriation of the lands of the large estates, private and public, and will not accept the proposal of the Constitutional Democrats and the Government plan of financial aid in purchasing farms.

The Indian Government, it is reported, has granted a subsidy of $25,000 to Louis Brennan for a continuance of his experiments with the gyroscope monorail. It is probable that the system will be put to its first practical use in India.

It is stated at Copenhagen that the question of the acquisition of the Danish West Indian Islands by the United States has been informally broached again by the American Minister, in conversation with the Danish Foreign Minister.

Egypt has 11,206,359 inhabitants, the new census shows, in addition to nomad Bedouins who do not linger in any one place long enough to be counted. In the last ten years the population has increased by 1,500,000.

Tourists from sixty-six countries visited Shakespeare's birthplace last year. Of the total number of forty thousand visitors over ten thousand came from the United States.

On the list of the world's mineral productions Japan ranks fifth in its production of sulfur, third in antimony, fourth in copper, sixth in petroleum, and eighth in coal.

Industrial and Commercial.

The Hamburg-American Line can point to the largest ocean steamship fleet in the world. The company was established on May 27, 1847. Three clipper ships, Deutschland, Nordamericka, and Rhein, were the pioneer vessels. The Elbe, Oder, and Donau followed and the fleet averaged about 717 tons a vessel. A score of cabin passengers, two hundred steerage passengers, and a little freight was the full complement of each. The time for the trip averaged from twenty-nine to forty days. The company adopted steam power in 1854, and in 1887 the twin-screw system. Its fleet now consists of 371 vessels in all, of which 166 are ocean-going, with a total tonnage of 950,693 tons. Of this number twenty-three are twin-screw steamships. Fifty-eight different services are maintained, and in 1906 1,256 round trips were completed, carrying 333,926 passengers and 5,804,798 tons of freight.

The *Washington Herald* announces that a gigantic railroad merger, involving $1,000,000,000 of capital, a mileage extending practically from the northernmost point of the Atlantic coast to the Gulf ports, with a network of tracks gridironing New England, the East, and Middle West, is nearly accomplished. This colossal merger, when perfected, will be known as the Greater Pennsylvania System. It will embrace practically all the railroad mileage in New England, together with the present Pennsylvania lines east and west of Pittsburg, with through connections to New Orleans and Mobile. Instead of projecting a transcontinental line from ocean to ocean the keystone of the new system will be the Panama Canal.

The Western railroads have agreed to lengthen the schedules of their through passenger trains. All the roads will put into effect on June 9 new schedules, under which the minimum time of passenger trains between Chicago and Omaha will be fourteen hours and thirty minutes, an increase of two hours. The minimum time between Chicago and Kansas City will also be fourteen hours and thirty minutes, an increase of one hour. The increase in time between Chicago and Denver will be four hours and a half and between Chicago and San Francisco at least four hours. The Western railway officials declare that the present schedules are not too fast for safety, but are too rapid for economical operations.

Texas is a great truck-growing State. She has 108,320 acres devoted to potatoes, 5,000 to onions, 28,000 to cabbage, 56,000 to watermelons, 11,500 to cucumbers, 73,000 to tomatoes, 45,000 to strawberries, 22,000 to cantaloupes, and 20,000 to other vegetables; in all 368,320 acres, according to compilations made by the railroads. It is estimated that there are 100,000 acres of peach orchards and 20,000 acres in apple orchards. Several thousand acres of orange groves have also been planted during the last two years.

New England mill officials, employing one hundred and thirty thousand persons, have already announced advances in wages amounting to an additional weekly payroll of $125,000. It is expected that within a few weeks advances will be made that will bring the total number of employes benefited up to two hundred thousand.

The forty-five-foot obelisk which is to commemorate the opening of the Sault Ste. Marie Canal, has been cut at Branford, Conn. Owing to its size and weight the big monument will probably have to take a roundabout course to its destination.

General.

A violin made in 1703 by Antonio Stradivari of Cremona, has been sold at Christie's, London, for £590. Robert Burns' seal, a Highland pebble with his coat of arms, fetched £210.

The United States has twenty-three per cent of the entire population in school, Germany nineteen, England sixteen, and France fifteen per cent; Russia has but 3.3 per cent of her people engaged in school studies.

The total number of Bibles issued by the American Bible Society during its ninety-one years of existence is 80,420,382.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

LETTERS OF SPECIAL INTEREST.

Bushire, Persian Gulf, May 5, 1907.

My Dear Mrs. Eddy:—I have been thinking the last few days that you would be glad to hear of the spread of Christian Science to these parts of the world, so well known in Biblical history. A little over five years ago I was appointed by the India Office in London to become an assistant superintendent under the Government of India, in this department, and was at once sent out to Arabia in charge of a submarine telegraph cable to be laid down between Southern Persia and Muscat in Arabia. About nine months before I left England I had become interested in Christian Science, and so of course I brought Science and Health out with me. On the very first day I landed at Bushire in Persia, one who has since become a good friend of mine became interested in Christian Science, and through him, a short time later, his father became interested, and is now a leading member of the newly established church in Johannesburg. At that time, five years ago, I was stationed here only about two months, and I feel sure that was the first introduction of Science and Health into Persia. Since then I have visited Arabia, Baluchistan, India, and Turkey, and have always taken Science and Health with me. On two occasions I have been up the river Shut-el-Arab almost to the junction of the two great rivers, the Tigris and Euphrates, between which lies the land upon which the Garden of Eden is supposed to have flourished.

When I first came to the land of the Medes and Persians no one had ever heard of Christian Science, but now, in Bushire, every one knows of it, and several are deeply interested, to the extent of reading the Lessons daily and striving, to the best of their knowledge of Christian Science, to live up to it. We have many proofs of God's loving care and we are all most thankful for this great truth that you have revealed to us through the pages of Science and Health. The *Journals* and *Sentinels* which reach us weekly are always a tremendous help and comfort.

Sincerely and gratefully yours,

T. F. TEBBUTT.

New York, N. Y., May 12, 1907.

My Precious Leader:—I enclose some clippings from the New York *Sun* and *Brooklyn Eagle*. The other papers give some of my students' letters, but not all. Mrs. Margaret Beecher White is one of my dear students and a practitioner in our Reading Room. She and Mrs. Alice Beecher Hooker Day are among my prominent and intellectual students, and both have come out in print on this question. To-day the American consul and his wife from Bombay, India, were at church, and after service visited me in my home. At both services the auditorium and the overflow were filled to their utmost seating capacity, except a few seats out of sight behind the large columns. Never was there such appreciation of *you*, dearest; never such recognition of your wonderful message to the world, and never, oh, never, such love and loyalty as we feel for our beloved, our precious Guide to eternal Life, as to-day. If I can do anything for you, dearest, will you let me know.

I am working and watching and praying, and demonstrating the healing power of Christian Science. Last Sunday a boy nine years of age was nearly given up by doctors. They declared that only one thing more could be done, and that was an operation which was most serious. I was called to calm the mother, who was nearly beside herself. I went into the room in the absence of the nurse, and audibly spoke to the child. Then I realized for myself just a few moments that Love filled the room, and went out and to church. In an hour the surgeons came with the doctors to consult and decide about the operation, when they were amazed to find the boy in a nearly normal condition. This was the end of the disease. The boy quickly improved and is the wonder of all interested. To have normal temperature restored in two hours has puzzled the doctors, who will learn later that the truth sets free, and that Christian Science teaches the way to health, harmony, and peace.

I send you more love than tongue or pen can convey. Forever and ever,

Your loving child,

AUGUSTA E. STETSON.

A LESSON FROM THE LABORATORY.

M. G. KAINS, M.S.

A MAN of my acquaintance, who when a boy used to make simple fireworks to add variety to the ordinary pinwheels and Roman candles of those days, at first had little idea that he was studying chemistry. He only knew that certain combinations of chemicals produced certain results, and that every variation from the correct method or any impurity of the chemicals resulted in more or less of a failure. While interested in this manufacture a friend lent him a book on chemistry, telling him that by its aid he could learn a great deal more than by his rule of thumb methods; but the book seemed too dry or difficult and it was soon returned.

After spending some years in business life the young man told an acquaintance of his simple chemical experiments, and was scarcely surprised when the friend said, "You are not in your right place; you should be a scientist." The result was that the young man resigned his position and went to college, where a year or so later he was studying chemistry from a different view-point than that of his boyhood. Instead of mixing chemicals to make more complex compounds, he was discovering the nature of materials given him by the professor. For instance, a small bottle would be handed him and he would be required without

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

hint to find out all the chemicals it contained. The process was something like the following: A small quantity of the mixture was poured into a thin glass tube, and a few drops of what is called a reagent added. Perhaps there would be no change in the contents of the tube; if so, this lack of reaction proved that certain kinds of chemicals were not present. Then another reagent would be tried. Let us suppose sulfureted hydrogen to be added by blowing it through the liquid. If the contents turned black, this change was proof positive that at least one chemical, namely, lead, was present. For even the most minute particle of lead in any of its many beautifully colored compounds at once acts in this way; never in any other with the same gas. In similar ways other materials would be recognized by means of other reagents, until all were discovered and removed, leaving only a mixture of reagents and water.

The experiences discussed are paralleled in the experience of the majority of people who become Christian Scientists. At first, in their prayers, they practised the simple faith of their childhood. These prayers in time became mere repetitions. Perhaps for a time they may have produced apparently satisfactory results, but as personal interest blinded faith they failed to get the results desired, until many grew tired of failures, ceased to experiment, and declared that former results were due to chance or to something they had forgotten. While in this state of mind they may have been given a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, but concluded that it was too deep or hard to understand, or they may have been too lazy to test its rules; and so they got off into other lines where they did not belong, and were only recalled by some one who recognized their true sphere. Just how they may ultimately have become interested in Christian Science is not the point that interests us here. It is the application of the methods. As with the boy making fireworks, a certain kind of prayer produced certain results, but the introduction of variations and impurities, coupled with a disinclination to work scientifically, resulted in failures, and so the people gave up their perfunctory prayers and found themselves in undesirable conditions, from which they were rescued only when some one who understood these conditions explained their true meaning.

Then came the analysis of consciousness, the recognition and the removal of undesirables as quickly as possible. This may be done as scientifically as is the work of the laboratory. The moment the mental cause of any disturbance is touched, be it physical, financial, or other, there is a reaction, which continues until this mental cause is removed; and when the cause has been removed the effect is no longer present. The process has no more relation to the brute force of human will in the case of Christian Science than in the case of chemistry. In a scientific sense the student's or practitioner's work is "to dissolve with the universal solvent of Love the adamant of error, —self-will, self-justification, and self-love,—which wars against spirituality and is the law of sin and death" (Science and Health, p. 242).

In due time, having discovered and removed various undesirables from the mental make-up which the student has claimed to be his own, he is able to help others. In chemistry the reagent indicates the presence of a chemical; the student merely applies it. In Christian Science "the universal solvent" does not stop with mere indication of the character of material with which the patient may be loaded, it destroys the undesirable element and takes its place; and as a result of the application of divine Principle the "adamant of error" is dissolved, and nothing is left "that can sin, suffer, be punished or destroyed," for man is revealed as "the image of his Maker in deed and in truth" (Science and Health, pp. 340 and 203).

THE QUESTION OF COMPENSATION.

ANNIE M. PAYNE.

WHAT seems a stumbling-block to many when brought face to face with Christian Science is the fact that its adherents accept remuneration for their services. The revulsion of feeling which this produces in some who incline to the teaching, and even in beginners themselves, is curiously disproportionate to the occasion, when we consider how long it has been the custom to pay both the clergyman and the doctor; and that in the ministrations of Christian Science the offices of both these servants of humanity are combined. Still so it is, and therefore we have here a manifestation of mortal sense, which must be met by statements of Truth's requirement.

We would first call attention to the fact that throughout the entire range of our Leader's work there has been the tendency to gather into it all the hardly-won, Christ-sanctioned assets of social life. In the Manual this tendency is shown by frequent references to the laws of the State; and it is equally clear in regard to the subject before us. Among these things of good report is the healthy sense of independence. Availing himself of this characteristic, as in itself helpful to soundness of body and mind, the practitioner accepts a return, and lets the patient experience the pleasant sense of giving something for something, and realizing the better that this work is worth paying for. Gratitude is a second bulwark of our dealings with one another; and it is quite indispensable if one would reap the full benefit of Christian Science work. Some have been healed seemingly in advance of this consciousness; but none can proceed further while nourishing ingratitude; and the way in which payment is made affords a good test of the condition of a patient's thought on this subject. Again—we have Jesus' word for it—"the laborer is worthy of his hire," and these words illustrate the sense of common justice which plays so large a part in the harmonious relations of human life. A fourth and growing sense is that permanent ill-health should be discountenanced. Though seemingly hard to the invalid, it is often a wholesome check upon sickness that we must pay to get well. Hence it is not the aim of Christian Scientists to underbid the doctors, nor to attract people through the thought of cheapness. Let us look more closely at the healing work itself and those engaged in it. To abrogate compensation would be to put an artificial restriction upon this work, since many, otherwise ready, would be unable to relinquish for the non-paying labor that which had hitherto supplied their daily needs. When we consider how many a hard-working man or woman with a family has come earnestly into Christian Science, and is ready to begin the healing of the sick in Jesus' way, we see that non-payment would put a veto on certain good work, possibly for years. Poverty is a wrong state of human thought, and cannot be allowed to override the work of Science. It is most important to recognize that the demonstration of Life as made known in Science is possible to all who are ready to put the truth first. There is no barrier. No occupation, not wrong in itself, is a hindrance to making a start, and it is desirable to give as much freedom as possible to the worker. Here compensation helps by enabling him, in proportion to success, to tend towards the giving up of that occupation considered essential hitherto as a channel of support.

Be it conceded, then, that the poorer student should take remuneration. But why, asks a critic, render the matter so obtrusive by compelling the wealthy to adopt a practice often at first most repellent to them. A little consideration will show how truly God-guided was our Leader's thought here. If the rich student might forego a return, how many ungrateful, or at least unthinking persons, would select the practitioner who charged nothing. What an abyss of error opens before the analytic thought in this

Digitized by Google

case! Supposing out of several students the most spiritually-minded were at first the poorest in this world's goods. The public, knowing nothing of the great need there is for spirituality in the practitioner, would then be patronizing the less receptive thought. What a loss to the whole world's apprehension of Christian Science! Nor would the effect on the workers themselves be less unfortunate. The old order of pride with riches and envy with poverty might secure a footing, and the only right standard of pre-eminence be greatly obscured. Again, though in the end the poorer student overcame his early handicap through special success in healing, yet what difficulties would linger over the money question. Whether he sought to retain, to lessen, or to relinquish his compensation, what a stream of false, hard thoughts he would bring down upon himself. Truly we cannot be too thankful that the decision is taken altogether out of the student's hands, that in this question of payment as in many another our Leader has stood by the demands of Principle, even though it has subjected her to the shafts of misrepresentation. It is narrated that a wealthy student, neglecting this requirement, found presently that her path was beset by inharmonious conditions. Applying at last to her teacher as to the cause of failure, he asked her whether she accepted a return from those who were able to pay. She confessed that she had not felt inclined to do so. "Go, then," said he, "and learn humility and obedience, and you will succeed." And the result showed that he was right.

It goes without saying that the Christian Scientist whose loyalty has been well tried and proved needs no such argument as the foregoing to convince him of the soundness of the wisdom which established a simple system of payment. Demonstrating day by day the character of Christian Science as revealed truth, he rests happily in the assurance that the one who was pure enough to receive the revelation is also receptive of the wisdom needed to apply it in detail to human need. Carlyle well says that "there are no might-have-beens," and in Science this is incontestable. Every step humbly and prayerfully demonstrated has ever opened the way for assurance in regard to the next; and all that has been established as proper to a given stage of progress has, sooner or later, become amply self-evident to every true follower of the one whose unswerving loyalty to Truth is ever our gain.

"OUT OF THE MOUTH OF BABES."

WM. BRADFORD TURNER.

ONE was a little fellow, the other a thoughtful man. It was past mid-day and the bright sun of midsummer was flooding the "homey" room, but across the strong, sweet features of the man lay the shadow of pain. He had been making his way, not so rapidly as many, out of dark years of suffering into the light again. The boy stood watching him. "Won't Love stop the pain, papa?" The man shook his head wearily. He was pondering in himself wherein he might have failed to realize the good. "I think Love will," added the boy; then—after a moment's silence, very quietly—"I'm going to help you, papa."

The wee, tousled head of gold sank close to the shaggy gray one; one little arm stole about the father's neck; the baby knees bent in attitude of prayer beside the low couch, and all was still. Somewhere in the room a tiny clock ticked out the quarter seconds; but the man and the boy were oblivious to the world of time. There is a consciousness which touches heaven, wherein time is lost in a glimpse of the eternal.

Presently the boy rose softly, but no word was spoken; a pair of little feet tripped noiselessly across the floor, a door was opened and shut—and the child was gone. But the angel of his ministration remained behind. Over the sufferer there came a feeling of uplift. Somewhere, deep down in his heart, thought had changed. Imperceptibly at first, then more and more swiftly, a sense of security, of childlikeness and trust superseded that of doubt and weariness. The harbingers of Spirit came to lead thought and instinct upward. And the pain and misery? They had fled away before the touch of Love as shadows when comes the day. In their stead was peace; peace, which is Love's largess to all who are of simple heart.

And now across the centuries is heard again the gentle admonition, "Forbid them not: for of such is the kingdom of God."

PERSISTENCY.

JOHN E. FELLERS.

THE experiences of Jesus, prayerfully considered, give hope and encouragement to struggling hearts at all times. The healing of the blind man at Bethsaida reads into the practical, demonstrable work of Christian Scientists a deeply significant lesson. Error whispers no more subtle falsehood into our consciousness than discouragement. After weeks and even months of successful work, we often find ourselves inclined to doubt that we have sufficient understanding to meet certain claims of error which present themselves to us. We may then be helped by recalling the Master's experience. Jesus had healed the man with the unclean spirit; he had healed the leper; he had healed the paralytic; he had restored the withered hand; he had stilled the waves of the sea; he had even raised the little twelve-year-old girl from the dead, and yet when he made the first attempt to heal the blind man at Bethsaida he was not successful.

It is recorded that "he took the blind man by the hand, and led him out of the town." A town suggests the idea of a number of people, governed by mortal-mind laws, rituals, ordinances, beliefs, and creeds. It would seem that Jesus, realizing that mortal mind considered blindness a stubborn form of error, led the man away from the town, as far as possible from false beliefs. Then we are told that he spat on the blind man's eyes. Now the word spit means "to reject," "to thrust out," "to deny." Taken metaphysically, this demonstration began by the rejection of the man's belief in blindness, not by actually spitting on his eyes, as the story has been literally interpreted by many. Although this false claim had been denied by the Master, who knew Truth's power, the demonstration was only partially made, for when the man looked up he said, "I see men as trees, walking." After this first attempt Jesus put his hands (symbolic of spiritual power) upon the man's eyes, and when he again looked up he "saw every man clearly." In referring to this incident our Leader has said, in "Miscellaneous Writings," p. 170, "Jesus' first effort to realize Truth was not wholly successful; but he rose to the occasion with the second attempt, and the blind saw clearly."

AFTER ALL.

HON. CLARENCE A. BUSKIRK.

OUR sobs and our laughter may follow each other
As swift as our heart-throbs, many's the time;
Our smiles and our tears may neighbor each other
Behind our quick eyelids, many's the time;
Hide-and-seek may be played by the clouds and the sunlight
Across the blue spaces forever above us;
Yet we know, after all, there is always the sunlight,
And we know God is Love and is ever above us.

SELECTED ARTICLES.

[From the *Boston* (Mass.) *Times*.]

NO SUCCESSOR TO MRS. EDDY.

The rumor to the effect that there is strife in the Christian Science movement concerning leadership, which has periodically appeared in the public press, and which has recently been revived, has not become true with age, but is quite as much a myth now as it was when first put into circulation.

It is quite as much out of place to talk of a successor to the Discoverer and Founder of Christian Science as it is to talk of a successor to the discoverer of America. She is doing daily what no others can do,—writing letters, examining letters, and directing the movements in Christian Science with a vigor and wisdom that others have not, and which she did not excel twenty years ago. There is nothing in the position of the revered Pastor Emeritus of the Christian Science Church which could be succeeded to by any man or woman. Already Mrs. Eddy's teachings have in a large measure become her successor, and she will never be succeeded by anything else than the spiritual influence she has planted in human consciousness. We believe that every Christian Scientist in the world will agree that there is not a student of this Science anywhere who has ever dreamed of being a successor to Mrs. Eddy.

The recent change at Pleasant View has absolutely no significance, except that one man served out his time and it was not convenient for him to continue. Therefore, out of necessity, another took his place.

[V. O. Strickler in *The Times*, Rochester, N. Y.]

In terms Jesus was not called a Christian Scientist. He was not even called a Christian. The term Christian was first applied to his followers at Antioch, eight years after the crucifixion. They were Christians, however, before the term was applied to them, and the name merely expressed the fact that they believed the doctrines and performed the works of Christ Jesus.

In like manner, when John the Baptist sent two of his disciples to ask Jesus the direct question as to whether or not he was the one who should come, or if they should look for another, Jesus did not in terms say that he was the Messiah. He merely directed them to tell John the works they had seen him perform, and left John to judge him by these works rather than by his words. This is not only the true test, but is the only test to-day to determine whether a person is a Christian. The fact that a man says he is a Christian does not make him one. Neither does the fact that he believes himself to be a Christian necessarily make him one. Jesus might have declared himself to be the Messiah, but he would not have been the Messiah if he had not fulfilled the Messianic hope and promise.

So it must be with Christian Science. It has the right to be called Christian if it follows the teachings and performs the works of Christ Jesus. Hence, if Christian Science, through following his teachings, brings out the results in healing the sick that he did, then he must have been a Christian Scientist in fact, although he was not so designated in specific terms. By the same test it is proved that this Science is also Christian. The question of real interest, then, is as to whether or not Christian Science does heal the sick and regenerate the sinner. If it does, nobody wants to oppose it and everybody wants it. It will be admitted on every hand that the need for healing and regeneration is universal. That Christian Science is meeting this need is shown by its rapidly increasing numbers. There are already so many people living in our very midst who have been cured of the drink evil, of the use of opium and other drugs, and of physical and mental diseases in almost every form, that the fact of Christian Science healing is now established beyond any possibility of doubt.

Why should the Christian Church not heal the sick? Jesus did so, and it is apparent that it was his intention that the same work should be done by his followers. During the first three centuries of its existence the Christian Church possessed the power to heal the sick, and it was regularly exercised. In fact the dead were raised during the first two centuries. In healing the sick it is plain that Jesus acted in accordance with a definite law and rule, which he was able to apply without failure because of his perfect understanding. It is also clear from the Scriptures that this law, by means of which he healed the sick, was one that was capable of being communicated to others, and that he did in fact communicate it to his disciples, who in turn communicated it to those whom they brought into the Church. To say that Jesus was able to heal the sick because he was God, does not explain the exercise of the same power either by his disciples or by those who lived a long time afterwards. He said that "these signs shall follow them that believe," and among other things he mentioned that they should heal the sick. It is also stated in the Epistle of James that "the prayer of faith shall save the sick." From these statements alone, if other evidence were lacking, it would appear that both Jesus and James recognized that the power to heal was dependent alone upon the spiritual attainments of the individual, and that this power might be exercised by any one who understood how to make the "prayer of faith." . . . Christian Science is the rediscovery of the Principle of healing practised by Jesus and by his followers. It once more teaches mankind how to make the "prayer of faith." It is nothing more nor less than a return to primitive Christianity. It is to-day in its infancy, and it may be that its operation is but imperfectly understood, nevertheless there are a vast number of people who have been healed through its teachings.

I am aware that in cases where Christian Science has apparently failed to heal the disease, the argument is advanced that if it were of God it would never fail, and would heal in every case. The slightest reflection, however, will show that such argument is not well founded. We read in the Bible that the disciples of Jesus were not able to heal in every case. In at least one case they brought a young man to Jesus, who healed him immediately, after they had failed to do so; and yet these same disciples subsequently raised the dead. What was it, we may ask, that occurred in the mean time to bring to them this great increase of power? It could have been but one thing, namely, their understanding of the Principle of healing, taught and practised by Jesus, had increased. Jesus said, "Ye shall know the truth, and the truth shall make you free," thus showing that man's freedom from whatever enslaves him must come through his knowledge of the truth, which knowledge may be obtained by every person who is willing to conform his life to the teachings of Christ Jesus. So we may be encouraged. Even if the Principle of healing revealed in Christian Science be not yet perfectly understood, we can rejoice with the thousands of those who have already been helped by it, and abide in the assurance that as our knowledge of the truth increases we shall be better able to do the works of the Master.

[From the New York *Sun*.]

"I've become acquainted with several Christian Scientists since I came to New York," said a business man the other day, "and from the first I've noticed how different

Digitized by Google

their small talk is from that of the other people I meet. They never find fault with the weather, never criticise their friends, or for that matter speak evil of any one. They never discuss sickness or symptoms, and whenever a conversation drifts into an unhealthful channel they invariably try to get it back to some wholesome, interesting topic. Germs, bad water, poor ventilation, and the like are all crossed off their list of small talk subjects. A draught is simply a "current of God's fresh air" and not a thing to be dreaded and discussed, as is usually the case.

[C. M. Merica in the *Daily News*, Chicago, Ill.]

I am not a Christian Scientist. I with my family came to Chicago as Methodists, and at once became regular attendants at and contributors to the St. James church and a teacher and workers in the St. James Sabbath School. For the last two years we have been attending Christian Science churches, and my experiences and observations in attending these churches have led me to conclusions diametrically opposed to those of the pastor of that church. One of the first things to attract me to the Christian Science Church was the universal cheerfulness, hope, and assurance depicted in the countenances of the members and prevailing in all the work of the Church. To one like myself, whose mind had become thoroughly imbued with the teaching that Christ did not mean what he said in his oft-repeated and imperative command to all his followers to "heal the sick," it would have been very easy to believe that "Christian Science was a disease peculiar to the brain." But "by their fruits ye shall know them." . . .

It is true the Christian Science pulpit does not have any of the so-called "funny" or humorous ministers, nor does it preach politics, political economy, and the like, and the Sunday services are calm and serious—largely Scriptural readings. The doctor's observations that the Christian Science churches are usually located in the "fashionable boulevards" or other places of beauty are also correct. And why should the churches not be so located? Christian Science, as I understand it, is religiously opposed to having one church on the boulevard for the rich and aristocratic and another in some uninviting, out-of-the-way place for the opposite class. If, however, any one will take the pains to investigate for himself, he will find, as I think I have found, that the congregations and the membership even of these seemingly aristocratic churches are made up of people from all honorable walks of life, with the "leisure class" very much in the minority. Many of the active members have been redeemed from the lowest depths of drunkenness, morphinism, dissipation, and all forms of vice, to respected manhood and womanhood, divinely healed from all their sins and diseases, and have been accorded the same treatment by the Church as Jesus accorded Mary Magdalene.

In my search for the truth or the falsity of the doctrine of Christian Science I have observed that nearly every argument I have seen intended to refute Christian Science has been directed against some doctrine, practice, or belief attributed to Christian Science, but which in reality is absolutely foreign to it.

[Edward E. Norwood in *The Washington* (D.C.) *Herald*.]

In the account of the Episcopal convention of the Washington diocese Rev. Mr. S—— is quoted as saying, "Rarely now in many places are the clergy called upon to minister to the sick and dying. With the best intentions in the world, physicians often forbid them to see their patients. What wonder that now comes Christian Science, so-called, and forbids the physician himself to see the sick?" It should be remembered that it is the patient himself who chooses the method of treatment, whether a matter-physician or a metaphysician, and in a large number of cases the latter is called in after the former has exhausted his efforts. Yet, under such odds, the large percentage of "hopeless cases" healed by Christian Science is remarkable. The Christian Scientist does not forbid the physician to see the sick. We believe he introduces to the patient the great and only Physician, the ever-present Christ, who is with us always, even unto the end of the world, and relies confidently upon this gracious presence. On the other hand, why should *materia medica* exclude the clergy from the sick-room? Is it not because the physician fears a mental disturbance in his patient's thought, inducing a fear or expectancy of death, rather than a strengthening and uplifting influence? I trow a physician would be glad to know a Christian Scientist was praying for his patient (and have had many to tell me so), especially if later the credit for bringing about the healing were given to matter instead of to divine Mind, or God. Again, why should not our brother and all Christian ministers, instead of bemoaning the fact that they are excluded from the sick-room, heal the sick themselves? Their Master always coupled the two injunctions, "preach the gospel" and "heal the sick."

[Estelle R. Freeman in *The Needham* (Mass.) *Chronicle*.]

Paul declared, after his wonderful conversion to Christianity, when referring to his previous life, "I verily thought with myself, that I ought to do many things contrary to the name of Jesus of Nazareth." Just at this present time there seem to be many who feel the same way about Christian Science. For these Christian Scientists would say, "Father, forgive them; for they know not what they do." As for those who are actuated by malicious or other inferior motives, neither Mrs. Eddy nor those who have accepted her teachings feel that it is their business to judge them or their works; and they are not disturbed, knowing that the truth cannot be touched. Honestly believing that Christian Science is the truth, they are willing to wait for that fact to be revealed to others. Their only reason for noticing these misleading statements is that the proper antidote for a lie is the truth about it, and if people go on repeating falsehoods, after knowing the truth, they have the matter to settle with their own consciences. . . .

Another reason for not being disturbed is that, not many years ago, the great body of those who are now firm in their loyalty to Christian Science were bitter in their denunciations of what they thought it was, and yet, when the hour of trouble came, they dropped all prejudice and turned to this source for help; so it is confidently believed that others will do the same, when the time comes that what they now depend upon fails to satisfy. The effect upon the lives of those who have thus turned, is most interesting. First "Science and Health with Key to the Scriptures" by Mrs. Eddy is placed in their hands, and soon a Bible is brought into daily use and ere long by them declared to be "a lamp unto my feet, and a light unto my path;" life becomes illuminated with a new meaning and they begin to comprehend what is meant by the command, "Acquaint now thyself with him [God], and be at peace." . . .

To those who scoff at absent treatment and tell amusing stories about it, we would say that the Founder of Christianity gave several examples of healing spiritually, though absent from the patient, notably the case of the centurion's son. Christian Scientists, and their friends who are associated with them, know that there is nothing ridiculous about this, for it is not the influence of one human being over another that heals, but the power of God, which is omnipresent. The practitioner claims no more for himself in healing the sick than in reforming the sinner, but the understanding that enables the student to do these works is not gained by trying to tear down a brother Christian's religion or in any other way than trying to be Christlike.

THE LECTURES.

TRENTON, N. J.

Frank H. Leonard lectured on Christian Science Sunday afternoon, April 7. He was introduced by Edward L. Katzenbach, Esq., who said in part.—

For some reason unknown to myself I have been asked to introduce the speaker of the afternoon, and I may add, without overstepping the bounds of truth, that I rejoice in an opportunity to express publicly my own observation of Christian Science and Christian Scientists. "By their fruits ye shall know them" is a saying old, tried, and true, and by their fruits and by these alone I have known and judged them. My acquaintance with the sect has been confined to what I have seen and not to what I have known, for I am not of the Christian Science faith, being a Presbyterian dyed in the wool and with the blue brought out and developed in the college of Edwards, Witherspoon, and McCosh. The few brief years when I studied law in Cambridge did not shake my faith in the religion of my fathers, but they did cause me to respect more thoroughly the religion of others and they did afford me a broader and more comprehensive view of what may be termed the philosophy of religion.

I have attended Mrs. Eddy's church in Boston and have been personally and intimately acquainted with a number of Christian Scientists, and two things most clearly impress me. In the first place—and this observation is easily verified—those who go to make up the body of followers of Mrs. Eddy are not the uneducated, the emotional, the unsuccessful portion of the community. They are educated, rational, and successful in the pursuit of business. This surely is a fact of great significance. In the second place—and this observation is also easily verified—most of those who profess to be Christian Scientists do what those of us who are not Christian Scientists would do well to do likewise, namely, live their religion. To them the teachings of Christ seem to be the rules of every-day living.

These are the things which make us not only willing but anxious to listen to Mr. Leonard when he tells us of the Christian Science faith. They are the same reasons which in the distant ages of the past made the Athenians, thirsty for learning, listen to the apostle Paul on Mars Hill. There was a man of education who lived the religion he professed, and who desired to speak to them, as he diplomatically said, not of a new religion, but of their own "unknown God." To-day there comes into this assemblage a man likewise educated, likewise living his religion, who desires to tell us not about a new religion, but more about our religion; a man who comes to tell us, not about the "unknown God," but how better to reach out and know God. It will be with interest that we listen to what he says, and I feel sure that when Mr. Leonard is done there will be none who cannot extend to him the invitation which the Athenians extended to St. Paul, when they said, "We will hear thee again of this matter."—*Correspondence.*

MEMPHIS, TENN.

Rev. Arthur R. Vosburgh of Rochester, N. Y., delivered a lecture on the doctrines of Christian Science at the Lyceum last night [April 12] to a large and attentive audience. He was introduced by H. C. Williamson, who said in part,—

In looking down through the graded centuries of the past we catch with dim vision the first illuminating spark of the human mind in its infantile efforts to commune with its creator. In the dark night of universal ignorance men wandered in the forest jungles of superstition and fear until they emerged into the slavery of creed and dogma. Through long ages this slavery was accepted and borne, but eventually their shackles were broken by the hammer of liberated thought. Then was begun the great work of emancipation that has ushered mankind into the empire of spiritual and intellectual freedom. In their upward course men have been guided by the great teachers whom God has sent to illumine and point the way. To-day earnest men and women throughout the Christian world recognize and profoundly reverence such a teacher in the person of Mrs. Eddy, of whom the Encyclopedia Americana says, "The world's highest meed of praise is eventually bestowed upon those who have made the largest contribution to its spiritual good, and it is in the light of this fact that the honored place of Mrs. Eddy's name in the annals of the race is unqualifiedly assured. The prominence in public thought which she has already attained as the Discoverer and Founder of Christian Science, and the tender love which glows for her upon the altars of unnumbered hearts, find their explanation in the ministry of good which she has brought to her fellow-man."

The magnitude, substantiality, and success of her work is a marvel to mankind.—*Commercial Appeal.*

GLASGOW, SCOTLAND.

Bicknell Young lectured in Glasgow, April 18, to an audience of about eight or nine hundred people. He was introduced by W. F. W. Wilding, M.R.C.S., L.R.C.P., who said in part,—

The honor and privilege of presenting the lecturer to you to-night has been conferred on me because nineteen years of my life were spent in the study and practice of medicine, and because, when I reached the conviction that Christian Science was the only true method of healing, and identical with that practised by Jesus the Christ, I forsook all material systems for this healing Christ.

My experience during the transitional period proved conclusively to me that it was not possible to continue the two, medicine and Christian Science; we cannot serve two masters, and in Isaiah, 55, we read, "For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts," saith the Lord. So in my study of Christian Science I found that the principles of its teaching were higher than those of the teaching of medicine, just as the "heavens are higher than the earth," the spiritual than the material.

I was engaged in the active practice of a profession which I really loved, and after trying every means which medicine advocated for the disease my daughter was suffering from, and failing to alleviate or check the disease by those methods, until she was brought to the verge of the grave, I was persuaded to try Christian Science for her; and although I had no faith in Christian Science, I was ready to try anything to avert her approaching death. From the first Christian Science treatment all active disease ceased—and I can now tell you, with a heart overflowing with gratitude, that my daughter is perfectly healed; from that day, more than six years ago, to this, she has never spent an hour in bed through sickness.

Several patients in my then medical practice, suffering from organic diseases which most medical men would have recognized as incurable, were healed without any material aid by Christian Science prayer. Since becoming a Christian Scientist I have seen many other so-called incurable diseases healed by this new-old Christ power.

This practical religion, revealed to this age forty years ago, performs works which medicine with its history of forty centuries of theories, accumulated experiences, and self-sacrificing lives, recognizes and records as incurable. It must and does strongly attract the helpless and hopeless sufferer, and rightly so, because the fruits of its teaching

Digitized by Google

are manifest in healing all manner of sickness and disease, in healing sin in one's self, in purifying one's character, in bringing one nearer to God, and showing us how it is possible, here and now, to begin to love one's neighbor as one's self.

It is for this practical religion that I gave up the practice of medicine, and it is in order that you may hear a true statement of its teachings, that the lecturer has traveled many thousand miles to speak to you to-night.

Correspondence.

CAMBRIDGE, ENGLAND.

Bicknell Young lectured on Christian Science here April 25. He was introduced by Philip H. Martineau, a graduate of Cambridge University, who said in part,—

The last century has witnessed many great discoveries in science, which have astonished the world and urged it on to greater endeavor; and, at the same time with all this discovery going on in the world of commerce and science, the human mind has been making investigations and probing into questions of religion. There has been a breaking away from the old ideas. The world has been looking for a more practical Christianity, it has been longing for a clearer conception of God, a better understanding of the Bible; in short, people have been looking for a Science which would unfold and make practical in their every-day lives the omnipotence of good and the infinite Principle which governs all things. To-day there are tens of thousands who, like myself, believe we have found this truth, this Science of Christianity, in the teachings and writings of Mrs. Eddy, who is the Leader of the movement. It is to tell you something of what Christian Science is that Mr. Bicknell Young is here to-night. It may interest you, however, before I formally introduce him, it may help some one in this audience, to know what brought me to look into Christian Science. I have always been very fond of all kinds of athletics. After I left the University and settled down to the legal profession, what spare time I could get was given up to sport and games. Some years after I left Cambridge I developed varicose veins and other kindred troubles. I was advised by my doctor, and also by a leading surgeon whom I consulted, that I must either be operated on or wear elastic stockings all my life. The surgeon advised preferably the latter course, as he said I should have to be operated on in so many places and that he could not guarantee it as a cure, so I chose the elastic stockings. I wore them for some years—weary years they were too—and I had practically to give up athletics on this account. Chance brought to my notice Christian Science. A lady who was a Christian Scientist told me of it and advised me to try it. If I had not known her to be an eminently practical person, I am afraid I should only have smiled and never have tried it. Fortunately for me I did try it, with the result that I was able to give up my elastic stockings at once, and have never worn them since. This is now seven years ago. My veins have never troubled me again and I have been able to take up athletics where I left them off and with a renewed energy and enjoyment. I was also healed completely of tonsilitis, from which I had suffered year after year since I was a child. People have said to me, "How can you, a lawyer, believe in such a thing?" My answer is always that it is just because I am a lawyer, because I am accustomed to look carefully into things, not to accept anything without considering it, without some proof of the truth of it, that I do accept Christian Science, and that I believe it to be a practical, every-day religion, eminently suited to the needs of the present generation.

Ladies and gentlemen, there are thousands of people to-day to whom Christian Science has brought health and happiness, many of them from the grave, and who are only too glad of an opportunity of telling others what it has done for them. It has passed the experimental stage. It does not range under its banner dreamers and fanatics, as some think, but good, sensible, practical people, men and women who stand in the front rank of intellectual attainments, men who stand in the front rank in business, in commerce, in law and finance, men and women, in fact, with a keen sense of all the obligations of home, society, business, and civic life. Can you, having regard to the benefits I and my family have derived from Christian Science, wonder that I esteem it a privilege to come here to-night to introduce the lecturer, and to have an opportunity of expressing my gratitude to Mrs. Eddy for the unselfish and loving work she is doing for the good of humanity?

Correspondence.

GENEVA, SWITZERLAND.

At the Casino de St. Pierre on Sunday afternoon, May 5, an interested audience listened to a lecture on Christian Science delivered by Mr. Bicknell Young. The speaker was introduced by Mr. Charles Vouga in the following words:—

Ladies and Gentlemen:—You are invited here to-day to hear a lecture on a subject which preoccupies the thought of a number of people. This subject is Christian Science, or the Science of Jesus Christ. Christian Science does not pretend to bring a new truth to the world, because Truth always has existed and always will exist, but Christian Science brings to the world the application and the practical realization of the Principle of the truth practised by Christ Jesus, and each one of us to-day is capable of demonstrating and proving this Principle.

You will find everywhere to-day—in America, England, France, Germany, Holland, Italy, Australia, China, and in Switzerland—adherents of Christian Science who are living examples of its healing power and its salvation—even the opponents of Christian Science admit this. I am glad to testify to the healing of myself and to healing in my family, and a changed life.

The time has come when the world is obliged to recognize the mission of Christian Science and when its results must be seriously considered. In the presence of these facts which cannot be doubted, it seems necessary that each intelligent seeker for Truth must inform himself on this subject. Christian Scientists are convinced that this Science is inspired of God, and know that its teachings furnish proof of the power of God for the salvation of all those who accept its teachings and who live them.

I have the privilege of introducing to you one who is competent to present the subject of Christian Science, to which I ask your careful thought, Mr. Bicknell Young, C.S.B., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, The Mother Church, in Boston, Mass., U.S.A.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

THE MIRACLES OF THE BIBLE.

We are asked by a correspondent to state the attitude of Christian Scientists toward the miracles of the Old and New Testaments, specifically whether they believe that Jesus walked the water or that Daniel was cast into the lions' den without harm to him; and as these questions appear to be asked in good faith, we see no reason why they should not be answered in the same spirit in which they are propounded.

In the first place, the attitude of Christian Scientists toward the Scriptures is well set forth by Mrs. Eddy on page 497 of Science and Health, in the "religious tenets of Christian Science," and especially in the first of these tenets, which reads as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." Every Christian not only believes in the crucifixion of Jesus, but also in his resurrection and ascension, and on these manifestations of Divine power he builds his faith. To human sense they are the greatest miracles in the earthly career of the Master, and if they be not true what can we accept of the entire Gospel record as worthy of belief? Certainly Jesus' walking of the waves, and Daniel's immunity from harm in the lions' den, were no more at variance with so-called material laws than were the closing days of the Master's earthly experience.

Paul asked, "Why should it be thought a thing incredible with you, that God should raise the dead?" May we not ask, Why should it be thought incredible that God should rescue and preserve His servants from every danger? Jesus violated no law of God when he walked the water, fed the multitude, and healed the sick. He came not to set at naught the divine law. John wrote of him, "The Son of God was manifested that he might destroy the works of the devil." In healing the sick, in binding up the broken-hearted, in comforting "all that mourn," Jesus acted under the divine law, and he commended these works to his followers. In emulating his example his followers of the early centuries and of this day have done and are doing nothing so incredible to human sense as was the marvel of the resurrection and ascension. Yet he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

In answer to our correspondent we can say with confidence that Christian Scientists believe in the miracles of both the Old and the New Testaments, and they understand them through the spiritual illumination of the Scriptures as given to us by Mrs. Eddy in Science and Health.

ARCHIBALD MCLELLAN.

THINKERS.

One of the first statements in our text-book is this: "The time for thinkers has come" (Science and Health, Pref. p. vii.). Some who read these words may say that there have been thinkers in all ages, which is doubtless true, else would mankind have gone backward rather than forward, since all progress is dependent upon right thinking. These words of our Leader may therefore be taken as a call to every one to think for himself, to recognize the source of intelligence, and to realize man's possibilities when reflecting God,—divine Mind. Thought-processes in Christian Science are of necessity different from those to which we were accustomed in the past, and to which we might apply the Scripture statement: "For the law made nothing perfect, but the bringing in of a better hope did; by the which we draw nigh unto God." If our thinking in the past had really brought us "nigh unto God," we had thus found peace of mind as well as rescue from both sin and sickness.

Mrs. Eddy outlines the work of Christian Science when she says, "It lifts the veil of mystery from Soul and body. It shows the scientific relation of man to God, disentangles the interlaced ambiguities of being, and sets free the imprisoned thought" (Science and Health, p. 114). The student of Christian Science sets about finding out how this is accomplished, and he can best do so by diligent study of the literature of this Science and by the demonstration of the truths it teaches. Christian Science reveals the divine Principle of being, and the student who is wise keeps close to Principle, so that the Bible as well as all the phenomena of existence may be rightly interpreted for him. He will think well before seeking another's views or giving expression to his own, seeing, as he must, that unenlightened human opinion has been so largely responsible for the mistakes and sufferings of mankind.

To illustrate: Some one asks what Christian Science teaches respecting the sufferings of Jesus Christ, as if this question could be disposed of in a few words. Our Leader would say that this sacred subject can only be approached as we take off our shoes and bow our heads in lowly reverence, and thus does she draw near to it in that wonderful chapter in Science and Health, "Atonement and Eucharist." No one can study this chapter without being a better man and a better Christian, whatever his religious affiliations; for he will learn therefrom what it means and what it costs to follow Christ.

It is simply amazing how much human opinion is based upon a careless and superficial knowledge of any subject, and there is the greater reason why this should be avoided by students of Christian Science. The habit of referring all questions to divine Principle, as revealed in the Bible and Science and Health, develops a truly scientific method of thinking and precludes the possible mistakes of mere opinion. In the book of Revelation we are warned against taking from or adding to the truth, and yet how recklessly this has been done throughout the centuries. Some bring discredit on themselves, and in a measure on the Cause of Christian Science, by claiming to ignore the body,—a mistake for which there is no authority in Christian Science, wherein we are taught that the body must be included in the harmony which Truth bestows. Another speaks of having "impersonal patients"—a mistake which could be avoided by keeping close to the rules and explanations given in our text-book, especially in the chapter on "Practice." While it is true that the material sense of personality must be given up, we should be sure that its place is taken by what our text-book calls "the truly Christian and scientific statement of personality and of the relation of man to God" (Science and Health, p. 94). This calls for and necessitates clear thinking, which alone brings results that are worth while. Christian Science acknowledges but one standard, namely, the perfect Mind,—God. It teaches that all may reach this standard; nay, that all must reach it, and the wonderful results already attained by thinking in line with the demands of Principle prove conclusively that "with God" all good is possible.

THE FRAGRANT LIFE.

After all that may be said in praise of other blossoms, to the grown-up country lad there are none quite so satisfying and so dear as the lilac, and for the reason that in addition to its gifts of fragrance and beauty it brings a picture of mother and the old home which means far more to him than he has ever tried to express; above all others, perhaps, it is the flower that for him awakens

Thoughts that do often lie too deep for tears.

He remembers how freely it grew near the kitchen door, and how deliciously it flavored the twilight air as he sat on the porch when the day was done and enjoyed his well-earned rest. He remembers, too, that though the lilacs were gone so soon, somehow his mother learned their secret, and the blossomings of her unselfish spirit perpetuated their charm and sweetened his life all the year round, so that he could but realize how fittingly the bounteous and pervasive fragrance of this dear old-fashioned flower symbolized the unfailing largess of her loving heart. Her goodness was so natural and unpremeditated, her ministry so instant and unlabored, that though they may have failed to attract attention, they could not fail to open the well-springs of affection. He thus came to feel, if not see, that the gentlest thing in the world is in fact the most potent, and that humanity's redemption is necessarily a work of love. Christ Jesus could say, "I have overcome the world," because he could say, "As the Father hath loved me, so have I loved you."

Not many may hope to become known to history, but all may certainly make history, if they will, by living that fragrant life whose gentle pervasiveness finds its way e'en through walls of prejudice and purposeful reserve, and whose every advance means betterment for mankind. To create and maintain a sweet and kindly atmosphere about us, whatever our place or lot,—an atmosphere that is filled with the aroma of an all-embracing affection,—this cannot fail to beget in the hearts of men a love for the good and the true, and when the crucial and decisive hour shall come, as come it must in every life, the choice of the uphill path will be found to be the direct fruitage of the simple and true living which impressed and won in days perchance long gone by.

In Christian Science the thought of man is indissolubly wedded to the thought of reflection, the manifestation in manifold detail of the Life that is Love, and one is led to regard the true individual consciousness as but a capillary in which the steady beat of an infinite heart is made known. This concept fully explains the irresistible charm and redemptive power of a life which is a continuous expression of the impulses of the divine nature. Such a life becomes the vicarious link between the infinite beauty and good, and heart-sore humanity. It is one of the contributions which we may make in furtherance of the Master's supreme enterprise, the salvation of men. Says our Leader, "Let unselfishness, goodness, mercy, justice, health, holiness, love —the kingdom of heaven—reign within us, and sin, disease, and death will diminish until they finally disappear" (Science and Health, p. 248). This points the way to Christlike service, for the least no less than for the greatest, and it is the inspiration of this thought in Christian Science which has opened a new book of life for unnumbered thousands in all the world. The dewdrops have never been catalogued, yet nothing more perfectly reveals and transmits the purity and beauty of "stainless light." And thus may a loving life, be it ever so humble, bring the revelations of God to receptive hearts.

There is no element of uncertainty respecting the perfume which the lilacs distil. Their product is unalloyed and unvarying; they are genuine and they are true, and such must we be if we would witness for divine Principle and win the prize. When the manifestations of good shall have become the reliable phenomena of our daily life, then that life will yield the perfume of a true faith and love, and become a joy and a holy stimulus to all about us.

Christian Scientists have been blessed with an ideal and an opportunity that are beyond words. Moreover, they are to-day being given an example of patient wisdom, self-command, and love which must surely inspire a high and holy endeavor upon the part of every worthy representative of this Cause to live a life so wholesome, so helpful, and so sweet that the world shall note its fellowship with the flowers.

John B. Willis.

LETTERS TO OUR LEADER.

Center Ossipee, N. H., May 23, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

My Dear Cousin:—I have to recall myself to you, perhaps, as a daughter of Erastus Baker, who often visited your father, grand-uncle Mark Baker, after he left Concord to live in Conway; but I feel I won't intrude in writing you a word of sympathy in this disagreeable suit, which must be very annoying to you. Of course I understand that you are peculiarly sustained by a great faith and calm uplift, but a trial it is even then to have one's privacy intruded upon, and it seems to me that it is in a measure an outrage. I hope that you will not be disturbed by it and that the firm arm that is about us all will give you the strength which has heretofore sustained and guided you in giving a light in many lives and a spiritual consolation to a multitude who already call you blessed. With a firm belief that the Spirit will now, as always, conquer, and many messages of love, Your cousin,

Eliza Baker Manson.

Johannesburg, South Africa, April 23, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of First Church of Christ, Scientist, Johannesburg, Transvaal Colony, assembled in annual meeting, greet you with all joy and peace. We desire to assure you of our love and of our loyalty to your leadership. We realize that you have given us the true and correct conception of God and of man's being. Your teaching has already established joy, peace, and harmony in many a South African home. We rejoice in all this, and the knowledge of it fills our lives with an endless song of thanksgiving to the God of our salvation.

We are, beloved Leader, yours in truth and love,

J. L. van der Merwe, John L. Kuhlmann,
Mrs. C. C. Bredell, C. Bredell,
C. L. Ockenden, A. Langebrink,
M. Talbot-Bowe, J. H. Rainier, *Secretary.*
Board of Directors, for the members of the Church.

Berlin, W., Germany, May 6, 1907.

Revered and Most Beloved Leader:—We, the members of First Church of Christ, Scientist, Berlin, Germany, assembled in our tri-annual church meeting, desire to express our love and loyalty to you, as the Leader of Christian Science. We are deeply grateful to you for your life, your teachings, and your example, showing us clearly the way of salvation and delivering those who follow faithfully from sin, disease, and death. We wish to express our entire confidence in your wisdom and your ability to guide the Cause of Christian Science, and we promise to follow obediently as you shall direct.

We know that it will gladden your heart to hear of the

Digitized by Google

love which the German people manifest for you, for your faithful, untiring work, and how willingly they follow your leadership. The attendance at our German meetings is between four and five hundred, and of these a large number are now studying your priceless text-book, with the aid of a dictionary. The thought of differing languages is fast disappearing, and universal brotherhood, regardless of nationality, is being manifested. The loving wisdom you manifest was again expressed when you directed that *Der Herold der Christian Science* should be published. Many have been healed and otherwise benefited by the truth it contains, and have been led to study Science and Health.

We thank God that in this hour of trial you are safe "in the secret place of the most High," far beyond the attacks of the persecutor, and we all unite in the prayer that you may "dwell in the consciousness of Love, forever."

Signed for First Church of Christ, Scientist,

GEORGE WILBER REED. EMMA J. LEPLOW,
ANNE LE BARON DRUMM, *Committee.*

Woodview, Manningham, Yorks, England,
April 16, 1907.

Mrs. Mary Baker G. Eddy.

Revered Leader:—We, the twenty-seven charter members of First Church of Christ, Scientist, Bradford, Yorkshire, England, desire as our first act to express our love and loyalty to you. We hope to show our gratitude for the many blessings that have come to us through the study and practice of our text-book, "Science and Health with Key to the Scriptures," in good works rather than in good words. Four and a half years ago the Christian Science text-book was practically unknown in this district. Already many have felt the power of the Word. Lives have become more pure, sight has been restored and glasses discarded, chronic rheumatism, locomotor ataxia, serious heart trouble, lupus, eczema, bronchitis, influenza, pleurisy, pneumonia, varicose veins, constipation, indigestion, sick-headaches, biliousness, fear, and fatigue, have all disappeared into their native nothingness, as mists before the rising sun; thus proving that the omnipotence and omnipresence of divine Love break the despotic fetters of sense. May our lives be consecrated to God and to humanity and so attest our sincerity,—vessels "sanctified, and meet for the master's use."

May this branch of the Christian Science Church be indeed "the structure of Truth and Love" (Science and Health, p. 583), proving by our unity, love, complete and quick healing, that Christ has indeed risen.

Yours faithfully,
LUCINDA SLATER, *First Reader.*

Yonkers, N. Y., May 23, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Revered and Beloved Leader:—To me it is a great, nay, sacred privilege to be allowed to write these few lines, to tell you how the Reading Room work of this loyal little church, First Church of Christ, Scientist, of Yonkers, New York, is progressing. Since Jan. 1, 1906, the amount of literature given away is as follows: *Sentinels,* 517; supplements, 273; reprints, 410; *Journals,* 12; pamphlets, 10. Six copies of Science and Health have been placed by the church in the free library here—all of which are in great demand; two more copies have been placed in the two other libraries in this town.

At a meeting of the Board of Trustees, held on May 13, it was decided to open the Reading Room on Friday evenings, to give those who are at business all day an opportunity of investigating Christian Science. The Room was opened on the evening of Friday, May 17. One of the strangers present spoke to me of the wonderful chapter on Genesis in Science and Health and what it meant to him. That chapter means much to us all, it is such a marvelous account of the spiritual creation, and it enables us to separate so entirely the material concept of man from God's man. This little church is trying to help you, beloved Leader and Guide, in the great and glorious work you are doing for humanity, by greater humility, greater consecration, and greater activity.

Lovingly we greet you.
AGNES AITCHISON, *Librarian.*

Austin, Minn., May 20, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The Board of Directors of First Church of Christ, Scientist, of Austin, Minn., in meeting assembled, and in behalf of our Church, desire, in deep gratitude to God, to express our sincere love and devotion to you, for what you have done and are doing for mankind, and for the glorious example you have set in teaching us to be not "weary in well doing: for in due season we shall reap, if we faint not." You are standing on the eternal Rock, Christ, and demonstrating to the world the truth of the Scripture, "Fear ye not, stand still, and see the salvation of the Lord, which he will shew to you to day." Words are inadequate to express our appreciation of your consecration of your life to the noble work of God. Your text-book, "Science and Health with Key to the Scriptures," giving the spiritual interpretation of the Bible, does indeed bring to light the inspired Word of Life to this age.

Yours in truth and love,
BOARD OF DIRECTORS.

Los Angeles, Cal., May 20, 1907.

Beloved Teacher:—My heart so overflows with gratitude that I must speak. Through all the seeming turmoil around and about you, my aim has been to rise above all personality and see you only as standing for the light of the world, and in that light there was no darkness at all; and what a power of Love has since been revealed to me, giving me a higher sense of gratitude for the blessings that have been mine. Chief of these is this, that twenty years ago you were my beloved Teacher, and taught me how to know God, how to love, and how to know only good. What this knowledge has done and is doing for me, I can express only by living it. It has met my every need, proving that it is from God, giving me "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." With deepest love to my beloved Teacher, Leader, and Guide, Ever your grateful student,

MARY J. LEWIS.

Altoona, Pa., May 25, 1907.

Dear Leader:—While assembled at our late quarterly meeting, it was decided by the members of First Church of Christ, Scientist, of Altoona, Pa., to send you a letter of gratitude. We thank God that in this age one was so spiritually gifted as to receive, and be able to give to the world, the spiritual interpretation of the Scriptures. We realize daily for you that "the darkest hour precedes the dawn;" and, "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you."

Lovingly yours in Christ, Truth,
ALICE HORTON, *Clerk.*
By order of the Church.

AMONG THE CHURCHES.

HASTINGS, NEB.

Negotiations have been completed by the Christian Scientists of this city for the purchase of the two lots at the northeast corner of Fifth Street and Lincoln Avenue. The price agreed upon is $2,800. The Scientists will ultimately erect a church building on the site.

Hastings Tribune.

SAN RAFAEL, CAL.

Quite a number of the followers of Mrs. Eddy have banded themselves together in a Christian Science Association. Mr. Olcott Haskell, a University graduate and an instructor in the Hitchcock Military Academy, has the credit of originating the movement. The present membership is composed of several of the brightest and most intellectual and conscientious people in San Rafael. The Christian Science church in San Francisco has a membership of eight hundred people.—*Marin Journal.*

POMONA, CAL.

The First Church of Christ, Scientist, of Pomona, was dedicated on Sunday [April 7] in celebration of the payment of the last indebtedness on the building. There were a number of Christian Scientists from Los Angeles, San Diego, Pasadena, Riverside, San Bernardino, and Hollywood present. The first Christian Science service was held in Pomona in 1894 at the home of one of its followers. In 1903 First Church of Christ, Scientist, Pomona, was organized with twenty-one charter members; the membership now numbers thirty-four. The lot of land on which this building stands was given to the church in 1903, and in 1905 this chapel was completed, the opening services being held on June 4 of that year. In its dedication those who have labored so faithfully may well rejoice in this manifestation of Love. The part which the children have taken in this work is encouraging, the Reader's desk and chair being their gifts. It has been demonstrated that strength is not in numbers alone, and that a cause is strong only in proportion as it is governed by good.—*The Pomona Progress.*

HONGKONG, CHINA.

The members of the Christian Science Society of Hongkong gathered in the rooms of the Society on Saturday morning [April 13] to present an address to Mr. and Mrs. S. T. Dunn, who have been First and Second Readers, and there was a large and representative attendance of members and friends. Mr. Bovet expressed the gratitude of the Society for their loving guidance and help. The members and friends were desirous of presenting Mrs. Dunn with a mark of their appreciation, but owing to the official position held by Mr. Dunn it had been agreed that no present of any kind should be made. The money collected was therefore added to the funds of the Society and a little address, representing the feelings of the many subscribers under the original plan, was presented them. Mr. Dunn replied on behalf of Mrs. Dunn and himself. He said in part that during all the years his wife and he had worked among them, their labor had indeed been one of love, and they had only passed on that which had been so freely given to them by Christian Scientists at home in England, who were in turn originally indebted to their revered Leader, Mrs. Eddy.—*So. China Morning Post.*

CHICAGO, ILL.

Forced by the overcrowding of the edifice and by increasing applications for membership, members of the congregation of First Church of Christ, Scientist, residing within a certain district, formally decided last night [May 23] to organize Eighth Church. More than two hundred members of First Church, established in 1897 at 4017 Drexel Boulevard, will become members of the new church, which probably will be located temporarily in the Plymouth Congregational Church, 2553 Michigan Avenue. The location will be decided upon in a few days and later a permanent site will be obtained as near Twenty-fifth Street and Michigan Avenue as possible. The boundaries of the new congregation will be the district north of Thirty-fifth Street to the river, with the lake and the South Branch as the eastern and western boundaries, and all the territory west of Grand Boulevard between Thirty-fifth and Fifty-first Streets.

The following were elected officers of the new church: First Reader, Downer M'Cord; Second Reader, Mrs. Mary A. Barrow; trustees, John E. Fellers, George H. Fox, Thomas V. Wooten, James S. Jacoby, and Harlan D. Cook; directors, Mrs. Magdalena W. Cook, Mrs. Mary J. Hoxie, Mrs. Grace T. Davidson, Mrs. Mary Fuller White, and Mrs. John E. Fellers. Adlai T. Ewing was the temporary presiding officer. The resolution for the meeting to decide on organizing Eighth Church was read, together with the names of the members of First Church who signed the proposed charter. John E. Fellers was elected permanent chairman. It was then decided unanimously in favor of the new church. By-laws were adopted and thirty days allowed for other members to sign the charter roll. Eighth Church will be the sixth to be established from the overflow congregations of First Church. Some of the wealthiest members of First Church will go to the new church, but the former will not lack a complete congregation.—*Record-Herald.*

Plymouth Church is one of the wealthiest in Chicago, numbering many millionaires among its pewholders. Those who worship there are largely drawn from the exclusive circles of South Side society. Dr. Joseph Anthony Milburn, the present pastor, succeeded Dr. Frank W. Gunsaulus, who severed his connection with the church to accept a position with Armour Institute. Dr. Milburn preached the sermon at the funeral of President McKinley. He is regarded as one of the ablest and most eloquent clergymen in the West. "I see no reason why Plymouth Church should not be rented to a Christian Scientist congregation," said Dr. Milburn. "Christian Scientists are recognized as a regular Christian Church. They have their own point of view, it is true, but they are entitled to it. They worship God in their own way. If we rented our church to an Episcopal or Presbyterian congregation it would occasion no comment. I don't see why it should cause surprise that we are thinking of renting to a Christian Scientist congregation." "No proposition has been made as yet," said J. J. Abbott, president of the Board of Trustees of Plymouth Church. "If a proposition is made it will be considered. I see no objections to renting temporarily to a Christian Scientist congregation."

The action of a fool cannot serve as a precedent.
The beginning of anger is madness, the end penitence.
Arrogance is a kingdom without a crown.
First correct thyself, then correct others.

THE TALMUD.

TESTIMONIES OF HEALING.

I am a graduate from the Hahnemann Medical College of Chicago. After several years of practice my health failed, and this finally ended in nervous prostration. My usual health could not be regained. Complicated conditions presented themselves which terminated in what were pronounced incurable diseases. I received no encouragement from specialists whom I consulted; change of climate was recommended and cessation from mental work. With this haunting spectacle before me, all ambition had to go; I gave up my home, my practice, and sought change of climate and work. Only a few of my intimate friends knew what a sufferer I was, for I was never free from pain. I had heart disease from which I never expected to be cured; and as the result of a fall an abnormal growth of the spine, which the surgeon advised me to have removed, at the same time expressing fear of serious results. For two years I was on a strict diet on account of intestinal trouble, and had a constant pain, which a specialist told me that nothing but the knife could help to diagnose correctly. For as much as ten years I was subject to the most excruciating pain, and suffered from sleeplesness. There were also minor troubles, in fact every organ of my body seemed affected.

After four years of travel, and change, with scarcely any benefit, a sorrow came to me which threw me into the depths of despondency. While in a desperate state of mental and physical suffering, the thought came to me very forcibly to try Christian Science. I might say here, that when I first broke down in health I tried to become interested in it, but could not—it did not appeal to me at all. From girlhood my life had been spent with drugs and diseases, the drugs seeming indispensable and the diseases so very real to my mortal sense that to interest myself in the Science seemed absurd indeed; but at this particular time which I have mentioned, the thought would not leave me that now was my time to take up Christian Science.

The first book I succeeded in getting from the public library was "Miscellaneous Writings." I cannot tell how eagerly I searched those pages so full of love and hope—how I longed and hungered for rest and peace. I became so absorbed in its contents that I lost all sense of time, of sorrow, of pain. The Comforter came with the joy, peace, happiness, and contentment that do indeed surpass all human understanding. God was in deed and in fact the "great Physician." The illumination which came to my consciousness at this great transformation—the dissolving of diseases into their native nothingness—was proof that Mrs. Eddy had discovered the everlasting Truth. In my medical practice and from clinical observation, in my inability to restore to health the patients who had seemingly fatal diseases, and in my complete failure to cure myself, even after consulting with the best physicians, I was awakened more and more to the full realization of the limitation, yes, the utter failure of medicine to offer a real curative, and could I do otherwise than appreciate the healing power of Christian Science? And who in Science has not learned that the physical healing is but a small part when compared with the spiritual understanding and regeneration which it brings. As I began the practice of Christian Science regardless of my own beautiful physical healing, my great difficulty was to unsee mentally the diseases of patients; nevertheless, I placed the "high goal" (Science and Health, p. 426) before me and struggled on, and I have been wonderfully blessed by proofs of God's presence and guidance in my work.

Words fail utterly to express my boundless gratitude and love to God for all these blessings; to our Saviour for his revelation of this Science; to Mrs. Eddy, its Discoverer and Founder in this age. I shall humbly strive to be obedient to the teachings of Truth, and to seek constantly for that Mind which was in Christ Jesus to be established in me.—PRISCILLA G. MYERS, M. D., Oakland, Cal.

After attending a most impressive service in a Christian Science church this beautiful Thanksgiving day, an earnest desire to be saved from the sin of ingratitude impels me to write my testimony. On the first day of January, 1904, a kind friend sent us a copy of "Science and Health with Key to the Scriptures." As a mark of respect for and courtesy to the donor, we felt that we ought to read it; so my wife and I began reading it together, but for some time we felt that it was most contradictory, incongruous, and incoherent. It seemed impossible, but we were interested and kept on reading, and the more we read of it the more we learned of the beauty and goodness of this wonderful book, and have now read it through many times. We soon subscribed for the *Sentinel* and *Journal* and commenced to attend the meetings, from all of which we have received immeasurable benefits.

In June, 1904, I was taken ill with a lingering fever, and having a little knowledge of *materia medica* I made use of such remedies as are supposed to be efficacious in these cases, but received no benefit. Inasmuch as I had become interested in Christian Science, I determined to call on a practitioner; which I did, and after a few weeks' treatment was completely healed. I immediately threw away all material remedies I had, and from that time to this I have enjoyed perfect health and have relied absolutely and wholly upon the great Physician, who is always at hand and always ready to help. Through the power of divine Love as unfolded to us by Mrs. Eddy, my wife has been healed of a bowel trouble with which she had been afflicted for more than twenty years. She has also been healed of failing sight. For some years she had worn glasses when reading or sewing, but about a year ago she laid them aside, realizing that in God is her sight and that glasses are not needed. In both cases the healing was slow, because of the great fear which seemed to possess her, but when fear was completely met and overcome by both of us, the healing was steady and continuous.

Prior to coming into Christian Science I was greatly predisposed to throat trouble, so that on taking cold I would lose my voice in a day or two. I was in great fear of these colds, and when attacked I would quickly make my way to a drug store for a material remedy, but since July, 1904, I have had no fear of colds. If I feel this trouble coming on, I do not guess, or simply believe, but know the truth and its power to make me free, and that matter cannot take cold except as I give it power through a false belief; and the result is that in from one to three days I am free, without having experienced any disagreeable consequences. One day last August a gust of wind blew a cloud of dust about my head and a cinder lodged in my left eye. The irritation was so violent that I felt I could not go on, so I returned to my office and stood before a mirror for several minutes, trying to remove the cinder with a handkerchief, but without success; I tried to wash the cinder out, but could not do so. Then I remembered that I had failed to go to the only real help in all the universe. I immediately declared the ever-presence and power of divine Love, and relief was instantaneous and permanent.

My greatest enemy has been a sense of lack. Some years ago I was so unfortunate as to meet with financial loss, and at times it has seemed to me that there was an insurmountable stone wall between me and recovery; but thanks be to God, I am now slowly but surely making the demonstration, and I know that ere long this foe will be completely destroyed. I cannot write of all the blessings I have received, but my heart is so filled with gratitude that I must mention some of them. While the physical

Digitized by Google

benefits have been many, and I am reverently thankful for every one of them, the spiritual activity which a study of this wonderful Science has awakened, is to me more than all else. The meekness, patience, tolerance, and forbearance it has created is to me most sublime, and I am profoundly grateful to God, and to Mrs. Eddy. I want to say to our dear readers that I am accustomed to hearing, weighing, and sifting evidence, and judging its value, and that Christian Science, judged by the proof adduced and the results attained, has not been found wanting. One of the anomalies of our experience is the almost "infinite capacity of the human mind to refuse to receive instruction." It is said that no one comes into Christian Science until he is prepared or ready for it. I presume it is better so, but it seems a great pity that people should come into it only through suffering, misery, and sorrow. The patience sometimes exhibited by Scientists in trying to teach others and in answering criticism is marvelous. I am very grateful to all the Scientists who have so patiently answered my numerous questions and tried to help me along. God bless each one of them.—S. E. HOSTETTER, Chicago, Ill.

It is now nearly eight years since I became interested in Christian Science, at which time I was healed of an organic trouble that had baffled the skill of twelve of the best doctors I could hear of in my own city, in Albany, and in New York city, covering a period of more than six years. At the time I accepted Christian Science I was healed of severe bowel troubles, from which I had suffered more or less ever since I was a child. Since then I have had some ailments to meet, but have always depended on Christian Science and have used no other remedy. The physical healing, though it seems wonderful to me, sinks into insignificance when compared with the spiritual blessings which have come to me through the study of our text-book, Science and Health, by Mrs. Eddy. This book is certainly the "Key to the Scriptures," for it has opened up the Bible to me in a truer and more practical sense than ever before, although I had been interested in religious work for more than twenty-five years.

Words are inadequate to express my thankfulness for this truth, and for the peace and happiness which it has brought into my life. My greatest desire is to consecrate my life more and more to God and to His Cause, that I may prove by right living that I am trying to be a Christian Scientist.

ELLSWORTH O. HILL, Middletown, N. Y.

It is over ten years since I first heard of Christian Science. A friend told me of it, and said she would have the book if she had to save five cents at a time to get it, and that was the way I got it. She advised me not to tell my husband about it, so it went on for one month; then I made the remark to him that I was going to try Christian Science; that if it could heal others it could heal me. The next morning when he went to his place of business, a man walked in with a copy of Science and Health in his hand, and began talking Christian Science to him. My husband told him to go and talk to me about it, which he did, and gave me the address of a practitioner. I wrote her that same day, and took one week's treatment. My husband then said it was a money-making scheme, but he soon saw the change in me, for when I went out people would tell me how well I looked. I had been in a weak state for years, although I had doctored with the home physician and had all the faith possible in him. This doctor now admits that Christian Science did something for me. I had also gone East for one winter, but came back no better.

I took Christian Science treatment in September, 1895; in November my maid left, and I have been alone since then. In December I had another week's treatment, and have used no medicine since. I have had many ailments vanish before the truth, such as an abnormal growth, catarrhal and rheumatic trouble, etc., but the greatest blessing of all is the spiritual uplifting received.

MRS. J. G. NICHOL, Church's Ferry, N. D.

It is about fourteen months ago that I first heard of Christian Science and began to take an interest in it. I had reached a state of dissatisfaction with almost everything pertaining to religion, and for a few weeks had ceased to attend any place of worship. I was anxious to live as a Christian should, but when in a place where Jesus' teachings should show some tangible results, and I saw so much that was opposed to his teaching, how could it satisfy? It did not. For some four months previous to this time my mother and sisters had been attending Christian Science services at a private house, and had told me a good deal of what they heard, and soon after the meetings were held in a room hired for that purpose I went to my first service. There I met a servant of God who broke the bread, and I immediately saw that if the teaching was such as could be followed by every one, it was indeed the one thing needful. I at once began to study for myself, and in doing so a stomach trouble of over two years' standing lost its seeming power and vanished into nothingness.

I shall never forget one demonstration which occurred only a month or two after I began to study. I was in great pain, and could not control the groans which this brought forth. Knowing little of the means whereby Science brought relief, I concentrated my thought on the "scientific statement of being" (Science and Health, p. 468); also the passage, "Nothing is real and eternal,—nothing is Spirit,—but God and His idea. Evil has no reality. It is neither person, place, nor thing, but is simply a belief, an illusion of material sense" (*ibid.*, p. 71), and the spiritual sense of the Lord's Prayer (*ibid.*, p. 16), which I had committed to memory. In about an hour I suddenly realized that I was well, and over me came a sense of peace and exhilaration that words cannot express. The truth had made me free.

I have had more real happiness, peace, love, and joy during my short study of Christian Science than ever before and have many blessings to be thankful for. There is yet much error to be overcome, but with all my heart I thank Mrs. Eddy for her unselfish labor and love for every one; that through her perception of the truth, and her teaching, we are able more clearly to see and know "what is that good, and acceptable, and perfect, will of God."—S. M. SYDENHAM, Scarborough, York, England.

I feel very thankful for the many blessings that have come to me through the understanding of Truth in Christian Science. It has been an ever-present help in time of sickness, sorrow, and seeming inharmony. My eyes were healed of a serious trouble, and it was an instantaneous healing; a badly injured ankle was restored in a short time; throat trouble, etc.,—all of these have been met by realizing the truth that heals. I am thankful to God for all these blessings which have come to me through the understanding of divine Love; and more grateful than words can express, to our dear Leader, Mrs. Eddy, for showing me the better way. I am thankful for the helpful Christian Science periodicals. My earnest desire is that I may follow steadfastly the clear light of Truth and be a help to others.

MRS. M. WHITE, Highland Park, Ill.

For seven or eight years I have been receiving benefits from Christian Science, and feel that I should no longer

Digitized by Google

withhold my testimony from among those of the rapidly increasing multitude who with one accord are sending up a song of thanksgiving to God, for His revelation of Truth to this age through our beloved Leader. When I first came to Christian Science I was in a hopeless condition of grief, and burdened with an awful sense of responsibility and care. My slight understanding has come gradually, but I am healed of that grief, and am learning that the only rest for the heavy laden is found in Christ, Truth.

A retrospective view of these seven years, and the many difficulties overcome during that time by a faint perception of the omnipotence of God, good, encourages me to press on. At each stage of this "passage from sense to Soul" (Science and Health, p. 566) we find awaiting us loving admonition and encouragement from our dear Leader, who has advanced to divine heights. She is now proving before the world what it means to be "clad in the panoply of Love" (Science and Health, p. 571).

LAURA TURNBULL, Baltimore, Md.

It is with a feeling of inestimable gratitude to our dear Leader that I am happy to acknowledge my healing of asthmatic trouble through Christian Science. This disease came to me when a child, and after suffering for seven or eight years with but little relief from many excellent physicians, I seemed suddenly to outgrow it. During four years at college I was not troubled by it, and then it came back with renewed force, until frequent attacks of the usual distressing conditions brought me to a point where decisive action in one of two directions was necessary: I must go back to the unpleasant, ineffectual remedies offered by *materia medica* to assuage this so-called incurable disease, or I must try Christian Science, an alternative which had occurred to me somewhat dimly before. I at once took three weeks' treatment, with almost instantaneous relief from a severe attack within that period. This was over two years ago, and for nearly a year I have been free from my former grim taskmaster. Once or twice during the first year there were recurring symptoms to be conquered, but now I can go to any of the places where formerly the disease seemed to be lurking for me, without the slightest fear; and having no fear, I have no suffering. I shall never forget the elation with which I found myself running up the stairs in a house where previously I had gasped for each breath as I crept around on the lower floor, not daring to go up stairs. In traveling, with Science and Health as my "Baedeker," Christian Science has been an ever-present help. In the far West this summer I have found services being held in most unexpected and out-of-the-way places; even on Catalina Island, far out in the Pacific ocean, a little tent was used for Sunday and Wednesday meetings.

All honor to this Divine Science that has given us a new understanding of the Bible, and shown us that it should be used on seven days of the week instead of one. Christian Science has taught us to forsake our old gods and to know the one God, good, who forgives all our iniquities and heals all our diseases.

FLORENCE H. SNOW, Brookline, Mass.

I would be very ungrateful indeed if I did not acknowledge the benefit I have received from Christian Science. About three years ago my attention was called to it by the healing of a relative. From the first reading of Science and Health I felt that it contained the truth, and dating from that time we had demonstrations in our home, one being the healing of a case of stomach trouble of fifteen years' standing. A little less than two years ago our little boy, then three years of age, was healed of a growth in the bowels. This trouble had caused him to suffer excruciatingly every few weeks from his birth. In a few weeks Christian Science healed him perfectly, and he has been a strong, healthy boy ever since. Within the last year a great sorrow came into our home,—so great a grief that under the old thought we would have been in despair; but through it all Christian Science has led, and will continue to lead us until the night is gone. I am very thankful to God, and to Mrs. Eddy, for the truth which has helped us through many dark days.

MRS. LIZZIE K. NOFSINGER, Kansas City, Mo.

It is now over three years since I first became interested in Christian Science, and in all that time I have depended entirely on it for the overcoming of physical discord. I am very grateful to God, and to our dear Leader, for the spiritual uplift, ever knowing that Truth will and does meet all demands in the care of a little family. The first proof that I had in the way of physical healing, was the overcoming of severe bowel and stomach trouble. Since that time all the members of my family have been healed of various diseases, and benefited by the demonstration of love and harmony in the daily life. I am indeed grateful for Christian Science, and it is my desire so to live that I may be a worthy follower in the Master's footsteps. I am sincerely thankful to Mrs. Eddy for making the truth clear to us, thus enabling us to do the "works" as we are commanded to do.

MRS. GERTRUDE E. BISHOP, New Haven, Conn.

Prompted by recent experiences I submit the following partial statement of what the life and work of our Leader means to me. For seventeen years I did not attend a church service or open a Bible. My excuse was that if the Bible is intelligible, men whose business it is to know should not still be in disagreement as to its interpretation. Three years ago Christian Science was brought to my notice by a friend, who—after my pointed remarks, which only served to bring out a greater degree of patience on his part—showed me that God being Spirit, His creation cannot be material, for like produces like. I agreed that this must be true, though I kept him half the night answering questions. He said that "Science and Health with Key to the Scriptures" by Mrs. Eddy was just as logical as the statement I had accepted, and when a few days later a copy was loaned me, I began at once to study it. After four months' thoughtful reading I laid aside tobacco with a sense of relief, as the desire for it had left me some weeks previously; severe headaches no longer followed the eating of certain foods; a violent temper was much improved upon, and profanity had ceased. I had not attempted to give up or overcome these habits, which were of long standing, but had gained an understanding of God and man which does not include discordant conditions, and they had disappeared. The Bible has become my daily study, because in the light of Christian Science it reveals the divine Principle and rule whereby we may prove our present unity with God. I gratefully acknowledge my indebtedness to our Leader for Christian Science, and the new life it has opened up to me.

J. D. BLAISDELL, Boston, Mass.

I feel more grateful every day for what I have learned in Christian Science and for what it has done for me. About five years ago I commenced to read Science and Health, and I had not read very long before I knew I was returning to the Father's house and that the Father was not very far off, and waiting with open arms ready to receive me. The words of our Master, "Come unto me,

Digitized by Google

all ye that labor and are heavy laden, and I will give you rest," never before had seemed so precious to me, for I was surely weary and heavy laden, and needed just what Christian Science had to give me. Previous to this I had lost interest in religion, because I did not understand God. I am so thankful that I can now worship Him understandingly. I have been helped physically many times, and it is my great desire to show my appreciation for all the good I have received by being obedient and by helping others.

MRS. NELLIE MOTT, Troy, N. Y.

[Translated from the French.]

It will soon be one year since I have had the happiness to know Christian Science, and I desire to express my gratitude for all the good it has brought me. I am thankful to those who have helped me and encouraged me to learn the English language. I understand so well the importance and need of reading Science and Health, and how much work a practitioner has to do for those who can neither read nor understand English. I am happy that I can already understand much of Science and Health; it is a precious aid for each day. I realize each day, more and more, that there is no condition of the mortal body necessary to happiness, because God alone is man's Life. My health is now perfect and during the last four months I have been able to work almost every night until midnight without being tired. All my fear has gone, and I realize that Spirit governs every condition of man, and that as the child of God I have the right to enjoy all good. I am glad to have passed through the desert of suffering from sickness, and so come to Truth, to Life, and I love God more than ever. Nothing interests me so much as Christian Science; the Bible and Mrs. Eddy's Science and Health are so precious to me that I would like to give them my entire time. I am ever thankful to God for His goodness, and my only wish is to progress in spiritual understanding through faithfulness in the little things of each day, and to be conscious only of the things of God.

ELISA CHARBONNIER, Geneva, Switzerland.

[Translated from the French.]

Christian Science, of which I first heard in July, 1905, has entirely changed my life. I had been a believer, certainly, but I knew there was something yet needful. I suffered because of that sense of lack, and prayed God to change my heart and to give me wisdom. The answer was long in coming,—so long,—but what an answer came to me! I now know that God is not a God to fear but to love. He is Love, and to Him belong kingdom, power, and glory! His power is for good only to His children. His hand is always open to save, and we have but to ask Him in the right way. He can and will help us in small things as well as great. Being Love, He sends no sickness, no afflictions, but delivers us from the evil that our sins have brought. He wishes us to be happy here in this life, on this earth. In knowing God we are taken out of the bondage of material law, because of which mortals have suffered so many centuries. All this has been made plain to me through Christian Science, and this understanding has changed my life. Christian Science has given me a deeper knowledge of the Bible, better health, quietness, tenderness; made me more watchful toward my neighbor. It has taken away all fear, given me "eyes that see" and "ears that hear"—teaching me to see in every one and everywhere the reflection of divine Love. The commandment is to be holy, and we can learn to be this through the study of Christian Science.

God bless Mrs. Eddy, who has revealed to us these wonderful and "deep things of God;" and thanks be to God for His unspeakable gift here and now.

MADAME J. BERNOUD, Geneva, Switzerland.

I wish to add a note to the great song of praise which is being raised for Christian Science and for the overcoming of sin, sickness, and sorrow. I am especially grateful for the victory over fear and worry, which had grown to be habitual, causing distress to myself and those around me. Many physical ills have been overcome, and several times a sense of contagion has been destroyed; but it is for the awakening to the spiritual concept of things that I am most grateful to God, to Mrs. Eddy, and all who have helped me to gain something of this truth as it is revealed in Christian Science.

MAE K. MARSH, Danville, Ill.

I have been studying Christian Science only a short time, but by diligence and the help of a practitioner for a period of two months, diseases of eighteen years' standing have been completely cured. For one of these I had undergone three operations and been made much worse each time. To say that I am grateful for this great truth revealed by Mrs. Eddy would but feebly express my feelings. I have thought I might wait longer to give my testimony, but it seems that we should be willing at all times to tell what Truth has done for us. I hope and trust many others may be led into this great truth, where all suffering is destroyed and peace of mind gained.—LOUIE MCCULLOCH, Hoquiam, Wash.

A year ago last May I was healed by reading "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy. For many years I had suffered with a complication of diseases. Two doctors said that my family would find me dead some day, and that the only help for me was an operation, to which I would not consent. I was then living in Minnesota, and a dear sister Scientist came to me many times and told me what Christian Science could do for me, but I did not understand it. At last, however, I got where something had to be done, and Christian Science came to me in such a way that I had to understand it. I went to bed on the night of April 29, 1905, and instead of waking up in distress as I usually did, I awoke many times that night only to find myself peaceful. The next day I felt better, and the night following I had the same experience. I then took my material remedies (which were many) out of my room, and I have never used them since. I went to the Scientist and told her that I wanted to try Christian Science. She told me what to do and loaned me a copy of Science and Health. I studied it, knowing it would heal me, and in less than a week I was well. I had a large lump in my side, but that disappeared and I could do my housework with pleasure. I had thought I was living as God wanted me to, and when I suffered I would say, "Not my will, but thine, be done;" but I have learned that God never made sin or suffering, and to-day I thank God that He has shown His children, through Mrs. Eddy, how they should live. I am now living in Saskatchewan, Canada, fifty miles from a town and three and a half miles from a neighbor, but I have had many demonstrations of harmony through Christian Science, and earnestly desire to be worthy of being called a Christian Scientist.

MRS. MARY OSTIC, Yellow Grass, Saskatchewan, Can.

FROM OUR EXCHANGES.

[Samuel Z. Batten in *The Standard.*]

Turning to the Gospels we find that Jesus of Nazareth in the beginning accepted the Messianic ideals of the law and the prophets, and began announcing the presence of the kingdom. The idea of the kingdom was the center and circumference of all his teaching and preaching. The nature of the kingdom, the conditions of entrance, the laws for its members, make up the substance of his teaching. With hardly an exception his parables set forth some aspect of the kingdom, its nature, its conditions of growth, the attitude of men toward it, its requirements, its rewards, and its retributions. He assumes the future, but the kingdom of God as a good to be realized here and now in this world fills all the foreground of his teaching and interest. The prayer which the Master gives as the model for our petitions indicates plainly the nature and location of the kingdom.

[James Buckham in *The Christian Work and Evangelist.*]

Character has always been a force in human life; but now more than ever, as men are waking to the vital relationship between the good and the essential, is its dynamic a factor to be reckoned with. The man of character will hereafter be a greater force than ever in civic, professional, and industrial life. Character will have more weight in determining fitness for service and for responsibility than it has had—in this country, at least—for many generations. The possessor of character will find himself controlling an increasingly valuable asset. The young man going into business or professional life will be subjected as never before to the test of moral assessment. . . . Signs are multiplying of the new moral order in society. Dishonesty and irresponsibility cannot fail to read the handwriting on the wall.

[*The Universalist Leader.*]

The most significant thing in church life of the present day is the rousing of the interest of men not only in religion, but in the institution of the Church and its various activities. That this interest is real and wide-spread is shown by the source and character of the movement. . . . The fact is, the spirit of the movement is in the air, there is no church to-day in which some form of organization is not appealing to men, and in nearly every one there is the desire and outspoken purpose of "organization for service."

[*The Christian World.*]

The least change of standpoint, the least enlargement of our vision power, and the plain thing before us, whose dimensions we seemed so accurately to have measured, expands to infinity. The evolution in science and the evolution in religion alike mean this—that we are only at the beginning of our knowledge. In one as in the other the unpardonable sin is the assumption of finality. The unlooked-for breaks up our structures one after the other, but always to leave something better than it found.

[*The British Congregationalist.*]

In the long run religion is a matter of experience. Theology is the attempt to put that experience into words. It is possible, therefore, to have a very good religious experience, but a very inadequate theology. One of the most grievous errors of the Church in the past has been the tendency to confuse these two things, and even to-day we are not free from the vice of judging religion by its expression in words rather than by the life and experience which it creates.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents: fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents: twelve copies to one address, sixty cents: twenty-five copies to one address, $1.15: fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.
Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75
Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Prosecution for violating the Sherman Anti-trust Law in restraint of trade by monopolizing the bituminous coal supply will be started immediately by the Department of Justice against the Pennsylvania Railroad, the Baltimore and Ohio, the Chesapeake and Ohio, the Philadelphia and Reading, the Seaboard Air Line, the Atlantic Coast Line, the Norfolk and Western, and the Beech Creek Railway, leased by the New York Central and Hudson River Railroad. This prosecution grows out of the investigation made by the Interstate Commerce Commission, by direction of Congress, of the charge that these roads had entered into an agreement to divide proportionately the shipments of coal over their lines; that the roads owned the mines, and that they had agreed to maintain freight rates on coal.

The decision of the Supreme Court of the United States, holding as excessive and unreasonable the advance of two cents per one hundred pounds on yellow pine shipments from points south of the Ohio River, means that six railway systems will have to refund to the lumber interests of the South between $12,000,000 and $15,000,000, for this maximum rate has been in effect since April 15, 1903.

Decisions by the Circuit Court at Findlay, O., a few days ago, open the Standard Oil Company's pipe line privileges to all independent oil operators. The Circuit Court held that the pipe line company must accept all oil offered it by the independent producers at a fairly remunerative price.

The monthly statement of the Government receipts and expenditures shows that for the month of May, 1907, the total receipts were $57,488,012, and the expenditures $48,912,800. The surplus for the eleven months of the present fiscal year is $65,050,963, as against a surplus one year ago of $6,162,378.

In the ouster suit of the State against the Waters-Pierce Oil Company, a jury at Austin, Tex., rendered a verdict for the State of $1,623,900 penalties, and granted the prayer of the State that the company's permit to do business in Texas be canceled. An appeal will be made.

An interesting memorial of Jefferson Davis, leader of "The Lost Cause" and the first and only President of the Confederate States of America, was unveiled at Richmond, Va., June 3, as the crowning feature of the annual reunion of the Confederate veterans.

The President, in his Indianapolis speech, declares without qualification that under the constitutional power to establish post roads lies the power to supervise and control the railroads.

International.

President Roosevelt has issued a proclamation announcing the conclusion of a commercial arrangement between the United States and Germany. The proclamation simply names the articles upon which the United States grants reduced duties to Germany and the undertaking of the German Government to make reciprocal concessions. Since the conclusion of this agreement the British Government has opened negotiations with the United States with a view to securing the most favored nation treatment for certain articles specified in section three of the Dingley act.

A late phase of the land agitation in the congested districts of Ireland is a crusade against the holders of grazing farms on the eleven months' lease system. The peasants in a number of counties are determined the land shall be redistributed to small holders. Large bands of peasants are destroying gates and fences and clearing the grazing ranches of cattle, which they drive back over miles of country to the farms of the owners. Sympathy is with the peasants.

Secretary of State Root has informed the Government of France that he is prepared to extend to the French Chamber of Commerce the same privileges relative to the certification of invoices in the case of goods exported to America as are accorded to the German Chamber of Commerce under the *modus vivendi* just proclaimed. It is stated that like privileges may be claimed and will be accorded to other nations if the conditions are similar.

The Argentine proposal, which is to be laid before the approaching second Hague Conference, looking to the holding of a third international conference in Buenos Ayres, in 1910, will, it is expected, result in bringing the second conference face to face with the American proposition to give the conference permanency and provide for periodic gatherings.

The final drafts of the Russo-Japanese commercial treaty have been completed and sent to Tokio for approval. The treaty will remain in force for five years.

Industrial and Commercial.

New Yorkers are said to be furnishing the capital for the construction and operation of railroads in Colombia. The chief project, that of the Colombian Pacific Railroad Company, will connect Bogota, the capital of Colombia, with the Pacific coast. It is said that the company has secured from the Colombian Government a subsidy of fifty per cent of the custom house receipts on the coast, which last year amounted to about $400,000 in gold.

The National Cement Company, Inc., with a capitalization of two million dollars, has been incorporated to acquire and control producing cement properties. The corporation will confine its efforts to the Lehigh and Warren county districts of Pennsylvania and New Jersey, where more than fifty per cent of all the cement in the United States is produced.

During the past year 2,642 new companies were added to the records of the International Independent Telephone Association. This makes a total of 10,042 independent companies operating in over ten thousand cities and towns.

The principal railroads of the country are making efforts to promote the manufacture of a more durable quality of steel rails, which will, it is believed, lead to a solution of the problem in the near future.

General.

Prof. T. J. J. See, U.S.N., professor in charge of the Naval Observatory at Mare Island, Cal., as the outcome of his studies shows that earthquakes of the world-shaking class are caused by the explosion of lava from beneath the bed of the sea, by the explosive power of steam which develops beneath the earth's crust by the secular leakage of the ocean bottom. This theory leads as a corollary to the development of a new theory of mountain formation, says the *Scientific American*. It has been customary for about eighty years to explain the mountains by the supposed shrinkage of the earth. Now comes the new theory of the earthquake work, and it proves that mountains, too, are formed by the sea; when lava is expelled from beneath the sea by earthquakes, the crust is broken and pushed up along the seacoast. All the region is injected with porous lava or pumice. It lies under all mountains, and is blown out of those mountains which break into eruption and become volcanoes. Earthquakes and volcanoes are thus directly connected, as the ancients believed; but as a general rule the steam-saturated lava does not escape to the surface, but remains hidden in the earth. It is only occasionally that the steam breaks out and forms volcanoes.

But Professor See has not only explained earthquakes and mountain formations along the seacoast; he has also explained the formation of islands in the sea, the feeble attraction of mountains long noticed in geodesy (they are found to affect the plumb line as if they were hollow), and how the great sea-waves are produced which frequently accompany violent earthquakes, and sometimes do more damage than the earthquakes themselves. By a thorough study of earthquakes the writer has explained half a dozen classes of phenomena by a single cause, which is proved by elaborate and exhaustive argument. If these results are confirmed, there are many who believe that no generalizations since Newton's discovery of gravitation in 1687 will have more far-reaching effects upon all the sciences which deal with the earth.

The assistant in the Bureau of Biological Survey of the United States says: "No statistics of the actual damage annually done by rats have been gathered in the United States, but in Denmark the loss is put at $3,000,000 a year and in France at $40,000,000 'if for each cow, horse, sheep, and hog on the farms of the United States the farmers support one rat on grain, the toll levied on the cereals by these rodents would reach the enormous total of $100,000,000 a year. Granting that half their food is waste material the tax of feeding rats is still an enormous drain on the profits of agriculture. The average fire loss in the United States due to defective insulation, a considerable part of which is caused by rats, is placed at $15,000,000 annually."

The output of the Kimberley diamond mines and the river diggings in the three years, 1903-05, amounted in weight to nearly 7,250,000 carats, or about a ton and a half, and in value to £14,450,000. Since the first diamond was discovered by the banks of the Vaal in 1867, down to the end of 1906, it is estimated that the total weight of diamonds extracted from the Griqualand mines is over thirteen and a half tons, of a market value of fully £95,000,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

COMMUNION IN THE MOTHER CHURCH.

THE regular annual Communion service of The First Church of Christ, Scientist, in Boston, was held Sunday, June 9, in the new auditorium, which was well filled at both the morning and afternoon services, about eighty-five hundred persons being present. That there was not a general attendance of the members from all over the world was due to the observance of the By-law adopted about a year ago, by which the entire membership of the Church is invited to participate in the annual Communion service only once in three years.

After the usual opening exercises Mr. McCrackan read the "religious tenets" of the Church from the Christian Science text-book. Then followed the Lesson-Sermon, which had been specially prepared for the occasion and consisted of selections from the Bible and correlative passages from "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was followed by the Communion, during which the entire audience kneeled in silent prayer. This part of the service ended with the audible repetition of the Lord's Prayer by the audience. Following the Communion doxology Mr. McCrackan presented a communication, which was despatched to Mrs. Eddy. This despatch was adopted by a unanimous vote, and read as follows:—

Boston, Massachusetts, June 9, 1907.

To the Rev. Mary Baker G. Eddy, Pastor Emeritus,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—We, the members of your Church who are assembled in Boston in annual Communion, hail this occasion as a welcome opportunity to send you our loving and loyal greetings. Step by step, you have proved by daily deeds the methods of righteousness, which are recorded upon the tablets of our memories and stored in the quiet chambers of our grateful hearts, making this Communion Sunday a day of thanksgiving and rejoicing. To-day the poor, the weak, the fearful, the oppressed in all lands have the gospel preached unto them, and they are enabled to rejoice with Paul that "the law of the Spirit of life in Christ Jesus" hath made them "free from the law of sin and death."

In view of the unfailing wisdom, the heroic courage and indomitable faith you are displaying under God's guidance, we wish to renew the expression of our absolute confidence in you as the ordained Leader of this Cause. Your humility and meekness and the rule you have laid down as invariable in your book come to mind: "At all times and under all circumstances, overcome evil with good" (Science and Health, p. 571).

No shaft of envy can penetrate the armor forged by the understanding that God is Love and that Love is illimitable, inexhaustible, and accessible to all, at all times, under all circumstances. And this understanding is yours, for your life proves it and you have taught it to us. This same and only God, whose commands you obey, keeps you under the shelter of His wings in His quiet sanctuary and secret place.

Let these simple words convey to you the assurance of our steadfast devotion and love in days of good or of evil report, in the hour of trial or of triumph.

WILLIAM B. JOHNSON, *Clerk.*

The Golden Text, Responsive Reading, and Lesson-Sermon used on this occasion were as follows:—

Subject: THE FIRST AND GREAT COMMANDMENT; AND THE SECOND WHICH IS LIKE UNTO IT.

Golden Text: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself." Matthew, 22 : 37–39.

Responsive Reading:—Deuteronomy, 6 : 1, 4–7; Leviticus, 19 : 1, 2, 9, 10, 13, 15, 16, 18.

1 Now these are the commandments, the statutes, and the judgments, which the Lord your God commanded to teach you, that ye might do them in the land whither ye go to possess it:

4 Hear, O Israel: The Lord our God is one Lord:

5 And thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might.

6 And these words, which I command thee this day, shall be in thine heart:

7 And thou shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house, and when thou walkest by the way, and when thou liest down, and when thou risest up.

1 And the Lord spake unto Moses, saying,

2 Speak unto all the congregation of the children of Israel, and say unto them, Ye shall be holy: for I the Lord your God am holy.

9 And when ye reap the harvest of your land, thou shalt not wholly reap the corners of thy field, neither shalt thou gather the gleanings of thy harvest.

10 And thou shalt not glean thy vineyard, neither shalt thou gather every grape of thy vineyard: thou shalt leave them for the poor and stranger: I am the Lord your God.

13 Thou shalt not defraud thy neighbor, neither rob him: the wages of him that is hired shall not abide with thee all night until the morning.

15 Ye shall do no unrighteousness in judgment: thou shalt not respect the person of the poor, nor honor the person of the mighty: but in righteousness shalt thou judge thy neighbor.

16 Thou shalt not go up and down as a talebearer

among thy people: neither shalt thou stand against the blood of thy neighbor: I am the Lord.

18 Thou shalt not avenge, nor bear any grudge against the children of thy people, but thou shalt love thy neighbor as thyself: I am the Lord.

MEETING OF THE EXECUTIVE MEMBERS.

AT the regular meeting of the Executive Members of The Mother Church, held in the original church edifice, Saturday, June 8, the following despatch to Mrs. Eddy was unanimously approved, and later it was forwarded to her by a special messenger. The despatch was as follows:—

Boston, Massachusetts, June 8, 1907.

The Reverend Mary Baker G. Eddy, Pastor Emeritus,
Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—The Executive Members of your Church, The First Church of Christ, Scientist, in Boston, Mass., in annual meeting assembled, send loving greetings, and congratulate you upon the uninterrupted progress of the Cause for which you have prayed and labored for over forty years.

In these four decades during which you have held the unique position of Discoverer and Founder of Christian Science, the promises of the great Master have been fulfilled through your teachings and your work,—the sick have been healed, the sinful have been redeemed, the sorrowing have been comforted, slaves to every form of sin and disease have been released from bondage, and the downcast and disconsolate have taken new heart.

These are the results of your labors under Christ: these your achievements for humanity; and as you stand at the portal of a new decade of loving ministry we pledge to you our loyal and earnest support. This we do with intimate knowledge of your ability and wisdom as our Leader and Guide, your consecration to God's service, your unfailing charity and compassion, and your indomitable courage in the right.

We send you our hearts' deepest love and gratitude for the great and manifold blessings which have come to us through your inspired interpretation and demonstration of the words and works of Jesus the Christ. Your example in this hour of extreme test of your faith, understanding, long-suffering patience, and Christly love, strengthens our faith in God and brings more forcibly to mind our indebtedness to you, our beloved Teacher. We are inspired with increased energy and courage to follow you as you follow in the footsteps of the Master.

To you the world is greatly indebted for righteousness and peace. To the kingdom of God on earth, to which you are leading your fellow-men, all must come, in the fulness of time and in the knowledge and love of the Father. The day of victory over all sin is fast approaching, and God is guiding you to this divine consummation.

Lovingly yours in Christ,

ARCHIBALD MCLELLAN,
AUGUSTA E. STETSON,
ALBERT METCALF,
Committee.

THE ANNUAL MEETING OF THE MOTHER CHURCH.

THE annual meeting of The First Church of Christ, Scientist, in Boston, Mass., was held in The Mother Church edifice on the afternoon of Tuesday, June 11. The meeting was attended by more than two thousand local members of the Church, and also by a number from distant points, such as San Francisco, Chicago, Kansas City, Hong Kong, China, and Berlin, Germany. Reports received from branch churches throughout the United States, Canada, and Europe showed that our Cause is gaining in membership wherever it is established, and that much healing work is being done.

Early in the meeting a despatch to our Leader, which had been prepared by a committee, was read by Mr. Kimball, and upon the unanimous vote of those present it was forwarded to Mrs. Eddy. It was as follows:—

DESPATCH TO MRS. EDDY.

Boston, June 11, 1907.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—The members of this Church who are assembled at its annual business meeting in conference concerning the welfare and activity of our denominational organization, unite in sending you the renewed assurance of our deep and reverent esteem. During the past year many churches and societies have been formed, new edifices have been completed, and thousands have been added to the Church membership. Our Publishing Society has enlarged its facilities and greatly increased the circulation of its periodicals. The various educational and executive departments of our work have continued in effective operation and afford evidence of increase and progress.

Although moved with modest rejoicing because of the wholesome prosperity of our Cause, we are mindful that not only the Church itself but every individual department thereof has been organized and operated on your initiative and according to your counsel and advice. All that includes its existence as a religious system and denotes the success and harmony of its operations has been incidental to your

Digitized by Google

wise leadership, and to the guidance which throughout every year you have continued to bestow upon its affairs. We who know all this, and appreciate its advantage, have reason to perpetuate our gratitude and thankfulness to you.

The Christian Science Church justifies its existence by its acknowledgment of one supreme individual God, manifested through His divine and irresistible Christ, and by its faith in showing forth the fruits which are demanded by Christ as the essential evidence and consequence of Christian obedience. Its endeavor has justification in its redemptive and healing efficacy, and in the definite good it accomplishes for those who understand and follow in its way.

The unnumbered thousands who have come up from sin and beds of pain, and from the hard attrition of adversity, stand in justification of Christian Science, its purpose and promise, and of your faithful ministry and devotion. For years and years you have labored and won for mankind. You have endured the stress of sacrifice and the futile storm of antagonism. With uncomplaining devotion to the way that has compelled you to pass through fire, with never-ceasing charity, without wrath and without reprisal, you have led a multitude into the way of holiness and health.

For a generation you have borne aloft the message of Christian Science, which came to earth as a dove comes, bearing upon its wings a promise of ineffable hope and peace. During all these years the burden of your appeal has been that men would learn the will of God and find health and blessedness in peace and obedience. After weary waiting the appeal has found its recompense, and the troubled men and women of this generation are giving heed and turning from wretchedness to hope and from hope to deliverance; and when the radiance of joy tells the story of its thanksgiving, it tells of its gratitude to you for the ever-growing value and kindliness of your ministry.

EDWARD A. KIMBALL,
ANNIE M. KNOTT,
LAURA LATHROP,
Committee.

The Clerk then announced that Mr. Eugene H. Greene had been elected President, Stephen A. Chase, Treasurer, and William B. Johnson, Clerk, for the ensuing year. Mr. Willis F. Gross, the retiring President, introduced Mr. Greene in the following words:—

MR. GROSS' REMARKS.

The early disciples of the Master had abundant opportunities to demonstrate the truth of what they had been taught. When, as the result of living what they knew, they were found with "one accord in one place," they received the baptism of the Holy Ghost. There is power for good in unity of thought and action. Of the faithful it was prophesied that one should chase a thousand, and two put ten thousand to flight. True unity is based on divine Principle and works out good to all men. Its realization comes only as the result of renunciation and consecration —renunciation of that which is false, consecration to that which is true.

If we, as Christian Scientists, have been faithful to our trust during the year that has passed, if we have earnestly desired to become possessed of the Mind that was in Christ and our lives have borne faithful testimony to the sincerity of that desire, there is more or love and unity, less of criticism and selfish consideration, and a greater willingness to let God's will "be done in earth, as it is in heaven."

The ever-increasing desire to know God and His ways is the hope of humanity. It was this desire which led to the discovery of Christian Science and made it possible for our Leader to establish in this age the idea of Christianity which is reasonable, consistent, and practical. It is the desire to know God and His ways, the ways of infinite good in the affairs of men, which is bringing to the ranks of Christian Science recruits from all the walks of life. Since God is no respecter of persons, the truth about God must appeal to all men.

The signs of the times are encouraging and there is cause for rejoicing. Never was there a more wide-spread or deeper interest in Christian Science than at this day; never was our literature more generally circulated or more earnestly read; never were our Sunday services and Wednesday evening testimony and experience meetings more largely attended; never were our lectures more cordially received or the work of our Publication Committees more graciously recognized; never was there a greater demand for our text-book, the book which is indeed the "Key to the Scriptures," and which is bringing healing to the nations. Never did the world show a greater appreciation of what our Leader has done, and never was there a more sincere desire to know the truth about her and her work. No one can fully realize the import of her mission nor comprehend what Christian Science is destined to accomplish; but if the great good already done is but the first ripe fruits of the field, how bountiful will be the harvest when the angel of the Lord shall say, "Thrust in thy sickle, and reap: . . . for the harvest of the earth is ripe."

We rejoice in the prosperity of our Cause; we rejoice that we have had a part in this work, but we are not unmindful that to the Discoverer and Founder of Christian Science is due the credit for all that has been accomplished. We have been soldiers in the ranks,—faithful soldiers, we hope,—but we know that without our Leader's increasing watchfulness, wise counsel, and loving admonition our efforts could have availed but little.

We are most grateful for the progress we have made, and we realize that our blessings have not been few. We are conscious, however, that we have but begun the great labor of working out our salvation. Wherein we have been faithful in the past, that fidelity has been richly rewarded; and more is required of us in the future. The time has not come for us to cease from our labors. To-day we need to put on the whole armor of God, that we may be prepared to wage a successful warfare. We are not deceived by the subtle suggestion that since God's work is finished nothing remains for man to do. It is required of us that we demonstrate the reality of good and the nothingness of evil.

The necessity and importance of our life-work grows upon us, but we know that God is working with us both "to will and to do of his good pleasure," and we have the abiding conviction that His grace is sufficient for all human need. We count not ourselves to have apprehended, but this one thing we do: forgetting those things which are behind (save only as we would gather the fruits of experience), and reaching forth unto those things which are before (ever striving for the spiritual realities of being), we press toward the mark for the prize of the high calling of God in Christ Jesus.

Our President for the coming year is well known to all of you. It was his privilege to receive the personal instruction of our Leader more than twenty years ago, and he has been actively engaged in Christian Science work ever since. It is my pleasure to introduce Mr. Eugene H. Greene, C.S.D., of Providence, R. I.

Mr. Greene responded as follows:—

MR. GREENE'S RESPONSE.

I thank you, Mr. President, for the gracious words spoken of our beloved Leader, and I thank you also for the kind words spoken of myself. I would thank most

Digitized by Google

sincerely our dear Leader for the present honor conferred upon me. I thank you members of The Mother Church for the new great love you have brought to this sacred place, and which we are privileged to share with one another.

I have been profoundly impressed of late, perhaps more than ever before, with the position really occupied by Christian Scientists to-day. In an age of so-called higher criticism, wherein the fundamental truths of the Bible are openly assailed and cast aside as impracticable and visionary, it remains to them to preserve for future generations the very integrity of the Scriptures, to inculcate in human hearts the consciousness of the ever-presence and permanence of the healing and saving power of the Word of God understood spiritually. The pillar of cloud by day and of fire by night is surely as much a living necessity to-day as in any period of the world's history.

Humanity is hungering for the vital truths taught through Christian Science, the same grand spiritual truths taught by our Master. Our beloved Leader has, through God's infinite love, discerned these great spiritual laws of existence, and has in turn committed their promulgation to our keeping. Do we really believe this? Do we understand the import of this hour? Then surely we are standing face to face with the great spiritual opportunities and possibilities of all the ages. What a mighty heritage is this!

The report of the Treasurer, Mr. Chase, showed the finances of the Church to be in good condition, the Church free from debt, and a satisfactory surplus on hand. The report of the Clerk, submitted by Mr. Johnson, was as follows:—

THE CLERK'S REPORT.

Beloved Brethren:—The year that has passed since our last annual meeting has been one of hopefulness and progress. The erection of this monumental edifice, free from debt, startled multitudes into thought of the meaning of Christian Science and the genius of its Founder. The call for literature has far exceeded every previous demand, and reports from all places in which Christian Science has borne fruit, show increasing interest.

Christian Science has experienced what all great reforms and reformers have passed through. When the time came that opponents could no longer ignore it, they began to burlesque, malign, and pervert its teachings; but these efforts have never taken, and never can take the place of reason, and the public, no matter how much it may love humor and jest, will eventually turn to serious thought. No disguise can hide truth from view.

I need not tell you what falsehoods have been heaped upon this Cause, and upon Mrs. Eddy, its revered Founder; nor do I need to ask if you are with her in thought and deed in her holy warfare against all evil. You have proved your loyalty. In this momentous stand for Truth she has taught us to follow the methods of the great Master, who, being reviled, reviled not again.

During the last year there has been a steady growth in both The Mother Church and its branches. The membership of this Church is now 43,876, which shows a gain of 4,084 during the year. The total membership of the 645 branch churches which have reported, is 42,846.

This meeting beneath this great sheltering dome is another uplifting period of harmony, and of spiritual desire to grow daily more Christlike; and as, filled with higher aims and the fresh enthusiasm of this meeting, we go to our homes to heal the sick and reclaim the sinner, let us be deeply grateful to her through whose efforts this great edifice has been raised, and through whose courage, love, and guidance we have been enabled to meet to-day in health, happiness, holiness, and love.

WILLIAM B. JOHNSON, *Clerk.*

The final hour was devoted to reports from branch churches, and all of the reports submitted were most encouraging and satisfying. They showed large gains in membership as well as an increased interest in the literature of Christian Science. The meeting was closed by the singing of Old Hundred—"Praise God, from whom all blessings flow." All who attended the meeting seemed to feel that it was one of the most helpful and inspiring in the recent history of the Church, and much gratification was expressed because of the progress reported from all parts of the Field.

SOME COSTLY ADMISSIONS.

C. W. CHADWICK.

SINCE "there is nothing either good or bad, but thinking makes it so," it behooves every professing Christian to watch the thoughts that knock at the door of his consciousness. Even the student of Christian Science is sometimes caught napping in this most important matter. He forgets momentarily that all power lies within the realm of divine Mind, consequently that every erroneous admission on his part only robs him of the true consciousness of heaven or harmony. The great Master-thinker knew this, and in admonishing his followers to "watch" he delivered one of the most comprehensive sermons ever preached. He knew that humanity's only hope was in guarding the gateway to their habitation of thinking. They must think their way into the kingdom of heaven, and this involves the admission of that only which is true and Godlike, and the rejection of everything which is erroneous or un-Godlike.

The mighty discontent in the world to-day is due to the fact that humanity have strayed away from the beaten path leading heavenward, having lost the art of guarding their thought. A vast multitude of false theories, opinions, and beliefs have crowded themselves into consciousness, and mortals have accepted them as true; they have forsaken an all-good God, and have believed in the existence of another power, presence, and reality named evil. From this belief as a storm-center radiate a thousand false admissions, all of which tend to obscure a natural and scientific conception of the kingdom of heaven in the hearts of men.

One of the most costly of these has been the admission that man was once an angel, but that he has since fallen into sin and must be made to atone for his wrongdoing, and thus be brought back into his primitive angelic state. This is equivalent to believing that the statement "two times two is four" was once true, but has since been changed into the misstatement "two times two is five;" and that it must therefore be corrected and be made to harmonize with its principle. Christian Science solves this vexed problem by declaring that what God has created is eternally spiritual and perfect, and cannot fall or be divorced from its divine Principle. It then follows that the ideal man, the image and likeness of God, Spirit, has not fallen into sin, but that false human sense is both the sin and the sinner. The student of Christian Science is, therefore, engaged in the scientific elimination of this erroneous sense which incorrectly defines God's perfect creation.

Through his knowledge of the divine nature revealed in Christ Jesus, he realizes that man, God's perfect image, must be intact, and like the miner digging for the pure ore, he begins to remove the material rubbish that has hidden this man from view. He does not seek to establish any relationship between the statement "two times three is six" and the misstatement "two times three is seven." He sim-

Digitized by Google

ply tries to eliminate the misstatement, which is the only way of correcting it. Our critics must sooner or later agree with us that the admission that man has fallen from a state of spiritual perfection is in no way related to the true Christ-idea of man, and that it is not man that needs to be saved, but that mankind are to be saved from believing whatever is false concerning man and his Maker.

Another costly admission, one that has caused untold misery and trouble to the human race, is this, that mind or intelligence is an inhabitant of matter. To prove the falsity of this belief Jesus went so far as to suffer the fate of a felon upon the cross of Calvary, in order that he might demonstrate by his resurrection from the grave the all-sustaining power of Life separate from matter; and yet some professing Christians to-day hold to this belief of intelligent matter with amazing tenacity, and stoutly oppose the teaching of Christian Science, which offers divine proof and Scriptural sanction for its existence. The true follower of Christ in this or any age must needs "watch" unceasingly the trend of his own thinking if he would ever overcome the fear and tribulation attendant upon this unchristian admission of life in matter or apart from God.

Immediately following this belief comes another admission, viz., that Spirit has not control over bodily conditions. This admission has opened the door of human consciousness to unnumbered mortal opinions, each usurping divine power and claiming the ability to do the will of God, when in fact they have been but the willing servants of evil. Under the bondage of this admission countless thousands of the world's best people have bowed down to the god of medicine, believing that it was natural, lawful, and needful to do so, and knowing of no other remedy to appeal to. They may have professed to believe in God as Spirit, but how to make spiritual power available or applicable to the healing of physical disease was a problem that did not concern them, because of their unresisted admission that matter held the reins of government. After centuries of such educational influences in and out of the home it is not strange that Christian Science meets with opposition from those who still hold to a material view of things; while to those who have counted the cost of false admissions concerning God and man it comes as a messenger of peace, health, and good will.

Christian Science fully defines the penalty for wrong thinking and reveals to humanity the true spiritual concept taught and lived by Christ Jesus, which exposes another fatal admission, viz., that every man has a right to his own opinions. This unfortunate theory, which is responsible for all the unbelief in the world, and for "man's inhumanity to man," is the offspring of the erroneous belief of minds many. The great need of the world is to surrender its opinions, be they called good, bad, or indifferent, and to learn of man's spiritual unity with God, whereby man reflects the thoughts of the one Mind which "thinketh no evil." Only in this way can man demonstrate the power of good to destroy evil, and true Christianity be made manifest in the lives of men.

THE DIVINE ORIGIN OF CHRISTIAN SCIENCE.

LEWIS R. WORKS.

To those who have experienced the beneficent effects of Christian Science no other evidence of its Divine origin is necessary, but to others something in the nature of proof may be offered. To such proofs, happily, the world is daily becoming more ready to listen. Those who were formerly indifferent begin to lift their eyes to the "signs of the times," and the army of actual inquirers becomes daily more numerous in its impressive array. Such a state of affairs is not to be wondered at. If men can say in an inventive age, as they do to-day, that to the genius of man nothing seems impossible, how much more readily should they agree and know that "with God all things are possible." Such is the Scriptural declaration, and to the Christian Scientist it has become more than mere words. In the light of the undeniable truth of the assertion, the Scientist is likely to forget that his understanding is recent, and to wonder at those who occupy the ground where he so lately stood. He wonders at the necessity for the use of the word "proof" in connection with a statement which is of the very essence of established truth.

For many years it was vehemently contended that no healings had been effected through Christian Science, and the contention, in the light of history, was not remarkable; for history itself is of the nature of a story of the struggles of every cause which had in it a fundamental truth making for either the spiritual or material advancement and welfare of the world. The one great example of this fact is furnished in the beautiful but saddening accounts of the earthly sojourn of the Master, and instances in the material realm might be recited in great number. In the passage of time the denials of the healing efficacy of Christian Science have become less and less persistent, and have now practically ceased. If they are still occasionally heard, they come either from those who are not honest with themselves or from those who happen not to have been brought into contact with actual cases of healing and are not willing to accept hearsay testimony on the subject. Every Christian Scientist knows, as he knows the stability of adamantine truth, —and his knowledge is a part of that truth,—that the healings are daily and hourly effected. Christian Science has healed all of the admittedly curable and nearly if not all of the supposedly incurable ailments in the catalogue of *materia medica*. Many ministers of the gospel have resigned their pulpits and many physicians have given up their professions to become Christian Scientists because of their knowledge of these manifestations of God's law, and it may be safely asserted that the world at large knows, even if there be isolated instances of the lack of that knowledge, that Christian Science does heal. But how does it heal?

In answering this question it is not intended to try to explain the *modus operandi* of Christian Science healing. It is sufficient to say that the work is done through that Mind "which was also in Christ Jesus." If the healing is not so effected it is not effected at all, because the Christian Scientist relies upon nothing but that Mind, the omnipotent God. He knows that God is omnipotent. The Christian Scientist's God is a God of action, and His acts are those which even a mere human being, erroneous though his views may often be, has a right to expect from a God who is Love and who is good. The Christian Scientist's God is not a God who "taketh away;" He is not a God to whom, in a time of distress and affliction, men are servilely to bow down and murmur, "Thy will be done," believing that the distress and affliction express His will; but He is a God who saves and who heals, a God who commits neither wrong nor injustice toward His children, who knows no evil and does not afflict. He is a God whose will is "done in earth as it is in heaven;" who has no other will but that which is made manifest in the undisputed reign of good. The Christian Scientist knows no other method of healing than the application of these eternal and unerring truths. He knows, and to the exclusion of all else seeks to practise, the truth that "the prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1). He knows that "to those leaning on the sustaining

Digitized by Google

infinite, to-day is big with blessings" (Science and Health, Pref. p. vii.), and he is a joyous partaker of those blessings.

If it is after this manner that the Christian Scientist keeps sickness from his house and evil from his pathway, is not his exemption God-given? What says Jesus on this question? "And when he had called unto him his twelve disciples, he gave them power against unclean spirits, to cast them out, and to heal all manner of sickness and all manner of disease. This is the story of Jesus' injunction to the seventy: "And into whatsoever city ye enter, and they receive you, eat such things as are set before you: and heal the sick that are therein, and say unto them, The kingdom of God is come nigh unto you." Is it not strange that anything should have led the world away from the plain and simple meaning of the above passages? That meaning is unmistakable. If there be in existence language capable of giving true expression to thought, the passages mean that the healing of both sin and disease, and the destruction of evil generally, are a part of the Christian religion; and according to the mandate of Jesus, that religion is neither practised nor understood so long as sin and disease are tolerated by its votaries. It is equally certain that the healing of disease is part of the religion for all people and for all time, and equally now as in Jesus' time. His language will bear no other construction.

The early Christians followed Jesus' commands. The many cases of healing and raising from the dead referred to in the Acts call for but a passing mention, and history bears ample testimony to the continuance of those practices long after the ascension, indeed long after the period of the Acts. The fifteenth chapter of Gibbon's "Decline and Fall of the Roman Empire" contains pointed reference to the subject, and the author gives in that celebrated chapter what he calls "the miraculous powers ascribed to the primitive church," as one of the five "secondary causes of the rapid growth of the Christian Church," the primary cause being "the convincing evidence of the doctrine itself." He says further, "But the miraculous cure of diseases of the most inveterate or even preternatural kind, can no longer occasion any surprise, when we recollect that in the days of Irenæus, about the end of the second century, the resurrection of the dead was very far from being esteemed an uncommon event; that the miracle was frequently performed on necessary occasions by great fasting and the joint supplication of the church of the place, and that the persons thus restored by their prayers had lived afterwards among them many years."

The facts are, then, that Jesus healed the sick, and that his disciples did likewise both before and after the ascension; that Paul, who later became an apostle of Christ, did the same, and that the primitive Christians generally even raised the dead, up to the end of the second century. History shows that they healed diseases long—probably for a century—after that period. The Christian Scientists throughout the world are now healing hundreds of cases of disease every day, many of them, as has been said, being of the kinds which are termed incurable by the physicians. They do this healing by the knowledge of the allness of God, and know no other way of doing it. In fact they know that there is no other way of doing it. The question, Is Christian Science, together necessarily with the work it is doing, of divine origin? seems almost to answer itself. If Christian Scientists are not doing the work laid out by Jesus for him "that believeth on me," when may we expect that it will be done and by whom? "Shall it be denied that a system which works according to the Scriptures has Scriptural authority?" (Science and Health, p. 342).

It remains only to assert that the statements of the Master are being verified, and that the power of the Christian religion has appeared, as of old, to heal the sick and the sinful, to bring harmony and happiness to mankind, and eventually to enfranchise them with that dominion given to man by his creator. That power has never been lost, for it is the expression of God to man, and nothing that is of God can be lost. For centuries it was apparently—but only apparently—absent. It has always in reality been waiting at our right hand, though the knowledge of its presence departed for a long time from the minds of men. That knowledge has now been restored to us by the revelation of Christian Science, and to the noble and self-sacrificing Discoverer and Founder of that Science, Mrs. Eddy, there should be and there is a continual outpouring of the thankfulness which is growing more bounteous day by day.

SELECTED ARTICLES.

[From the *Youngstown* (O.) *Daily Vindicator*.]

[The following excerpts from a letter recently published in the *Youngstown Daily Vindicator* will do much to correct the erroneous opinion that Christian Scientists fail to recognize the physical needs of their patients. In this case great relief from suffering resulted from the Christian Science treatment, which was given after two surgical operations had failed to help Mrs. Reno. Besides the freedom from suffering which Christian Science brought to her, the husband testifies to the spiritual uplifting—the happiness and peace—which came to her.—EDITOR *Sentinel*.]

Youngstown, O., May 25, 1907.

Editor Vindicator:—Will you allow me to correct an article which appeared in Friday's *Vindicator* regarding the death of my wife, Mrs. Sarah Reno, which said that a doctor had been called just before death. This is not true. . . . Mrs. Reno's disease was pronounced malignant cancer by one of the leading physicians of this city. She was operated on at the city hospital in July, and again in November. The doctors said that the case was hopeless. They could do nothing but relieve her suffering by the use of opiates. My wife suffered untold agonies in spite of the morphine. At this time Christian Science was recommended, and I called a practitioner, Miss Ella Kroeck. From the time of the second treatment all pain ceased and my wife never suffered again. She gained rapidly and was partly able to take care of the house. . . . On Thursday afternoon she complained of gas on her stomach, but that passed away. At midnight she had this same trouble, but soon was perfectly comfortable and went to sleep. Miss Kroeck was watching by her bedside, and she rested until almost morning, when she asked for a drink of water and then went to sleep again. In perhaps half an hour, on going to the bed, Miss Kroeck found that my wife had passed away.

I feel that it is right to let the people know all that had been done for my wife. Christian Science not only relieved her pain, but made her very happy, and taught us all to trust in God. I had been unable to work because I had to stay at home and nurse my wife, so when Miss Kroeck came she found that we lacked many necessities. I had always thought that Christian Science paid no attention to the needs of the body, but I found that the first thing they did was to make us comfortable by providing food and clothing. I can never repay Miss Kroeck for what she has done, coming day after day through

Digitized by Google

all kinds of weather to see my wife, and never asking for one cent in return. I feel I should say this in justice to Christian Scientists. By their example in following Christ I have learned to know that God is Love.

Truly yours,

JOHN RENO.

[Editorial in the *Chicago* (Ill.) *Chronicle*.]

Whatever may be thought of Christian Science, it is impossible to deny that its underlying doctrine of the power of the mind to control disease and all other ills whatever, runs like a golden thread through universal human literature and thought. In fact, it is only when an attack on Christian Science is to be made that this great truth is called in question or ridiculed. The oldest human literature is the Bible, and in one of its oldest books it is said of man that "as he thinketh in his heart, so is he." The teaching of many parts of the Old Testament is that a condition of immunity from all the ills of life is attainable through faith in God, which means simply a conviction that God is too good to permit them.

The best example of this is in the 91st Psalm, in which it is said of people who are filled with this conviction: "Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day; nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday. . . . There shall no evil befall thee, neither shall any plague come nigh thy dwelling." Another psalm says, "They that trust in the Lord shall be as Mount Zion, which cannot be removed, but abideth for ever." This doctrine is the key-note of the New Testament and of the Christian religion. "All things are possible to him that believeth," said Christ, and an apostle said, "This is the victory that overcometh the world, even our faith." It is utterly impossible to give any other sense to these teachings than this: That believing things to be so makes them so. The same idea runs through profane literature, of which Shakespeare's writings are the most representative. It is almost startling to read Hamlet's remark, "There is nothing either good or bad, but thinking makes it so," and there is a still more striking passage in "The Winter's Tale," in which Leontes, referring to the belief current in Shakespeare's day that spiders were a deadly poison, says,—

> There may be in the cup
> A spider steeped, and one may drink, depart,
> And yet partake no venom, for his knowledge
> Is not infected. But if one present
> The abhorred ingredient to his eye—make known
> How he hath drunk, he cracks his gorge, his sides
> With violent hefts.

Even in the utterances of Christian ministers when they are not thinking of Christian Science very similar remarks occur. In a sermon of the famous New England Puritan divine, Dr. Pennington, for instance, he says, "Though distressing thoughts have entered thee, fear them not; but be still a while, not believing in the power which thou feelest they have over thee, and it will fall of a sudden."

[Gray Montgomery in the *Omaha* (Neb.) *World-Herald*.]

Our critic's first question, "Are the things which we see spiritual in the same sense that God and the angels and the souls of men are spiritual?" is answered by St. Paul. "While we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." The things which we see with our mortal vision are the false human concepts of them and are temporal, while the real things are spiritual and eternal. The reality of all things is in Spirit, and as ideas of God all things are spiritual, but it is only when we come into man's true inheritance and realize that Mind in us "which was also in Christ Jesus" that we shall see and know the reality and perfection of all things as they are in God's kingdom, the universe which He created.

To our critic's second question, "Are the mountains, the forests, etc., spiritual in the same sense that God is spiritual?" it is answered that all things are spiritual in the same sense that God is spiritual, in the degree that they manifest perfection and are God's ideas. Christian Scientists do not claim that their present understanding enables them to discern the spiritual reality of all things. They accept the teaching of the Bible that God is omnipotent, omnipresent, and omniscient, and that therefore the only universe is the spiritual. The material is the false human concept of the spiritual, but when this mortal concept of existence is corrected and mortal or carnal thoughts are put out of consciousness, then all things will appear as reflected objects of the infinite Mind. They do not claim that the material things we see with our mortal vision look like the spiritual or have the same shape, outline, or quality, or that they perform the same office as the spiritual, but that the real, spiritual things—God's perfect ideas—are always present.

[Harriet L. Betts in the *Troy* (N. Y.) *Times*.]

When long ago, on the first Christmas morn, a babe was born to a lowly, holy, virgin mother, the watching shepherds heard the song of angels, heralding the advent of the child who was to change the whole world's history. That sacred anthem, "Glory to God in the highest, and on earth peace, good will toward men," is sounding in our own age, clearer and nearer to the hearts of men who wait and watch for a fuller revelation of God's love for His children. Christian Scientists have a new sense of the Christ-coming, for in the dawn of a more spiritual reading of the Scriptures they welcome the consciousness of his ever-presence—"never born and never dying"—but to-day and forever a loving, living, perfect Saviour from present troubles.

They bring their gifts, the gold of purified character, the frankincense of devout aspiration, and the myrrh of self-abnegation, to lay at the feet of their king. He is come royally to rule all peoples and nations, lifting them above matter into a spiritual, real, and harmonious living, into faith in an omnipresent God and a knowledge of spiritual law as supreme over what is called material law. Christ Jesus foretold this period when he said, "I will come again."

Not all who dwelt in Bethlehem knew of the lowly birth of the child who should redeem the world. The angelic vision came to the wakeful shepherds, while the rest of the earth lay sleeping. When human hearts are surfeited with getting and giving, with pursuit of wealth, pride of power and position, and gross pleasures of the senses, and while they carry heavy burdens of sorrow felt to be real and God-sent, they cannot understand and accept Christian Science as it is taught by its revered Discoverer and Founder, Mrs. Eddy.

The trend of Christian Science is to lift the world above its submergence in material things. The imperative need of a better basis of living, whereon man may rise above the despotism of matter and the flesh, is met by the statements of Christian Science founded on the Bible, that all that God made is like Him and is real, while all that is unlike and opposite to Him is untrue and impossible. This Science insists upon the great fact revealed by Jesus, that man is the child of his heavenly Father, and now and forever holds this birthright and carries this birthmark. In every human heart there is a hidden sanctuary wherein the desire to be good forever dwells. This is the "heaven within." To perceive this longing, to nourish it and to bring it into active, fruitful, and eternal life, is the aim of Christian Science.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

COMMUNION.

In all Christian churches the sacrament has been regarded as that which had taken the place of the passover,—a feast which was first partaken of when the Israelites were yet in bondage, but on the eve of their deliverance. And so it came about that the passover, which on that first occasion was eaten in haste, with "loins girded," shoes on feet, and staff in hand, became with the lapse of time an event of great joy and thanksgiving; and rightly so, for what had not God wrought for those who trusted Him at that earlier day! With the advance of spiritual understanding, the symbols which had served their time—the unleavened bread and the slain lamb—gave place to the bread and wine of the Christian Church,—symbols intended to typify the bread "which giveth life unto the world" and the wine which is the "inspiration of Love" (Science and Health, p. 35). To what extent these symbols have served their purpose in the Christian Church is largely a question of individual experience. In the days of the apostles there were many who failed to discern their spiritual significance, so Paul tells us in his first epistle to the Corinthians (11th chapter), and he adds, "For this cause many are weak and sickly among you." The same may be said of professing Christians all through the centuries,—they have made much of the symbol but have not grasped its meaning, have missed "the bread which cometh down from heaven" and so have been "weak and sickly," sinful and sorrowful.

Now it happens that Christian Scientists are often asked why material symbols have no place at their Communion? To this it may be answered that the bread and wine have given place to what St. Paul refers to as the discernment of "the Lord's body," otherwise, the embodiment of Truth's immortal idea. With this discernment the symbol is no longer needed, and is given up, even as the giving up of the paschal symbols marked an advance in spiritual understanding. The all-important thing is that we reach out for that "bread which giveth life," as Christ Jesus has said. There are many professed Christians who are literally starving for this bread, and who are mentally and physically "weak and sickly," as in Paul's time, because of its lack. They do not know how the life-giving bread is to be found, and yet our Master declared, "The words that I speak unto you, they are spirit, and they are life."

It is said that once, during the Crimean war, a number of wounded soldiers were in direst need of food and hospital supplies, which were at hand, but could not be given out without certain formalities involving great delay,—a delay which meant suffering if not death to these men. At this juncture Florence Nightingale appeared on the scene, and with sublime daring ordered her hospital corps to force open the military stores, that the great need might be met. This was done, and all who knew of it honored the brave woman whose courage rose superior to precedent and power.

In the case of a far greater need, our revered Leader had the sublime courage required to open up fearlessly the stores of truth, that the sick and the faint on earth's battlefield might have healing and bread. Those who have learned to use Mrs. Eddy's "Key," find the Scriptures to be a great storehouse of truth, and know what is meant by the Christly declaration, "Behold, I have set before thee an open door, and no man can shut it." That unnumbered thousands have found in Christian Science this open door is the mightiest fact of present human experience. Because of this fact the Communion of The Mother Church is not confined to the walls of its sacred edifice in Boston. No country is now too remote to join in this service, in oneness of spirit, knowing that "the kingdoms of this world are become the kingdoms of our Lord and of his Christ." The simple yet touching words which those who were present on June 9 sent to their revered Leader, were but to assure her of a world-wide joy and gratitude for having found in Christian Science the "living bread," and ceaseless communion with the one Father, infinite Mind,—a Communion which brings health and holiness to all who draw near in reverence and love.

ANNIE M. KNOTT.

RACIAL UNITY.

MANY good people have tried to explain the injustice of so-called natural law, the cruel wrongs inflicted upon the innocent and well-deserving, by declaring that they are a necessary incident of racial unity. They remind us that "no man liveth unto himself," and that by virtue of his identification with the race every one is subject to the disabilities which have grown out of the stumblings and sins of the race. They further declare that these ills are beneficent, as a whole, since they give warning of the violation of law, and thus point the way to racial advance. Said one recently, "Our fathers have consented to the felling of the forests, the denuding of the great watersheds, and when our rivers leap their banks and flood the country with destruction and distress we make a great outcry against the cruelty of natural law! When men have learned wisdom these things will be righted, and not till then."

This sounds very plausible. It recognizes the undeniable fact of human short-sightedness and mistake, and it seems, moreover, to offer a reasonable explanation of the multiplication of evil through heredity, contagion, etc., and is constantly referred to in that connection. A very little thought, however, will disclose the fallacy of the whole contention, that it is but a recast of the long-honored but now unacceptable creedal dictum, that "in Adam's fall we sinned all."

The fact in human history of a kind of racial unity which has begotten unmerited miseries cannot be disputed, nor the further fact that these tragedies give sure indication of somebody's unwise thought and conduct, but to conclude therefrom that such racial unity is legitimate is altogether unwarranted. The real question at issue is this: Is that ordering of human life which necessarily involves the punishment of the innocent for the guilty a divine provision? In answer to this question Christian Science declares that the belief of racial unity which brings about such results is unjust, that it cannot be of God, and hence that it is without place or power save in the realm of false sense.

The endeavor to make injustice more endurable by declaring that it is the outcome of divine arrangement characterizes the teaching of Job's friends, as well as that of many modern apologists; but it would seem that Jeremiah clearly perceived the fallacy of this reasoning (See chapter 31 : 29, 30), while Ezekiel waxes eloquent in his denunciation of the whole idea (See chapter 18). Reasoning from the character of God, he reaches the logi-

Digitized by Google

cal conclusion that to make Him responsible for the punishment of a transmitted guilt is quite impossible; that to mar the integrity of the divine nature would be to wreck the universe, and Christian Science unequivocally endorses this position.

It is certainly best for the race, and for its every member, that sin should afflict and ultimately destroy itself, but the proposition that God has established an order by which sin is permitted to afflict the innocent is utterly untenable, and for the reason that it makes God less loyal to justice and right than He imperatively requires men to be. An offense to the moral sense is not made the more tolerable by elevating the rank of the offender. To attribute the slaughter of the innocents which is still going on in every city and village of the world, to the law of Love, is to dethrone the "Spirit of truth" and exalt the spirit of Herod.

The fallacy of the generally accepted thought of racial unity inheres in the fact that it is of the earth, earthy. It begins with mud instead of Mind. Assuming that man has material origin, nature, and susceptibility, it maintains that however cruel and unjust the asserted laws of materiality may be, they are not only inescapable, but somehow they are best. To this stoical and depressing belief the teaching of Christian Science presents the greatest possible contrast. Its concept of racial unity, like its concept of all other realities, is spiritual; it is centered not in dust, but in Deity. In Christian Science the race has no other unity, and can have no other than that which is grounded in the at-one-ment of all right ideas. It is an inter-relation which manifests "the eternal verity and unity of God and man" (Science and Health, p. 502), and it is expressed not in a common subjection to unjust material law, but in a common freedom and supremacy under the government of Truth and Love. Jesus taught and wrought the beneficence of this rule, and that it is to be brought into demonstration in human experience, so that men shall no longer be amenable to that sense of unity which effects a solidarity of suffering, but that which brings into realization the liberty of the sons of God; and it is the joy and rejoicing of Christian Scientists to-day that this teaching of the Master is again proved true.

Mrs. Eddy places this subject under a white light when she says, "The universe, like man, is to be interpreted by Science from its divine Principle, God" (Science and Health, p. 124).

JOHN B. WILLIS.

NOTICE.

If each branch church which now has a completed edifice will be kind enough to send two photographs of it, in as large a size as may be available, to the Board of Trustees of The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass., they will confer a favor. Those which arrive in June can be used for exhibition purposes, and it is requested that they be sent unmounted in any way, with a slip enclosed giving exact designation of the church. The print can be safely mailed if rolled around the outside of a mailing tube, and securely wrapped.

LETTERS TO OUR LEADER.

Concord, N. H., May 29, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

My Dear Madam:—I feel it my duty, as well as a great pleasure, to express to you my sincere thanks and high appreciation for the great honor you have bestowed upon the old veterans of the G.A.R. in Concord, by sending us an invitation to attend your church on Memorial Sunday, May 26. I can truly say that the service rendered us on that occasion was the best we ever had; and the passing out through your beautiful room and receiving the hearty hand-shake from the ladies of your church was an honor and a pleasure long to be remembered by the Grand Army boys. Truly and fraternally yours.

L. S. RICHARDSON.
A member of E. E. Sturtevant Post No. 2, G.A.R.

Erie, Pa., May 23, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Discoverer of Truth:—Something over twenty-one years ago Christian Science discovered me, and at a time when I greatly needed its uplifting and energizing influence. I was at that time addicted to the use of intoxicants, tobacco, profanity, and other sins that follow in their wake, contracted principally in the two and a half years that I served as a soldier in the Civil War, and these evils remained with me until they were destroyed by the application of your great discovery. Now, at the age of nearly three score and ten years, I find myself a far better man, mentally, morally, and physically than I can ever remember of being before, and I know this was brought about by the teachings promulgated by you. I read your book, "Science and Health with Key to the Scriptures," at least three times a day, and also love to study the sayings of the lowly Nazarene, who said, "The words that I speak unto you, they are spirit, and they are life." I have proved many times (notably two) that God, good, is a present help in time of trouble. Once on a railroad train I was struck a blow that threw me very near the border-line of mortal existence, and while in "the valley of the shadow of death" (to mortal sense), the teachings found in the "little book" above referred to came to my rescue and lifted me out of it. Again, in the compound fracture of my right arm, which was completely restored to its normal condition without the aid of matter surgeon or the application of any material remedies, such as splints, bandages, lotions, or liniments; proving again, as Jesus said, "The Father that dwelleth in me, he doeth the works." If what I have written you will bring one ray of joy or comfort to your consciousness, I shall have accomplished my whole and entire purpose.

With great admiration for what has been done for humanity through you, I am

Very sincerely yours,
GEORGE W. CHAFFEE.

Syracuse, N. Y., May 31, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

My Dear Teacher:—I think it will be pleasing to you to know that one of your students, *i.e.*, myself, has been selected to attend the Naval Architects Congress at Bordeaux, which convenes on the 25th of June. The French Republic opened an exposition in May to illustrate steam navigation and to honor the memory of Robert Fulton, who built the first steamboat ever put into successful operation. France has requested the various naval engineering societies throughout the world to send delegates to the congress above named, and as I have for some time been a member of the Naval Architects and Marine Engineers, that society has selected me as one of the delegates to represent it at this congress. I anticipate great pleasure in going to the congress, and believe that it will be a factor in the way of the peace movement. You will see by the enclosed list of names that I am also one of the committee

Digitized by Google

to assist in the building of the water-gate and monument to Robert Fulton, a work in which I am very much interested. I am glad that one of your students can act as a delegate to the Naval Architects Congress and also on this monument committee. There may be others, but I have not yet met them.

Permit me to tell you of a little incident which occurred a few weeks since. In walking on the principal business street of this city, I met a gentleman, a Jew by birth and a gentleman in habit and manners. In the course of our conversation he said to me: "I have read all that the newspapers say about that woman in Concord whom you love so much, and I have made up my mind she must be a very noble, competent, and pure-minded person." I was very glad to hear him say this. He further told me that he had had some treatment in Christian Science, that it benefited him greatly and he appreciated it. I think this incident illustrates in a way what the people think about the dust and dirt thrown into the air by some of the papers during the past few months. The thinking people are not taking it seriously, and what has been said with the intention of injuring you has reacted in your favor. I am told that the branch churches all over the country are filling up faster than ever with attentive listeners.

Mrs. Bates joins me in expressions of love to you and your household. Lovingly your student,

EDWARD P. BATES.

[Telegram.]

Chicago, Ill., May 24, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The growth of Christian Science in Chicago has necessitated the formation of a new church. Accordingly, last evening, at a meeting of members dismissed from First Church to become charter members of the new church, the organization was perfected with the title of Eighth Church of Christ, Scientist, of Chicago, Ill. At the close of the meeting the Board of Directors of First Church and the Board of Directors of Eighth Church jointly were appointed a committee to indite a message to you, our beloved Leader, believing that it will rejoice your heart to receive such evidence of the continued progress of the Cause of Christian Science and of the fruition of your message and mission to the world. We send this communication: May this new church deserve your love and fulfil your idea as expressed in your own words, "Its beginning will be meek, its growth sturdy, and its maturity undecaying" (Science and Health, p. 463).

RUTH B. EWING, *Chairman of Committee.*

Sydney, New South Wales, Australia, April 18, 1907.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—I have long wished to write and express my gratitude for your love and wisdom, and for the priceless treasure you have given each one of us in your book "Science and Health with Key to the Scriptures." I have lately passed through deep waters of mortal belief, and seem to see clearer than before the God-inspired work you have achieved for suffering humanity. It is so far above our comprehension at present, so high and holy, that it is only by small degrees we catch faint glimpses of the wonders of your revelation, of your sacrifices, cross-bearing, and wondrous pilgrimage for us. But you are now able to wear the crown, so we may rejoice exceedingly, and humbly strive to follow your dear footsteps and thank God for you.

With most loving reverence,

FLORENCE M. SMYTH.

Allegheny, Pa., May 4, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—As another branch of the parent Vine, we, the thirty members sent out lovingly by First Church of Christ, Scientist, Pittsburg, Pa., to fill a long-felt need, have organized Second Church, to be located in Allegheny, Pa. As we assemble here to-night our hearts are filled with love and gratitude to you, our beloved Leader, through whom so many blessings have come; for, while the way has always been, we realize that we should still be groping, had you not discerned, through your Christlikeness, the way out of all bondage.

We earnestly "promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus" [Science and Health, p. 497], that we may be accounted a fruitful branch.

Lovingly,

MARIE L. ARMSTRONG,
BYRON C. VINCENT,
CHAS. N. HOADLEY,
Committee.

Newark, N. J., May 2, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—At this time, when "a thousand" shafts of error "fall at thy side, and ten thousand at thy right hand" that cannot "come nigh thee," and when "only with thine eyes" dost thou "behold and see the reward"—the failure—of evil, you may be cheered with an instance of our growing perception of the atonement, to which you have recently directed our attention anew. In obedience to the law of Love which your teaching has revealed to us, and acting for the good of the Cause of Christian Science in Newark, N. J., the Board of Trustees of First Church of Christ, Scientist, and Second Church of Christ, Scientist, have taken action perfecting the union of the two organizations as First Church of Christ, Scientist. I am sending a notice of this action to our *Sentinel.*

Yours in gratitude and love,

MILTON B. MARKS, *Clerk.*

Wilmette, Ill., May 21, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the Directors of First Church of Christ, Scientist, of Wilmette, Ill., wish to express our love and loyalty and deepest gratitude to you, who have labored with such lovingkindness for the good of all the world. The eloquent tribute to you by Mr. Bicknell Young in his lecture in London, April 23, is echoed from the depths of our hearts, with the rejoicing that Love is being understood and reflected now as never before since the days of Jesus. Our prayer is to be faithful, obedient, and steadfast in "the structure of Truth and Love" [Science and Health, p. 583].

Very lovingly yours,

THE BOARD OF DIRECTORS.

Buenos Ayres, S. A., April 10, 1907.

Dear Mrs. Eddy:—South America sends you greeting and love. We feel that you are safe, and that you say of the Lord, "He is my refuge and my fortress: my God; in him will I trust." We are striving, dear Leader, to follow you as you follow Christ, feeling that by so doing we can best prove our loyalty.

Yours with sincere gratitude,

FRANK R. KINSLEY,
For the Society.

MOTIONS FILED.

STATE OF NEW HAMPSHIRE.
SUPERIOR COURT.

Merrimack, ss. April Term, 1907.

In the Suit Entitled

MARY BAKER G. EDDY, By her next friends, GEORGE W. GLOVER, MARY BAKER GLOVER, GEORGE W. BAKER, FRED W. BAKER, EBENEZER J. FOSTER EDDY, *vs.* CALVIN A. FRYE, ALFRED FARLOW, IRVING C. TOMLINSON, IRA O. KNAPP, WILLIAM B. JOHNSON, STEPHEN A. CHASE, JOSEPH ARMSTRONG, EDWARD A. KIMBALL, HERMANN S. HERING, LEWIS C. STRANG.

MOTION OF MARY BAKER G. EDDY FOR AN IMMEDIATE INVESTIGATION OF THE QUESTIONS HEREBY RAISED, AND FOR A SPEEDY DECISION OF THE QUESTION WHETHER THESE PROCEEDINGS MAY BE FURTHER MAINTAINED BY THE ALLEGED "NEXT FRIENDS."

(*Filed June* 5, 1907.)

Mary Baker G. Eddy of Concord, New Hampshire, respectfully represents to the Court that

1. All the allegations by her alleged "next friends" set out in said bill in equity—to the effect (1) that she is or has been incapable of understanding and protecting her property rights; (2) that she is surrounded and secluded by any person or combination of persons who are or have been managing or controlling her business or other affairs; and (3) that such persons have wrongfully converted or misappropriated any of her property—are untrue.

2. Her property interests have been and are fully protected and there is no lawful or just occasion for the maintenance of these proceedings for any such alleged purpose.

3. The trust deed of March 6, 1907, and the appointment of Trustees and attorneys thereby were her free and intelligent act, which carried out her own wishes, and the said Trustees and attorneys have thereunder and thereby the full control and management of her estate, and she desires the said control and management to be continued during the remainder of her earthly life.

4. These proceedings were not brought in good faith by said alleged "next friends" for her personal benefit and are not now being carried on for that purpose, and the maintenance of these proceedings by said alleged "next friends" is unjust and injurious to herself and an unwarrantable interference with her personal rights under the law of the State and the established rules of equitable procedure.

5. She believes and avers that the maintenance of these proceedings in her name by said alleged "next friends" is an abuse of the process of the Court and an unwarranted interference with her legal rights, and that she is by law entitled to speedy relief therefrom.

6. She believes and avers that, under our constitution and laws and the practice in this equity court, she is of right entitled to an immediate investigation, consideration, and determination by the chancellor of the following among other questions:—

(1) Whether her property interests have been and are now fully protected and whether there is any lawful or just occasion for the maintenance of these proceedings by said "next friends" for said alleged purpose.

(2) Whether the trust deed of March 6, 1907, and the appointment of Trustees and attorneys thereby were her free and intelligent act, which carried out her own wishes.

(3) Whether these proceedings were brought in good faith by said alleged "next friends" for her personal benefit and are now being carried on for that purpose.

7. She also believes and avers that she is entitled to have the prosecution of this case by her alleged "next friends" suspended until the foregoing questions, together with other questions arising therefrom, shall have been determined by the chancellor, in such manner as will best satisfy his conscience that her representations here made are true; she also avers that said alleged "next friends" have no standing in this court of equity, as parties litigant or otherwise, to oppose or prevent such investigation and determination by the chancellor.

Wherefore she prays: That this Court, by its presiding justice, sitting as chancellor in equity, may immediately investigate the questions raised by this motion and may consider and determine (1) whether her property interests have been and now are fully protected; (2) whether there is any occasion for having these proceedings maintained on her behalf by "next friends," so called; (3) whether these proceedings were brought and are being maintained by said "next friends" for her benefit and in good faith; (4) to determine all other questions raised by this motion so far as may be necessary for the protection of her rights; (5) that said "next friends" may be discharged by the chancellor; (6) that the chancellor may make such other orders as may be necessary or just for the protection of the petitioner and of her property; (7) that her legal and equitable rights as a citizen of New Hampshire may in all respects, so far as these proceedings are concerned, be established and determined without further delay; (8) that the relations of said alleged "next friends" to these proceedings may be suspended by order of the chancellor until the questions hereby raised may be investigated and determined by him.

MARY BAKER G. EDDY.

STREETER & HOLLIS, *Solicitors.*

SUPERIOR COURT.

Merrimack, ss. April Term, 1907.

In the Suit Entitled

MARY BAKER G. EDDY, By her "next friends." *vs.* CALVIN A. FRYE, *et als.*

IN THE MATTER OF THE MOTION OF TRUSTEES BAKER, MCLELLAN, AND FERNALD FOR LEAVE TO INTERVENE AND BE SUBSTITUTED AS PLAINTIFFS.

(*Filed June* 5, 1907.)

Various questions of fact and of law supporting the motion having been submitted to the Court at the hearing, and the motion having this day been denied without any statement of reasons therefor, the Trustees respectfully request and move

1. That such decision be given in writing, stating the facts found and the rulings of law upon which the order denying said motion is based.

2. That the Court state the evidence upon which any findings of fact are based.

HENRY M. BAKER,
ARCHIBALD MCLELLAN,
JOSIAH E. FERNALD,

By their Solicitors, STREETER & HOLLIS.

TESTIMONIES OF HEALING.

Prompted by gratitude and the hope that others may be benefited by these words, as I have been by other testimonies in the *Sentinel*, I wish to tell a little of the great joy and help that have come into my life through Christian Science. Five and a half years were spent in suffering from nervousness and abdominal trouble, during which time I dragged out a miserable existence. Irritable and depressed, I could enjoy nothing and was scarcely able to attend to my household duties or care for my two small children. Several physicians, all of whom were kind and thoughtful, attended me and tried in every way to relieve my condition. I even submitted to an operation which promised to make me a new woman, but the promise was not fulfilled, and a new trouble was added to the old ones. After months of treatment in *materia medica* I was told that nothing but another operation would help me. Rather than undergo a second season of torture I determined to try Christian Science, of which I knew nothing except a little that two friends had told me. I was skeptical, but gave it a trial, and with five present treatments and about three weeks' absent treatment I was healed of these distressing ailments, and became so interested in the truth which I knew had healed me, that much of my time, both by day and by night, was spent in reading "Science and Health with Key to the Scriptures." Although there were times when it seemed that the old trouble had returned, still I never doubted, so sure was I that it was the healing power of Truth that had helped me. My gratitude for this healing is very great.

It is now three and a half years since I was healed, and for our family of four no drugs have been used and no physician called in that time. Previously we employed a physician constantly and were never without all sorts of drugs. We are especially thankful for the help Science has been to us in caring for our two little boys. It is beautiful to see how naturally and easily they respond to its teachings. For the spiritual light that has come through the writings of Mrs. Eddy, for the wonderful truths made plain, and the joy of waking each day with a new and beautiful sense of life, we are filled with gratitude and love to God. We love and revere Mrs. Eddy for her unremitting toil and watchfulness, and for the pure life which made possible the writing of "Science and Health with Key to the Scriptures."

MRS. AMIE H. PADDOCK, Pana, Ill.

Frequently I am asked if I consider it right to give Christian Science treatment to a child too young to choose for himself, the thought being that it may be right, if I so believe, to rely for myself entirely upon Christian Science, but that it is wrong to risk the health of a little child by not giving him medical attendance. This question shows a mother who is a student of Christian Science how entirely those unfamiliar with it misunderstand her point of view. A few facts from my experience may help to make this point of view clearer. I received my early religious instruction in an orthodox church and Sunday School, and at home was taught to believe in the use of homeopathic remedies for sickness; but at the age of fifteen, feeling the need of a more practical knowledge of God, I had outgrown the creed, and at twenty had outgrown also my trust in the power of drugs to heal sickness. At this time my health failed, and still believing in surgery, I struggled on for five years, submitting to three surgical operations, rest cure, massage, and so on, under kind physicians, in a vain effort to be again well. Then it was that I was really cured by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and that my hunger and thirst to know more of God began to be satisfied. During the following six years, through varied experiences, my reliance on Christian Science was complete. Often the help received was immediate; often, too, it came through a more or less prolonged struggle, and sometimes treatment from a practitioner was needed; but whether the healing was manifested quickly or slowly, the effect was always beneficial, both physically and spiritually. Is it, therefore, any wonder that when my little girl was born I truly felt Christian Science to be her highest inheritance? I could not reasonably deprive her of what I had proved to be the surest and safest help in the world, to relieve all forms of trouble.

I am glad to testify to the good results of Christian Science in the experience of this little child. It has protected her from most of the diseases which children usually undergo, and in the few instances when she has needed help, it has come quickly and effectually. One occasion when she needed such help occurred last winter, after I had returned from a particularly uplifting and helpful Wednesday evening testimony meeting. She awakened crying, and I found that she had a well-defined case of throat trouble. It seemed severe, and I telephoned a practitioner for help. Then sitting down quietly with her in my arms, I simply repeated aloud to her the scientific statement of being (Science and Health, p. 468), which she knows and loves. Gradually she became quiet, and in about fifteen minutes she was sleeping sweetly. I put her in her bed, and in fifteen minutes more her breathing was perfectly quiet and natural. Once during the night she awoke, breathing with difficulty, and as I went to her I realized that I needed only to stand upon the truth already proved. So we both went peacefully to sleep, and in the morning she did not even remember her dream of the night.

In contrast to this experience, is one through which I saw another child pass many years before. I remember the long night of suffering for the child, the anxious efforts of the parents as they applied all kinds of remedies, and the terror felt by us all. Now which was the more desirable and effectual means of healing, the drugs in this case or the scientific prayer in the other? Is it any wonder that we feel that this scientific prayer—declaring the Word of God to be true—is the greatest of all remedies? When we utter the words of Scripture with the spiritual interpretation as understood from the teachings of our text-book, this prayer heals because it is the Word of God. "In the beginning was the Word, and the Word was with God, and the Word was God." We who believe that this Word is Truth, demonstrating the power of divine Mind to heal the human mind and body, also believe and begin to understand the statement in Science and Health, page 483, "Mind transcends all other power, and will ultimately supersede all other means in healing."

BESSIE LEONARD YOUNG, New York, N. Y.

Having received so much benefit myself from the Christian Science literature, I have thought a great many times that I ought to show my appreciation by writing a testimony of my healing. I was led to Christian Science through the healing of my wife, in two days' treatment, of rheumatic trouble. At that time my wife bought a cloth-bound copy of Science and Health, and I thought it was a very high-priced book; but after a while I began to read it, and it was not very long until I had a pocket edition of the text-book for my own use. By reading Science and Health I was healed of stomach trouble of some years' standing. Later on I asked for treatment for the smoking habit. I had stopped the chewing of tobacco before I came into Christian Science, but I still felt a craving for it. While under Christian Science treatment the desire for

Digitized by Google

tobacco in any form left me. I have never lost a day from my work on account of sickness since I have been studying Christian Science, which is about seven years. For all this I return thanks to God, and to our Leader, Mrs. Eddy.

SAMUEL G. FINDLEY, Keokuk, Ia.

While I have every reason to be most thankful for my healing, I have for years delayed acknowledging it. Although each issue of our *Sentinel* and *Journal* has a full quota of good and reliable testimonies, there are many people, healed as I was, who never take the trouble to give their tribute to the Cause. Ten years ago I was in a New York hospital, about to undergo the operation of laparotomy, and was awaiting the decision of one more physician as to the advisability of delaying it a little so that I might gain more strength. I wrote my mother to this effect, and in reply she sent me a newspaper clipping relative to a friend of ours who had been entirely cured by Christian Science. I read part of the article, then threw down the paper and wrote my mother that I had put myself into the hands of physicians, and that they must carve me or do anything they thought best, but I should not turn back now. The medical verdict was that I should await the return of my physician from Europe, before having the operation. I returned to Buffalo discouraged. I had been an active business woman, but almost a year before had given that up; and my physician had advised me never to attempt it again, except in a very small way. It was said that I had several abnormal growths, and I had suffered from stomach and bowel trouble for years, the doctors saying that even the operation might not cure this disease.

The bowel trouble had given me much discomfort, each remedy in turn having lost its effect, but upon returning home I went to our family physician for a new prescription, although I had given up any hope of being relieved by medicine from my other troubles. Then my mother said to me, "Why do you not now try Christian Science? Your sister has been cured of that same trouble during your absence in New York." This seemed strange to me, and I asked for the name of the nearest Scientist. I remember that I asked the practitioner if she could do anything for me, even if I had no faith. I said, however, that I would not limit her as to time or price, but that I wanted to be cured of the bowel trouble, for I would know whether that was cured, but if the cure of anything internal were attempted I could not have such proof. The practitioner smiled, and assured me that mine was a very easy case. I thought quite differently, and that she would find it out.

The ending of my story is short. In two weeks' time I was entirely cured of the bowel trouble; in three weeks I was free from all other, to me, serious troubles, and at last I acknowledged that I was perfectly well. The practitioner then called attention to my glasses. I responded that an organic defect made them a necessity, but that I was willing to let her try what could be done in this respect. In spite of having resumed my business, which was at the time very confining work for my eyes, my glasses were laid aside in about a week. I kept them in my desk, however, for I seemed to dread to part with them, but I never tried to put the glasses on, though I had several temptations to do so. Then one day, about a year from that time, I broke them all and threw them away.

This Comforter, the "Spirit of truth" which Jesus promised to those who believe, has come, and every day we can have a tangible proof of the fulfilment of that blessed promise. Should not our hearts go out in thankfulness to Mrs. Eddy, who through great tribulation has seen the flood of light, and in Science and Health and her other writings is showing us how to use it? I feel that we must never be too much occupied to attempt the small demonstrations, as through them, step by step, we are led to a more perfect understanding.

C. W. FRINK, Buffalo, N. Y.

In recognition of the help and strength derived from the testimony of others, I gladly tell of the good that has come to me through Christian Science. Six years ago, through the reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of stomach trouble and the fear of eating many kinds of food. By the daily study of the Bible and this book my consciousness is gradually being redeemed from sickness, selfishness, fear, and the many kindred errors of the human mind. My thought goes out in love and gratitude to our dear Leader for all she has done and is doing for mankind. While expressing this gratitude her loving admonition in Science and Health comes to my thought: "Gratitude is much more than a verbal expression of thanks" (Science and Health, p. 3), thus leading to more perfect obedience to the Bible commands: "Preach the gospel," "heal the sick, . . . cast out devils: freely ye have received, freely give."

EVA MAY WILLIS, Cambridge, Mass.

I wish to utilize a portion of Thanksgiving day in describing my healing through the blessed promises of Christ Jesus, as illuminated for us by our revered Leader's untiring devotion to Truth. In childhood I suffered constantly with a supposedly inherited disease. In youth I suffered nearly eight years with running sores, and in after years I was continually troubled with an aggravated skin disease, which the doctors said was caused by the inherited trouble. This became so bad that it affected my eyelids, and a growth started which the doctors called malignant, and several of them said it would kill me in from six to twenty-four months. This was a little over a year ago. I had also been an almost constant sufferer from stomach and other troubles for over fifteen years.

About Sept. 1, 1905, I became so bad that in sheer desperation my wife and I decided that I should try Christian Science. I did so, and the stomach trouble was healed with the first treatment. For years I had not been able to eat supper without suffering greatly all night, but within six hours after taking my first treatment in Christian Science I ate a hearty supper and then enjoyed the best night's rest I had had in several months, sleeping as peacefully as a healthy child. My wife and I at once began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and in a short time she was greatly relieved of an old chronic ailment, while my other ailments were gone and a violent temper was fast being subdued. The abnormal growth, however, continued to enlarge, until one Wednesday evening the following February, when the reading of an article which had appeared in the *Journal* of June, 1893, opened my eyes to some of the errors that were holding me back from the full light of Truth. Within five minutes after this reading I involuntarily rubbed my afflicted eye, and to my astonishment and unspeakable joy the entire growth came out by the roots, and almost immediately the space closed up, leaving only a small red mark, which entirely disappeared the next day, leaving my eyelid in a smooth, healthy condition.

Upon this Thanksgiving day, instead of being in my grave or nearly ready for it, as *materia medica* would have had me, I find myself in an almost perfect state of health, having been healed in one short year of several diseases, besides profanity and a violent temper. Is it,

Digitized by Google

therefore, any wonder that my heart is full to overflowing with praise to divine Love, and with the determination that my life henceforth shall be such as to prove my gratitude to God, and to our beloved Leader for the truth which has been revealed to us.

CHARLES WALLACE HAYES, Fitzgerald, Ga.

Gratitude impels me to add my testimony to those of the innumerable company of mortals who have been lifted out of the miry clay and set upon the rock. I was very antagonistic towards Christian Science, believing everything I heard against its followers and its teachings, and disbelieving all I heard in its favor. I had the impression that Christian Scientists did not believe in the divinity of Christ and that they rejected the Bible; moreover, I did not hesitate to express my opinions on the subject. A great deal of suffering and trouble seemed to be necessary to open my eyes to the fact that I was mistaken. At fourteen years of age I had been "converted," and joined an orthodox church. I always longed for the blessed experience of sanctification which some of that denomination said they experienced. I did my best, but came short of the peace I desired. In December, 1902, after an attack of illness, I was left in a partially helpless condition, being unable to walk or to move my right limb. I was in a hospital seven weeks, having four doctors in that time, and was then taken home in an ambulance. I returned to the hospital twice during the summer to receive electric treatments. In the mean time I had osteopathic treatment for two months, some herb baths, etc.,—all with only temporary benefit, though my doctor did all he could for me.

During my last stay at the hospital I formed the acquaintance of a young girl who was the means of leading me to Christian Science. After she left the hospital she went to work for a lady who was a Christian Scientist, and soon had a copy of Science and Health of her own. Bitterly did I oppose her becoming a Christian Scientist, and I wrote her a letter in which I said that I would rather see her in her grave, with her old sweet faith in Christ, than to have her become a Christian Scientist. One day I was talking to her about her new faith, when she interrupted me by asking, "Have you ever read Science and Health by Mrs. Eddy?" I answered, "No." "How do you know so much about it, then?" she asked. That remark gave me the shock necessary to wake me up, and I consented to read the book. She borrowed one at the Reading Room for me, and I had not read fifty pages before I knew that I had found the truth and that I should be healed. I soon had a copy of my own and received treatment of a dear practitioner. One by one the ills clinging to me have disappeared, until now I walk with crutch and cane out of doors, and without either in the house. I do all my own work, and have excellent health. I have been healed of many diseases, have left off glasses, and have had many physical benefits which it would take too long to relate. But best of all I have found the peace for which I had so long sought. I have also been able to help others, for which I am more grateful than I can express.

When I think of the change in my experience, my heart goes out in gratitude to God, and to our beloved Leader, who has given us this wonderful new-old truth. I wish also to express gratitude for the *Sentinel* and *Journal*, which have been such a source of help.

ANNA F. WILSON, Seattle, Wash.

It is with a deep sense of gratitude to God, and to our beloved Leader, that I seek to express my thanks for Christian Science and what it has done for me. Truth has been our family physician for seventeen years. During the late summer and autumn of 1901 we had in our family a case of fever which brought out a most beautiful demonstration of the power of divine Love and Truth. The patient, my son, a young man, wanted no treatment but Christian Science, and had no other. He was working and boarding away from home at the time he was taken ill. He came home on Sunday morning and said he was not feeling well. He decided to remain at home that night, and after he was healed he said that it seemed as if he had gone to sleep then and not waked up until he awoke well. I give thanks to God as the ever-present Life that can and does dispel the illusion of death. I am also grateful that through the understanding of Christian Science as taught by our beloved Leader, Mrs. Eddy, he was healed. It seemed to be a most serious case. One morning when the practitioner came there was no sign of life, but he spoke to my son several times, and receiving no reply, began to treat him. My son then looked up, and reached out to shake hands. The Scientist asked him if he would like to get up and be dressed, and he said he would. With a little help he was soon dressed, and then walked into another room. He asked for something to eat and took a hearty meal. It was not long before he regained his strength, and his sight; his hair began to grow, also his finger-nails were restored. I wish to say again that there was not one single material remedy used. How can we ever fear to trust all to such a God who is Truth and Love!

MRS. A. GISNER, Scranton, Pa.

I did not come into Christian Science on account of physical healing; but after studying Science and Health carefully, and taking a course of instruction from one of Mrs. Eddy's pupils, I was convinced that Christian Science reveals the truth and is founded upon the immortal teachings of Christ Jesus. When I was fourteen years old I joined an orthodox church, and received many benefits from my connection with that church for over fifty years. I was well acquainted with many of its prominent ministers in Chicago, and considered some of them my personal friends; my children were all baptized in that church, and attended Sunday School and church services; I know that they also were very much benefited, and for this reason it was no easy matter for me to sever my connection with that church in order to join another religious organization. The demand upon me, however, seemed imperative for my own and my family's good, and I took the step without the least doubt as to its being the right thing to do in the light of the knowledge I had gained through my study of Christian Science. Since my association with the Christian Science Church I have been healed of bronchial trouble. I have also been healed of excessive nervousness, and a tendency to become quickly irritated at the least provocation. The habit of worrying about my business and my family affairs has likewise been cured, and I now know God is ever-present; that divine Love will deliver my family and myself from all evil, as well as from sickness and sin.

When I need help I study the Lessons from the Bible and Science and Health; I also repeat from memory and read the vivifying and immortal words of Christ Jesus, who was dear to me long before I knew of Christianity under this new scientific classification. Now that I have accepted Christian Science I am ready and earnestly desire to defend and maintain its teachings. I can assure the world that it is here to stay. It will live throughout the centuries as promulgated by our revered and much loved Leader, Mrs. Eddy.—BARTOW A. ULRICH, Chicago, Ill.

It is with much love and gratitude that I write these few lines to tell some of the many things Christian Science has done for us. Over four years ago, all material remedies having failed to help me, I went to see a Christian Science practitioner. I had been very sick, was then just able to

Digitized by Google

walk, and at times felt very miserable. I was discouraged and downhearted when I called on the practitioner, but she talked to me so kindly, telling me that God never sent sickness upon His children; that He is all-power and Love, and would heal me quickly, that I felt much better when I went home. The Bible was a new book to me, and I studied it with Science and Health every day. I had three weeks' treatment and was well, and how happy I felt! I could work all the time and was never tired. Since then I have had many demonstrations in the truth. Several times, when it has seemed hard to overcome severe ailments, I have asked a dear practitioner for help, and she has always been ready to help me. We have seven little ones in our family and there is hardly a day in which we do not overcome error in some way.

I thank God for giving us Mrs. Eddy as our Leader; she is so faithful and true. I am striving to follow on in the path of health and holiness, and hoping to be able to help others as I have been helped.

MRS. OLIVE WILKINSON, Custer, S. Dak.

After first hearing of the good work which Christian Scientists are doing, it took me ten years to become willing honestly and earnestly to study Science and Health. Since I commenced to study Christian Science with the right thought very many blessings have come to me, and no words can express my gratitude to God, and to the Founder of Christian Science for this healing truth. Soon after I commenced to read our text-book, my youngest daughter, then four years old, was healed of an alarming attack of throat trouble in a half hour, under Christian Science treatment. Two years later, while jumping some distance to the ground, she injured her ankle very badly, but the trouble was completely overcome in two days' time. Many different ailments and troubles have been destroyed for us by Truth. I consider the greatest of all our blessings to be the complete change of disposition in both my oldest daughter and myself. What a wonderful thing it is that in our time has been brought to suffering humanity the knowledge of Life as God, Mind, and that man was not made to suffer but to rejoice.

BERTHA ASHTON COOPER, Vineland, N. J.

I wish to express my sincere appreciation and gratitude for what Christian Science has done for me. I was a sufferer from asthmatic trouble for about fifteen years, sometimes being unable to do anything for weeks at a time. From one to two months every summer I was comparatively useless, although I tried almost everything I heard of in the *materia medica* line; and being a druggist, I made a special study of the various so-called remedies, only to find that the more I studied and tried the less help I seemed to receive from material means. I was treated by eight different physicians in that time, but none of them could afford me more than temporary relief. The last remedy tried was a hypodermic injection of morphine, and the doctor said he was afraid I would not pull through as my heart action was so weak. I had to resign my position as head clerk in the prescription department of one of the largest drug-stores in New York city in 1893, as the doctor said I must go West or I would not live very long; but that did not materially improve my condition.

Christian Science was first brought to my notice in 1903, by a dear cousin who had been healed through its influence, and as I had tried about everything else and had failed to get relief, I was willing to try anything that promised to help me. After a few treatments I could eat anything I wanted without any fear of its bringing on an attack of illness, whereas prior to that time I was in constant trouble, although I ate only such food as the doctor said I was able to digest. I have also been healed of the other diseases, as well as of a very hasty temper and profuse blasphemy, although I had taken treatment only for the asthmatic trouble. I had not been much interested as to whether there was a God or not, and hardly ever went to church, but I find through Christian Science that God is a God of love, and the Bible and Science and Health are my daily study. I thank God for a better understanding of the Bible through the illumination of Science and Health, as given to us by Mrs. Eddy, and I am trying to live so that my life may attest my sincerity.—WILLIAM LEGATE, Kalamazoo, Mich.

My heart goes out in gratitude to our beloved Leader for the truth she has given the world. He who will read "Science and Health with Key to the Scriptures," and open his heart to divine Love, will receive many rewards and his life will be one great harmony. Christian Science came to my help in 1899, when all else had failed. My dear mother said to me on the Sunday morning I reached New York, "There is God and Science; you know Christian Science has healed me, and it can heal you, dear boy, of the drink habit." For ten years I had been a slave to intoxicants, and in that time I had tried all the so-called cures, but they had no effect on me. Drink had been my false god, and for it I had lived, but when I reached home that morning I was willing to do anything for relief. I went down on Madison Avenue, where Christian Science meetings were held, and listened to the Lesson-Sermon. I was introduced to a practitioner, who asked me to call at her office the next day. I shall always remember that service, for never had I seen such love and happiness written on the faces of a religious body. Then, too, my hand was clasped in brotherly love, although I was addicted to drink. The same love was shown me next day, when the practitioner took me into her office and talked to me as I had never been talked to before. She gave me the first sight of God's great love, and showed me how Christ, Truth, was ready to give me help. She said, "God can heal you, and no other can. Look to Him for help and believe in Him, and the peace that passeth all understanding will come to you."

One treatment cured me. I read the Christian Science text-book, and have done so ever since. Taking the Bible and Science and Health as my guide, I have struggled through the wilderness of material thought until to-day I can see how great is Love, and I see in my daily life God's power to lead "beside the still waters," where one is at peace with all men. Again I lift my voice in praise to our dear Leader for the great good she has brought to the world, and I say in closing, "Seek, and ye shall find."

CHARLES ELMER BOND, White Plains, N. Y.

Two years ago I was taken seriously ill, having had three severe attacks, one Friday morning, another Friday night, and the third Sunday afternoon. We employed a Christian Science practitioner at once. I was not at any time under a physician's care, nor taking medicine of any kind. Every appearance of disease that followed was met and overcome by Christian Science. Just two months from the time I was taken ill I returned to my work, teaching school, going back and forth through all kinds of weather, not losing another day the remainder of the term. To-day I am in perfect health, never having had a return of the trouble in any form. I have indeed every reason to be grateful for Christian Science, not only for what it has done in the past, but for what it is doing for me every day.

EDITH A. THOMPSON, Alpena, Mich.

FROM OUR EXCHANGES.

[*The Outlook.*]

No one who does not know other literatures, and especially other Oriental literatures, can appreciate the extraordinary difference of note between the Bible and other writings; its quiet, apparently unconscious assumption of authority, its definite and unhesitating attitude of command, its direct statement without any attempt to buttress its position by abstract reasoning, its simple narrative of unprecedented experiences and unusual events as if they were matters of common knowledge, its freedom from abstract statement, its marvelous concreteness. It habitually wears the air and uses the speech of revelation; it never explains, justifies, reasons; it is throughout a literature of intuition, insight, and vision anchored solidly in human experience and vitally bound up with historical events. It is, above all other books, the Book of Life, not only because it deals with the ultimate things of the soul, but because it is the book of the life of a race; bone of its bone and blood of its blood in its substance, but soaring far above the reach of its highest experiences in its revelation of God to man and of man to himself.

[Rev. Glen Atkins, D. D., in *The Advance.*]

Jesus says that, if we are really believing in him we begin directly to take his place, to do his work and to fulfil his purposes. Now this argues two things. It argues first of all that Jesus Christ meant that his work should be permanent and that his presence should be immediate and continuing in his Church. This word of Christ argues indirectly that his works are of a sort which may be repeated. They are not in any way so signal that they belong to his time alone, they are capable of being passed on, they are part of the permanent inheritance of his disciples. Directly a man becomes his disciple the power to do his work is already resident in that man's life. . . . The Master's work is the inheritance and the high possibility of his Church, and no one of the great ends which he sought is for us impossible of attainment.

[*The* (London) *Christian World.*]

In religion, as in science, it is the unlooked for that has always been coming to pass. In every age the facts have in the rudest way been shocking the susceptibilities of the orthodox. Of this, Christianity itself is the best possible illustration. The Messiahship of Jesus was an affront to the whole church-consciousness of Judæa. The orthodox doctrine, preached in its synagogues and expounded in its divinity schools, was of a Messiah, son of David, who should come in power and re-establish the independence and glory of the old kingdom. What an intolerable audacity, this new heterodoxy, which proclaimed the lowly Jesus as the Anointed One, and the kingdom to be looked for as inner, and of the soul!

[*The Churchman.*]

Christianity is indeed, primarily and essentially, a religion and not a philosophy. A great preacher has recently called our attention to the frequency in our Lord's mouth of the words last, least, lost. The last shall be first, the least shall be greatest, the lost shall be found. A gospel which is in such a sense for all cannot be converted into a philosophy which in its very nature is for the very few, and they the greatest and the most favored. It must be, and forever remain, the simple, direct, social message of God to every human soul, of love and life.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

In all other countries, six cents per copy, postpaid to any address; twenty-five copies, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST

National.

Protection for the people was the topic of President Roosevelt's speeches at the Jamestown Exposition last week. Taxation and reclamation he regarded as important questions to be considered in the near future. Speaking of these he said: "One of two great movements in our public life is the question of, in certain ways, reshaping our system of taxation so as to make it bear most heavily on those most capable of sustaining the strain. The other is the question of utilizing the natural resources of the nation in the way that will be of most benefit to the nation as a whole. The conservation of our natural resources and their proper use constitute the fundamental problem which underlies almost every other problem of our national life."

Visitors at the Charlestown (Mass) Navy Yard nearly all walk the length of the reservation to get an opportunity to see the Constitution, which is being restored to her old-time fighting appearance, and now have a fine chance to view the guns which will constitute the frigate's armament. There are fifty-four of these guns, and they follow as closely as possible the style used on the ship at the time of her world-famous battle with the Guerriere. They were cast at the foundry at the local yard from models made after plans taken from old prints and drawings of the ship's armament.

Export returns of the Bureau of Statistics of the Department of Commerce and Labor show that wheat exports in the ten months ending with April aggregated about 66,000,000 bushels, while flour exports also show an increase. This is the natural sequence of the large crop of 1906, which was the second largest ever produced in the United States. The total shipments during the entire fiscal year, wheat and flour combined, may be estimated at about 140,000,000 bushels. Thus it appears that the United States has regained, in part at least, its position as one of the important wheat-exporting countries of the world.

Neither the bears in Wall Street nor the croakers at large, though aided and abetted by the clerk of the weather, are able to check the progress of prosperity, according to the officials at Washington. The Government's cash balance is $85,000,000 larger than last year at this time. The postal receipts for the year will be a record—exceeding $180,000,000—a gain over last year of $12,000,000. This indication of a growing business is found in every part of the country. The railroads are still unable to furnish cars for all the traffic that is offered them.

The Wabash Railroad came in last week for the largest number of convictions ever made in the United States District Court for the southern district of Illinois. A jury, after being out forty-five minutes, returned a verdict finding the road guilty on fifteen of the seventeen counts, alleging violations of the interstate commerce law by failing to have freight cars equipped with safety appliances.

The opening move of what is expected to be a great contest between the United States Government and the coal roads, was made in Philadelphia last week, when the suit against the anthracite coal-carrying railroads, which are charged with carrying on a monopoly in the production, transportation, and sale of hard coal, was filed in the United States Circuit Court.

Errors in crop estimates by the Department of Agriculture have commonly been on the side of conservatism, and keeping this fact in mind, it is safe to accept the report for June 1 as evidence that the wheat crop of 1907 is more likely to exceed the average yield of the last ten years than to fall below that level.

The State of Minnesota is about to begin suit to oust the Standard Oil Company from the State. The suit will be based upon an alleged violation of the Hinton Law, which provides that the price of oil must be uniform throughout the State, allowance being made for shipping charges.

International.

The list of delegates and attaches to the Second Peace Conference at The Hague on file at the Dutch Foreign Office June 13, numbered one hundred and ninety-nine. It is apparent from prevailing gossip that the chief interest of the Conference will revolve about the jealousy and antagonism between Great Britain and Germany. Already a feeling is prevalent among the diplomats that the United States is destined to play a great role in the coming Conference. The general position of the United States may be summed up as follows: The most advanced position on any question involving the peaceful adjustment of international disputes, whether the subject comes up in the form of a proposal for the limitation of the expenditures for armaments, the immunity of private property at sea, the extension of the principle of arbitration, the permanent strengthening of the personnel of The Hague tribunal, or the Drago doctrine.

The *Echo de Paris* prints a report that a wealthy Parisian will form a company and pay to the Wright brothers of Toledo, O., a million francs for the right to manufacture the aeroplanes invented by them after the Wrights have made a successful test. The Ministers of War and Marines have promised to buy a dozen aeroplanes from the company. Another report states that German capital is ready to manufacture the aeroplanes, paying the Wrights a royalty.

The attempt made by the Radical members of the lower house of the Russian Parliament to instruct the Agrarian Commission to adopt the principle of compulsory expropriation of land was defeated by the Constitutional Democrats. By imperial ukase the Douma has been prorogued until Nov. 13, and while agrarian disturbances are anticipated later, a spirit of quiet confidence in the ability of the Government to handle the situation prevails in administrative circles.

The *Jiji*, published at Tokio, in a leading editorial says the recent assaults on Japanese in San Francisco were merely incidents growing out of the industrial troubles in that city, and that they do not constitute a cause for diplomatic action. The editorial advises that the authorities be trusted to mete out justice, and deprecates the outcome of the affair.

Russia's plan of reconstruction in the Far East now appears to be based on fear of China. Notwithstanding a lack of money, Russia is endeavoring to greatly strengthen her Siberian borders. The effect of their loss of prestige with the Chinese powerfully impresses the Russian people.

After an interval of six weeks, an earthquake shock, lasting four seconds, occurred at Kingston, Jamaica, June 13. On the same day a severe shock was experienced at Valvivia, Chile. Several buildings and the railroad bridges there were destroyed and five persons were killed.

The Franco-Japanese agreement was signed at Paris, June 10, by Foreign Minister Pichon in behalf of France and Minister Kurino for Japan.

Emperor Francis Joseph of Hungary celebrated the jubilee of his coronation as king of Hungary, June 8, 1867, at Budapest.

Industrial and Commercial.

A plan is being developed in Switzerland to conserve all the water power from the many Alpine streams, and apply it electrically to the propulsion of the trains on the existing main line railways, thus avoiding the necessity for importing coal for railway transport purposes, and developing the power resources of the land itself. A far greater scheme than the above has been laid before the American Institute of Electrical Engineers, this being nothing less than the conversion of the entire motive power system of the railroads of the United States from steam locomotives to electric traction and stationary power houses. As a consequence of an investigation it appears that if the single phase system, as adopted by the New York, New Haven, and Hartford Railroad, were installed on all the railroads of the United States, with generating stations such as are now in actual service, the aggregate cost of operation, now about $1,400,000,000, would be reduced by about $250,000,000.

By spending a few million dollars the United States can reclaim enough land along the Mississippi River, now valueless, to duplicate the entire cotton crop of the South. It has ben proven that there are thirty thousand square miles capable of yielding indefinitely, without fertilization, a bale to the acre, and even allowing for only one-half of it to be in cultivation at any one time, there would still be land enough to give ten million more bales of cotton than the South is now producing.

The shad situation is causing the fish commissioners no little uneasiness, for not only is this season poor, but future seasons are likely to be poorer, as each depends on the success of its predecessor of five years before. The decrease in the run of shad in the Connecticut River in the last few years can be rightfully attributed, the commissioners say, to the direct results of the decrease in the number of shad fry available for planting.

The torch has been applied to the new three hundred-ton furnace of the Alabama Consolidated Coal and Iron Company at Gadsden, Ala., which is one of the most modernly equipped plants in the South.

The *Iron Trade Review* says a new record in blast furnace production was made last month, statistics showing an output of 2,291,030 tons.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[From *The Boston Globe.*]

MRS. EDDY IS KEEN, ALERT.

EDWIN J. PARK.

Concord, N. H., June 15.—At her beautiful home, Pleasant View, this afternoon, Mrs. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, for the first time in six years gave a real newspaper interview, and for forty minutes talked not only entertainingly but with animation and keen intelligence on a number of subjects in which she is concerned.

When I make the statement that this was the first real interview Mrs. Eddy has given to a newspaper man in six years, I use the word "real" because I have in mind the fifty-five second meeting which about a dozen—eleven I think was the actual number—of newspaper writers had with Mrs. Eddy at her home on the 30th of last October. At that time Mrs. Eddy was in the presence of the reporters for less than a full minute and only a few questions, three or four, as I now recall it, were asked of her. The questions on that occasion were asked by a young woman who had been selected to perform that duty, and while Mrs. Eddy answered them readily, no opportunity was given any of the other writers present to propound any queries of their own or to hear her participate in a sustained conversation.

This afternoon I met Mrs. Eddy under far different and more satisfactory conditions. I was admitted to her study, and sitting in front of and close to her, I had for forty minutes an opportunity for uninterrupted conversation with the famous woman and for observation of her.

Mrs. Eddy Did the Talking.

In the interests of strict accuracy I desire to state at this point that most of the talking was done by Mrs. Eddy, and that my role was principally that of a most interested and earnest listener. The principal part I took in the conversation was occasionally to propound a question. Mrs. Eddy talked fluently and incisively. At no time was she at loss for a word or an idea in conveying her meaning to me. Considering her age—she will be eighty-six years old the 16th day of July—Mrs. Eddy's memory for dates, names, and circumstances seemed to me to be marvelous. In fact her memory in that regard is far superior to mine, as I took occasion to tell her, and I am a great way from being eighty-six years of age.

It is not my purpose to write a brief for Mrs. Eddy nor in her behalf, but to relate with entire truthfulness and as much accuracy as possible what occurred between us at Pleasant View this afternoon. I am not an alienist, and my experience with women eighty-six years of age has been *nil*, but I do desire to say here that if the mental competency of Mrs. Eddy had not been called in question by the "next friends," and if I had met her and talked with her as I did this afternoon, the thought that she was not fully competent mentally would have been the last one that ever would have entered my mind.

It is true that Mrs. Eddy is not robust, physically, and that her hearing is not acute, but her brain is keen and active, and there never is a moment of hesitation in replying to a question nor delay in forming the phraseology in which she answers. The trend of her thoughts remains unbroken, and her alert mind turns instantly from one line of suggested thought to another one put forward to take its place.

Quick Shift of Topic.

This afternoon I purposely diverted her mind from one line of thought concerning a question I had asked her in regard to her son, George W. Glover, by suddenly inquiring of her if she personally keeps an oversight of her household and its affairs, and she took up the new idea suggested to her and proceeded to talk upon it with not a moment's delay, her mind grasping the new subject, as dissimilar from the former one as I could think of, almost before I had the question formulated.

Apparently every faculty of Mrs. Eddy, with the single exception of her hearing, is unimpaired. To my mind, one of the most remarkable things she did this afternoon was to read without glasses. When I entered her study she was reading with the naked eyes a typewritten letter from J. R. Mosley of Macon, Ga. It contained a message of sympathy and good cheer and Mrs. Eddy was much pleased by it. She read the letter to me, and later she read to me a selection from her book, Science and Health, printed in small type, as an answer to a question I had propounded to her. Still later, in my presence, she took a copy of Science and Health, which she presented me, and wrote in it my name and "Compliments of the author, Mary Baker G. Eddy." When she came to write my name she took my card in her left hand to make sure of the initial, and read the card without glasses, as she had the typewritten letter and the extract from the printed book.

Received at Pleasant View.

I was received at Pleasant View about 1.57 o'clock by Mrs. Laura Sargent, Mrs. Eddy's companion. Mrs. Sargent showed me into the reception room at the easterly side of the hall, the room in which I had seen Mrs. Eddy last October, and in that room I met Archibald McLellan of Boston, one of the three Trustees of Mrs. Eddy's estate. I chatted with Mr. McLellan about two minutes, and then Mrs. Sargent came to the door and said Mrs. Eddy was ready to receive me. Mrs. Sargent showed me to Mrs. Eddy's study at the head of the stairs on the second floor, and I was introduced to Mrs. Eddy. Mrs. Sargent retired.

Mrs. Eddy was sitting in a large easy-chair, in the southeasterly corner of the large room, a writing-desk at either side of her and a magnificent view of the Merrimack valley stretching away to the eastward. When I was presented, Mrs. Eddy arose and stepped forward about three or four feet to meet me, with her right hand outstretched in greeting. Mrs. Eddy grasped my hand firmly and said,—

"Mr. Park, I am very glad to see you. I am glad to

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

welcome you here, for I am aware of the fairness with which you and the *Boston Globe* have treated me."

Mrs. Eddy then stepped back to her own chair, and motioning me to another easy-chair directly in front of her, asked me to be seated. In the brief time the introduction and reception occupied I noticed that Mrs. Eddy, who had only just returned from her daily drive down to the city, was dressed in a black silk dress, with white lace about her throat and wrists, that her lace collar was caught at the throat with a diamond sunburst of great beauty and undoubted value, and that her pose was that of a distinctly self-contained and reliant woman.

Reads Rapidly and Clearly.

When I entered her study Mrs. Eddy was reading a typewritten letter, and she held it in her left hand as she rose to greet me. When she had made me welcome and had resumed her chair, she said,—

"I was just reading a most cheering and comforting letter from Mr. Mosley. I will read it to you," saying which she read me the letter rapidly and clearly. When she had laid the letter aside I remarked that I never had had the pleasure of meeting her personally before, and I said, "You do not appear in public much of late years, Mrs. Eddy. I am sure many people would be glad to see more of you."

"It is quite impossible to do so," she replied.

"Many have wondered that you do not," I ventured.

"The best reason why I do not appear more in public," responded Mrs. Eddy, as she reached out her left hand and took from the desk a well-worn copy of Science and Health, "appears in this book. I will read it to you."

Then, without the aid of glasses and unhesitatingly, she read the following from Science and Health, which I found later in the copy she gave me to be printed on page 464:—

"It has been said to the author, 'The world is benefited by you, but it feels your influence without seeing you. Why do you not make yourself more widely known?' Could her friends know how little time the author has had, in which to make herself outwardly known except through her laborious publications,—and how much time and toil are still required to establish the stately operations of Christian Science,—they would understand why she is so secluded. Others could not take her place, even if willing to do so. She therefore remains unseen patiently at her post, seeking no self-aggrandizement but praying, watching, and working for the redemption of mankind."

"Dear," in Kind, Motherly Way.

When she had concluded reading this excerpt Mrs. Eddy laid the copy of her book carefully back on the desk and said, "I shall be glad to present you with a copy of my book. Would you like it?" I replied that I would, and Mrs. Eddy reached for a push-button which hung conveniently at her right hand, and there was an answering ring, three times repeated, in another part of the house. Almost immediately Mrs. Sargent appeared in the doorway and said, "Yes, Mrs. Eddy."

"Please get a copy of Science and Health, dear, for Mr. Park," said Mrs. Eddy, and Mrs. Sargent bowed and disappeared. She returned quickly with the copy of the book, and Mrs. Eddy said, "Thank you, dear." Mrs. Sargent asked if there was anything else Mrs. Eddy wanted, and she replied, "No, dear," and then Mrs. Sargent retired.

"Dear," spoken in a kind, motherly way, appears to be a favorite expression with Mrs. Eddy. At a later time in the afternoon, when she had summoned the Bohemian housekeeper to the study, she called her "Dear," and several times when replying to questions I had asked her, she spoke to me similarly, saying, "Yes, dear," or, "No, dear."

Before I left her this afternoon Mrs. Eddy wrote my name and "Compliments of the author, Mary Baker G. Eddy" on the fly-leaf of the book she gave me. By or on behalf of the "next friends" the authority of Mrs. Eddy's signature to several letters or other documents has been questioned. There can be no question as to her signature in my book. I saw her write it.

Talks of Husband's Death.

Mrs. Sargent having brought the copy of "Science and Health" which I was to be given, and having retired, I said to Mrs. Eddy:

"You know, of course, of the great interest which has been aroused by the 'next friends' litigation. Won't you tell me something about it? And also something about your son, George W. Glover?"

"You mean the 'next friends' *alias* 'next enemies,' do you not?" she replied, without a moment's hesitation and with a trace of a smile. Then she continued:—

"I was unfortunately situated about the time of the birth of my son. My husband, Maj. George W. Glover, was in business in Charleston, S. C., where we had gone to live after our marriage. We had not been married quite a year when he went to Wilmington, N. C., on a business trip and I went with him. At Wilmington he was attacked by yellow fever and he died there after nine days.

"The people in Wilmington said that it was unprecedented for a man to live so long with yellow fever, and they attributed his withstanding the disease so long to the prayers of his wife. When my husband died I was in a most distressing predicament, as I was left alone far from my friends. The people there told me that it would be months, perhaps years, before I could get all his affairs settled, and I desired to return to the home of my father at Sanbornton Bridge in this State.

"My husband had been a Mason, and the dear Masons of Wilmington were very kind to me. One of them was chosen to accompany me to my father's house, and he never left me until he had seen me safely inside the door. My son was born at my father's house, but my father married again, and it was not pleasant for me there. You know that old couplet, 'A mother's a mother all the days of her life, but a father's a father until he takes another wife.'

Leaves Father's House.

"When my son was eight years old I determined to leave my father's house to pursue my literary work, and I selected as the woman best calculated to care for the child, the wife of Simeon Cheney, who was formerly Mahala Sanborn, who had been our nurse and who I knew to be a good girl, kind and tender, and who I knew would take good care of my boy.

"I was then able to earn fifty dollars a week by my writings, and I had been offered three thousand dollars a year to write for the *Odd Fellows Covenant*, as it was called in those days, published by the United States Lodge of the Odd Fellows. Later the name was changed to the *Odd Fellows' Magazine*."

Mrs. Eddy mentioned the names of the different men who were editors of the magazine, and at a point where she paused briefly I remarked:—

"Your memory for names and dates is much better than mine."

Mrs. Eddy leaned forward and said earnestly:—

"You could do it if you tried. It is all a question of the triumph of Mind over matter. You could do it if you tried. I should love to have you for a student."

Never Forgot Boy.

Continuing, Mrs. Eddy said:—

"I was very busily engaged in my writings, but I never forgot my boy. He was a very smart boy and the Cheneys grew very fond of him, and they wanted to keep him for their own. I sent them money for his educa-

Digitized by Google

tion and support, and I wrote to him many times, but they kept my letters from him, and they told him his mother was dead. The result was that finally, believing me dead and not liking the way in which he was treated at the Cheneys, George ran away. I searched and searched for him, but never could find him, and for a long time I could get no trace of his whereabouts. Finally I heard through a letter from my relative, Mrs. Alexander Tilton of Sanbornton Bridge, that my boy had enlisted in the army and had gone to the front. It was then too late to do anything. George went into the army when he was sixteen and served four years, coming out when he was twenty, and then he went back to the West. I got in communication with him then, and wanted him to come to me, but he preferred the Black Hills. In 1899 I built and furnished him a house in Lead City, S. D., and it is a better house than the one I live in, and I have furnished him money from time to time."

Other Subjects Introduced.

At a pause in Mrs. Eddy's story concerning her son I suddenly switched the conversation by saying:—

"You have a very beautiful place here, Mrs. Eddy. Do you look after it and personally control your household?"

"No living person," she replied at once, with marked animation, "abridges my rights in this house or governs my actions."

Then I made another abrupt change in the line of thought by saying: "Mrs. Eddy, would you mind telling me what impelled you to place all your property in the hands of your three Trustees at the time you did (March 6)?"

"Certainly not," she said without the slightest hesitation. "I had come to a place where I could not carry on my work of Christian Science and attend to my business affairs. Some nights I had lain awake all night considering my Christian Science work, and then the next day I would be occupied all day with my business affairs, and there had been long growing in my mind the understanding that I must give up one or the other. My mind was too much diverted by business cares to give the thought to Christian Science which that demanded, and finally, a week or a fortnight before I created the trust, I called Laura Sargent into my room and I said: 'Laura, I am going to put my business out of my mind. I cannot go on being pulled one way and the other by material and spiritual matters,' I said, 'I am going with God.' No one but Laura Sargent knew of my decision until I sent for General Streeter and told him what I wanted done.

Selection of Trustees.

"I will tell you why I selected each of the Trustees. I selected H. M. Baker because I knew he was a Baker and was honest. I knew him thoroughly and knew that he was capable of my business. I took Archibald McLellan, the editor of my papers, for the next one, because I knew him and that I could trust him. I took Josiah E. Fernald of Concord, who is president of a national bank and who is treasurer of the Old Ladies' Home, and is a man I know personally, for the third one, and I don't believe I could have done better in making my selections. I picked them all out myself and for the reasons I have given you.

"By appointing them Trustees of my estate, I was made safe in my property and was relieved of the burden of caring for my material interests. I was not only relieved of the burden of caring for my business, but I was also relieved of what I call the inconsistency of bearing the burden, for one cannot serve two masters, and I chose the spiritual. I went with God. I have shut out society; I haven't time for it. I have things of more value to my life and to mankind to attend to."

Devoted to Her Work.

"May I ask," I said to Mrs. Eddy, "if you are now at work on additional writings on Christian Science; if you are amplifying what you have already written?"

"Yes, constantly. I am writing and studying, reflecting, all the time. I have dismissed material affairs from my mind wholly and am giving myself altogether to my work."

At this point, although having somewhat abruptly changed the subject of conversation in the same way once or twice before, I said to Mrs. Eddy:—

"Mrs. Eddy, adverting again to the subject of your household, do you wish me to understand that you personally oversee the arrangements and operation of the establishment?"

Inadvertently I had dropped my voice quite low, and Mrs. Eddy did not catch the question offhand. She leaned forward in her chair and said: "What, dear?"

I repeated the question, and she immediately reached for the push-button, which was near her right hand, and I heard the bell ring.

"I will answer you in a few moments," she said smiling.

Refers to Next Friends' Allegations.

Pending a response to the bell, and the response was not long in coming, Mrs. Eddy remarked, referring to the allegations of the next friends that she is not mentally competent, "I think I am *compos mentis*, but I may be mistaken." She smiled when she said this. Then she said: "I look after the house in a general way, and I look after the whole place, too. Why, when they repaired the fountain out there (pointing to the lawn), a short time ago, the men watched my window about all the time to see if I was looking at them, and they found I was. They were very grateful to me for the words of praise I gave them."

When Mrs. Eddy had proceeded thus far there came a response to the call she had sent on the bell, and the response was Mrs. Eddy's housekeeper, a young woman who had been recommended to Mrs. Eddy by a Western Christian Scientist and who is greatly appreciated by Mrs. Eddy.

The housekeeper was plainly flustered at her unexpected summons before the head of the house, and she started in to apologize for her appearance, although there was nothing about it that required an apology. She was a neat, wholesome-looking young woman, in the attire in which she had been at her duties about the house.

"Never mind, dear, you're all right," said Mrs. Eddy, and that quieted the housekeeper somewhat.

Direction of Household.

Then, as an answer to my question as to whether she really concerns herself, personally, in the matter of looking after the household and the estate at Pleasant View, Mrs. Eddy held this colloquy with the housekeeper:—

Mrs. Eddy—"Are you my housekeeper?"

"Yes, ma'am," affirmed the pleased and radiant girl, bowing and smiling.

"Do I go down stairs and look around every day and see that everything is running smoothly?" asked Mrs. Eddy.

"Yes, ma'am, you surely do," answered the housekeeper.

"Am I careful and observant?" said Mrs. Eddy.

"You surely are, ma'am."

"Have I arranged the furniture and shown just how I wanted it?" pursued Mrs. Eddy.

Digitized by Google

"Yes, ma'am, you've told me just how everything is to be."

"That will be all, dear," concluded Mrs. Eddy, and the housekeeper bowed herself out.

"My household is very harmonious and very devoted to my interests," continued Mrs. Eddy, after the housekeeper had gone. "Mr. Frye has been with me for twenty-five years, Mrs. Sargent for eighteen, and my cook for fifteen, and they are all most faithful."

As her last act in concluding the interview Mrs. Eddy wrote the inscription in the copy of Science and Health which she presented to me, and as I was leaving her study Mrs. Eddy, showing no signs of fatigue from the interview, which had lasted forty minutes, said:—

"I am very glad to have seen you, Mr. Park."

KNIGHTHOOD IN CHRISTIAN SCIENCE.

W. D. MCCRACKAN, M.A.

DURING the age of chivalry a man-at-arms could not become a knight until he had taken an oath to protect the distressed, maintain the right, and live a stainless life. He was a champion of good against the assaults of evil, so far as he understood these terms. The Christian Scientist of to-day, though bound by no oath, is also serving God, good, in a knightly manner, and is called upon for constant proofs of his prowess and generosity.

He is like one of these knights starting on a journey on an errand of mercy and succor, and taking with him a perfect outfit. He knows that his spiritual equipment is designed to meet every need he may experience and to protect him from every attack he may encounter. He rejoices in a sense of good cheer and security, and he is eager and earnest in his desire to test his strength under varying conditions and multifarious circumstances, because he trusts in God's loving care. No wonder he fares forth in a happy mood, even though his way may take him at times through dark forests or across barren deserts. He feels confident that experience will surely develop his aptness in handling the weapons of his warfare. He places complete reliance upon the absolute goodness of God, who will see that he is never tried beyond his powers of endurance, nor tempted without a sufficient understanding of Truth and Love to enable him to resist successfully. The knights of old acted largely upon the measure of reliance they placed in their well-tested weapons and accoutrements. The old Teutonic traditions especially have much to say about the swords of redoubtable warriors. There are anecdotes, songs, and pictures, representing famous knights addressing and acclaiming their trusty swords as loyal friends and good comrades.

If the age of chivalry, with its ideals largely tinctured by false notions, could produce so valiant a loyalty in the heart of a knight towards his sword of steel, surely this new age of spiritual enlightenment must produce a far nobler devotion on the part of the Christian Scientist towards "the sword of the Spirit" which he is privileged to wield. In "Science and Health with Key to the Scriptures" (p. 595), Mrs. Eddy gives the spiritual definition of the term "sword" as "the idea of Truth; justice." Elsewhere in this same work she writes of "the sword of Science" (p. 266), and "the two-edged sword of Truth" (p. 458). In fact the whole-hearted loyalty of Christian Scientists as a body towards the truth they have been taught, is remarked by many who have no understanding of this truth itself. More fearless than any legendary knight of old, issuing from his castle gate to seek out and destroy the dragon lurking in the neighborhood, must be the Christian Scientist of to-day who purposes to triumph over the great red dragon mentioned in the Apocalypse. Better acquainted and on better terms with the power and temper of his great two-edged sword must he be, than was the ancient warrior expected to be with his material weapon.

More consecrated to his ideal than any knight-errant pursuing his way through forest and stream, must be the Christian Scientist who has enlisted to follow the Christ, the Way, where'er Truth may lead. He must be absolutely undeterred by the self-sacrifice entailed and by the ceaseless demands of self-conquest. He must be obedient, meek, and mighty, and learn to follow the trail, the narrow way which leads over hill and dale, by precipice and peak, to the final summit, which is aglow with the sunlight of God's love. None so ready as the true knight to recognize the qualities of real leadership in another,—in one whom God has appointed and who has proved this divine commission by faithfully pointing out His waymarks.

"THE WAY TO EXTRACT ERROR."

ARTHUR E. JENNINGS.

OUR text-book tells us that "the demands of God appeal to thought only" (Science and Health, p. 182). I shall never forget the joy that came to me when I first caught a glimpse of the meaning of that statement. I had been a student of our text-book some considerable time, and no doubt had read this sentence over and over again, but I did not appreciate it until I arrived at a certain point in my demonstration over sense and self. Then I saw what an enormous amount of patience our Leader must have in proving to so many that "the way to extract error from mortal mind is to pour in truth through flood-tides of Love" (*Ibid.*, p. 201).

What a vista of thought this opened out to me. It enabled me first of all to grasp the meaning of the passage from the Lord's Prayer: "Give us this day our daily bread," as interpreted by Mrs. Eddy: "Give us grace for to-day; feed the famished affections" (*Ibid.*, p. 17). It is a help to know that this interpretation is correct according to the original language, and it is so comforting and healing to experience the understanding spiritually, and apply it to our daily life. Many times since then I have been able to rely upon divine "grace" and apply that prayer to my daily needs. We often hear the Bible quotation: "My grace is sufficient for thee," but what a substantial thing that grace becomes in Christian Science. It enables us to rely less and less upon materiality and personality for happiness and success. Now we know that happiness is spiritual, therefore we are not so easily disappointed or discouraged. We can affirm the truth about every real thing and every real individuality, in face of all seeming trouble and misunderstanding. Then we are truly relying upon His grace by making God first in our affections and in our aims.

One of the first lessons which I learned from our text-book was this: If I saw evil I realized that I must get it out of my own consciousness; and in order to do so I must understand the Principle and rules of Christian Science and be governed by them. I had a simple illustration of this one evening recently. I was riding along one of the beautiful lanes in this county on my bicycle, when I came upon some children playing in the road. I rang my bell, but in spite of that a little boy playing with a hoop ran across right in front of me, and I had to dismount quickly. I stopped and spoke kindly to the children without referring to the incident, and the little boy looked up and said smilingly to his playmates, "I did not hear that man's bell." I believed that child. He was so intent on his play that his ears were closed to everything else. I was thankful that I had enough understanding not to rely entirely

Digitized by Google

upon the child's sense of hearing for his safety, and as I proceeded on my way I thought how much my experience in Christian Science had been like this. When I stopped relying upon material sense, and helped others through "flood-tides of Love," there was safety. When I learned not to wait for another to get out of the way, but to act myself and trust Principle, there was harmony.

FRAGMENTS.

C. VERRALL.

In reading one of the letters to our Leader published in the *Sentinel*, some inspiring thoughts came to me which led to the question, What are the "fragments" that remained after the feeding of the five thousand? Some weeks later the answer came in connection with work which seemed almost unprofitable and needless, but which came in the form of duties that some one must undertake. I asked myself, Are not the fragments which the multitude rejected as worthless and insignificant, the opportunities of service for which we may receive no thanks, and for doing which we may even be despised? This thought led to another. What is it that makes a home in the real sense? Is it not those little nameless sacrifices which cannot be paid for, which are not acknowledged to be the special duty of any one, sometimes only the loving touch added to work which has been considered finished? Then came the thought of a home of which the owner said, "I never think of it as my own." It was a home like that which Jesus provided for his followers. Wherever he was, there was a home,—on a mountain, in the wilderness, or on the water. Wherever the Master was, there was the sense of safety, plenty, and protection,—the consciousness of the infinite love of the Father-Mother God for all His children, and tender care for even those who were quite unconscious of the blessings they were receiving.

By sharing her letters with us, as well as in a multitude of other ways, our Leader is feeding thought with the "bread of life," and is thus strengthening feeble hands in their efforts to supply their own and others' needs.

[Written for the *Sentinel*.]

"THE KINGDOM OF HEAVEN."

BEN. HAWORTH-BOOTH.

It gleams as lightning in the lurid shade;
'Tis like the leaven that the housewife laid
Unseen among the meal, till all was made;
Like fisher's net, filled from the weltering deep
With bad and good, to cast aside or keep;
It comes in silence, thief-like, while we sleep;
Like the small mustard-seed, uncared, that fell
And grew the mightiest of the herbs, until
The birds of heaven upon her branches dwell;
'Tis like the king who for his marriage-feast
Called rich and poor, the peasant and the priest;
But all men made excuse, the greatest as the least.
Like the ten virgins that the scrolls record,
Who took their midnight lamps to meet their Lord,
And five had oil, and five no oil had stored;
'Tis like hid treasure that the swain hath found
Deep in the delvéd earth, then casteth round
To sell his heritage and buy the ground.

Seek ye such goodly pearls? This merchandise
Is safe from sordid hands and envious eyes:
Sell all ye have, to gain so great a prize.
There is no male nor female, bond nor free,
Nor Jew nor Greek henceforth remains for me,
For we are one with Christ in God's eternity.

SELECTED ARTICLES.

[Mrs. Phillip Martineau in *The Onlooker*, England.]

There was once a clown who yearned to play tragedy, but who could never obtain a hearing owing to the peals of laughter which greeted him from a too faithful audience.

Mark Twain's reputation as a humorous writer hardly warrants his excursion into the deeper field of metaphysical healing. It is unnecessary to dwell on the bad taste of his humor, for it has been fully commented on by many of the leading papers; but his rapid flights from strong abuse to highest praise leave one in considerable doubt at the finish as to his object in writing such a book.

If it is to decry the Christian Science Leader, Mrs. Eddy, he fails on his own showing, for while abusing her in no measured terms, he cannot speak too highly in favor of Christian Science! He quotes from her book Science and Health (chapter on Prayer)—"*The Divine Being must be reflected by man,—else man is not the image and likeness of the patient, tender, and true, the One 'altogether lovely,'*" and does not see that unless she *were* reflecting the Divine, that it would have been impossible for her to have healed the sick (and without payment) during many years, as he relates in another part of his book. It seems as though Mark Twain, while partially reflecting the bitter hatred evil has for Mrs. Eddy, is forced by the power of Truth, involuntarily as it were, to admit here and there throughout his book the efficacy and wonder of that Power in healing sin and sickness—a power lost to us as regards practical demonstration since the third century, and made known to us again by Mrs. Eddy. He admits on p. 53 that Christian Science can banish four-fifths of the pain and disease in the world, and says (p. 268): "*But there is a mightier benefaction than the healing of the body, and that is the healing of the Spirit, which is Christian Science's other claim. Personally, I have not known a Christian Scientist who did not seem serene, contented, unharassed. . . . Time will test the Science's claim. If time shall make it good, if time shall prove that the Science can heal the persecuted spirit of man, why then Mrs. Eddy will have a monument that will reach above the clouds.*"

And while endeavoring to prove that she was incapable of writing Science and Health," he yet says (p. 171), talking of her ideas: "*This one came out of no ordinary business head, this must have come out of her own . . . there has been no other . . . in a thousand years that was equal to it.*"

Many of the statements he makes are inaccurate. For instance: That on supposed evidence of unequal writing, Mrs. Eddy could only have written twelve pages of "Miscellaneous Writings" herself. Quite forty pages are addresses and extempore sermons preached before large numbers of people by Mrs. Eddy in different places. . . .

Those who have been healed of sin or sickness by the help of Christian Science recognize only too clearly that without the unceasing devotion of Mrs. Eddy to the Cause of Christian Science, they would not now be reaping the benefits of her work and experience, and it is hard to believe that Mark Twain, who is well known for his kindness of heart, could of his own accord have attacked a lady so universally respected and beloved, whose desire is for seclusion—"time to assimilate myself to God."

[With respect to the absurd charge that only twelve pages in Mrs. Eddy's "Miscellaneous Writings" were written by herself, there are thousands of Christian Scientists who have heard her give many of the addresses published in this book, and who know all of the statements in it to be her unique, forceful, and original teaching.—EDITOR *Sentinel*.]

[From the *New York American.*]

The Rev. Dr. Madison C. Peters, in his sermon last evening [April 28] in the Majestic Theater, on "The Good in Christian Science," said: "Christian Science promises not only life and happiness beyond the grave, but health, success, and happiness here. Based upon observation, her [Mrs. Eddy's] followers are far more healthy than members of other churches, and it is claimed that they are more successful and happy than other professing Christians. If this claim is true, and in the main I believe it true, then Christian Science is a challenge to other churches.

"I believe that Christian Science to-day, in proportion to its numbers, is exerting more influence for good on the world than any other religious force at work. It is an undoubted fact that the Bible teaches health and success and promises life and happiness here and hereafter, and unless the other Christian churches will use power to prevent disease and heal sickness, Christian Science will steadily grow. To change bad effects we must change the thinking that produces them. I believe church members should be happier than they are and take example from the Christian Scientists, who I know are happier in their belief than other church people. What Christian Scientists are doing to-day all professing Christians should do, they should think right as the basis of happiness, and live clean to conquer disease."

[Editorial in the *Baltimore American.*]

There is scarcely any imaginable crime which does not grow out of, or is not attendant upon, the prosecution of war, . . . and yet, because it has gone on for thousands of years, the tender feelings of civilization must not be hurt by an assault upon this relic of barbarism. There can scarcely be any question about the attitude of Jesus. He was the gentle, dignified embodiment of peace, if ever there was such. All of his teachings are so directly opposed to war and its consequences that it is difficult to understand the attitude of the Christian Church through twenty centuries. There have been small detachments of the Church which have bitterly set their faces against war, but they do not appear to have thriven greatly, possibly because they were out of touch with the great body of the Church. While peace has been proclaimed from every pulpit at a certain time of the year, scarcely a word has been said in opposition to war. Peace seemed to be regarded as a kind of indefinite attribute of Jesus, having no particular reference to his followers. It is for this reason that the presence of these distinguished clergymen was hailed in New York with unexpected enthusiasm. The announcement that certain churches had gone over bodily to the movement was welcome. It was felt that if this great body could once be set in motion as a sincere ally of the movement for universal peace, the object would be gained.

[V. O. Strickler in the *Evening Recorder*, Amsterdam, N. Y.]

An article in your paper of Feb. 26 charges Christian Science with being responsible for the disruption of many homes. No evidence is offered in support of this charge. Neither is the charge sustained by those who are in the best position to know the facts. More than this, an acquaintance with the teachings of Christian Science shows how impossible it would be for this religion, when really understood and properly applied in the relations of everyday life, to bring discord or separation in the home. . . .

Christian Science teaches that the home relations are sacred, and that they must be maintained against the attacks of evil. Christian Science enlarges the affections; it does not contract them. It has been truly said that when we have more to love, we love more, and Christian Science inculcates a genuine love for all that is good and pure. Under its ministrations husbands and wives who have been estranged for one reason or another, have been brought together again, and homes that have been disrupted by vice, selfishness, or worldliness have been rendered harmonious.

Jesus said, "I came not to send peace, but a sword. For I am come to set a man at variance against his father, and the daughter against her mother, and the daughter in law against her mother in law. And a man's foes shall be they of his own household." He expected that some members of a household might accept his teachings, while others would not, and that this would cause a difference of opinion. Such experiences have necessarily occurred all through the ages. Some are ready for the truth; others are not, but there need be no discord on account of a disagreement of opinions. Men have differed over religious topics from time immemorial, and it would not be difficult to find cases of divorce or separation because of a difference arising from a belief in other creeds, but it would be unfair to say that that particular church was causing divorce. Those who understand Christian Science know better than to believe that it is other than a force for good in society.

[Joseph W. Range in the *Seattle* (Wash.) *Times.*]

Christian Scientists do not proselyte. They ask no one to join their Church. The Church has no money-getting schemes. All people who come into Christian Science come in because the gospel of Jesus Christ is made practical to their every-day needs, bringing to them health, happiness, and rest. "The kingdom of heaven is at hand." Christian Science has made us to understand the Bible; and to understand the Bible aright is to be able to heal the sick man of his diseases and the wicked man of his sins. Christian Scientists are willing to let judgment of their faith in the divinity and leadership of Jesus Christ rest in the works done in his name,—on a record of unnumbered thousands healed from sin and disease. . . . It is a fact that could be proven, if necessary, that every disease known to *materia medica* has yielded to the benign influence of Christian Science treatment, which is the prayer of understanding that Jesus taught and which heals both sin and disease. Then why not give God the glory for these good works done in answer to Christian Science prayer, and not ascribe them to Beelzebub?

[Willard S. Marcox in *The San Francisco Examiner.*]

Christian Science does not teach that "things do not exist." The belief that it does so teach is based upon misapprehension. Our position here is strictly Scriptural. "All things were made by him [God]; and without him was not any thing made that was made." "And God saw every thing that he had made, and, behold, it was very good." This included everything in creation, everything which God made. It is pronounced good, hence the conclusion that what is not good God did not make, and that it only seems to be, but is not. Sin, disease, death, are either good or they are not good. If they are not good, and most of us will agree that they are not, then they do not really exist, because all that God made is good, and He made all that was made.

Sin, sickness, and death must be accounted for in some other way than by declaring that God made them, or that He simply permits them to be. Both of these statements are morally as well as logically impossible. Sin, sickness, and death are not included in the list of things which God made. They are, according to Christian Science, only false beliefs about that which is—a perverted sense of the spiritual. To the Christian Scientist it is easier to understand this explanation than to take in the usual theological account, which practically makes God the author of disease and pain and sin, and at the same time declares that He

Digitized by Google

is all good, a loving Father, an ever-present help, etc. And it should be remembered that many members of the Christian Science Church wrestled with this theological paradox and tried to believe it before they found satisfaction in the Christian Science view.

Christian Science does not say, "It is not necessary that we should overcome sin, sickness, and death." They cannot be ignored. They must be overcome. The Bible commands it, and Christian Scientists are busy overcoming, in their own way. Differing from the way of scholastic theology, they believe that evil will never be overcome so long as it is held to be real or immortal. They expect to overcome evil by denying it any existence, but the denial must extend to the actual overcoming. We must prove our theory by our practice. To say there is no sin and at the same time to indulge sin does not prove anything concerning sin, except that it seems to exist. But to refrain from evil and lead a sinless life is a demonstration of the nothingness of sin.

[Albert E. Miller in the *Pittsburg* (Pa.) *Post*.]

It would almost seem as if our critic were expressing a hope, rather than a fact, when he foretells the early decline of this faith among men. No such "exodus" as he depicts is taking place among the adherents of Christian Science, nor is it at all probable that men will desert a faith which has brought them a foretaste of heaven in daily life. There are no heresies among its members. There may be faiths which endeavor to parallel Christian Science, but they do not encroach upon its boundaries.

It is regrettable that any critic of the religious faith of his neighbor should couch criticisms of this faith in language that one would strongly resist if employed toward one's own religious belief. Rather should it be said, as of old: "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren." Christian Science has gained the support of people who, as a class, are at least equal to the average. Many of them, in fact a large majority of them, have received spiritual training covering periods of many years in the older churches, and this should at least fit them to decide wisely concerning spiritual matters, and enable them to determine what constitutes the truth concerning God and His son Jesus Christ. To contend against this self-evident fact would be to reflect upon the ability of the older churches to teach successfully their adherents how to discriminate between truth and error.

Aside from this, many infidels and unbelievers have been led to Christ through the study of Mrs. Eddy's writings, and the Bible has become to them a rational and believable exposition of God's word to His children. The Christian Scientist believes that the right understanding of God's purpose toward mankind will heal the sick as well as reform the sinner. Christ Jesus taught and demonstrated this. His promise was, "These signs shall follow them that believe." Let me say once more that Christian Science is a rational interpretation of the Scriptures. It not only teaches that the sick should be healed, but it heals them. It brings comfort to the sorrowing; it binds up the broken-hearted, and what the future may bring forth when this teaching shall have become more thoroughly understood, time alone can determine.

One thing is certain: Christian Scientists owe apology to no one for their determination to propagate their faith. Their Leader, Mrs. Eddy, has given to this age one of the most remarkable examples of Christian fortitude and forbearance, in the face of unrighteous persecution, that the world has ever witnessed. Her loving counsel to the fellow-members of her Church, to follow her only as far as she follows Christ, rears a wall of defense which renders futile any attempt to attack the integrity of her mission.

AMONG THE CHURCHES.

WILMINGTON, DEL.

The members of First Church of Christ, Scientist, held their sixth annual meeting last evening [May 15]. A large attendance was present to listen to the reports of the officers and committees and to participate in the election of officers and directors for the ensuing year. The treasurer's report showed the church to be in a healthy financial condition with all bills paid and no obligations due. The secretary's report stated that there had been about twenty-five per cent increase in membership during the year and a very marked increase in the attendance. The librarian stated that the number of callers at the Reading Room and the demand for the writings of Mrs. Eddy had been greatly in excess of former years. A unanimous vote was passed, thanking the press of Wilmington and of the State for the uniformly fair and impartial treatment that has been accorded Christian Science at a time when sensationalism and misrepresentation are rampant.—*Wilmington Journal.*

NEEDHAM, MASS.

By invitation of First Church of Christ, Scientist, Needham, Mass., the local post of the G.A.R., together with the Woman's Relief Corps and the Sons of Veterans, attended the regular service in a body on Memorial Sunday, May 26. No deviation from the regular order of service was made, save in the presentation of a brief address of welcome by the First Reader, who said in part,—

Never in the world's history were so many alive to the horrors of war, and at the same time so appreciative of the old soldier, as now, when people so generally are inquiring how they may work more intelligently in the interest of universal peace. And surely no man is more worthy of honor and appreciation at the hands of his fellow-citizens, than is he who in the hour of a great crisis counted even the hazard of life as secondary when compared with the welfare of his country. It matters not what may be the menace to the well-being of mankind, the quality of soldierly heroism is ever in demand, and the character behind it is ever the same,—it is unselfish, loyal to a high ideal, large-minded, chivalrous, obedient, brave; and these qualities make the effective soldier, and the effective citizen as well.

Christian Scientists are realizing, with most thoughtful people, that the arena upon which the greatest battles are to be fought is that of the individual consciousness, and they are coming to understand the meaning of St. Paul's declaration in his letter to the Romans, when he says, "The good that I would I do not: but the evil which I would not, that I do." Christian Science explains the nature of this mental warfare and shows how selfishness, pride, lust, envy, all evil impulses, are in league to despoil every man and enslave him. Were men working more intelligently to destroy these evils, war with material weapons would never again be called for and man would never have to kill his brother-man that right might win. Our Memorial day will come to have a two-fold meaning when it encourages a just appreciation of the sacrifices of those who have laid all on the altar for love of country, and at the same time teaches the present and coming generations how to live so righteously that there will be no occasion for war.

A pleasant feature of the service was the gift of a check conveying a generous contribution to the funds of the Post from the members of the church and congregation.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

"A JOYOUS STATE OF MIND."

In its report of the annual meeting of The Mother Church held Tuesday, June 11, *The Boston Globe* said,—

The aspect of the gathering and the tone of all that was said indicated a joyous state of mind among the Scientists, notwithstanding the unusually bitter attacks made upon the movement of late. It was reported that the past year had witnessed larger audiences at the lectures, both in this country and abroad, a much wider circulation of the literature, and a greater manifestation of interest in Christian Science generally throughout the world than any previous year in the Church's history.

The above aptly describes the mental attitude of those who attended the annual meeting, as well as the attitude of those who took part in the Communion services on the previous Sunday, and it is not at all surprising that the joy and peace which Christian Science imparts to its followers should have been manifested in the appearance of so representative a gathering of members of the Church. A congregation of Christian Scientists is a congregation of people who have been brought up out of great tribulation,—out of sorrow and sickness, some from the very gate of death,—and the health and happiness which they now enjoy must find outlet in their manner and in their appearance.

Christian Scientists are realizing the truth of Mrs. Eddy's profound and inspiring statement on page 45 of Science and Health: "Christ hath rolled away the stone from the door of human hope and faith, and through the revelation and demonstration of life in God, hath elevated them to possible at-one-ment with the spiritual idea of man and his divine Principle, Love," and this realization of divine omnipotence manifested through Christ is the foundation of their joy.

Although the attendance upon the Communion and annual meeting of The Mother Church this year was small, in comparison with that of last year and other years before the adoption of the present rule by which the general membership is invited to be present only once in three years went into force, all the Boston papers—*The Globe, Transcript, Herald, American, Journal, Post, Record,* and *Traveler*—liberally and interestingly reported the meetings.

ARCHIBALD MCLELLAN.

A GRATEFUL TRIBUTE.

ON another page of the *Sentinel* we give in part an article recently published in *The Onlooker*, a widely read English magazine. Mrs. Martineau replies seriatim to a number of the misstatements in Mark Twain's book, but we quote only one of her corrections, that which deals with the authorship of "Miscellaneous Writings," and students of our literature may be interested in having a more detailed statement respecting Mrs. Eddy's authorship of the articles contained in this book, from one whose personal knowledge of the subject goes back over twenty-one years. In replying to the statement that only twelve pages of this book could have been written by Mrs. Eddy, Mrs. Martineau says that fully forty pages are given to addresses and sermons which had been listened to by large audiences. The writer is glad to be able to say that she was one of the privileged listeners on a number of these occasions, and while Mrs. Eddy modestly says that, owing to the great demands upon her time, "most of these articles were originally written in haste, without due preparation" (Miscellaneous Writings, Pref. p. viii.), the present writer can bear witness that they are wonderfully close to the inspired and inspiring thought given out on these occasions, as hundreds of others can testify.

On June 13, 1888, Mrs. Eddy spoke to a very large audience of people in Central Music Hall, Chicago, and the writer, who was present, could not help uttering a fervent prayer that the thrilling words then spoken might be preserved and given to all truth-seekers. And they were! It was easy to see that our dear Leader's thought was big with a divine idea, which was destined to go forth and accomplish the thing whereto God had sent it, and so her words on this occasion were given to us in the article, "Science and the Senses," from which we venture to quote as follows: "Love's labors are not lost. The five personal senses, that grasp neither the meaning nor the magnitude of self-abnegation, may lose sight thereof; but Science voices unselfish love, unfolds infinite good, leads on irresistible forces, and will finally show the fruits of Love" (Miscellaneous Writings, p. 100). Wonderfully prophetic words, were they not?

So much for one article in this book. The writer, who is widely acquainted among Christian Scientists, knows of no one except Mrs. Eddy who could have written this article as we find it. It it as like Mrs. Eddy as is her handwriting, and the same may be said of all the articles in this book, which will be more and more read and appreciated as the years roll on and the truth of Christian Science is better understood. The writer remembers thinking, as she listened to the address of Mrs. Eddy to the Alumni of the Massachusetts Metaphysical College in 1895, that she would cheerfully give all she possessed if her students could have the privilege of reading it; and, happily, the address was given to us in this book (p. 110).

All through Mrs. Eddy's teaching, whether oral or written, we find her "comparing spiritual things with spiritual," as St. Paul says; but now, as in his time, "the things of the Spirit of God" are "foolishness" to the carnal mind, to material sense. We rejoice that the hour has struck when this false sense is called to give place to spiritual sense,—the sense which apprehends God and the man of His creating. And so it comes to pass that many doubting cavilers are being led, one by one, to look into Christian Science for themselves; one by one they are being healed of their doubt and brought to see why people love Christian Science and its Leader. They find in the pages of Science and Health and in all Mrs. Eddy's writings messages from the All-Father,—messages which meet humanity's need at this hour, which throw a glorious light upon the ministry of our Lord, and reveal an outlook for mankind worthy of man's high destiny and an infinitely good creator.

ANNIE M. KNOTT.

A SIGNIFICANT PROTEST.

IT is one of the stock claims of those who have tried to secure repressive legislation respecting the practice of Christian Science, that they are impelled by a sincere interest in the welfare of the people, that their motive is unselfish, and that they are seeking to right a wrong which, strange to say, the people themselves have not voiced nor even discovered. While it can but seem remarkable that this perception and interest should be exclusively confined to practising physicians, whose material interests are so

Digitized by Google

plainly affected by any movement which would tend to lessen the dependence of the public upon their services, this contention is ever pressed before legislative bodies; hence special interest attaches to the warning being given by some physicians to-day, that the public welfare is imperiled at the hands of the medical profession itself.

In a recent issue of *The Independent Review* (London, England) there is an article by James A. Rigby, M. D. (Consulting Physician to the Preston and County of Lancaster Victoria Royal Infirmary), in which emphasis is laid upon the hazard to society involved in committing "the power of life and death" to those who are ready to enlarge their experience by advising "illegitimate and indefensible exploratory operations," while the ignorant, the careless, and the venturesome are not in any way held responsible for their acts. After presenting a startling array of facts, with which the writer states he is personally familiar, he declares that "there is nothing exaggerated, nothing overstated," they are findings "which may be verified any day in any part of the country, and it is now time they should receive the careful and deliberate attention of the State. In the case of a naval officer losing his ship, even though no loss of life is involved, he is court-martialed, and a searching investigation is instituted to decide whether or not he is in any way culpable . . . but in the case of the surgeon no such inquiry or investigation is made, and he may proceed in his happy-go-lucky way from one unsuccessful operation to another, secure in the consciousness that no inquiry into his conduct will be instituted, and that his professional course will not be in any way impugned"!

In closing his discussion of the situation the doctor says: "The present position of operating surgery has founded what is in fact a new tribunal, and one of great and far-reaching power, with very little if any responsibility, and that in the interests of the people at large it is quite time it should be seriously inquired into, and, if it is found necessary, its power should be limited and its responsibility vastly increased by bringing each individual case operated upon, where a fatal termination ensues, under the notice and investigation of an authorized court of inquiry."

While thoughtful people have awakened somewhat to the significance of medical and surgical experimentation, the above statements are made, be it remembered, by one of the initiated, a physician of experience and recognized ability, whom both personal interest and professional pride would naturally impel to minify rather than magnify discreditable facts. There is certainly no question as to the final authority exercised, as described, by even the inexperienced, or as to their immunity from investigation even though many and fatal blunders are made, and under these circumstances the propriety of limiting the people's constitutional right of freedom of choice as to the means by which relief from physical ills may be sought, and the advisability of interdicting, so far as legislative restraint can, the practice of that healing art which in the hands of Christ Jesus was shown to be wholly adequate, which he commended to his disciples, and which is to-day setting the sick and sinful free,—all this can but be a matter of deep concern to alert people, and especially to those who are jealous for the maintenance of the liberty wherewith "Christ hath made us free."

The efforts which some physicians have made to enlarge their "power of life and death," and to make it an offense even to try to fulfil the commands of the Master,—that his followers should heal the sick,—is a colossal presumption, and it is destined to meet with ever-increasing protest at the hands of the nobler-minded representatives of the medical profession, as well as at the hands of all others who prize that individual freedom for which Christian Science stands, and the value of which is above rubies.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., June 9, 1907.

My Precious Leader:—I am glad I know that I am in the hands of God, not of men. These reports are only the revival of a lie which I have not heard for a long time. It is a renewed attack upon me and my loyal students, to turn me from following in the footsteps of Christ by making another attempt to dishearten me and make me weary of the struggle to demonstrate my trust in God to deliver me from the "accuser of our brethren." It is a diabolical attempt to separate me from you, as my Leader and Teacher, and thus deprive you of your faithful student and her faithful students, who are living, as far as they can demonstrate, according to your teachings in Science and Health. They are striving to emulate your holy life, and to trust in God, as you do, in every hour of sorrow or joy. My disloyal students are determined to destroy me and my work. Their efforts to prevent me from loving and obeying you, as Leader and Teacher, are futile to terrify me. I shall follow your example of trust in God, so far as I can, and God will never forsake me, nor any who put their trust in Him.

Oh, dearest, it is such a lie! No one who knows us can believe this. It is vicarious atonement. Has the enemy no more argument to use, that it has to go back to this? It is exhausting its resources and I hope the end is near. You know my love for you, beloved; and my students love you as their Leader and Teacher; they follow your teachings and lean on the "sustaining infinite." They put their trust in God, and recognize you as the messenger who brings to them the message of salvation from sin, sickness, and death, through making their atonement with the creator, the one God, who is the source and supply of every need. They who refuse to accept you as God's messenger, or ignore the message which you bring, will not get up by some other way, but will come short of salvation. I see the subtle suggestion of the enemy and am not afraid. My trust is in God I know, and my students know that we must work out our own problems as you work out yours—but we shall follow your teachings and strive to emulate your example and love you as our Leader. Your Father is our Father. He will protect us as He has and ever will protect you. We have much to do to stand in this hour, but we trust in God.

Dearly beloved, we are not ascending out of sense as fast as we desire, but we are trusting in God to put off the false and put on the Christ. This lie cannot disturb you nor me. I love you and my students love you, and we never touch you with such a thought as is mentioned.

Lovingly your child,

AUGUSTA E. STETSON.

Macon, Ga., June 6, 1907.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Friend and Helper:—Your statement some time ago,—"God has always been kind to me, and I am certain He will work this out for the best,"—and other things you have more recently said, have meant so much to me that I want to thank you for them. I am always cheered and blessed as I remember that the God who works all things together for good, and consciously so for all who love and trust Him, is surely working all things together for your highest good. Because I feel assured that nothing can keep you from loving and longing to bless your seeming enemies, as well as your real friends, I feel assured that God will enable you to turn all seeming defeats into larger

Digitized by Google

and truer victories. With grateful appreciation for your life and life-work, I am Yours in sincere love,

J. R. MOSLEY.

Boston, Mass., June 6, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dearly Beloved Teacher:—We thank you most deeply for the visit of last Saturday. Though short in time it was full of vital interest to us. Your words of deep import will remain with and strengthen us. We were especially rejoiced, at this time, to see you in the enjoyment of such good health, and manifesting a mental and physical vigor which reminded us of the days when we so often sought and received your helpful counsel in connection with our then editorial work. God is blessing and sustaining you—of that we are sure. Sincerely your students,

SEPTIMUS J. HANNA.
CAMILLA HANNA.

Auburn, N. Y., May 26, 1907.

Mrs. Mary Baker G. Eddy.

Dear Leader:—The members of First Church of Christ, Scientist, wish to send love and gratitude to you for the many blessings which have come to them through your wonderful works. It is with pleasure we note the many strangers who attend our meetings, and that they always return to hear more of the truth as explained in "Science and Health with Key to the Scriptures." It is our earnest wish that we may be able to demonstrate the truth more clearly in the future. Respectfully yours,

BOARD OF DIRECTORS,
First Church of Christ, Scientist, Auburn, N. Y.

Los Angeles, Cal., May 29, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—We come to you with hearts overflowing with gratitude for the blessings received through the application of the Word, made practical by your selfless love, consecration to God, and spiritual understanding, and we feel that our only way to show this gratitude is to strive more earnestly each day to live the life which Christian Science is teaching. We are especially grateful for the illumination which has resulted in the revised edition of Science and Health, making it doubly clear, thereby constantly calling forth expressions of thankfulness, both for this and for your untiring efforts to show us that we are to "owe no man any thing, but to love one another." And we would tell you that this branch of your planting, First Church of Christ, Scientist, of Los Angeles, Cal., still holds in sweet memory the leaf of olive you laid upon its altar at its dedication, and it now "yieldeth the peaceable fruit of righteousness unto them which are exercised thereby." We are earnestly trying to follow your guiding admonitions as given in "Miscellaneous Writings," p. 135: "Abiding in Love, not one of you can be separated from me; and the sweet sense of journeying on together, 'doing unto others as ye would they should do unto you,' conquers all opposition, surmounts all obstacles, and secures success."

In love and gratitude,

BOARD OF DIRECTORS,
First Church of Christ, Scientist, Los Angeles, Cal.

Billings, Mont., May 30, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—First Church of Christ, Scientist, of Billings tenders to you its love and loyalty. We are grateful that the light of Truth and Love is again shining, and that the "Way" is revealed. We know that only purity and unselfishness could perceive "the things of God," and show them to the world creature. The persecutions which attend your efforts to re-establish primitive Christianity are to us but an added conviction of the truth which you teach. "Blessed are they which are persecuted for righteousness' sake: for their's is the kingdom of heaven."

Loyally and gratefully,

BOARD OF TRUSTEES.
BOARD OF DIRECTORS.

Worcester, Mass., June 3, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—It was unanimously voted at a special meeting of First Church of Christ, Scientist, Worcester, Mass., that the members of this church express to you their love. Your example of loving forbearance, your fortitude, and your unswerving adherence to Principle, is an inspiration to greater humility, to more earnest endeavor, and to a closer walk with him whose admonition was, "If ye love me, keep my commandments." The supreme importance of demonstration rather than profession at this particular time is recognized, and also the need of hourly watchfulness and prayer for that Mind to be in us "which was also in Christ Jesus." We most lovingly and gratefully acknowledge our debt to you in pointing us to the Wayshower, and in directing our thought from sense to Soul. And we testify to the happiness which has come to us in so far as we have been obedient to your every word of admonition.

We ask to be permitted also, to thank all those who have had your confidence in carrying out the great work of our Cause, and those who have in any way helped to lighten your burdens.

Yours with sincere gratitude and love.

EVELYN KNOWLES, FREDERICK N. COOKE,
HARRY SYLVESTER, *Committee.*

Boston, Mass., June 3, 1907.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—It has been a great comfort to me whenever I have thought of you lately, while pondering the phase through which our Cause is now progressing, to realize that the religion you have discovered and founded is true, that its truth is practical, and none knows its truth and its practicality better than its Discoverer and Founder. I am rejoiced to know that the God you so eloquently and lovingly define to mankind in your writings, is *your* God, and that He does not leave you comfortless, but protects you and guides you continually. I know that the loyalty of your devoted followers is a constant source of solace and encouragement to you, but it also makes me happy to think that a personal sense of support is not indispensable to your welfare, since our God, good, sustains you and provides whatever you need.

Your words in "Miscellaneous Writings (p. 338) seem to fit the time with especial appropriateness: "And remember, a pure faith in humanity will subject one to deception; the uses of good, to abuses from evil; and calm strength will enrage evil. But the very heavens shall laugh at them, and move majestically to your defense when the armies of earth press hard upon you." The prophet prayed that his servant's eyes might be opened to see their angelic allies. I wish you could know how your coreligionists feel about this affair, how their eyes are opened to realize the omnipotence of good and the impotence of every malicious purpose to harm you or your Church. God blesses you.

Affectionately,

WILLARD S. MATTOX.

THE LECTURES.

DRESDEN, GERMANY.

On Friday, May 3, Mr. Bicknell Young of Chicago delivered a lecture on Christian Science under the auspices of Erste Kirche Christi des Scientisten [First Church of Christ, Scientist] at the hall of Palmengarten before an audience of more than five hundred. Mr. Robert Schattenberg introduced the speaker, and said,—

I have the honor of presenting to you Mr. Bicknell Young, C.S.B., member of the Board of Lectureship of The First Church of Christ, Scientist, Boston. It is the first time that a lecture on Christian Science has been delivered in our city. In this time of universal seeking and searching for Truth it surely is of deepest interest for every one to receive information about this great movement, which came to us from the United States. I esteem it a pleasure to introduce the speaker of this evening and to express to him our warmest thanks for having complied with our wishes.—*Correspondence.*

COLDWATER, MICH.

Judge Septimus J. Hanna lectured on Christian Science at the Armory Hall, April 12. He was introduced by Rev. H. P. Collin, who said in part,—

It is with no little interest that I am present with you here this evening to listen to a lecture on Christian Science. We are interested in all systems of thought and life that engage the attention of intelligent and earnest people and that proclaim their purpose to be a larger and truer knowledge of God and man and a better and happier life. It has always been characteristic of a large portion of those who have sought to understand and teach and live the thoughts of Jesus, that they have not counted themselves to have attained perfection or to be already made perfect. They have been seekers after truth and goodness. They have wanted liberty to study and think and judge for themselves, but they have been willing to grant that same liberty to all others. So it was with Paul. I think I can assure the gentleman who is to address us to-night that, whatever our own beliefs may be, whatever he may present will receive attention that will be respectful and courteous and sympathetic with his chief purpose. We may be critical, but we shall be candid and considerate.—*Correspondence.*

DAVENPORT, IA.

At the Burtis Opera House Monday evening [April 15] a large audience had the pleasure of hearing Frank H. Leonard tell of the faith of Christian Scientists with an eloquence which held the entire audience in the deepest attention from the opening to the close of his address. The lecturer was introduced by Principal Harry E. Downer, who said in part,—

The beliefs of the Christian Scientists are daily misrepresented and condemned by those who have small knowledge whereof they speak. Every fantastic vagary in the realm of the impractical is attributed to them. Their Leader is defamed by newspapers whose natural love of fair play is forgotten in the desire for sensationalism and street sales. She is misrepresented by magazines from motives equally disreputable. This winter lobbies have endeavored to influence legislation at various State capitals that would interfere with the practice of Christian Science and put its adherents in the attitude of lawbreakers.

And yet, in spite of all these elements of disfavor and outright opposition, this branch of the Church of Christ is growing as never denomination grew before. The reason for this I do not know, for I am not a Christian Scientist, but I have been thrown much among them and I can tell you what I know of them. I have found them good citizens, admirable neighbors, and friends filled with optimism and inspiration. They are intelligent students of religious thought. They are people who in their daily walk in life strive to see no evil, hear no evil, think no evil, speak no evil. They are, moreover, possessed of and by a simple and sincere trust in God that is wonderful.

The Davenport Democrat.

ELGIN, ILL.

Miss Mary Brookins delivered a lecture on Christian Science at the Universalist Church, May 2. She was introduced by Mr. Albert Hall of the *Daily Courier,* who said in part,—

As Martin Luther and the Lutheran Church were to the sixteenth century, as John Wesley and the Methodist Church were to the eighteenth century, so are Mrs. Eddy and the Christian Science Church to the present day. The Christian Science Church is the one which is now giving to Christianity its new life. It is attracting more attention in Christian lands than is any other creed, church, or denomination. Its benign influence is felt at every hand. I am not a member of the Christian Science Church, I am not a regular attendant of the Christian Science services, but I have studied its teachings with great profit for more than a year, and I have tested the truths as demonstrated by Christian Science practitioners. Christian Science is being preached about in orthodox pulpits, it is being written about in newspapers and magazines, but the one force that is setting Christian Science in its true light before the world at large is the system of lectures regularly provided by every organized church. To these lectures is due very largely the wide-spread knowledge regarding this new and exceedingly interesting denomination.—*Correspondence.*

TESTIMONIES OF HEALING.

Standing one evening at twilight on a low hill, a range of which fringes the Colorado Desert in the State of California, I was trying to find my way through an opening in a large mountain, which it seemed should be just beyond. I had been over the ground a number of times and felt that to lose my way in this section was entirely out of the question; but after a fruitless search I felt compelled to conclude, though very reluctantly, that I was lost on the desert. As these words revolved themselves in my mind, the whole horror of the situation seemed to dawn upon me. Was I to be left there to suffer and die of thirst as so many others had done? I tried to think differently, but my fears overcame me. Every canyon I had traversed seemed the right one, and every hill, tree, and shrub seemed to be just like those I had picked out as landmarks to guide me back to camp; but each time I was deceived, and the hills and brush appeared to mock me. I had searched, it seemed, in every direction, and each way proved the wrong one.

As I thought of home, my mind reverted to my boyhood days, when a Christian mother taught me to pray at her knee. I remembered vaguely a part of the 23rd Psalm, "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me," and it gave me new courage. It seemed to be more than the mere repeating of the words, and I began to feel that it could be made practical. Once more I tried to find the way. Looking to the north I saw an opening in the mountains. "That is the way," I cried, and started; but no, I had been there several times and it was not the way; yet I resolved as a last and seemingly forlorn hope to try again. Meantime the Psalm kept passing through my thoughts, and I soon forgot my parched tongue, my limbs ceased to quake. As I drew nearer I began to see familiar objects; no mistaking them this time! I moved forward with a sprightly step; I had found the true way, the only opening in the mountain which led to camp, and at last I found my desert home and settled down to a night of rest. I had escaped the fear of thirst and death; and awoke in the morning refreshed and happy.

The incident related above prefigured the writer's experience in coming into Christian Science, and it seems to him the comparison may help some wanderer on the great desert of error and despair to take new hope and reach out, as he has done, for the true way. When a young man I embraced, at a revival meeting, the religious faith held by an orthodox church. I had been raised by Christian parents, though I had ceased to believe as they had taught me, but finally under the excitement of a moment I started anew, in what seemed to be the only way to find the truth. I was taken into the church on probation for six months, at the end of which time, if faithful, I was to be made a member of that church. There were some sins which seemed to be very difficult of eradication, and some doubts from which I could not free my thoughts, but assurance always came to me that all would be made clear in time. All seemed to go well until the question of eternal punishment came up in our Bible class. Our teacher, a theological student, asked us individually if we believed in eternal punishment. I remained silent. Finally the question was asked me if I did not believe that if we disobeyed God's will He was justified in punishing us throughout all eternity. I did not and could not. I separated from the church. Years went by, and I found myself sick; tired of life; full of aches and pains; hating all mankind; finding no enjoyment in anything; indulging in sin, and dying, as it seemed, with lung trouble. All the world seemed to be against me. Poor in every sense of the word, I had given up hope. I even feared that hope might spring up only to be dashed to the ground, and that that very hope would mock me in my distress.

Christian Science was presented to me, but I replied to my would-be benefactor that I wanted nothing pertaining to religion; that it was a farce and a sham. The seed was sown, however, and soon began to bear fruit. I was led to a practitioner, a dear Christian woman and loyal Christian Scientist. I tried to make myself believe that I had no interest and was only going to accommodate my friend, and so told my practitioner. "Well," she said, "you can't be expected to believe something you do not understand. If you are helped you will believe, won't you?" I mused on her words; I thought I had tried all routes, but this seemed different, and the lady was so confident of success if I would do my part that I decided to give Christian Science a fair trial. I did just as the practitioner directed, as nearly as I could understand, and slowly a little of the truth of this new-old religion was revealed to me. I soon saw that I had found the only opening in the mountain of error that would lead me into the valley of health and peace.

My progress was rapid and in six weeks I felt completely healed! Whereas for years I had suffered constant pain, it was now gone. In place of despondency there came understanding and confidence; fear was banished by love and a desire to know God, good, better. Death was "swallowed up in victory," and I began to learn what was to me a new truth, and to realize in a small way what good exists for those who strive to follow the Master. Though still a babe in swaddling-clothes in the study of Christian Science, the blessings which come with every good work done, and the spiritual uplifting through prayer, are sufficient evidence of promises that will be fulfilled as we seek "first the kingdom of God, and his righteousness."

To every one suffering physical pain, to every one in the anguish of mental torture, to all mankind yet in their sinful beliefs, to every one sitting in judgment on his neighbor, to every self-righteous person, to every one not living in accord with the Principle revealed by Christ Jesus and again by Mrs. Eddy, and to every babe in Christian Science, I want to give all I can from my little store to help them and make their burdens lighter. Christian Science has been to me not only the healing of sickness, but many sins have been overcome, and I have been prospered financially; although where money-getting was once my chief aim in life I can now say that it is a secondary consideration and only interests me in so far as my present need must be supplied. Surely the world has reason to rejoice for the system of healing given to humanity by our dear Leader. Mrs. Eddy's teaching stands to-day as a beacon-light of Truth to this material age, pointing the way to wanderers in the desert of sin and disease,—the way she has proven and knows. She has blazed the way for us to follow, and no one can fail who watches the guide-posts of divine Love. Not heeding these guide-posts, one may find himself going down the road which leads to destruction, but finally he will be compelled to retrace his steps and follow the way our Master taught. Mrs. Eddy has worked unselfishly and gives out abundantly, to all who will receive, the truth that will make them free.

I am indeed grateful to our Leader, and gladly contribute my little mite of love to her already overflowing store. She has been the means of showing me the way, and I would be most ungrateful if I did not return thanks. I have been healed a little less than six years and each day brings more blessings. It is my desire to be at peace with all the world; to know one Love, one Church, one people, to see and know only God's children.

J. E. RHEIN, El Paso, Tex.

I would like to tell some of the many blessings that have come to me through Christian Science. Some ten years ago I seemed to be heir to all the ills which are alleged to follow severe nervous trouble, fever, etc. I had tried three prominent physicians, but received very little benefit. I also went to Hot Springs, S. D., and took baths and massage, coming home no better. The following fall Christian Science was first brought to my attention, as I had never even heard the name before. The next spring I took treatment and was healed. After the first treatment I was able to eat anything that was set before me, and have done so ever since. I have used no medicine for myself or my two children during these years. But this is not all! Those who know what Christian Science is, know the help that comes to us each day through knowing the truths therein taught. Why should not gratitude be felt towards Mrs. Eddy, who has so nobly shown us the way to health and harmony? I desire to be worthy in word and deed to be called a Christian Scientist.—Mrs. C. A. Hamilton, Omaha, Neb.

If I should tell half the good I have gained by reading Science and Health there would be no room in this issue of the *Sentinel* for any one else to say a word. I did not come into Christian Science for physical healing, but because divine Love led me to it. I have, however, been healed of female trouble of many years' standing, in fact I cannot remember a time when I did not suffer. I also had trouble with my feet, so that for weeks at a time I could not wear my shoes, and was subject to very severe throat trouble. I had tried many doctors, and took medicine continually, but without relief. The reading of Science and Health healed me! I had suffered from hay fever for fifteen years. I called on a Christian Scientist, and the disease disappeared in less than a week. Later the trouble appeared again. I called on another Scientist, and this attack was also overcome. I had worn glasses for twelve years, but with the help of a Scientist I laid them off and have not needed them for about two years. I can read day or night; sew, embroider, or do any other needlework without glasses, though not long ago I again called on the Scientist for help. I have also been healed of a very discontented disposition and spiritual dulness. Before I came to Christian Science I did not believe in the Bible, but by studying it with Science and Health I have found a knowledge that can be demonstrated. I have thus learned to help myself and others.

Can any one wonder that we love our dear Leader, Mrs. Eddy. I thank God every day for her, and my daily prayer is that I may be worthy to be called a Christian Scientist. I am thankful for the *Sentinel* and *Journal*. A Christian Scientist cannot get along without them.

Mrs. Lula Walthall, Crowell, Tex.

Four years ago I first came to the understanding of Christian Science through the healing of my eldest son. He had been ailing for some time, and we had taken him to two different physicians, but he seemed no better. At last he was confined to the bed, and besides the trouble under which he had been laboring, he was taken with throat trouble. The doctor was called again, and when he made another examination he said that there was a serious trouble of the spine, and that all I could do was to place him under some good physician's care, that he himself knew of nothing that would help him. My boy was at his aunt's at the time, and his little cousin was being treated through Christian Science. She was doing so well that my boy said he wished he could have the same help. I then asked the Scientist to see him. That night he got up and ate supper, and next morning he came home with me, a distance of twenty-six miles. The doctor had said that he could not come home for at least three days, and then he must keep quiet. When he got home he went out coasting and seemed to get stronger. He has had none of his old trouble since. We live on a farm, and he and two younger brothers do nearly all the work.

About a year later a younger son was taken very ill. The doctor called it a serious lung and bowel trouble. We then asked the Christian Science practitioner to take the case, as the child preferred this treatment. He got along nicely at first, although we met with great opposition from his father. Later there seemed to be a relapse, and we sent for the Scientist. When she arrived he seemed very bad, but she had been here only a few moments when the fever left, and although appearances were very alarming, in a short time he was better and the fear had left me. He gained from that time on, until his strength was restored; and he is now the largest and strongest boy we have.

We have been able to demonstrate the truth for ourselves a number of times by reading Science and Health, which has truly been our guide to the Scriptures. We are grateful to God, and to Mrs. Eddy for that dear book, the reading of which has made it possible for us to experience the help of Christian Science by patient and persistent work, and thus break the spell of error.

Mrs. Helen L. Sarver, Excelsior, Minn.

For about forty-three years I had been seeking, from Socrates to Emerson, a solution of the life-problem, and mental harmony in ancient and modern philosophy, metaphysics, and psychology, in studying symbolism, mysticism, occultism, etc. Since the Parliament of Religions I have been very closely identified with many *isms*, cults, clubs, and societies, also the different schools of advanced thought and mental therapeutics, hygiene, "nature cures," physical culture, dieting, fasting, etc., without obtaining permanent satisfaction, until last September, when I began in earnest the study of Christian Science. Mrs. Eddy says in "Miscellaneous Writings" p. 181), "When we understand man's true birthright . . . we shall understand that man is the offspring of Spirit, and not of the flesh." The understanding of this truth has given me the peace of mind which "passeth all understanding," and has healed me of catarrhal and kidney trouble, also blood-poison of over twenty-five years' standing, caused by sensuality and excessive indulgence in the drink and tobacco habits for more than forty years.

For the overcoming of these and many other ailments, for the mental emancipation and liberation from Egyptian bondage, and for the spiritual regeneration of both mind and body, I wish to express my great love and gratitude to God, and to our Leader, also to the Publishing Society.—John F. Morgan, Pasadena, Cal.

Several years ago, when the drainage of the city was being constructed, and prior to our coming into Christian Science, I suffered, as I had suffered for many consecutive years before, with what the doctors called a low form of fever. Every year I had medical treatment, but never got completely well. In September, 1898, after having the usual trouble and under the same conditions, my father and mother had my case treated in Christian Science, and my healing was effected through the realization of the truth, as made known in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was sick in bed only one week, and since then have never been troubled with the fever. I am very grate-

Digitized by Google

ful to give this testimony, for my experience meant the destruction of a disease which had baffled the doctors, and had increased year after year, until it was almost unbearable. I am so thankful that Mrs. Eddy has made plain to us this wonderful Science of healing.

FLORENCE J. BUTLER, Mexico City, Mex.

I desire to express in some small measure my ever-increasing sense of gratitude for the blessings which Christian Science has shed upon my earthly path, by healing my diseases and bringing me out of darkness into Truth's eternal light. I first heard of Christian Science in July, 1905, when some Scientists came to stay where I live (as servant). One lady, seeing that I was suffering from asthmatic trouble, told me she was sure I could be healed, although I had suffered for eight years from this trouble, weakness of the heart, etc. I had tried all sorts of medicines, and had been told by four doctors that I could not be cured. I had given up all hope; but the lady said Christian Science could help me. She began to treat me at once and lent me "Science and Health with Key to the Scriptures" to read. The first week I was a little better, and when the lady left, at the end of three weeks, I had no signs of the asthmatic trouble. This was such a great and grand revelation to me that I only partly grasped it, but the treatment was continued until in October all the ailments had given way, and the healing was complete. The same month I was able to be present at the Thanksgiving service at First Church of Christ, Scientist, in Manchester, and the great spiritual uplifting I received will always be to me one of the blessings of Christian Science. The one great impression this visit made upon me was the love to one another that existed among the congregation. The beauty, the peace, the harmony and love was so very real, for it was not only seen but lived. My mother, too, who was quite a helpless invalid at that time, can now walk about and do her daily duties through the help of Christian Science, and neither my mother nor I have taken any medicine since the first treatment.

Words cannot express the gratitude I feel for all the blessings I enjoy from the knowledge of this great truth, and I thank God that our dear Leader, Mrs. Eddy, has been led step by step to the truth that makes free. I am thankful for having been helped into the light of understanding, and I am very grateful for the Lesson-Sermons, the *Sentinel*, and our other Christian Science literature. My earnest desire is that I may live a life worthy of the name of Christian Science.

RACHEL WALLIS, Richmond, Yorkshire, England.

While reading the *Christian Science Sentinel* of Dec. 1, 1906, I was particularly impressed with one of the testimonies, because it recalled a similar experience of my own, which took place some years ago while I was living in San Antonio, Tex., and which I had forgotten until I read this article. I realized that I had never acknowledged through our periodicals this blessing, nor many others which I have received since finding the truth in Christian Science, and it really made me feel ashamed of myself, so I thought I would write at once. To-day is the first of the new year, and I will do my first writing by acknowledging some of my many blessings since coming into Christian Science, wherein we are taught to know that God is Love.

The experience referred to began while I was sitting with our family at home. They were not particularly interested in Christian Science at that time, but thanks to divine Love, one of my sisters has since then become a Christian Science practitioner, and some of the others are much interested. I was suddenly attacked by severe pains all over one side of my body. I said nothing to any one, however, but managed unnoticed to get to the next room. I lay down and tried to realize the truth, but not getting much relief, I left the room and went to bed. The entire night I declared the truth, from the Bible and Science and Health. I distinctly remember repeating the 91st Psalm and the scientific statement of being (Science and Health, p. 468), to which I clung continually, though tears at times trickled down my cheeks. I knew that if I were to awaken my dear mother she would wish to do all she could in her kind and loving way by giving material remedies, but I felt this would make my struggle still harder, so I held to the thought of God, "who healeth all thy diseases," and towards morning I obtained relief and was able to turn in bed. I got up about eight or nine o'clock the next day, with very little pain, and during the day I kept close to my books, the Bible and Science and Health, and by night the attack was all overcome, and how I did glorify our heavenly Father for His blessing bestowed upon me in this hour of trial.

Previous to this time, and since then, I have had demonstrations for myself in many ways, spiritually, physically, and financially, and have also been enabled to help others, and my desire is that through this new year I may keep closer to the truth contained in the Bible and all of Mrs. Eddy's works than ever before. I know that if I so live, God's many blessings will be bestowed upon me bountifully. I had a feast of spiritual blessings while attending the dedication of The Mother Church last June, and they will forever remain with me. Of late my dear husband is compelled to be away from home a great deal, and I have the thought of loneliness at night to overcome, as I am away from all of my family, but I am trying to realize that God is ever present and will and does take care of me, no matter where I am, if I put my trust in Him.

In reading the comments of different people and papers recently, my heart is gladdened indeed to see that the world is recognizing what Mrs. Eddy is and what she is doing for mankind. I receive the *Sentinel*, *Journal*, and *Quarterly* regularly, and my husband studies the Lessons with me when he is here; and for these and many other blessings I am more than grateful to God, and to our revered Leader, who through struggles and triumphs has shown us the way to health, holiness, and happiness, a peace that the world cannot give nor take away. Were my husband here I know he too would join me in acknowledging the blessings we have received through this wonderful truth, as found in the Bible by means of the "Key" which unlocks the long-sought blessings contained therein.

IDA KRAUSE HALL, Camagüey, Cuba.

It is with gratitude and pleasure I testify to my healing through Christian Science. Nearly five years ago I was in bed for six weeks, helpless. I called a physician, and he gave me morphine, and other drugs. He said I had rheumatic trouble in my hip and told me not to step until the pain left me. I became so used to taking morphine that I thought I could not live without it. Last summer I was again taken ill, and the doctor gave me the same kind of medicine. I was in a very bad condition—helpless and hopeless—when a friend of mine was led, as by an angel, to my bedside. She said, "Why will you suffer so, when there is help for you?" I said I would do anything to get out of this condition, that if Christian Science could help me I was willing to try it. My friend at once sent for a practitioner, and when she came I knew God was with her. I began to feel better immediately, and the first treatment cured me of the morphine habit entirely, so that I have hardly given the drug a thought. In two days I was free from pain, and I got up and went to my sister's, also settled up my business. A friend sent me a copy of Science and

Digitized by Google

Health, and I have not read anything else but that and the Bible. I am thankful to God that I was led into this light of Truth, for it has changed my thought entirely. Everything looks different to me, and neither tongue nor pen could explain it. I am grateful to our Leader for giving us "Science and Health with Key to the Scriptures." God bless her in her work. If it had not been for Christian Science I do not believe I would be here to-day.

MRS. L. E. DESHON, Brookline, Mass.

It is with the deepest gratitude to God, and to our Leader, Mrs. Eddy, that I send this testimonial of healing. Eleven years ago my eyes were healed through Christian Science, after I had worn glasses for a period of four years. Nervousness figured largely in the case, and I was able to read but a few moments at a time. I was also unable to use a needle, as I would see double. I was fond of decorative art, and asked the oculist if he thought my eyes could be relieved sufficiently so that I might resume that study. His reply was stern: "You need never hope to paint another stroke." Three specialists, high in their profession, had been consulted, glasses adjusted, and changed every few months, but all of no avail—no favorable results. The verdict was that I would never be able to use my eyes without glasses, and at best the glasses gave very little satisfaction, as I was almost as helpless with them as I was without them. I was under medical advice the greater portion of this time, but gradually and continually grew worse, until I hesitated to go into company or to meet strangers, for I was very sensitive as to the disadvantage under which I appeared.

This failure to restore my eyes through human means reminds me of a passage from Psalms: "Give us help from trouble: for vain is the help of man." Through Christian Science my eyes have been wholly and permanently healed. I have not worn glasses since I began Science treatment—eleven years ago—and have used my eyes with perfect freedom for all purposes; I have also gratified my desire as to the resumption of my art work. I have accomplished much in that line; at times working late at night. I had Science treatment for three months, but at the expiration of that time I did not consider my eyes entirely healed. The perfect healing came, however, within a few weeks, and it has been permanent. This shows that God's work stands, and according to Scripture, "Affliction shall not rise up the second time." This is but one of the many proofs we have had in our family of the allness of God. I am grateful for the physical healing, but far more grateful for having the spiritual way disclosed.

Words are inadequate to express my thankfulness for having been led into this blessed truth, and I realize more fully each day that it is the truth.

MATTIE W. MOSS, Billings, Mont.

I wish to express my gratitude for the truth I found in Christian Science. For more than thirty years I suffered from chronic stomach and bowel trouble. For many years a trained nurse, I was prescribed for by numerous physicians and surgeons with small relief and never a cure. After leaving this work, I underwent a serious operation; then followed extreme nervousness, for which I tried physical culture, with small results. Soon after I removed to San Diego, Cal., from New York State, hoping the beautiful climate would cure me, but it failed. I next tried osteopathy. At the end of all, and on the verge of insanity, I remembered that a Christian Scientist, when leaving our hotel, where he and his wife had been for a short time, handed me a folded paper, saying, "I believe if your brother will get this book and read it, it will cure him." My brother was a confirmed invalid, and did not pay any heed to the advice. I, however, remembered it, and though nearly a year had passed, I asked for the book, which was Science and Health. After reading it for a few days, I sought a practitioner and asked for treatment, which was given, the practitioner telling me to go home and eat whatever I liked, and to come again the second day after. I had the second treatment, when to my great joy I was healed! I continued the treatments for a time, as I was involved in business troubles which it seemed that only the courts could decide. I soon found myself in almost perfect health, and my brother, as well as others of the family, sought the truth and are on the way to health.

Greater than physical healing is the spiritual uplifting. Through entire trust in divine Mind the business difficulties were adjusted out of court, and daily I strive to reflect Love, as our Leader teaches. My earnest wish is that every mortal would look into Christian Science, learn the way out of sin, sickness, and a belief in death, to perfect health and happiness. I feel truly grateful for the sowing of the seed which has brought forth so great a harvest; and a gratitude I cannot express for all our Leader, Mrs. Eddy, has given to the world.

MRS. MARY WAKLEY, San Diego, Cal.

I am seventy years old, and it has been about ten years since God revealed Himself to me through Christian Science. I have attempted many times to acknowledge my healing to the public, and do so now to encourage others. I had been a sufferer for fifteen years, and had tried some twenty or thirty different doctors and took medicine daily. I had read the Bible and prayed. Weeping bitterly, I had begged God to relieve my sufferings, but seemingly could get no help. I became dissatisfied with my church, and began to search in other fields, but found no relief in any of them. When I heard of Christian Science I turned to it, and as soon as the truth was explained to me, I began to drink of the living waters. My diseases were many, but with the great spiritual uplift the stone was rolled away and the diseases vanished. I am strong and well now, do all my work, including the milking of a cow. My husband was healed of a severe bowel trouble contracted in the war. I cannot close without thanking God, and our dear Leader, for all the help that has been given me.

MRS. LUZINA COUGLE, Chattanooga, Tenn.

[Written for the *Sentinel*.]

THE MORNING LIGHT.

DAISY E. TRANTY.

METHOUGHT I saw a hill and heavy cross,
And error crying, "Crucify!"
Then on that cross the "perfect man" was nailed,
While all the earth was black and heaven wailed.
'Twas done! And chaos reigned;
And in the tomb of him who deigned
To die for men, was buried their last hope.
Behold! Love rose from out the gloom,
And lo, the stone of sin was rolled away!
While he whom hate had crucified came forth:
And like the spray that tips the heavy wave,
Doubt lashed the shores of doubt and vanished,
while about
The heavens there rang a glad hosanna out!
Gone was the fearful pall of night,
And on earth's vision broke
The radiant truth—the morning light.

FROM OUR EXCHANGES.

[Rev. C. F. Aked in *The Standard*.]

Reconcile your business with God, your commerce, your whole system of economics, your politics, the principles which dominate your state and federal policies, and the laws by which you live! Let these be reconciled with God. Such a ministry is searching. It must ask you questions, and it must so force them in upon your soul with every argument, threat, and promise, with every warning of God's justice and all the wooing of His love, that you cannot get away from them—cannot silence the questioner by killing the preacher, because insurgent conscience is voicing them again, and it you cannot "down" by any device you have discovered yet! Can you reconcile your business with God? Was yesterday's "deal" in accordance with His mind? A ministry which does not force these questions home is sawdust and chaff.

["The Gadite" in *The Independent*.]

There is no use of beating about the bush for a revival or for a solution of the problem of candidates for the ordained ministry of the Protestant Church, or for a satisfactory answer to the question of world-wide evangelization. All these things may be found at once in an enlightened Christian conscience and a redeemed Christian purse. We may talk as we will about our prayer meetings and our conferences and our what not, the fact remains that the hearts of our Christian laymen are locked up with their cash boxes in the inmost recesses of their chilled steel vaults down at the Imperial Banking House of His Majesty Myself, and the millennium will not come until we break that bank.

[*The* (London) *Christian Life*.]

The great tide is beginning to rise; some of those still living will be privileged to see it rising higher and higher, until it shall bear away the old hindrances to the love of God and man, and lift all above the stress of selfish conflicts into Christian self-denial. The Spirit broods over the dark and troubled waters of human life now, as the writer of the old Creation-story saw it in his clear and beautiful imaginings. The form of the new religious revolution cannot easily be discerned. But its direction is clear. It is towards a purer and truer faith in the living God, to a more consistent and loving discipleship to his Christ, to a closer and more intimate communion, in the spirit of Jesus, with his God and ours.

[*The British Congregationalist*.]

What is serious is the growing indifference to all spiritual claims among the young. This must be combated by an increasing sense of reality in the churches. Their worship and their religious thinking and teaching must bear more directly on the needs and problems of every-day life; and those who profess and call themselves Christians must show by their whole conduct and demeanor that their religion means something to them, and something that is worth having. Theological reconstruction is needed just in order that we may be able to express the vital truths of Christianity in language which the men and women of to-day will be able to understand.

[J. B. in *The* (London) *Christian World*.]

If ceremony can wash away sin—turn a man from thieving to honesty—well and good. If not, what use is it? To observe it as a means of placating God is to resort to the superstition, begotten of that old-world fear of which we have spoken, which places Him, whose name is Love, on a level with Thor and Woden,—with savage deities whose wrath must be appeased by magic rites.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.
Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75
Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10 x 7, bound in cloth, marbled edges. Price prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 130 pages, cloth covers, gilt edges. Prices, prepaid, $1.00; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration will be found on the wrapper. No other notice will be given.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

In all other countries, six cents per copy, postpaid to any address; twenty-five copies, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Up in the hills behind Peekskill the first spadeful of dirt has been turned in the great engineering undertaking which will eventually furnish the city of New York with eight hundred million gallons of water a day, in addition to that which is available from the Croton and other existing sources of supply. The main reservoir, in which the waters of Esopus, Schoharie, and Catskill Creeks and the Rondout River, as well as of several smaller streams, will be impounded, is to be named the Ashokan Reservoir, whence the Catskill aqueduct, eighty miles long, will deliver the water without pumping to the Highview Reservoir in Yonkers, the location of which is far enough up in the hills to enable gravity distribution to all parts of New York, Brooklyn, and Richmond. The estimated cost of the Catskill system is $162,000,000.

It will be for Congress to say whether the United States shall return to China the difference between the total expenses and claims incurred in the suppression of the Boxer movement in 1900 and the amount of the indemnity awarded this country. Secretary Root has written a note to the Chinese Minister expressing the desire of the executive branch of the Government that the excess indemnity, nearly thirteen million dollars, be returned. The total of the indemnity levied on China by the Powers was $337,000,000, payable in instalments during a period of forty years. The amount was vastly in excess of reasonable money reparation and the expenses of the Powers combined.

Attorney General Bonaparte has under consideration, with a view to prosecution in the courts under the provisions of the Sherman Anti-trust Act, a case involving nearly all the railroads south of the Ohio River and east of the Mississippi. The charge against these roads is to the effect that they have been operating under agreements to raise the rates for transportation on shipments of yellow pine lumber from the South to territory in the North.

Governors of many States are expected to attend the fifteenth National Irrigation Congress to be held in Sacramento Sept. 2–7 next. The president of the Congress, Governor Chamberlain of Oregon, has written to the governors of the sixteen western States and Territories which come under the provisions of the National Reclamation Act, inviting and urging them to be present. Governors of other States will also be invited to attend.

It is expected that proceedings will be inaugurated by the Department of Justice before the end of the present month against three or four more large corporations, the American Tobacco Company, the International Harvester Company, and the combination of powder manufacturers, for alleged violations of law.

The committee in charge of the coming celebration at Bath, Me., of the building of the first American ship, during the week of Aug. 5, has received word from Secretary Root that Ambassador Bryce has assured him that several British warships will come here to participate in the festivities.

According to a despatch from Berkeley, Cal., President Benjamin Ide Wheeler has declined the presidency of the Massachusetts Institute of Technology, with a salary of $15,000. As president of the University of California his salary is $10,000.

International.

M. Nelidoff of Russia opened the Second International Peace Conference on the 15th at The Hague by affirming that universal peace and disarmament are unattainable, although he believed that a better method for judicial adjustment of disputes was possible. Representatives of forty-six countries were present. All the delegates admit that the public agitation in favor of the reduction of armaments is stronger than at the first Conference in 1899. While the Drago doctrine, the collection by force of private debt by creditor nations, has no place on the official program, it is likely to come up at an opportune moment. All of the Americas, except possibly Mexico, are practically united on this doctrine, although they differ in details. The nations represented are practically unanimous in favoring the revision of the rules observed in time of war, and generally favorable to extending the scope of arbitration. On the 19th publicity for future plenary sessions was unanimously adopted. The only unexpected feature was a proposition submitted by Baron Marschall Von Bieberstein, Germany, for the creation of a high international prize court for the settlement of difficulties arising from the judgments of the local prize courts. The surprise of the day was the formal reservation by General Horace Porter, on behalf of the United States, of the right to present the question of limitation of armaments. He also reserved the right to introduce the subject of the collection of contractual debts by force. On the 20th the various delegations met and selected members to be assigned to the four general committees already created, each delegation having full liberty of choice in this respect.

England appears to be much interested at the present time in "coalite," a bright, hard substance, very similar in appearance to the best coke. In burning it makes no smoke, gives off, it is claimed, something like twice the heat of coal, and lasts forty per cent longer than an ordinary coal fire. This coalite is produced by a process similar to that employed by the gas companies in the production of coke, except that the coal is treated at a much lower temperature, and the residue, instead of being coke, is coalite, which can be easily lighted, and burns with great steadiness and economy. Out of a ton of coal about seventy per cent of coalite is extracted, but its calorific power being much greater, the ton may be said to have suffered no loss in value.

The Assouan Dam, across the Nile at the First Cataract, is to be raised twenty-three feet. The Nubian shores are to be flooded for another fifty miles, and the temples of Philæ, between Assouan and Wady Halfa, will be entirely submerged.

Industrial and Commercial.

At Atlantic City recently the secretary of the Interstate Commerce Commission, in addressing the convention of the Master Car-Builders' Association of the United States, surprised the delegates by declaring that "too tight-fisted boards of directors are responsible for a majority of the railroad accidents of the past year." The speaker said the directors paid "too much attention to stock market reports and not enough to railroad management and the proper rolling stock."

There is to be constructed near Denver, at an estimated cost of $4,000,000, the biggest dam in the world. It will not be as long as the Nile dam at Assouan, nor as high as some others, but it will exceed all constructed or under construction in area presented to the water. It is intended to irrigate more than one hundred thousand acres of land. It will confine the flow of five rivers and impound ten billion cubic feet of water. Five million cubic feet of material will be required for its construction.

The Massachusetts Legislature is discussing the question presented by the proposed merging of the New York, New Haven, and Hartford Railroad with the Boston and Maine road. Together these roads comprise most of the mileage in New England. The Legislature desires to prevent the roads in the State from passing out of the operation of its railroad laws.

According to a report to the Department of Commerce and Labor, the industry of shoemaking is one of growing importance in Austria Hungary, about sixty thousand pairs of shoes being the daily output. Notwithstanding this the importation of boots and shoes from the United States into Austria-Hungary for the fiscal year 1900 was 20,277 pairs, valued at $42,094.

The production of platinum in the United States increased from two hundred ounces in 1904 to three hundred and eighteen ounces in 1905, and reached a price of $34 an ounce, nearly twice the value of gold.

Eighty-two thousand barrels comprised the output of the Portland cement industry in 1880, while the estimate for 1906 has been placed at the enormous total of forty-two million barrels or more.

General.

An experiment is to be made at South Thomaston, Me., to convert the tidal power into usable energy and to transport that energy a number of miles to an inland point, where it can be of commercial value. The tidal power is to be used in the compressing of air, and it is technically figured out that seventy per cent of the tide power can be stored in the compressed air apparatus, and from there be transmitted in a pipe line to the lime quarries and factories in Rockland or in any other place within a radius of twenty miles, to be distributed for industrial uses, it being figured that five thousand horse-power may be secured in this way.

A new comet, first discovered by Zacheus Daniel of the Princeton observatory on June 10, and confirmed later by the astronomical bureau at Harvard, is located in the constellation Pisces near the planet Saturn. This comet is a round, hazy object with a slight central condensation, but has no noticeable nucleus or tail. It can be easily seen through a two-inch telescope.

During the excavations near Pylos, Greece, conducted by the German Institute of Athens, a vaulted edifice containing many gold ornaments and other valuables was discovered. Experts believe the building to have been the palace of the Homeric king, Nestor.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

UNCONSCIOUS IDOLATRY.

THE EARL OF DUNMORE.

There is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God.
Science and Health, p. 228.

WHAT a stupendous area of thought does this pronouncement of our Leader open out to us! What a field in which to exercise our reasoning powers, with a view to arriving at the truth concerning the absolute omnipotence of the one Mind, God, and the equally absolute impotence of any mundane counterfeit of power! As our Leader says, "To acknowledge any other power is to dishonor God" (Science and Health, p. 228). This is a strong but thoroughly wholesome declaration, which every one would do well to ponder; one on which to ask one's self the question, "How far does this saying apply to myself?"

Now I feel sure there are scores of well-meaning persons in the world whose sensibilities would be greatly shocked were it suggested to them that they were ever in the habit of doing anything, consciously or unconsciously, which would dishonor God; and yet, if these same people were to apply to themselves a system of honest, unsparing self-examination, on the lines of the Christian Science interpretation of this phrase, "to acknowledge any other power is to dishonor God," they would be forced to confess that they were frequently in the habit of acknowledging the presence and reality of some lesser power,—a power apart from God,—a power of whose existence we have no evidence except that of the physical senses.

To illustrate: Let us take the case of an individual so engrossed in his particular work or so absorbed in his particular profession as to be quite unable to spare any time to turn his thoughts to any other subject. That individual is making an idol of his work in so far as he is placing it before God and God's work by allowing it to absorb most of his time and energies. Does such an one realize that by acting in this manner he is guilty of breaking the First Commandment, which says, "Thou shalt have no other gods before me"? There are scores of such people, I repeat, excellent, law-abiding citizens, who are nevertheless living in this same erroneous condition of unconscious idolatry. Some may be moving in the stirring arena of camp or senate; some may be students of the arts or natural sciences; others may be engrossed in financial schemes or absorbed in sport; but one and all act more in obedience to the dictates of ambition than to the impulse of any higher motive; one and all acknowledge the false power of their still falser idol, "success." Shakespeare, who was by no means a bad judge of human nature, says,—

Fling away ambition:
By that sin fell the angels.

And by that sin have fallen many besides Lucifer, many who, self-satisfied with their gifts of genius and their talents, are so absorbed in self as to be unable to find time to show gratitude to that God who enriches with all precious gifts,—these are they who are engaged in the exercise of unconscious idolatry and are thereby dishonoring God.

I have thus briefly endeavored to point out that the fact of setting up any power other than the divine, and of the absorption of our physical and mental energies in the work and worship thereof, constitutes a form of idolatry to which the adjective unconscious has been purposely applied, because I believe that in many cases the idolater is unconscious of the gravity of his fault and views his conduct simply in the light of an extra energetic application of his time and talents to the development and perfecting of some given work. Here Christian Science comes in and teaches that we should depend upon God for everything, and not upon materiality. Thus Christian Science demonstrates the impossibility of there being any power apart from God, otherwise the expression omnipotent, as applied to Him, would be a misnomer. It teaches that a man may and should work with energy and should endeavor to perfect whatever work he may be engaged in; but to make a power of ambition, a god of success, and an idol of his work, is a direct infringement of the First (and great) Commandment, and therefore "dishonors God."

There is another signification attached to these words of our Leader, "There is no power apart from God;" another meaning and one full of encouragement and consolation for the sick and suffering, who have hitherto believed in the power of evil, or of some other power apart from God, which made them suffer and against which prayer was of no avail. How comforting for them to learn through the teachings of Christian Science that God is the only power, and that His power is good and never brings suffering. What a consolation for them to know that all they have to do is to destroy their fear of and belief in evil, and to divest themselves of all evil thoughts, to enable them to realize the truth of Mrs. Eddy's teachings and to recognize God as the ever-present help in time of trouble. The old habit into which we have all been educated, namely, that of placing our trust in drugs, we are now able to give up as false and to classify it as another form of idolatry, from which Christian Science has delivered us by teaching us the true meaning of our Leader's words quoted at the beginning of this article.

THE SIMPLE LIFE IN CHRISTIAN SCIENCE.

LOUISE DELISLE RADZINSKI.

WHAT is this simple life that thoughtful men and women desire, and how are they to attain it? Simple means one-fold; open; pure; unmixed; sincere. These terms applied to human life convey a wonderful sense of freedom, of fearlessness and of corresponding purity,—one-fold, therefore nothing hidden in darkening secrecy or under the pall of fear; sincere, truthful, therefore free, noble, upright, fit for any good work the Father has for man to do. A life ruled by these conditions stands as the ideal of worthiness,

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

of happiness, and all mankind long for the opportunity to live in this freedom, this happiness; the question is how the men and women of this age shall live this simple life in the midst of the social and the commercial demands and the temptation to absorption in material things of this twentieth century.

In olden times, when a man became convinced he had sinned as deeply as he thought the mercy of God could condone, he withdrew from his human responsibilities and retired to some desert solitude or mountain fastness, there to lead a life of prayer and fasting, either in penance for a life of violent deeds, or to satisfy a yearning for a closer communion with God than he could obtain in his accustomed occupations and surroundings. Many men and women of the early centuries of the Christian era thus forsook all family ties, all civic duties, thinking that in a solitary life they could purify their thoughts and desires of all that had darkened their lives among their fellow-men. They thought that a diet of pulse and water would cool their blood and help them to pure thoughts; but, as many a sorrowing saint has testified, the sinful imaginings and desires of mortal mind followed him wherever he went; he discovered that his own heart was a fountain of evil which a life of prayer, hunger, thirst, and danger from the wild beasts of the desert could not purify, that it might be fit for the dwelling of the angels of God. The material conditions of life had been joyfully left behind, but still their shadows darkened the sight of those who sought the harmony of Spirit and free communion with God. The hermit's grotto, the monk's cell were not always illumined by the divine countenance yearned for; the peace promised by Jesus did not descend to bless the longing penitent.

Throughout the centuries the same mistake has bound men to sin and suffering, and many among us now, seeking peace, begin at the wrong end. To drop one's natural duties in order to devote all one's time and energies to some form of life that will, to belief, make salvation sure, has been the teaching of ecclesiasticism for ages; but as men grew bolder in the expression of their highest thought, claiming the right to interpret the Scriptures according to human needs and not according to ecclesiastical policy, these men were branded as unbelievers, and were cast out from the churches, thus being helped to the simpler life by the very thing that would have obstructed their success in attaining it.

The Scriptural simple life has been a difficult one for those who sought it while blinded by their sense of rebellion and unlighted by Science, the perception and understanding of Truth. The prophet Micah formulated the demands of this life when he said, "He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" This is the simple, true, free life, to walk with God; this is what men and women have sought from the earliest glimpse of a sense of a purer, stronger life than that they were conscious of in themselves. This desire for the highest good is found in all, no matter how inarticulate the individual expression may be; and the great blessing and glory of this present period in the development of mankind is that the "Key" has been given us wherewith to open the way to the simple, true, and holy life, the walk with God.

Christian Science teaches mankind how to walk in God's way in love, truth, and freedom. It does not demand that men should desert their families; deny themselves the pure joys and wholesome activities of human life and duty; but it shows them how to make this life holy, pure, and free,—a blessing, not a burden. By presenting a rational sense of life and a lovable idea of God, Christian Science destroys the ignorant fear that enslaved men, that blinded them to the truth and drove them in despair to the wilderness or to the cloister.

In all that divine Love has given our revered Leader, Mrs. Eddy, the grace to write for our healing and guidance, this true life is made plain and attractive. Jesus said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent." Christian Science shows men the true God. In "Miscellaneous Writings" (pp. 306–7) the communion of God with men, through His angels (intimations of Love and Truth), is told in language that will open to awaiting, thirsty hearts streams of refreshment that past ages have failed to bring, in answer to prayer. In "Retrospection and Introspection" (p. 76), Mrs. Eddy again gives us the example we need to make our lives perfect, and on p. 80 she shows, as in a lightning flash, what our Master, Christ Jesus, declared, in deeds as in words, to be his sense of life.

At the present wonderful period of the world's development this teaching is most precious. At no other time have material prosperity and spiritual light been poured out upon the world as they are now; no man, no woman, can at the present time desert the duties and responsibilities, an honest fulfilment of which may open a way to the multitudes who are starving spiritually in the midst of material luxury and power, and who, if guided in the path of Love, will speedily gain the true meaning of life—its harmony and peace.

No man having received sight may allow another to remain in blindness, the darkness of ignorance of Truth. It is his to lead all who desire to find the light of Love, that they may all live that true and simple life, here and now, which opens the portals of the Father's house of "many mansions."

THE REVERSAL OF ERROR.

EDWARD C. BUTLER.

About one hundred and fifty years after Christ, Ptolemy, the Egyptian astronomer, promulgated ideas concerning the universe which had been held in a measure by Plato and Aristotle. The Ptolemaic system of astronomy was held by the human race until the close of the fifteenth century. According thereto the earth was the center of the universe, the heavenly bodies revolving round it at a uniform rate and in regular circles, thus making the greater tributary to the lesser. In 1530 A.D. Copernicus, a German astronomer, corrected the old-time error, and mapped out the heavens scientifically. He taught that the sun was the center of the solar system, and perfectly at rest; that the earth and the planets moved in ellipses round the sun. His theory had been vaguely held by Pythagoras, but it required the courage of Copernicus to formulate the correct view of the universe. Kepler, Galileo, and Newton corroborated the Copernican view, and it is the theory accepted to-day concerning our solar system. Copernicus re-established the connection of the planetary system with the sun, like lost children restored to their father, and thereafter our earth has been held—in human belief—fast to the solar control by chains of resistless power, even while swinging in space ninety million miles distant from the sun. The stellar universe, according to the Copernican system, is in perfect sympathy and rhythmic harmony with the "central stillness." The lesser is, therefore, now truly tributary to the greater. The laws of weight, gravitation, and solar attraction and influence are thus preserved, according to human belief, making life and action possible not only upon our planet, but upon other heavenly bodies as well.

Galileo suffered at the hands of the Inquisition for upholding the idea of the movement of our earth in space. His famous whisper, "*E pur si muove*," has become historic. Jesus suffered martyrdom for declaring that the

Digitized by Google

world moves Godward, and Mrs. Eddy has encountered human prejudice because she holds to this view. Like all truly great leaders of thought, Mrs. Eddy has corrected old-time error while following the footsteps of Christ Jesus, of whom she says, "The material senses' reversal of the Science of Soul was practically exposed nineteen hundred years ago by the demonstrations of Jesus" (Science and Health, p. 122). Something of the beauty and bravery of Mrs. Eddy's thought becomes apparent as she pleads for our acceptance of the theories Jesus brought into life,—our absolute dependence upon an attraction to the Father-Mother God; that we shine on as the quenchless reflection of all-controlling Principle, perfect even as our Father in heaven is perfect; subject in truth only to divine law and government. "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick. Thus Jesus taught that the kingdom of God is intact, universal, and that man is pure and holy" (Science and Health, p. 476). Recognizing "a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (*Ibid.*, p. 259), we are thus enabled to reverse in thought the error so long seeming to control ourselves and others, and so to help the race Godward.

WHO GIVETH ALL.

LIEUT.-COL. W. E. FELL.

THERE are many Christian people who have not individually experienced through the teaching of Christian Science the affluence of our God, and who look upon poverty almost, if not quite, as in the light of a virtue. The student of the Science of Christianity is, however, quickly and mercifully disillusioned on this point. He learns the falsity of this clogging belief, and becomes conscious that a sense of the absence of supply is by no means a virtue, that it is nothing less than a sense of separation from God, the source of all supply. To realize for one instant, as did Jesus, man's at-one-ness with God, is to be cognizant of Love's ruling—that where supply is man is. Says our Leader, "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being" (Science and Health, p. 361). Why do we suffer from a sense of penury? Because we do not follow Jesus' instructions but rather reverse his method. He said, "Seek ye first the kingdom of God, . . . and all these things shall be added unto you;" or as some one has beautifully expressed it: "Seek first to know thy need, and 'all these things,' the supply for thy wants, shall be added unto thee."

When tempted to be anxious and worried over our financial affairs we should take courage and remember that the prayer is for "daily bread." Are we taking thought for to-morrow? Then "give us grace for to-day" (Science and Health, p. 17). Give us heavenly riches for to-day. As heirs of God we have all, and know that every blessing is a spiritual blessing and our God-bestowed right. To know this is to know the truth which makes free,—free from this ungodly sense of God's absence.

In striving to explain the Science of Christianity to one who manifested in a marked degree the child-mind in his quickness to apprehend, he summed up the situation in the following pithy sentence: "I see! we have to know what is true, and all else has got to fall in with it." All that is worth possessing belongs to God, and we are His almoners to distribute His bounty, and dare we in cowardly dishonesty withhold that which is not ours to keep back? Rather should we be bravely trustful, ever giving of our best, for in "ceasing to give we cease to have, such is the law of Love."

If we ask for bread will God give a stone? Do loving parents withhold what is needful from their children? Then "shall mortal man be more just than God?"—our infinite Father-Mother. We need but arise and go to this Father, and cease the fruitless and unsatisfying search for riches amidst the husks of materiality, where no riches are, for has not Spirit, God, enough and to spare? We should turn from the eager contemplation of money, of material riches, to our treasure in heaven; then we shall sing, "Nothing can I lack."

A whole-souled dedication of ourselves and our possessions to Spirit reveals infinite supply, wherein poverty and lack have no name because unknown. If we know this truth, live in this truth, we are free indeed from that which is but a bland denial of God's loving care for all His children. Paul said, "If we live in the Spirit, let us also walk in the Spirit;" then it would not be possible for any demand to be made upon our resources that the infinite source of supply is unable or unwilling to meet. Like the widow of Zarephath, when we draw on the infinite source of good, the meal and the oil are always there; we are but asked to know it and fearlessly draw to supply our own and our brother's need. This was shown when "the barrel of meal wasted not, neither did the cruse of oil fail, according to the word of the Lord."

Let us ponder the loving words of our inspired Leader: "Never ask for to-morrow: it is enough that divine Love is an ever-present help; and if you wait, never doubting, you will have all you need every moment. What a glorious inheritance is given to us through the understanding of omnipresent Love! More we cannot ask: more we do not want: more we cannot have" (Miscellaneous Writings, p. 307). With the above assurance we may readily obey the Master's injunction, "Sell all that thou hast,"—all that would seem to come between thee and the Christ,—and taking up the cross, with thy gaze fixed on the crown, "follow thou me," in whom are the true riches, and who giveth "richly all things to enjoy."

[Written for the *Sentinel*.]

HUMILITY.

KATHARINE J. SMITH.

Love, redolent with unselfishness, bathes all in beauty and light. The grass beneath our feet silently exclaims, "The meek shall inherit the earth."—*Science and Health*, p. 516.

GOD'S love doth garb the serrate hills with gold
And glowing raiment, and anew unfold
The floating splendor of the patterned cloud;
Doth weave the grape's mauve miracle of bloom;
Yea, Love doth gear the spider's faultless loom—
From mystic shuttle cast on leaf and lawn
The web fair-fashioned, set with pearls of dawn.

Bird-lilt and insect-croon, parted light of guiding moon,
Love toucheth tenderly, all tenderly;
Dusty weed at quiv'ring noon doth yield some tiny thing the boon
Of shade, shifting slenderly, all slenderly.

The meek of earth inherit visions rare;
More than Chaldean wisdom is the prayer
Of blossoms' breath, of breeze, and sunbeams' gold.
Love's tint and tincture bless our lowly ways
With royal gifts of nature's pleading praise,
And mocking Sheba's homage long ago
Doth mock the dreamless dust of kingly show.

SELECTED ARTICLES.

[Prof. J. R. Mosley in the *Macon* (Ga.) *News*.]

If Christian Scientists believed what Mark Twain and others claim to believe they do, it would not be necessary for their critics to misrepresent or even oppose these beliefs. Such beliefs would never have been entertained by reasonable men and women; and even if they were believed for a time, their own absurdity would be all that would be necessary to destroy them. As Gamaliel saw and advised, and as all the best and wisest men of all ages have seen, it is best not to judge, condemn, or persecute others for holding religious opinions and convictions differing from our own. Our work is to bless and help each other, and not to criticise, judge, and condemn. To quote Gamaliel's own wise words with reference to the contemplated as well as the actual persecutions of the early Christians, is it not well to "refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought; but if it be of God, ye cannot overthrow it: lest haply ye be found even to fight against God." The very fact that Mrs. Eddy and all other Christian Scientists, to the degree that they are true to her teachings and example, strive to meet all evil with good as well as all good with good, should entitle them to the Christian love and good will of all men, especially of all those who claim to be the followers of him whose religion was and from necessity is and always will be a religion of universal love, kindness, charity, and true helpfulness. . . . In the light of Christian Science, as well as in the light of Christ's own teachings, we are all Christians to the degree and only to the degree that we have the Mind and do the works of Christ; and judged by this standard none of us is a good enough Christian to entitle him to sit in judgment upon others. The very fact that whenever Mrs. Eddy is reviled she reviles not again, that whenever she is persecuted she strives to be kind and just to her persecutors, should entitle her to the name Christian, as well as to Christian treatment; and the fact that she sees and teaches and is actually proving that the Christianity of Christ is universal, eternal, practical, and demonstrable, that it heals the sick, reforms the sinner, and brings to light all good and perfect blessings, is sufficient justification for calling this Christianity Christian Science.

[H. D. E. in the *New York Evening Post*.]

In the *Literary Digest* for May 11 I have read several extracts from an interview with Prof. L. P. Jack, editor of the *Hibbert Journal*, London, taken from the *Evening Post* of recent date. I regret that in my reading of the *Evening Post* this interview should have escaped me, for it contains matter of much interest. For instance, Professor Jack is represented as having said that Christian Science is "the over-emphasis of a partial truth." "It is the extreme revolt," said he, "against materialism—the revolt of those who think in metaphor—and it shows that all men are idealists at heart." Now I am conscious that for several years I have been leaning more and more toward the teachings of Christian Science, but if its teachings fail in logic, principle, or science, I should be most grateful, as a searcher for positive truth, to have this failing pointed out. There is a plain inference from the language of Professor Jack that he is acquainted with the whole truth, of which he says Christian Science is the over-emphasis of a part.

He declares that Christian Science is the revolt of those who think in metaphor. Do you know of any human being who does not think in metaphor? Do you know of any other possible means of thinking? Do you know of any word in any dictionary in any language that is not in itself a metaphor—a mere symbol of thought? Professor Jack declares that Christian Science is the "extreme" revolt against materialism. But what is materialism? It is the belief in the existence of matter and certain forces assumed to inhere in matter, is it not? Is there a physicist in the world to-day who claims that he is able to prove the existence of an atom of matter in the universe? Huxley reproved certain clergymen for classing him as a materialist, stating that he knew of no evidence that such a thing as matter existed anywhere. As early as the thirteenth or fourteenth century philosophers were burned at the stake for daring to maintain the non-existence of matter. . . . If it be true that matter does not exist, then how can any revolt against materialism be called "extreme"?

Professor Jack further affirms that the growing success of this "extreme" revolt against materialism "shows that all men are idealists at heart." But surely the universality of this idealism (a sort of instinct of life, like the hope of immortality) is proof rather of its truth than of its untruth, isn't it? Would Professor Jack imply that pure idealism was irrational, irreligious, or unscientific? Hume once said that Berkeley's arguments left him unconvinced, notwithstanding he was unable to answer them. Thomas Huxley and John Fiske have also said that Berkeley's arguments were unanswerable. If Professor Jack can do what Hume, Huxley, and Fiske admit their inability to do, he owes it to the scientific spirit of the age to do so.

According to Christian Science, "ideas are things." Why deny substance to an idea simply because its nature is too tenuous to be apprehended by the senses? Emerson said, "The Soul of God is poured into the world through the thoughts of men. The world stands on ideas, not on iron and cotton; and the iron of iron, the fire of fire, the ether and source of all elements, is moral force. As cloud on cloud, as snow on snow, as the bird rests on the air, and the planet rests on space in its flight, so do nations of men and their institutions rest on thoughts."

Is this "metaphor," or truth?

[Editorial in the *St. Louis* (Mo.) *Times*.]

The great following of believers in her views which Mrs. Eddy has drawn into harmonious accord, consists of men and women of repute, conscience, and elevated intention. They are catholic, charitable, and open-minded. Whatever others may uphold as a creed, none of fairness will deny the cleanness, decency, and lovableness of Christian Science doctrine in its purity. It makes for sweet living and for honor among men.

[Editorial in the *Merrill* (Ore.) *Record*.]

We are printing in this issue a resumé of the Christian Science lecture delivered in this city last Saturday night, not because we advocate the doctrines therein established, but because the Christian Science movement is wide-spread and vigorous and is therefore of interest to all thinking people. America, since the landing of the Pilgrims, has been a land of innovations. Particularly in a religious way have we made important developments. Since the signing of the immortal Declaration of Independence every citizen of our land has been free to exercise his religious and political belief in perfect liberty, so long as such exercise in no way deprived others of like privilege. The Christian Scientist may be wrong in his belief, but so long as the belief is honestly entertained no true American will scoff at or belittle it.

As we understand it their places of worship are open to all and no compulsory process is employed in establishing a congregation. There are many thousands of people who honestly and enthusiastically testify to great advantage

Digitized by Google

they have obtained through the organization. And whatever an individual may think as to the reality of those benefits, he cannot but respect the honest testimony of the Christian Scientist. Individually we are far from convinced of the absolute efficacy of the methods fostered by Mrs. Eddy, but we stand in the same position in regard to many other institutions that are exploited and reverenced by intelligent and thinking people the world over. Our opinion is well expressed by the old toast, "There is so much good in the worst of us, and so much bad in the best of us, that it hardly behooves any of us to talk about the rest of us."

[Editorials in the *New London* (Conn.) *Day*.]

The clearness of Mrs. Eddy's understanding has been one of the remarkable attributes of this most remarkable woman, for on reading the stories of her life it is patent from the very beginning of her activity in the new belief she had a clear view of its future and the important place she would occupy in the movement she inaugurated. It is admitted that Mrs. Eddy is entirely sane.

Governor Hughes of New York has signed a bill, known as the Medical Unification Bill, which revolutionizes the system of State control of the practice of medicine. This law creates a new definition of medicine more sweeping than the old, and substitutes one board of medical examiners under the auspices of the board of regents in place of the three boards now having jurisdiction and representing the allopathic, homeopathic, and eclectic State medical societies. The new law recognizes osteopathy as a system of treatment and provides for the examination and licensing of its practitioners. Among the exemptions from the application of the law defining the practice of medicine is "the practice of the religious tenets of any church," which will apparently exempt practitioners of Christian Science. The New York lawmakers have apparently recognized that personal liberty is a great factor in the making of laws relative to the practice of medicine, and they have favored a law that in its breadth is perhaps unique among medical laws of the States. The effect of the law may be to open still wider the loophole through which quackery may safely pass, but if there are persons who will put themselves under the influence of quacks they deserve to suffer for their ignorance. The utmost freedom in selection of a physician will never hurt the medical profession, for the practitioners of ability will still have the call and by their success cast discredit upon the doctors whose ignorance is a menace to life.

[Editorial in the *Chicago Journal*.]

Mrs. Eddy and the Christian Scientists are not the only persons in the world who disparage drugs in the treatment of disease. The greatest living physician and surgeon, Professor Osler of Oxford, formerly of Baltimore, has made a speech in which he said that the best doctor is he who knows the worthlessness of medicine. Only four of the drugs in the pharmacopoeia, according to Doctor Osler, have any therapeutic value. All the others do more harm than good. This may explain the cures that are unquestionably wrought by Christian Science.

Like can only comprehend like. When you cease to be finite, you become one with the Infinite. You realize this union, this identity. Things that exalt the soul,—such as beauty, poetry, music, prayer, devotion,—all assist, till we stand in the immediate presence of the Infinite, who shines out from the deeps of the Soul.

Letters of PLOTINUS (A.D. 254).

THE LECTURES.

CONCERNING THE LECTURES.

[We are glad to publish the following article, which was prepared by a member of the Board of Lectureship. The lecture work is of importance and it is necessary that it should be carried on with the greatest possible economy of the lecturers' time. We commend to the consideration of the branch churches these suggestions in the interest of orderly methods, which will increase the efficiency of this important branch of our denominational work.—EDITOR.]

Christian Science makes progress in a community first by the demonstration of healing. Those who have been healed usually assemble for regular services, and after increasing in numbers may form a society, and have notice of their services in the *Journal*. When continued proof of healing is given by the members of the society, their influence in the community increases, and so new members are added and additional workers trained. After a good proportion of the members in a society have become members of The Mother Church, and when there is ample membership to provide for rotation in office and sufficient liberality developed to sustain the additional duties, then the society may become organized as a branch church.

Under the By-laws of the Manual, each branch church must provide for the welfare of the community in two ways: first, by having a Reading Room (Article XXXVIII., Section 1); and second, by arranging for one or more annual public lectures (Article XXXV., Section 4). A lecturer is permitted to lecture for a society, if called upon; but only the churches are required to make provision for regular public lectures.

A lecture invariably arouses interest in Christian Science, and as a result a number of people, cherishing a new hope of deliverance, are found inquiring for healing. These seekers after God should find proof of His love, and if a company of Christian Scientists is lacking in vitality, so that healing is not done, it is evident that they have not reached the stage where a lecture can be given profitably. Furthermore, inquirers should be able to find the instruction given by the Lesson-Sermon read on Sunday, and the encouragement given by the testimonies of the Wednesday evening meeting, and in addition have the welcome of a public Reading Room, where the writings of Mrs. Eddy and other authorized literature may be studied without initial expense. By these means the interest awakened by the lecture is maintained, questions are answered, and the lives of men are blessed. It must be evident that Christian Science societies should await growth, and avoid the disadvantages of prematurely assuming the duties of a branch church.

The lecturers have endeavored to assist the churches in this work of providing public lectures by issuing at their own expense a circular to answer the questions usually asked; but the instruction given by the circular is not always utilized by the clerk and officers to whom it is sent, and correspondence is sometimes addressed at random to those who have no means of answering the queries. Therefore it seems desirable that the general membership of the churches, whence committees are sometimes drawn to arrange for lectures, should understand how this work may be accomplished.

Correspondence regarding a lecture should in all cases be addressed, by the clerk representing the church, to that member of the Board of Lectureship whose services are desired,—not to the Clerk of The Mother Church, nor to the editorial department or the business management of The Christian Science Publishing Society, nor to the Board of Lectureship.

Only churches or societies which are advertised in the

Digitized by Google

Journal, and thus publicly known to be branches of The Mother Church, are eligible to call for a lecture; so Christian Scientists may discontinue any efforts to arrange for lectures on the program of other assemblies, or in connection with organizations not authorized by the Manual.

It is sometimes a matter of consideration for churches to avoid incurring undue expense involved in calling a lecturer from a great distance. There is no reason why a number of neighboring churches in good fellowship with one another, should not correspond and confer together, and agree to call the same lecturer, so that expenses may be apportioned and shared.

Individual clerks have written at the same time to ten or a dozen of the lecturers asking for a date, and then when an actual engagement has been consummated, the other lecturers have not been notified that they need not keep open the date they offered. The members of the Board of Lectureship make request in their circular that they be notified by wire in such cases, as it requires thought and caerful study of time-tables to arrange these offers of dates, and it is advantageous to the work in general that they should know promptly when a proposed date is either accepted or considered unavailable. In some churches it has become a custom to avoid unnecessary correspondence with the lecturers by allowing the members of the church at a business meeting to express their choice in regard to the lecturer through an informal ballot, so that the clerk is authorized to send a direct invitation to the lecturer for whom there is the largest vote; and failing to secure his services, may write to the next on the list. This mode of reaching a decision is here presented as one way of working, but it must not be considered as in any sense mandatory, since every church is entirely free in regard to its rules and modes of doing business.

THE BOARD OF LECTURESHIP.

The appointments for the year beginning July 1, 1907, are:—

Miss Mary Brookins, C.S.B., 925 N. Y. Life Building, Minneapolis, Minn.

Hon. Clarence A. Buskirk, C.S., 1337 Mt. Clare Place, St. Louis, Mo.

Clarence C. Eaton, C.S.B., 624 N. 3d Street, Tacoma, Wash.

Judge William G. Ewing, C.S.B., 541 St. John's Avenue, Highland Park, Ill.

F. J. Fluno, M.D., C.S.D., 1368 Franklin Street, Oakland, Cal.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada Avenue, Colorado Springs, Col.

Prof. Hermann S. Hering, C.S.B., 91 North State Street, Concord, N. H.

Edward A. Kimball, C.S.D., Post-office Box 518, Chicago, Ill.

Bliss Knapp, C.S.B., 4 Batavia Street, Boston, Mass.

Frank H. Leonard, C.S.B., 305 Temple Bar Building, Brooklyn, N. Y.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

William N. Miller, K.C., C.S.B., 6 Sumner Terrace, S. Kensington, London, England.

Mrs. Sue Harper Mims, C.S.D., 1219 Peachtree Street, Atlanta, Ga.

Rev. Irving C. Tomlinson, M.A., C.S.B., 82 Warren Street, Concord, N. H.

Rev. Arthur R. Vosburgh, C.S.B., 517 Central Building, Rochester, N. Y.

Bicknell Young, C.S.B., The Republic, 209 State Street, Chicago, Ill.

Letters and telegrams sent to the addresses given above will be duly forwarded.

MOBILE, ALA.

On Sunday afternoon, April 21, a good-sized audience was present in German Relief Hall to hear Frank H. Leonard of Brooklyn, N. Y., speak on the subject of Christian Science. The stillness of the house and the marked attention of the listeners during the hour and a half that Mr. Leonard spoke showed extraordinary interest. The lecturer was introduced by the Hon. N. R. Clarke, who spoke in part as follows:—

Among you are many who, from personal experience and actual connection, with full knowledge of its historical advent and sequence, are fully cognizant, while all of you have heard of the wonderful growth and progress of a branch of the great Christian religion which has for the past forty years taught its faithful members the great truths of the Bible, and scattered in its triumphant passage down the years of its existence sunshine and hope to the weary and heavy laden, health to the sick, making lighter the burdens of the afflicted—at all times pointing upward.

When in the year 1866 that great and good woman, Mrs. Mary Baker G. Eddy, made her discovery of metaphysical healing, and founded a system of "moral and religious instruction," thereafter to be known as Christian Science, she gave to the world a blessing that fully entitles her to one of the brightest places in the galaxy of saints. I have not the privilege of calling myself a member of this great institution, but from the standpoint of a layman viewing its object and its works, I can bear witness to the influence it has exerted upon the world for its good, in the uplifting of mankind, in bringing men closer to that perfect state which they must reach before qualified for the life eternal.

I can most truly bear witness to many blessings as the result of faith in its doctrines. I have seen the sunshine of happiness enter a home where prior to the belief in this religion there was darkness and gloom. I have seen the burdens lifted from the abode of poverty and perfect contentment thereafter reign therein. I have seen sickness and disease bid farewell to the body tabernacles where they were wont to dwell so tenaciously, hope take the place of despair, the death-chamber made glorious by a perfect faith in the goodness of the creator and in His promise of a more glorious reunion.

Many believe this religion to be an occult science, working its miracles in a mysterious way, and when one of its Board of Lectureship appears upon a platform, audiences generally flock there with the expectation of having these mysteries unfolded. My understanding is that the foundation of this religion is love and faith in the creator.

Mobile Register.

TOLEDO, O.

To as large an audience as could be accommodated in First Church of Christ, Scientist, in this city yesterday afternoon [April 14] Judge Septimus J. Hanna, of Colorado Springs, Col., delivered an address on the Bible as interpreted by Christian Science. Mr. H. C. Adams, a prominent lawyer of this city, and at one time principal of the Toledo High School, introduced the lecturer, and said in part,—

All advancement in learning, every new height attained in thought, has been fraught with labor, sacrifice, and suffering. To battle against prejudice and bigotry requires courage and sacrifice of the noblest sort, and in this particular the Christian Scientists appear to me as among the foremost of effective workers in God's vineyard. Happily mankind is showing signs of doing away with persecution for conscience' sake, but it has not altogether overcome the spirit of intolerance. The growth of liberalism is steady and irresistible, if not as

Digitized by Google

rapid as we would have it according to our poor way of thinking; and we now see the dawning of the day when the intelligence of the world will be tolerant of all honest search for truth. Luther and Cromwell, Pilgrim Rock and the Declaration of Independence, and we may also add Unitarianism and Christian Science, are the results of a mighty but invisible power, whose silent throbbings, like some great tidal force in nature, are slowly undermining falsehood and heaving the whole mass of humanity upwards.

I am not a Christian Scientist, perhaps for the reason that my nature has not yet become attuned to the finer chords of sentiment and truth; but I am happy to say that I rejoice that Christian Science exists for the good it is doing in helping to elevate mankind to a higher plane, and in overcoming the error of their baser nature by touching the sweeter chords of perfect harmony by which they are attuned to the infinite. One cannot come into the presence of an intelligent Christian Scientist without feeling that he has been made better for it. He is not met with anger nor with any other form of error; but on the contrary he is made to feel the uplifting influence of truth, by which he is made free to enjoy the true, the beautiful, and the good.

When you come in contact with those who have pursued the thought of Christian Science and lived it, you cannot help feeling an inspiration to look only for what is good among men. Through such instrumentalities we are getting glimpses of the perfect day of "on earth peace, good will toward men," which proclaims that the golden era of true freedom is about to be ushered in.

Toledo Press.

GRAND RAPIDS, MICH.

An audience that filled to its utmost capacity the beautiful auditorium of First Church of Christ, Scientist, Sunday afternoon, May 19, gathered to hear the lecture on Christian Science by Miss Mary Brookins of Minneapolis, Minn. The lecture was repeated the following evening at the same place. Mr. Percival B. Garvey, First Reader, introduced the lecturer the first evening, and said in part,—

Christian Science offers everything which fully and consistently satisfies the need of humanity right here and right now. It does not create or establish a truth, it simply proclaims it, and projects into human consciousness that which saves and heals, that which always was true and always will be true. Christian Science, instead of rearranging or altering your Bible for you, helps you to study and read it understandingly, and thus the imperishable truths it inculcates become clearer, nearer, and dearer.

On the second occasion the introduction by Luman A. Fields was in part as follows:—

To you who are faint and weary with the heavy burdens of life—to you we bring the glad assurance that through Christian Science is fulfilled the Scripture, "The night is far spent, the day is at hand." "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee." In this wonderful religious epoch at whose threshold we now stand, the prophecies of the ages are finding fulfilment, not only in a general way, but also in the minutest details. In this time, says Isaiah, "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

The universal presence of this spiritual understanding is ushering in the reign of individual and world-wide peace and blessedness. This happy condition the prophet thus describes: "They shall not hurt nor destroy in all my holy mountain." "And it shall come to pass in the day that the Lord shall give thee rest from thy sorrow, and from thy fear, and from the hard bondage wherein thou wast made to serve." "Violence shall no more be heard in thy land, wasting nor destruction within thy borders;" but, "they shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn war any more."

That Christian healing must constitute a leading feature of this new era is plainly indicated by such prophecies as the following: "In that day shall the deaf hear the words of the book, and the eyes of the blind shall see out of obscurity, and out of darkness." "Then shall the lame man leap as an hart, and the tongue of the dumb sing." "And the inhabitant shall not say, I am sick:" for "God shall wipe away all tears from their eyes, and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

John, the beloved disciple, speaking of the second coming of Truth's idea, definitely states that "there shall in no wise enter into it any thing that defileth, neither whatsoever worketh abomination, or maketh a lie." In harmony with this prophecy, the teachings of Christian Science are making possible the realization of the growing and insistent demand from religious, social, and business life that the fundamental qualities of purity, honesty, and goodness find sincere and noble expression in all the varied activities of daily living. The fulfilment of these and many other similar prophecies is made possible only through the spiritual understanding imparted by Christian Science.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

HISTORY.

In these days when so much is being written about our Leader and Christian Science, it is well for us to remember that Mrs. Eddy has not left the world in ignorance of her early history, nor of the early history of the Cause which she has founded. We do not need to turn for information on these subjects to the alleged histories which have been published by unfriendly magazines and newspapers, for in "Retrospection and Introspection" our Leader has given us not only a summary of names and dates important in her early experience, but also a clear insight to the condition of thought which made her discovery possible.

The study of this book is important to Christian Scientists at this time, not only for the historical data which it contains, but also for the wise yet simple admonition and advice which are so frankly given, and for the lessons of Christian hope and cheer that fill its pages. The consistent Christianity of this book is of itself an answer to the attacks that have been made upon Mrs. Eddy and her works, and every Christian Scientist should be as familiar with it as they are with our text-book, "Science and Health with Key to the Scriptures."

When authentic information about Mrs. Eddy and Christian Science is so much in demand as it is at the present time, her followers should see to it that this is available to every honest inquirer, and for this purpose we most heartily commend "Retrospection and Introspection" as an authoritative statement of facts in connection with Mrs. Eddy's life and works with which it is well we should be familiar.

ARCHIBALD MCLELLAN.

"PROOF AND DEMONSTRATION."

About eleven years ago a new order was introduced in the Christian Science Church, namely, the substitution of the now well-known Lesson-Sermons for sermons prepared and delivered by preachers. There were at that time a relatively small number of organized churches and societies of our denomination, and the rapid growth and development along this line since the introduction of the Lesson-Sermons have proved their value in the education of religious thought in Christian Science. It is safe to say that never before has the Bible been studied by the laity as it has been studied in connection with these Lessons, and its teachings have been applied by many of these students to all the varied problems of their lives. In most cases they have first experienced the power of the truth in the healing of bodily ailments, then in the transformation of their dispositions and the unfolding of man's God-bestowed faculties and capabilities.

From the time of one's awakening to the truth of Christian Science there is more or less of an effort to apply the truth perceived to the experience of each hour, and he who is wise always begins the day with the study of the Lesson-Sermon. At this "morning meal" (Science and Health, p. 35), he partakes of the "hidden manna," the spiritual sense of the Scriptures, which indeed "giveth life unto the world," and those who do this work faithfully find that their needs have been anticipated and met in a wonderful way. Under divine guidance, as we reverently believe, the Scriptures are diligently searched by the compilers of these Lessons, and the great questions of God, man, and the universe, spiritually and scientifically explained from the Bible and Science and Health. In the study of these Sermons it is well to remember our Leader's words, "The hour has struck when proof and demonstration, instead of opinion and dogma, are summoned to the support of Christianity, 'making wise the simple' " (Science and Health, p. 342).

All who attend our services are familiar with the words read at every service, immediately before the Lesson-Sermon, to the effect that these Sermons are "uncontaminated and unfettered by human hypotheses" (See "Explanatory note," *Christian Science Quarterly*). In the Manual of The Mother Church we are told that the Readers in our churches "shall make no remarks explanatory of the Lesson-Sermon at any time" (Art. IV., Section 6). It is understood that each listener is to be left free to grasp all the truth which he is prepared to receive, by the light of reason and revelation. Mrs. Eddy says, "In Christian Science mere opinion is valueless" (Science and Health, p. 341. It would be considered irreverent and presumptuous for the Readers to express their opinions as to the possible meaning of the Lesson-Sermons, and such being the case others should hesitate about doing so at any time, lest they, perchance, deflect the beginner's thought from the true direction. In this, as in many other respects, we can safely trust God to be His own interpreter, especially in view of the fact that so much harm has been done to mankind by mere human opinions.

The student of these Sermons will find it helpful to read the first Science and Health reference of each section when he begins its study, since this reference usually furnishes the key to the section and opens up the meaning of the Scripture cited. We have also an excellent tract, sent out by The Christian Science Publishing Society and entitled "The Lesson-Sermons," which furnishes the beginner with all the information he requires as to the study of these Sermons. The desire to study them with those who are thought to be more advanced implies dependence upon the opinion of others rather than upon divine guidance. We should *let* the Spirit bear witness, and the truth best adapted to each one's need will be made plain to him, especially when he faithfully demonstrates this truth as he sees it. Doing this each day will bring an enlarged sense of Truth's power and presence, and of necessity a clearer sense of the meaning and message of the Lesson, which will establish health on the true basis. We should never forget that the great and mighty conqueror of all human ills, who alone in righteousness "doth judge and make war," is called "the Word of God."

ANNIE M. KNOTT.

A QUESTION OF CHOICE.

Error ofttimes makes itself impressive to human sense, not only by its pains and terrors, but by its asserted greatness, continuity, and conformity to law, and its arguments are of such significance to some that, though they cannot believe evil is good, or that God actually has need of it, they nevertheless feel compelled to say that it is too big and too significant to the life that now is to be counted out as nothingness. They find it impossible to think that "the material universe, with its lights and its shadows, its splendor and its gloom, has sprung from something outside of or contrary to the wish and will of God." Consequently

Digitized by Google

they have difficulty in accepting the teaching of Christian Science that evil—all materiality—is unreal, a falsity in its nature and phenomena, and are disposed to think that in some sense evil has to do with the making of good; that there is some reason for it in the divine economy. "The unripe apple," say they, "is unattractive to the palate, but it is the prophecy of delicious fruit," and has a necessary relation to it.

This position is manifestly a resultant of the belief in the reality of evil, and inseparable from it; and if such reality be admitted, the impressiveness of its bulk, continuity, etc., certainly cannot be questioned. If, however, we were to begin to think of the phenomena of material sense as having no more real substance or being than a dream of the night, then its bigness would in no sense increase our difficulty in recognizing its nothingness. Indeed, to one who accepts the divine idealism of Christian Science, the bigger the seeming error the more removed from actuality and the more powerless it becomes, in view of its correspondingly greater removal from the ideal.

The objectors referred to above are certainly right in their intimation that a choice must be made between the denial of the reality of the material universe in which evil inheres, and its acceptance as "good in the making," a part and parcel of the divine ordering. There is no other alternative, and, therefore, whatever problems the first position may precipitate, the question of its acceptance cannot be intelligently settled until we see what the acceptance of the only alternative would involve.

If evil is "good [*i.e.*, if materiality is spirituality] in the making," it is necessary to good. The making must precede the thing made, hence evil has a right to its place, and in that place it is not evil, but good. This would explain the existence of evil, surely, but the explanation is secured at too great a sacrifice, for if evil is good in any place or at any time, moral discriminations must manifestly go by the board. Moreover, if evil be accepted as of divine provision, it must be in the divine consciousness, and the ideality of God can no longer be affirmed! The moral concept of the universe has passed away! When this is seen to be the outcome of the acceptance of the reliability of material sense testimony, then surely that outcome bids us pause.

In Christian Science thought is lifted toward the viewpoint of God, to the ideal concept of whose nature and manifestation all true statement and philosophy must conform. The asserted bigness and continuity of evil are seen to be a part of the delusion of human sense, while its apparent conformity to law is but the semblance of orderliness, which a counterfeit of the divine manifestation must necessarily have to be a counterfeit.

In view of the uncertainty respecting the nature of matter, the constant shifts and changes taking place in the theories of substance, materialists are now emphasizing law as the stable factor in their system, and this is the best they can do. Nevertheless all Christians must remember that it was the asserted laws of materiality, so-called nature, which Christ Jesus constantly set aside as without power or authority; and to-day the nothingness of these laws is being demonstrated in kindred ways. The experience of healing, of escape from the bondage of material law, does far more to settle the question of its unreality than the most logical argument can accomplish; and yet for all who accept the Christ concept of the divine nature, philosophy and demonstration stand together in support of this fundamental teaching that God is all, and God is good, hence all is good. The significance of this matter to our practical overcoming of sin and sickness, is expressed by Mrs. Eddy when she says (Science and Health, p. 92), "Until the fact concerning error—namely, its nothingness—appears, the moral demand will not be met, and the ability to make nothing of error will be wanting."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

New York, N. Y., May 29, 1907.

Beloved Leader:—The holding of the Memorial service of the E. E. Sturtevant Post in your church could in no way be detrimental to the work of our Association for International Conciliation. It was my privilege during the recent Arbitration and Peace Congress to secure the cooperation, on the same committee, of the presidents of all the patriotic societies which sprang up in the wake of the Revolutionary War, and of a number of those which resulted from the Civil War—the Grand Army of the Republic, the United Daughters of the Confederacy, the United Confederate Veterans, and others. Those who are guiding the action of our Association understand not only the conditions which we wish to change, but the better condition which we wish to substitute therefor, and the way to accomplish the desired result. Therefore we honor and respect the soldier for doing the duty to which his country sends him, while at the same time we know that he would prefer to have the right rule, and justice done, without any resort to force. In proof of the truth of this, you may be interested to know that, upon my motion, Captain William F. Robertson, of the Wilmington Light Infantry, was recently elected Vice President of the North Carolina Peace Society, of which I am President. He demurred, fearing that the two positions were inconsistent. I asked him whether his promise to the State that he would obey her in making war, should interfere with his working to prevent the happening of those things which would make war necessary? He saw from this question that we gave him an opportunity to do good work in the cause of peace, which would decrease the danger of his having to engage in war. So he consented to serve as an officer of our society.

The question which perplexed him is one which many people have not yet solved; many of our peace advocates differ on it. But it seems very plain to me that it is merely a question of meeting conditions as they exist, while working continually to improve them, and in due time everything is destroyed that is contrary to God. I abide in the faith that the time foreseen by the prophets will come, when men shall learn war no more, and I am deeply grateful to you for enabling me to work effectively for the hastening of that day. I am ever conscious of the fact, however, that I cannot wisely work for this while I either despise or neglect those things which we must suffer to be so now, or while I suffer that to remain which ought now to be destroyed. I am endeavoring to do all the duties of to-day, on the journey from "sense to Soul," looking and working for the destruction of all error, when we shall attain to the perfect understanding of Principle which overcomes even death. You, dear Leader, are approaching that hour, and your faithful ones will follow; and on the way your peace motive, and your incessant prayer and labor for the good of others, make your sense unerring.

As the son of a Confederate soldier who did his duty bravely and for years, as his conscience dictated, I thank you for your consideration to the members of the E. E. Sturtevant Post, and I pray that all those who undertake to follow you will exhibit in this our moral warfare the grand qualities of obedience, of courage, of loyalty, of persistence in the right through long appearances of victory for error, of gratitude and love for those who lead in the struggle. It was the exhibition of these qualities under most trying circumstances that has made the patriotic societies come into our world. I pray that the soldiers of all lands may be united in the work of our Conciliation Association, and as soon as "the Father draweth" them, in the work of your Church; then they will come into the peace which the world cannot take away.

In your quick and unqualified approval of our efforts

Digitized by Google

to make progress toward peace, through conciliation and arbitration, you have already strengthened our cause. And on the eve of my departure for The Hague I re-echo in mind the wish recorded by the founder of our Association, that your beneficent influence may spread itself as far as possible for the honor of our country and the progress of civilization.

With a deep sense of gratitude, and in the hope that you will find the answer which your spiritual sense can approve,

Your loving student,

HAYNE DAVIS.

Toledo, O., May 22, 1907.

Dearest Mrs. Eddy:—For a long time I have wanted to write to you and tell you of the great happiness that has come to me through the study of your books in connection with the Bible. I am sending to you a copy of the *Army and Navy Journal* containing a short article written by me, which I thought would be interesting to readers of this paper, as your inspiring words which I have quoted show so beautifully your gratitude for the services of our brave soldiers and sailors. These words bring tears to my eyes every time I read them, and my heart is filled with love for you, and gratitude for your appreciation of loyalty and obedience. These words appeal to me especially, as my father is an officer of the United States Army, and my husband, also an army officer, lost his life in the far-away Philippines, in the cause of humanity. May all nations soon find a better way than war to bring freedom to those who are oppressed,—even the way you have taught us in Christian Science. I am proud to be descended from one of your ancestors, Captain Lovewell, who lost his life in the early colonial days in New Hampshire.

Christian Science has brought happiness and a deep sense of gratitude for many blessings to me, where formerly there was sorrow, disappointment, and regret; and I am thankful every day and hour for this comforting understanding of God which has come to me through your interpretation of the Scriptures.

My little daughter, seven years old, loves you, too, and she said to me not long ago, "Mamma, I know when Mrs. Eddy goes to sleep at night she is listening to beautiful music." With loving thoughts, I am

Sincerely yours,

ELIZABETH KELLOGG WITHER.

Rome, Ga., May 1, 1907.

To Our Beloved Leader:—By unanimous vote the members of First Church of Christ, Scientist, of Rome, Ga., desire to send to you an expression of their great love, confidence, and loyalty. We wish to assure you of our loving appreciation of your holy work among men; marking out the path for us, and making it luminous with inspiration to walk in that path, and "eat the bitter herbs" (Science and Health, p. 559) if need be. This small branch of the Vine, in the far-off Southland, though separated from you by many miles, feels very near to you in spirit and in love; and we are working harmoniously for the establishment of our great Cause, the kingdom of heaven on earth. We rejoice in knowing that nothing can touch our Leader, for underneath are the "everlasting arms," bearing her onward and upward, and "the gates of hell" cannot prevail against her security in the Divine embrace.

With deepest devotion, and gratitude to you who, though unseen at your post, are "praying, working, and watching for the redemption of mankind," we are striving to be your faithful followers in truth.

MRS. ROSA L. HANNAN, *First Reader,*
MRS. MINNIE MORENO SLEDGE, *Second Reader,*
MRS. MARY FORT THOMAS, *Clerk,*
Committee.

Joliet, Ill., May 6, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Beloved Leader:—During the hour of Jesus' trial and his voiceless struggle against the human hatred of Truth and Love, while he "held uncomplaining guard over a world," he was deserted by his disciples and those whom he had blessed, left without "one sign of fidelity" [Science and Health, pp. 48, 49]. We would not have the history of that error repeated in your experience and ours. We earnestly desire, by this letter and by our lives, to express our heartfelt love and fidelity to you; our loyalty to Christian Science; our recognition of the divine Principle that you have discovered; our implicit trust in your wisdom and ability to lead on the Cause which you have founded, and our sincere confidence in the integrity and honesty of those whom you have chosen to aid you in the work of establishing the kingdom of heaven—the universal reign of Divine Science on earth. By precept and example you have taught us the way to health, peace, and heaven. We sincerely and gratefully thank you. For any wound that our sins of omission or commission may have caused you, we are deeply sorry. We appreciate more and better than ever before your "toils, privations, sacrifices," your "divine patience, sublime courage, and unrequited affection." [See Science and Health, p. 49.] Dear one, we love you.

In the bonds of Christ,
First Church of Christ, Scientist,
H. E. BALDWIN, *Clerk.*

Kewanee, Ill., May 29, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—It is with the deepest sense of gratitude, that we, the members of First Church of Christ, Scientist, of Kewanee, Ill., write to you of the loving loyalty of our little band for your wonderful revelation and the innumerable blessings we have received from a devoted and righteous application of the Principle which saves and heals. Our gratitude rises to consecrated veneration when we remember how the "might of his right hand" has guided us triumphantly through a dark sea of seeming discord: the aspect of which, to sense, would tend to wring from one's lips the anguish the Master uttered on the cross. Our church is small, but most harmonious, and faithful in following your teaching. We shall ever endeavor to reflect more and more of divine Truth, expressed in humbleness, meekness, love, charity, and good works, thus in a small measure repaying the inestimable debt we owe to God for having given us a "burning and a shining light" to guide us into the realm of everlasting harmony and peace.

If wishes were wise, we would say "God bless you."

SARAH E. BONE, J. W. HOUCH.
KATHRINE J. BONE, *Committee.*

Barrington, R. I., June 1, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—We, the members of the Christian Science Society of Barrington, R. I., at our annual meeting, desire to express our hearts' gratitude to you for what Christian Science has done for us. Dismal and comfortless would have been the condition of every one of us but for the teachings of Christian Science. We are striving for a better understanding and in all ways to be more practical—to learn better the application of your words, "I will follow and rejoice all the rugged way."

ALICE G. SAYWARD,
ELLA M. BOURNE,
Committee.

AMONG THE CHURCHES.

TOPEKA, KAN.

Second Church of Christ, Scientist, which recently purchased the Swedenborgian church property on the southeast corner of Sixth Avenue and Harrison Street, held their opening services in their new home Sunday [May 26]. The property, which has a frontage of fifty feet, is a very desirable location. The church contemplates building a beautiful church on this corner in the future. The present building has undergone a complete transformation. The usual Sunday services were observed, with the addition of a brief address by the president of the church, who in the course of her remarks said, "While we cannot dedicate our material building to-day, as it is not completely paid for, we can dedicate ourselves and our lives anew to God's service, and our real church, which is in the hearts of the people, can be so enlarged and consecrated in this service that it will prove a great blessing not only to ourselves, but to the city and community."—*The Topeka State Journal.*

DAYTON, O.

Perhaps never in the history of Christian Science has the movement been so much discussed as it is to-day. In consideration of the fact that there is no proselyting among the members, the growth of the Christian Science movement has been phenomenal. Dayton possesses one of the strongest and largest societies in the State, and it may prove of interest to many to note the progress and kind of work that is being accomplished by the local organization. Christian Scientists are everywhere reserved in their attitude toward the world at large, and content themselves with works rather than words. The fact is recognized that Christian Science is developing a great influence upon the world of religious thought and is effecting a marked revolution in social conditions as well as medical practice.

The growth of Christian Science here has been phenomenal. In 1894 a church was organized, which began with an enrolment of eleven members. Thirteen years have passed, and several hundred members have been added to the church. The first meetings held in Dayton were conducted in a small room in the Pruden Block, but the speedy growth of the organization necessitated larger quarters. Dayton now has two recognized churches of the Christian Science denomination and stands fifth in number interested in the State. The congregation of First Church owns its edifice on the Boulevard.

Second Church of Christ, Scientist, this city, has been organized about sixteen months, and at present holds its Sunday morning service in the sun parlor, Algonquin Hotel. Both congregations are growing and are in a flourishing condition. Some of Dayton's prominent citizens are Christian Scientists. There are probably five hundred people in Dayton who are adherents of the faith. Many testimonials are on file relating to cures effected by the practitioners of Dayton. As a number of the patients live in Dayton and vicinity, they may be seen at any time if an investigator wishes to verify the testimonials. It is safe to say that the local church is doing a great good for the moral and physical uplift of the community. Its followers are from the representative families of the city, and nothing but praise is due the sober and deep earnestness of the people constituting these congregations.

Dayton Journal.

HONGKONG, CHINA.

Among the visiting attendants at The Mother Church on Sunday, June 9, were Mr. and Mrs. Dunn from Hongkong, China. Mr. Dunn made the following statement concerning his own experience with Christian Science and the introduction of Christian Science in Hongkong:—

In view of the rapid extension of the study of Christian Science during recent years in all parts of the world, it may be of interest to give a brief account of the origin and progress of the movement in the Far East of Asia. The first student of Christian Science to reside in China, so far as I am aware, was Mrs. Conger, wife of the United States Minister at Pekin. Her beautiful work at the time of the Boxer rising, by which she strengthened herself and so many others during those trying weeks, is now a matter of history.

In 1903 my wife and I came out to Hongkong on my appointment to take charge of the Colonial Botanical and Forestry Department under the British Government. We had been studying Christian Science for some years and had taken a systematic course of instruction in England. Christian Science was at that time quite unknown in Hongkong. We began at once to tell the glad tidings to the sufferers, the hopeless and the unhappy. Many heard us gladly and not a little healing work was done. I need not dwell on the opposition which fell to our share nor to the gradual change of these conditions towards respect and toleration when the true meaning of Mrs. Eddy's writings began to be understood and their effect seen. As our numbers increased it became necessary, in 1905, to take public rooms in the town, and some twenty students met together at the close of that year and formed the Hongkong Christian Science Society—the first in Asia—with the object of opening the rooms and providing for the holding of regular services. We now have two convenient rooms in a central part of the town, open daily as Reading Rooms and in which regular Sunday and Wednesday services are held. From Hongkong or from other sources Christian Science is now established in Singapore, Straits Settlements, Shanghai, China, and Yokohoma in Japan. There has also been for some years a flourishing society in the Philippine Islands.

I must give grateful testimony to the very great benefits that I have myself received from the teachings of Christian Science during my four years in the trying tropical conditions of Hongkong, and by which I have been able without the irksome precautions of *materia medica* to discharge the duties of an arduous post without one day's sick leave. Those who have had to deal with large numbers of Asiatic subordinates under tropical conditions will appreciate my gratitude for the overcoming of worry and irritation in executive work, and those who have traveled in the wildest parts of the tropics, far from the comforts of western civilization, will at once see the advantage which my wife and I have felt in a complete immunity from or even anxiety about fever and the other misfortunes which so often spoil such expeditions or bring them to an untimely end. Among the more common maladies of tropical Asia which I have seen cured by Christian Science in myself or others are malarial fever, dengue fever, acidity, prickly heat.

Before concluding I desire to say how much gratitude and love we feel for Mrs. Eddy, the courageous woman who once stood almost alone in delivering the message which has brought us such blessings and offers such rich promise for humanity.

CORRECTIONS.

[The notice of a Christian Science organization at San Rafael, Cal., which appeared in the *Sentinel* of June 8, should have read church instead of association. This church was organized in 1903 and has the usual card in the *Journal*. The notice which appeared in the *Sentinel* was published as sent us.—EDITOR.]

[An article in the *Sentinel* of May 4, republished from a magazine, states that Fifth Church of Christ, Scientist, of New York city is located at 228 West 49th Street. This should have been 45th Street.—EDITOR.]

TESTIMONIES OF HEALING.

It is now about twenty years since the truth came with its healing beams to my consciousness. A chronic invalidism, marked by occasional serious and alarming conditions, necessitated several surgical operations by specialists, culminating in the "rest-cure," taken at Rhita at very great expense. This, in addition to the preceding expensive operations, electrical treatments, etc., made in all a small fortune in medical bills, and resulted in very little alleviation of my ills. This brought me at last to Christian Science, which restored me to health, strength, and usefulness. Now for these many years I have, without medical treatment or any material reliance whatever, although formerly a spinal brace had to be worn to keep me up, been able to undergo fatigue in traveling, exposure, and loss of sleep,—experiences that have been quite wonderful,—and which have elicited much comment, as ordinarily the same conditions would seemingly have imperiled my life.

With unfailing gratitude to our dear Leader for added years of comfort and usefulness, I rejoice to follow in the light that through her has been revealed to us.

SUE HARPER MIMS, Atlanta, Ga.

I desire to express my ever-increasing sense of gratitude for the many blessings which Christian Science has brought to me, in leading me out of the darkness into Truth's eternal day, enabling me to understand the Bible and to know and to love God. When I realize what Christian Science really is, and what it has done for me, my gratitude is unspeakable. For twelve years I had been a great sufferer from all kinds of stomach trouble and attacks of bowel trouble. I had eminent physicians all over the country; one physician, who has a world-wide reputation, did not allow me to eat any fruit or vegetables for four years, and for three years I was not allowed to drink any water; but with all these restraints I obtained only temporary relief. After coming into Christian Science, this trouble was healed instantaneously. I now am free and eat anything I desire.

About five years ago I met with an accident which caused a severe injury to my right leg. I had been under a physician's care all this time, and was compelled to use remedies and bandage the leg continually; but the excruciating pain I suffered is indescribable. When Christian Science found me I had become greatly discouraged; and I am very happy to state that in less than three weeks of treatment I was completely healed of this injury.

I am profoundly grateful, both to God and to our beloved Leader, for the many blessings that have been brought to me through this blessed truth, and I can pay my debt of gratitude only by living the life of a true Christian Scientist.—JEANNETTE H. JONES, New York, N. Y.

About a year and a half ago, after many years of struggle with the world, I found myself sick and discouraged —disappointed by and with humanity; this, too, in spite of the fact that I had always wanted to do right. My life was one of constant worry and I never seemed satisfied or truly happy. I boasted that I was always able to overcome my enemies, but every time I got through with one there was, or seemed to be, another who had to be knocked down. There came a time, however, when defeat seemed certain, and I no longer cared what happened so long as I could end it all, for I felt that everybody misunderstood my motives, which I thought were always good.

After having tried doctors, and having been ordered away by my physician, who gave me morphine to deaden the pain caused by severe bowel trouble, at the suggestion of a customer I sneaked into the office of a Christian Science practitioner. When I sneered at him, and told him I could not leave my business as the doctor had insisted I must do that very day, the Scientist said, "My dear fellow, if you go away you take yourself with you. What you need is to get away from yourself." Without knowing a single thing about Christian Science, and in spite of my sneers and unbelief, I was healed in two days, although I ate certain things to test my healing. Since then, with the love and patience manifested, I have come into an understanding of Christian Science, and have had the opportunity to prove my faith by my works. Harmony has taken the place of discord in my business and home life; perfect health—the kind I never dreamed was possible—the place of sickness; worry is a thing of the past, and my heart is full of thanksgiving. Need any wonder, then, that we are not disturbed by the attacks now being made upon us; for the wisdom of the world is folly, compared to the wisdom of God. In Science and Health, (p. 266), Mrs. Eddy sums up my case completely and exactly, in one brief paragraph, which begins: "Would existence without personal friends be to you a blank?" The answer to this question filled me with gratitude for so much truth expressed in so few words. I am happy to have been a channel through which many others have been healed; my own father of an ailment for which he had worn rubber stockings for three years, but which have since been discarded.

We can well afford to be, and should be, patient with those who have not yet seen the light,—when we remember that it was only through the love expressed to us by others that we have this pearl of great price. When I stop to think of the love, patience, and work which it often takes to convince one mortal that God does heal our sickness,—even after the movement has such a splendid footing in the world to-day,—what infinite courage and love did it take for one lone woman, unaided and without money, to tell the whole world that what they thought real was unreal. It is, therefore, no wonder that with this knowledge before me my appreciation of the wonderful truths which Mrs. Eddy has revealed to us is finding daily expression. When I tell people to-day that I am trying to be a real Christian Scientist, I find that it attracts respect, not ridicule.

With the hope that through Christian Science some one may be spared suffering, these facts are respectfully submitted by an Israelite brought up in the Jewish faith.

MILTON WEBER, New York, N. Y.

Words are incapable of expressing our deepest thoughts, and I pause reverently, thinking what I can say at this late day to declare my gratitude to God, the giver of all good, for my manifold blessings, and to show forth my appreciation of our Leader, the one who has labored so faithfully to make plain the way of salvation, to help us to understand the Principle of being, whereby peace and health can be attained here and now.

Nearly sixteen years ago I was compelled to resign the position I had held for several years, as art director of a college. As there was no perceptible sign of weakness, and my work showed no failures, the president of the college refused to accept my resignation until a second and more urgent request was made. My life had been a constantly busy one, as public school teacher and art director, and at this time sleeplessness was added to the supposedly hereditary liver and bowel trouble which compelled idleness. Leaving my college work, and after various experiences with friends and foes, I was advised by a doctor in New York city to

Digitized by Google

try a celebrated rest-cure, in order to regain my normal condition. A strong belief in will-power had always sustained me in my work, enabling me to keep my ailments somewhat in subjection; but the sleeplessness, coupled with a serious nervous condition, now threatened my life. Half a year spent at the Springs gave no perceptible benefit. While there I was admonished to attend chapel exercises, the good man of the house saying, "God can do what doctors fail to do;" and he often said that he gave little or no medicine. Having prayed all my life,—more from habit than understanding,—I obeyed reluctantly. The nights were spent tossing on my bed; the days in taking baths, pouring out medicine, counting pellets, and anon sketching the people drinking from the sulfur pools. The best night's rest I had was once when after midnight I grew desperate, and reaching out in the dark for the medicine that my attendant had left, with the advice to take but little as it was very powerful, I drank from a glass nearly all its contents. I then slept till morning, an experience very unusual. Glancing at my table, I found the glass of medicine was untouched, while the glass of clear water was nearly empty, proving that as one thinks, so it is.

I had repeated the Lord's Prayer and the litany constantly through nights of agony, but God seemed so far away that often I would ask in despair, "Where is God?" None but myself ever knew the stifled ambition, disappointment, and anguish of soul I experienced during nearly two years of this purgatory, all these experiences forming a composite picture of pandemonium. In my case, however, man's extremity was truly God's opportunity, for after my return to Chicago Christian Science was thrust upon me by those who knew nothing of it personally, but they had friends who had been healed of very peculiar ailments. After the third person accosted me, it flashed upon me that I had heard the words "Christian Science" about five years previous, while amongst the mountains with a sketching club, and the seed then dropped into thought was not lost. Finally a practitioner's name was given me, but nothing save enforced idleness could have driven me to make use of this God-given opportunity. Calling upon her with burdens which I thought were beyond her sympathy or power to remove, she remarked that God is able to help us in all our afflictions and trials and that she would give me treatment. She bowed her head, while I gazed upon her with the criticism that she was "only praying" for me; but soon the spirit of humility overcame my combativeness, and the power of that prayer erased a deep-seated and acute pain in my head, and this has never returned in these sixteen years.

It was as when the Christ had said, "Thou dumb and deaf spirit, I charge thee, come out of him, and enter no more into him." The light which seemed to enter that room proclaimed to me, "God is Love," and I seemed to see those words in letters of gold every way I looked. To my awakened consciousness it was a heavenly vision. Mrs. Eddy tells us that the "spiritualization of thought lets in the light" (Science and Health, p. 407). I felt that I must know something of this subject, so I asked if there was any book that I could read. Having never before heard the book mentioned, the words Science and Health appealed to me as a medical treatise. Buying the book, I hastened home, eager to see what was in it. I read the preface carefully, as was my custom, and then began to read the book. Some of the statements appeared vague, while others deeply interested me and awakened a new line of reasoning, as they explained subjects of vital importance. Studying day and night, reading several pages, then reviewing, accepting all I was capable of receiving, it occurred to me after several weeks that I was free from the liver and bowel trouble; but when or how I was healed I could not tell. This was a great surprise, on account of my later affliction—sleeplessness—continuing, although somewhat abated. My dominant desire was to rest and sleep in a natural way, but over-anxiety, constant fear and dread kept my thoughts filled with that which I longed to consign to oblivion. This lesson early learned has enabled me to be more helpful to my fellow-men. Mrs. Eddy reminds us that we must learn "either by suffering or by Science" (Science and Health, p. 240).

The prophets of old, Jeremiah and Ezekiel, gave to the world a denial of the asserted law of inheritance, and before long Science and Health opened to me the Bible, saying, "Whom therefore ye ignorantly worship, him declare I unto you." The Bible was now read with a different incentive; the God who is Love was made known to me. During my affliction and idleness, my Bible would invariably open at the book of Job, my condition of thought attracting me to a like condition,—a lesson clearly seen afterward, and made helpful to others. My reading of this wonderful book would generally close with a feeling of compassion for Job; also a wonder why God permitted the patience of Job to be so greatly tried, and why his "comforters" did not mind their own business. Like the boy gazing at the stone face upon the mountain, changing his conception as his thought advanced, I began to look upon the Bible characters from the view-point of Christian Science, and found my conception of God and humanity changing in the dawn of a new light, and mortal man's various forms of self-righteousness and frail understanding of God became lessons to my awakening consciousness, while Job's final confession to God was fast becoming my acknowledgment,—"I have heard of thee by the hearing of the ear: but now mine eye seeth thee."

Having in time past read and taught the Bible from a literary, historical, and moral point of view, gradually its "spiritual import" began to inspire me with a deep sense of the omnipotence and omnipresence of God, which afterward made it possible for me to bring healing to my absent friends and fellow-sufferers. The help and healing in the family of a dear brother (a druggist) aroused him to examine into the faith that was within him, and he became convinced that there was no life-giving power or principle in drugs; and finally, as he expressed it, his drug store "gave him up." Members of my former church have been made to realize, through the healing in their families, that God's children are not miserable sinners, and that sickness and sorrow are not a divine inheritance. My church discipline I treasure as one of the stepping-stones on the way "from sense to Soul" (Science and Health, p. 566. I treasure also all the many lessons learned in the nearly two years of varied experiences before I fully realized that the truth had made me free from all my delusions. For the benefit of others I will add that naturally the "last misfortune" to fly out of my Pandora box was the one I studied the most and hugged the closest. In "Miscellaneous Writings" (p. 307) Mrs. Eddy says, "What a glorious inheritance is given to us through the understanding of omnipresent Love! . . . This sweet assurance is the 'Peace, be still' to all human fears, to suffering of every sort."

HELEN R. PLATT, Boston, Mass.

Ten years ago we came into Christian Science. At that time I had kidney disease, supposed to be inherited. I was healed of this trouble in a comparatively short time, and have a great deal to be thankful for. Before coming into Christian Science fevers were frequent with me. At one time I had a long illness and was doctored by my grandfather, who is a physician, and for a while my recovery was doubtful. I have been practically free from fevers since coming to Christian Science, which has kept me well nearly all of the time; so that my best proof of the power of Truth is that it keeps me well. The visitation of chil

Digitized by Google

dren's diseases upon me has been so slight that I scarcely know whether I even had any of them or not, except that I was told I had a slight attack of an ailment supposed to be contagious. I am very grateful for the blessings Christian Science has brought me, and I love Mrs. Eddy for pointing the way to God.—ZERELDA COBB, Pittsburg, Pa.

I cannot let another year dawn before I send in my testimony as to the healing power of Christian Science. About five years ago I was struck in the face by a piece of wood, which resulted in a severe injury. I had the bone set, and it healed in little over a week, although a bright red spot remained on my nose. A year after the injury this spot became sore, and troubled me, off and on, for three years; when it developed rapidly, one side of the nose, the eye, and cheek being affected. I had been studying our text-book, and also had help; but the condition seemed to grow worse, until finally, through the perseverance and loving kindness of my teacher, I was brought to see the nothingness of disease and the allness of God. As soon as I gained this consciousness of Truth the healing began; and in three weeks I was entirely well. This seemed to me a wonderful demonstration of God's power—to see this dreaded disease yield, and simply fade away! Words cannot express my gratitude to God, and to our dear Leader, Mrs. Eddy, who by her self-sacrifice has enabled her students to do such great work.

Although this physical healing seems the greatest thing, it is not nearly all that Christian Science has done for me. Through the reading of Science and Health I was healed of hay fever and nervous headaches; my financial condition has been greatly improved, also my domestic affairs are more harmonious, and in every way I have been helped. Surely God does "give us abundantly, above all that we ask or think." I wish to add that this healing took place a year and a half ago, and there has been no return of the trouble.—M. ESTELLA POWELL, Media, Pa.

From my earliest recollections until I found Christian Science I hardly knew a day free from pain, and never a time when I felt really well. I was repeatedly under different physicians, but their treatment hardly relieved the suffering, even for a season. All that kept me from utter despair was my trust in God, as I then understood Him, and the hope of relief after death. When a very small child I had hip and spinal disease, which necessitated the use of a crutch. Later, heart and kidney trouble developed, together with inflammation of the hip joint. As I grew older the burden became heavier, even though I was not expected to be self-supporting, for I felt I was of little use to any one or even to myself. I prayed only for something to relieve my suffering, no matter what.

In June, 1904, at the time when things seemed the darkest, a dear Christian Science friend invited me to visit her in her home near Boston. She, through her love and patience, gave me my first glimpse of what God's love can do. I began treatments with a Christian Science practitioner, at the same time studying our text-book, "Science and Health with Key to the Scriptures." In six weeks the heart trouble was completely healed, while the kidney trouble and inflammation of the hip were healed in a few months, and there has been no return of them. In the September following I went to work for a dressmaker in Boston, staying until the next May and losing very little time because of sickness. I then went into business for myself, and have had all my needs supplied in proportion to my faithfulness to the teaching of Christian Science and my trust in God. Sometimes the way did not seem clear and I was tempted to be discouraged, but after each struggle I had cause to rejoice. Many minor troubles, including a very sensitive throat, have yielded to the power of Truth. I was enabled after a time to give up my crutch, and the shorter limb has grown nearly three inches. While I am deeply grateful for the physical healing, it cannot be compared with my new understanding of God and the peace that comes from knowing that whatever the conditions may seem to be, over, under, and around me is an infinite, ever-present Principle,—Love,—that is guiding me safely.

I hardly know how to express my love and gratitude to God for this wonderful gift, Christian Science; neither can I express my deep love to our Leader, who has given us our text-book. I can only strive to grow more worthy of the blessings I have received, and watch every opportunity to prove by my life a portion at least of what Christian Science teaches, so that I may be an avenue through which others may be led to their Father, as I have been.

ALICE VIOLA HOPKINS, Boston, Mass.

It is with a feeling of deep gratitude that I make known the wonderful blessing I have received through Christian Science. For over two years I have been studying and enjoying the rich treasures of thought and experience found in "Science and Health with Key to the Scriptures." It encourages and strengthens me every day. Before I accepted Christian Science I had been a sufferer for over fourteen years from heart, kidney, and stomach troubles, also from extreme nervous headaches. I was in a hospital for a month, underwent a severe operation, and was an invalid ever after. Sleepless nights and restless days added still more to my distress. Eight doctors were unable to ease my constant suffering, until my case was finally considered hopeless. One of my doctors, however, suggested Christian Science, but after my healing, failed to recognize the source of my help.

Christian Science found me on my bed, awaiting death as my only relief, but within half an hour after the practitioner called I was up, dressed, and helping to prepare dinner. My friends and neighbors considered my healing a miracle, and for some time could hardly believe I was the same woman. Now I am doing all the work for a family of five, and I grow stronger every day, knowing that divine Love does keep and care for me. Words cannot express my thanks for being so lovingly led out of doubt and gloom into a clearer understanding of man's true relation to God as His child. I should estimate the amount expended for doctors' services and drugs at eight hundred dollars; while my treatment in Christian Science was free, as I had then no money to offer.

MRS. HARRIET V. STONEHOUSE, Jamestown, N. Y.

In reading the many testimonials of healing in the *Sentinel* I feel that all who have been helped to perfect health through the knowledge of divine Principle should help to spread the glad tidings. I have been enjoying health and peace as the immediate results of my first reading of Science and Health, and have desired for a long time to express my thankfulness for it all, but somehow could never find words adequate to convey the completeness of the change which the knowledge of Truth has brought me through Mrs. Eddy's teachings.

ANNA WARE BARNES, Holmesburg, Pa.

In the old thought we commenced the year by taking account of stock, as it were, seeing what could be placed to our credit and thinking of the failures we had made. Now, on the first day of nineteen hundred and seven, I am looking to see what my advancement has been in

Digitized by Google

this Science I am studying, and one thought comes to me very forcibly, viz.; that I have failed to do my duty in acknowledging the help received in Christian Science. Each month and each week I look eagerly for our literature, feeling that I need every article written,—but we must be willing to give if we would receive. For thirty years I was to mortal sense an invalid, a great sufferer. I received an injury which caused complications, so that no part of the body was free from pain. From allopathy I went to homeopathy; then to hydropathy; a year in a sanitarium, etc.,—changing, hoping for relief; at each change a little better, but soon returning to the old conditions.

About eighteen years ago, when this Science was little understood and there was a strong feeling against it, I was at a summer resort, and a lady who had been wonderfully healed and who was consequently very enthusiastic, seeing how pale and sickly I looked, asked me if I knew anything about Christian Science. I replied that a friend had written me that she had attended some lectures, and that Scientists said there was no sin, no sickness, no death, and I thought it was the most ridiculous thing I had ever heard of. In a few days she asked me if I would like to have her treat me. I was willing to try anything, so consented. She then gave me a copy of Science and Health and asked me to read it. The midnight lamp was often burning, and I found the teaching to be both logical and self-evident; but how could I ever abandon the opinions that had been held for centuries! I was, however, ready to admit that Science must have an absolute Principle, no matter whether it agreed with my beliefs or not. For a year the struggle was great; but I could not go back to the old beliefs, and finally the light of spiritual understanding dawned on my consciousness, and I have never been inclined to return to *materia medica,* although many problems have presented themselves.

It is great cause for rejoicing to know that our help is always with us, and (as I think all who are interested in this Science will say) the physical healing is nothing compared to the spiritual uplifting. The Bible was seldom read by me in the past, because it seemed so contradictory; but now, having the "Key," it is a daily study. The English language is inadequate to furnish words that can express adequately my love and gratitude for our dear Leader. I send thanks to all who help on the good Cause.—M. L. MORGAN, San Francisco, Cal.

I first heard of Christian Science nearly four years ago, at which time I was in a wretched condition of physical health, never having recovered my strength after two operations which had been performed in 1898. I also suffered very much with stomach trouble, and a day never passed but I took medicine for some ailment, especially headache. When I heard of Christian Science, and it was explained to me, I knew it was the truth, and I determined from that moment to be a Christian Scientist. From that day to this I have not used any kind of a material remedy, and I can honestly say that Christian Science has never failed me. Instead of being a nervous, delicate woman, obliged to rest for two or three hours every day and unable to walk any distance, I am strong and well. I go to business all day, am on my feet the greater part of the time, and hardly know the feeling of fatigue. But, tremendous as are the physical benefits, they are as nothing to the spiritual joy which Christian Science has brought to us; it has taught us where real happiness lies, and every one in our household is honestly trying to overcome self and to bring forth the fruits of the Spirit.

To dear Mrs. Eddy my heart goes out in love and loyalty. I feel that to her purity of life and her clearness of vision I owe all that I have and all that I am. Actions speak more strongly than words, and I am trying to show my gratitude as she would have me.

LAURA B. DOORLY, Leeds, England.

For about forty years I was a slave to the tobacco habit, having often tried to quit it, especially since I came into Christian Science three years ago. On account of the seeming reaction on my nerves and heart, I had treatment by a practitioner, and still failed to overcome the habit. The day after Christmas I felt that I had to quit tobacco. I went at it, determined to conquer at any cost, and my wife and I made the demonstration. Since this experience I have had no trouble with my heart or nerves, and I have gained fifteen pounds in weight. I am mounting upward as on eagle's wings. The gratitude I offer to God, and to His chosen one, our beloved Leader, is a fuller consecration of all I have or am to the Cause of Truth.

GILES F. HUNT, Blanchard, Ia.

It would be ingratitude on my part did I not admit that I owe my well-being to Christian Science. About two years ago I was confined to one of our hospitals, getting ready for a very dangerous operation. As I was not expected to live, my relatives advised me to make my will; which was done, and my wife was telegraphed for, as she was traveling in Europe at the time. Fortunately for me the operation did not take place, as I was considered too weak for the ordeal. At the end of six weeks I left the hospital, seemingly a physical wreck, patched up but not cured, with the operation to take place as soon as I was stronger. In the mean time I went from one doctor to another and from one remedy to another, until I stumbled on Christian Science; and I was ripe and ready for it. Although I had been reared in the letter of the orthodox Jewish faith, I found in Christian Science the true religion, and I started in all sincerity to practise it in my daily life. God was very good to me. I improved from the start, and although my healing came slowly I had the utmost faith that I would get well,—be healed completely,—and so it was. I enjoy the best of health and have gained about fifty pounds. From a business standpoint I can say that my needs are abundantly provided for by divine Love, which "always has met and always will meet every human need" (Science and Health, p. 494)—our needs and not our wants.

Words cannot express my gratitude towards Mrs. Eddy, the Discoverer and Founder of Christian Science, for this beautiful truth. May her works be a shining star for others as well as for my coreligionists.

H. GOODFARB, Kansas City, Mo.

I was taken to a sanitarium after being two years in bed and having the best of medical skill. At Saratoga Springs, N. Y., a Christian Science practitioner came to me, and I was able to be up and around in two weeks. In three months I came home to Baltimore. Many can testify to my condition in this city, but the Christian Scientists did not know me until after my healing. As I took up life again and met the old thought, I sent for a practitioner, and was helped over many rough places. I am grateful to be able to say that Science and Health by our beloved Leader now enables me to do my own work and also to help others. At the present time I am manifesting the harmony called good health.

IDA G. FARREN, Baltimore, Md.

FROM OUR EXCHANGES.

[*The Congregationalist.*]

The only way in which the Church of Christ can renew her youth and vigor is for her members to get together in practical service. If they cannot thus get together in the Church, they will unite outside of it, as they are doing. Unity in spirit with rivalry and division in labor is not the unity for which our Lord prayed, nor is it any real unity in the eyes of sensible men and women. The time has arrived when Christians in earnest can get together in the enterprises which they regard as essential to their Christian service. If the churches would survive as ecclesiastical organizations, they must unite in administering such enterprises.

[*The Christian World.*]

Men long for a basis of life which shall be as credible to the intellect as it is inspiring to the soul. They want a religion into which their whole manhood can go; and this is what at present they have failed to find. The Church, they say, feeds the heart at the expense of the brain; and so it has, to the modern man, become as unsatisfying in one way as the world is in another. The disaster that has happened to it is that people have come to repeat its creed in a quite different sense from that in which they repeat the creed of electricity or mechanics. This last is actual belief, a belief by which they run trains or build bridges. The other is, in part at least, make-believe.

[Rev. Burt Estes Howard in *The Christian Register.*]

Love dreams dreams, then sets about making the dreams come true. That was the inspiration of Jesus. He was keenly sensitive to the wickedness and depravity and hypocrisy of the people all about him. No stain on the souls of men escaped his notice. But he had a supreme faith in manhood and a vision. Over and above every poor, soiled fragment he saw the thing it might be, the clean, white soul it might become. In the tattered bits of broken manhood and womanhood he saw the prophecy of a divine wholeness that they were meant to have, and his love set itself to work and bent under the world's burden that the wounded, staggering feet of the miserable and sad might struggle upward toward the perfect. . . . Love never faileth. It hopeth all things, believeth all things, endureth all things.

[Lyman Abbott in *The Outlook.*]

God was always a speaking God; always a self-revealing God; He has never left Himself without a witness among men. . . . He is the Light which lighteth every man—believer and unbeliever, Jew, Christian, and pagan. In every warning of conscience, in every aspiration to a purer and better life, in every sorrow and shame for wrong done or duty neglected, He is manifesting Himself to His children. Offspring of His are they; and their very idolatries and superstitions are a blind seeking after Him. But in one perfect man He has so lived, one perfect life He has so filled with His illuminating, inspiring presence, that His glory of perfect truth and perfect graciousness was there seen as never before or since. The infinite and the eternal we cannot know, because He is infinite and we are finite. Only in the terms of a finite human experience can He interpret Himself to us. And this He has done, that in that perfect life and character we may see both what should be the object of our highest reverence—not power, but grace and truth—and what the example and the inspiration for our highest endeavor.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

CONCORDANCE TO SCIENCE AND HEALTH.—This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY. DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents: twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.
Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75
Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10 x 7, bound in cloth, marbled edges. Price prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75
Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration will be found on the wrapper. No other notice will be given.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

In all other countries, six cents per copy, postpaid to any address; twenty-five copies, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Passenger rates on all railroads of the United States, says the Chicago *Inter-Ocean*, will be reduced to two cents a mile. The lowering of the price and the complete abolition of the old three-cent rates will begin July 1. This was the decision reached in Chicago recently after a long discussion by the leading railroad presidents of all the Western and trans-continental roads. Officials of several of the roads admitted that they had been forced to bow to public opinion and anti-railroad legislation. They said that no further fight would be made on the two-cent laws already passed and that the roads would accept the inevitable.

Founded by John Adams, President of the United States, Adams Academy, Quincy, Mass., has indefinitely closed its doors because of lack of funds. Dr. Everett, who has been master of the academy for twenty-nine years, in presenting the diplomas, said: "If I have not taught you to be men; if I have not taught you to follow the path of honesty and truth, though it leads you to the scaffold; if I have not taught you to be Americans; if I have not taught you that you owe a responsibility to your heavenly Father which you cannot shake off, even though you are alone in the desert, then my time and your time has been wasted."

The Porte has addressed a communication to the American embassy at Constantinople, giving satisfaction in the case of the last outstanding question between the embassy and the Porte and thus removing the objection to America's acceptance of the three per cent customs increase. The question at issue between the United States and Turkey has been the dispute with regard to discriminations practised against American missionary schools in the dominion of the Porte. The contest has dragged on now since 1902.

The national collection of heads and horns, long in existence as a project, has become an institution and a fact, with Dr. Hornaday's valuable collection donated as a nucleus. The New York Zoological Society will own the collection and will take care of it. For a time it will be housed in the Administration Building of the Society, which is now being built in Bronx Park, but as the collection grows, a new building will be required, which it is expected the city will furnish.

Including the so-called "out-of-course" degrees conferred upon students of former years, who for some reason did not receive their degrees in the regular manner, and the honorary distinctions, the total number of degrees conferred by President Eliot at the Harvard Commencement was 1,068.

The committee selected to determine the design for the new home for the Bureau of American Republics has made its decision in favor of the design submitted by Kelsey and Cret, associate architects of Philadelphia. The building is to cost $750,000, including furnishings and decorations.

The Treasury Department has completed the purchase of $25,000,000 in four per cent bonds maturing on July 1, 1907, under the order of the Secretary of the Treasury issued early last April. Those bonds remaining unredeemed will be taken up and paid for on and after July 2 next.

The Treasury surplus for the year has reached $81,052,317. The receipts for the current fiscal year, lacking five days, have already aggregated $648,786,026. The expenditures this year to the same date were $567,733,709.

The total enlisted strength in the line of the United States Army is 64,520 men. With the men in the staff departments and the Military Academy the grand total on July 1 will be 68,976.

The registration of Filipino voters began June 21. Reports indicate that the total registration will be heavy.

International.

The official text of the Franco-Spanish understanding has been published. It binds each country, in the event of circumstances arising which threaten to modify the *status quo*, to consult the other with a view of "common action." The declarations contained in the agreement were exchanged May 16.

A plot to steal fifty million dollars from the Russian Government office at Tschita, where the money was kept for enterprises in Siberia, has been discovered and thirty Russians arrested. They had made a tunnel one hundred and twenty yards long from a hotel to the safe.

The last link of the Yerkes' tube system of underground railroad in London was opened June 22. The new line, which connects the northern suburbs with the heart of London, is eight miles long. It was begun in 1903, runs on an average of sixty feet below the surface, and cost $25,000,000.

The Wellman-*Chicago Record Herald* Arctic expedition arrived at Spitzbergen June 8. Rapid progress with the work of the expedition is reported.

In accordance with the terms of an imperial edict just issued the opium dens in the native portion of Shanghai were closed June 22.

Premier Campbell-Bannerman last week moved his resolution curtailing the power of the House of Lords.

Industrial and Commercial.

The National Cement Company has been formed, to combine several of the most extensive plants outside the control of the American Cement Company—the Cement Trust—and will construct in New Jersey what is said to be the largest Portland cement plant in the world. The company has been incorporated with a nominal capital of $2,000,000 common stock. It is expected that negotiations will soon be closed for the acquisition of fourteen plants in New York, New Jersey, and Philadelphia, thus giving the company a controlling interest in the Portland cement industry of the entire country.

Recent fuel tests made by the Government indicate that it may soon be possible for locomotives to enter cities without emitting smoke of any quantity whatever from their stacks. The tests indicate that a fuel made from slack coal pressed into briquettes not only burns almost without smoke, but also evaporates more steam and produces more power under the same boilers than does the same amount of coal. These briquettes are made by taking the waste or slack coal from mines and mixing it with sufficient tar so that the coal will hold together, the whole being pressed into blocks or cakes by machinery.

By the sale to the Nippon Oil Company of Japan of its wells and plant in Echigo Province for $875,000, the Standard Oil Company has taken the first step toward the abandonment of the Japanese oil field. Experts of the Standard Company, after several years of experimenting and experience, have come to the conclusion that the prospects do not warrant operations on a large scale. Echigo is Japan's best developed oil section. It is probable also that the company will dispose of its holdings on Hokkaido, the northern island.

A better bale of cotton than has ever been compressed before will, it is expected, be the outcome of a resolution adopted at the closing session at Memphis, Tenn., of the annual convention of the Southern Compress Association, which embraces seventy-eight plants in five States. The members pledge themselves to see that all cotton is properly tagged and that railroad companies refuse bills of lading to shippers unless the package bears the name of the consignee, the destination and mark. It was decided to standardize bales.

The efforts being made by the United States Government to replenish the rapidly decreasing lobster supply off the New England coast are meeting with more success than even the most sanguine exponents of the movement could have expected. Last year's collection of the eggs of the crustaceans amounted to almost one hundred and twenty-five million, which, with the plant of 1905, brings the total up to to two hundred and twenty-five million.

Traffic through the ship canals at Sault Ste. Marie for May broke all previous records. The vessels locked through carried a total of upwards of 7,800,000 net tons of freight, exceeding the maximum of any previous month during the fifty-one years the canal has been in operation.

The largest cranberry bog in the world is being established just outside Siasconset, Mass., and when completed will cover five hundred acres, of which three hundred will be under cultivation by July 1. The company which is promoting the enterprise is incorporated with a capital of $100,000.

It is estimated that the strawberry crop in Sussex County, Delaware, will total $300,000 in value this season. On the big day fifty-three cars were sent from the shipping point, and for several days the number ranged from forty to forty-five cars.

Despite the fact that the United States produces probably twelve million bushels of peanuts per annum, her importations in the year about to end will aggregate nearly $500,000 in value, while exports for the year will approximate about $300,000.

Contracts were placed recently by the United States Steel Corporation for six thousand steel cars, aggregating in cost $6,500,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SUBMISSION TO DIVINE PRINCIPLE.

SAMUEL GREENWOOD.

As mortals realize that the tendency of a belief in material selfhood, with its desires, affections, and ambitions, is ever towards evil; that of themselves they have nothing upon which to build a perfect character or a pure consciousness, nothing pertaining to immortality and goodness, and that all in them which opposes the reign of Spirit must be denied and cast out before the Christ-idea can appear, they begin to see that salvation depends upon their complete submission to the all-inclusive Truth of being, explained in Christian Science as divine Principle and its idea. Applied to our daily work this means that "nothing that defileth," or that would make us false to the divine ideal of man, should be allowed to enter or remain in thought. Although to a material sense this may be the way of the cross, to spiritual sense it is the way of the resurrection.

Self-abnegation is a virtue whose culture and development is productive of the highest good, and this is indispensable to our success as Christian Scientists, but we are apt at times to lose sight of its importance or apathetically to neglect it. Self-assertiveness is one of the strongest characteristics of human personality. It manifests itself in self-will, stubbornness, intolerance, pride, hypercriticism, etc.; and the hardest struggles of the pilgrim Christward are for self-surrender, for the putting down of the false human ego and the enthronement of the divine. The willingness to put one's self and one's opinions and preferences aside, and to be guided wholly by the leadings of divine Principle, is one of the truest tests of discipleship in Christian Science.

The influence of Christian Science upon the individual is to make him more charitable and more considerate of others. If he is not growing kindlier in judgment, if he is not thinking less evil of his brother, and loving everyone better as time passes, he may be sure that it is not Christian Science which is influencing him. We are taught that without Love, the letter of Christian Science is but "its dead body" (Science and Health, p. 113). It is possible to gain considerable knowledge of the letter of this Science without experiencing either moral or physical reformation, or without gaining the ability to demonstrate its teaching. Indeed, the high standard of Christian Science tends to bring out sharply opposing thoughts which may be latent in the student's mentality, and if he does not imbibe enough of the spirit to bring these into subjection to the Christ, he is apt to present the abnormal habit spoken of by our Leader, that of talking the right and living the wrong. (*Ibid.*, p. 448.) As students of Christian Science we need always to remember that the Principle of this Science is Love, and that its rule is love; and that it cannot be understood from any other standpoint, nor demonstrated in any other way.

If we have reached that height of spiritual understanding where we can infallibly interpret the demands of divine Principle, we shall have gained so much love in the process as to lift us above all harsh criticism or unkind judgment. Those who are gaining most of the Christ-spirit leave others freest to work out their own problems in the way that seems right to them, always counseling in love, but never dictating nor coercing. If others are honest in their motives and conscientious in their efforts, the requirements of Principle will be unfolded to them much better than we can do. God's ark does not require steadying at the hands of mortals.

Submission to Principle does not mean submission to one's personality. It is possible for one to become so mistaken in zeal as to be dogmatic in his attitude towards those who differ from him, a position that is not helpful to any one. Dogmatism should and does become obsolete in Christian Science. Those who are wholly governed by divine Principle work together in harmony and love, allowing their mutual differences to exist amicably instead of engendering strife and bitterness. How much do any of us really know of God as Principle beyond what we actually demonstrate in life practice? Our position and conduct alone prove whether self is submitting to divine Love.

Students take up the study and practice of Christian Science who have different temperaments, training, education, culture, etc., from each other, and they do not at once come out from the influence of former ideals and beliefs. Because of this they may easily differ in opinion regarding things not essential to their salvation nor involving disloyalty to the Christian Science text-book; but this need not disturb their mutual love and good-will, nor prevent them from uniting in labor for mankind and for the welfare of our Cause. The problems that arise in the association of individuals could easily be adjusted through brotherly love and a generous allowance for the different aspects which the same thing may present to different persons. One thing that we all may agree upon is to be governed in all our deliberations by divine Love and wisdom, and to accept the result in the spirit of meekness. It is the privilege of all to be so deeply concerned in the redemption of mankind that personal opinions or preferences become insignificant.

As the human submits to the divine, the imperfections and deficiencies of personal character disappear; envy, malice, hypocrisy go out as the Christ-truth dawns and ascends in human thought. Personal ambition or glorification is the opposite of genuine Christian Science; but there is what may be named a higher type of selfishness that, for the sake of one's own peace and safety, eschews all evil. When we become willing to let Love and its attributes be All in all to us, we shall not care what position we fill so long as we are growing Christlike and God's kingdom is coming in the affections of men.

What is there after all in this mortal human self worthy of recognition or honor or obedience? What does it give in return for all our care, but disappointment, discontent, and sorrow? Let personal ambition be satisfied; let the

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

individual gain all the positions he covets, all the ends he desires, receive all he longs for materially, and what is he the better for it? What does fame or power or prestige bestow upon men? When all these things have come and gone, we must begin as a little child to learn through Christ the way of Life; we must leave our pride, worldliness, and all else pertaining to self, and in humility learn the way of Love, if we would be satisfied and awake to our true being. How much better that we spare ourselves the suffering that follows self-indulgence, and in submission to Truth sacrifice all that does not belong to man in the divine likeness. This self-surrender is a small thing compared with the greater gain of thus approximating the character of Jesus, who, as the Scriptures tell us, "pleased not himself."

Our salvation from error will never be accomplished until we work it out ourselves according to the Principle and rule of Christian Science. To be in submission to this Principle is to be guided by the promptings of divine Love in place of self-interest, to cherish nothing inimical to our own or another's good, to express nothing unworthy of the ideal man, nothing that can cause our brother to stumble or give him a single pang of pain. Egotism and pride may deceive self, mistake personal domination for the reign of Principle, and personal homage for loyalty to truth, but these vanities do not forward one's spiritual growth, nor secure from God more than we have earned. God demands that at all times we be good and pure and loving, and being this we shall be our true selves, reflecting the divine nature and government.

WEALTH AS SCIENTIFICALLY UNDERSTOOD.

H. L. GWALTER.

There is that maketh himself rich, yet hath nothing: there is that maketh himself poor, yet hath great riches.—PROVERBS, 13 : 7.

WEALTH is abundance, plenty, possession, riches, treasure, substance. Marshall in his "Principles of Economics" says that a man's wealth is to be taken to consist of two classes of goods, . . . those material goods to which he has, by law or custom, private rights of property and which are therefore transferable and exchangeable, and those immaterial goods which belong to him and serve directly as the means of enabling him to acquire material goods. A still better sense of wealth is given in the word richness, expressing not the possession of riches, but "being rich." Richness is the overflowing plenty of inherent quality, excellence, fruitfulness; we thus can speak of the wealth of the soil, the wealth of affection.

The word wealth is a derivative of weal, signifying a sound, healthy, prosperous state,—happiness, prosperity, well-being. Commonweal and commonwealth signify strictly the common good, and the primary sense of weal is strength, soundness. The true nature of wealth is best expressed in the word affluence. Affluence means a profuse or abundant supply, a flowing toward, concourse. The dictionary defines affluence as "abundance of material goods, accompanied with generous expenditure." The realization of affluence therefore demands that abundance be made liberal use of, in giving out, imparting. We could not speak of a miser as living in affluence, though we might speak of his hoarded wealth as useless riches. Affluence implies a "flowing readily"—which suggests Life; a "flowing toward,"—which tells of Love; the having or furnishing of abundance,—abounding in substance, which to be ever abounding must be infinite, eternal Truth. We find then that wealth signifies a state of having more than common abundance, and while wealth does not allow of limitation, on the contrary riches are always measurable,—having a limit, coming to an end somewhere and at some time.

Science and Health (p. 140) bids us rejoice "in the affluence of our God." True wealth in Christian Science is the power of demonstrating the infinite ability of divine Love to meet every need, for others as well as for ourselves. The true sense of wealth binds us closely to God, since in order to have an abundant supply which will never fail us, we have to turn to the infinite. Infinite good is the ever-flowing source from which all good must come, and we can only realize wealth in the going out of good through us to others; our measure of wealth lies in our ability to give. A material sense of riches, on the other hand, would tend to separate us from God and from our fellow-men,—through cares, worldliness, pride, fear, and limitation,—producing spiritual barrenness. The psalmist says, "They that trust in their wealth, and boast themselves in the multitude of their riches; none of them can by any means redeem his brother, nor give to God a ransom for him: . . . that he should still live for ever, and not see corruption."

True wealth can never be gained by oppression, by trampling upon the rights of others or by taking advantage of our brother. Jeremiah says, "He that getteth riches, and not by right, shall leave them in the midst of his days, and at his end shall be a fool." Pride of possession would blind us in our relation to God and cut us off from the source of wealth. The wise man said, "There is a sore evil which I have seen under the sun, namely, riches kept for the owners thereof to their hurt." The mere accumulation of riches does not constitute wealth, which bears not in itself the elements of contentment. Happiness can only dwell in the understanding of wealth as the manifestation of the abundance of divine Love, and in the consciousness of reflecting Love, thereby calling forth the response of Love.

Mrs. Eddy said in "Choose ye," her dedicatory Message to The Mother Church, that Christian Science reveals God as giving all, and man as having all that God gives. (*Sentinel*, June 16, 1906.) Our wealth, therefore, is to know that we have, because God has, and because we reflect the infinite. This we realize only in the measure to which we awake from the limitations of material sense. Paul says, "Now we see through a glass, darkly; but then face to face." The attainment of this consciousness demands of us the consecration of every thought and requires that we bring "all the tithes into the storehouse." Selfishness, envy, as well as idleness, will debar us from realizing affluence, the true wealth. The unlimited, inexhaustible ability of divine Mind is reflected in human achievement for good, but the latter is only gained by the sacrifice of self. In proportion as we learn to sink self and to see that God is all reality, we shall prove the prophet's word, "Blessed is the man that trusteth in the Lord, and whose hope the Lord is. For he shall be as a tree planted by the waters, and that spreadeth out her roots by the river, and shall not see when heat cometh, but her leaf shall be green; and shall not be careful in the year of drought, neither shall cease from yielding fruit." Then shall we make true the beautiful thought of Dryden, "Each day new wealth without their care provides," and know that "the blessing of the Lord, it maketh rich, and he addeth no sorrow with it."

MEDITATION.

JOHN E. FELLERS.

Let the words of my mouth, and the meditation of my heart, be acceptable in thy sight, O Lord, my strength, and my redeemer.—PSALMS.

MEDITATION is a quiet and sincere endeavor to apprehend the "mystery of godliness." It is a discipline, a drilling for the march. It is sometimes the Christian's Gethsemane, wherein he prepares to meet his accusers. It is the

Digitized by Google

refiner before his crucible. It is the tree, nestling in the seed; the fruit, hidden in the bloom. It is Bethlehem, contemplating the star. It is progress, measuring the distance up Calvary. It is "silence, healing the blows of sound." It is prayer, winged for its flight to the bosom of God. It is atonement, facing the light. It is the penitent, forgetting the mistakes of the past. It is the teacher, preparing the world's lessons. It is the father, watching for the home-coming prodigal; and the mother, holding to her heart the Saviour of mankind. It is the psalmist, exclaiming, "What is man, that thou art mindful of him?" the patriarch, inquiring, "If a man die, shall he live again?"

From out the years of meditation, fraught with consecration and toil, come the words of our Leader, "O Christian Scientist, thou of the church of the new-born; awake to a higher and holier love for God and man; put on the whole armor of Truth; rejoice in hope; be patient in tribulation,—that ye may go to the bed of anguish, and look upon this dream of life in matter, girt with a higher sense of omnipotence; and behold once again the power of divine Life and Love to heal and reinstate man in God's own image and likeness, having 'one Lord, one faith, one baptism'" (The People's Idea of God, p. 14).

"LET NOT YOUR HEART BE TROUBLED."

ALBERT E. MILLER.

We can never truthfully complain that God has deserted us or that He is separated from us. The fact that we are alive—that one is able to say, "I am conscious, I am alive"—is an admission that consciousness is, and therefore God is, for God is Life. With this as our starting-point, we begin to reason out man's relationship to this infinite Mind, of which he is the expression. The voice of Christ comes down to us through the ages, saying constantly, "Let not your heart be troubled." It may be that we are so engrossed with the material aspect of things that we are unable to hear this voice, but it is always there and always uttering this same loving admonition.

A sense of contentment, of gratitude for the blessings which we already have, is a good thing to build or enlarge upon. A little child recently said, "I must learn to be content with the good things I have, or I may lose them instead of getting more and better things." This was said after visiting a home where every need and comfort was supplied, where everything was beautiful and harmonious. These things did not arouse a feeling of envy or covetousness with this child, but on the contrary made her very glad, for she said, "These folks must have always been very content with the things they had so as to get such nice things; and I must be content so as to get nice things." There was a world of wisdom and philosophy in this child's remark, and we know that this thought as it unfolds must of necessity bring to her all that is good. Let us dwell upon this idea more and more each day; lose sight as far as possible of immediate wants and needs, and still the tempest within by this simple means—by reflecting upon the amplitude of divine Love. The trials of to-day will sink into insignificance as we look out upon the horizon of God's loving promise to His children: "Lo, I am with you alway." This is the way to gain the true sense of substance, compared with which matter is but a mere shadow.

[From the *Concord* (N. H.) *Daily Patriot*.]

Who works for glory misses oft the goal,
Who works for money coins his very soul.
Work for the works' sake then, and it may be
That these things shall be added unto thee.

KENYON COX.

SELECTED ARTICLES.

"DISTRESSINGLY NARROW-MINDED."

[THE following items, which we copy from the *Huntington Beach* (Cal.) *News*, relate to a case of religious persecution and intolerance which one would hardly expect to encounter in the twentieth century and in a free country.—EDITOR *Sentinel*.]

Because the trustees of the Huntington Beach Union High School district believe that Christian Science is demoralizing to the community, Prof. S. M. Abbott has been summarily dismissed from his position as principal of the local high school (Huntington Beach), and will in all probability be compelled during the next year to earn a living for himself and family at some other occupation.

The news of this radical action on the part of the board came as a thunderbolt from a clear sky, and the entire community has been dazed almost beyond expression. So far as the public was aware, school conditions were very satisfactory, and especially so as regarded the principalship. It was known to a great many that Professor Abbott clung to Christian Science as a religion, but as he had been employed upon his merits as a school teacher, no importance was attached to his church affairs, if for no other reason than that the question of religion was never brought up in the schools.

Interviewed on the subject by a representative of *The News*, C. W. Warner, clerk of the board, said Professor Abbott had been informed about six weeks ago that there was a division of the board relative to a change in the principalship, but direct questions elicited nothing but evasive answers. Mr. Warner admitted that the professor's religious belief "might have had a bearing on the case." Mr. Warner was especially anxious that the matter be withheld from the public. He also laid particular stress upon his statement that the board "has not yet officially discharged the professor," but had merely notified him as to the "division" on the question of retaining his services.

Professor Abbott explains the matter in a way that is truly direct and refreshing. With him there is no equivocation or beating around the bush. He says that Mr. Warner informed him on behalf of the board that he would do well to look for another position, the reason given being that the professor's religious belief "would have a tendency to demoralize the community." The deposed teacher is emphatic in the declaration that he was not notified of the proposed change until less than three weeks prior to the closing of the school term, at which time it is practically useless to look for a desirable position, owing to the fact that engagements are generally made several weeks earlier.

Professor Abbott has led an exemplary life in this city and is admitted by the board to be an excellent teacher. But his religion doesn't suit the trustees, and incidentally the public says the action of the board is distressingly narrow-minded.

The *Santa Ana Register* of Saturday had the following to say regarding the local school situation:—

"Things are warmed up at Huntington Beach, and they are getting warmer. All the indications are that the heat will be felt quite keenly by the Union High School Board. Three petitions are out and have been largely signed, and efforts will be made to keep Prof. S. M. Abbott as principal of the high school. Principal Abbott was not re-elected principal for the reason that the members of the school board, a majority at least, thought his religious belief made him morally unfit for the position. The largest

Digitized by Google

share of the Huntington Beach school patrons think a big principle is at stake and a fight is on, and in that fight are engaged many who profess no particular religious belief and many who do not know Abbott by sight.

"Three petitions have been signed asking the school board to retain Professor Abbott. These petitions state that the only reason for Abbott's dismissal is his religious belief, that religion is not taught in the schools, that a man's religion should not be considered if he performs his duty and does not force his views upon his students, and one declares than an act of dismissal with no other reason for it than the one given would be 'an outrage to the intelligence of this age of civilization and learning.' One petition was passed among the students of the high school, and every student with one exception signed it, asking for the reinstatement of Professor Abbott.

"Professor Abbott is not the only person dismissed from the high school. Miss Lucy R. Watkins, teacher of English and history, is also a Christian Scientist, and she, too, is dismissed. Professor Abbott has been principal of the high school and teacher of the commercial department. His students declare that he has given no intimation of his religious belief to any of them. Professor Abbott said this morning: 'I doubt if more than a very few people in this city knew my religious belief. Three weeks ago I met Mr. C. W. Warner, clerk of the board, on the street. He told me that the board was divided on the principalship. I asked him if there had been any criticism on my conduct of the school. He said no. I demanded that he tell me the reason. He said that my moral influence was not right. I asked if my habits were not clean, and the behavior of my family not upright. He said there was no criticism there. I asked him if it was because I was a Christian Scientist, and he said that was the reason.'

"Abbott has been a teacher for twenty-five years, and in that time has always been at the head of the school where he was teacher. He was twelve years city superintendent in Illinois. He came to the coast from Hot Springs, Wyo., where he was city superintendent. Professor Abbott said he had been a believer in Christian Science for two years. He was led to the belief by the fact that his daughter had been cured while under the Christian Science treatment of a severe form of St. Vitus dance. He says his family hold the Scientist belief, but none of them had thrust it upon others, having accepted it for themselves and followed it."

"To the Board of Directors of the Huntington Beach Union High School.

"*Gentlemen:*—We, the undersigned, residents, heads of families, and parents of children attending the Huntington Beach Union High School, do hereby respectfully request your honorable board to retain Prof. S. M. Abbott in his present position as principal of that school. We ask this for the reason that we are informed that his contemplated release from his position is solely on account of his religious belief. We do not believe that this reason should ever be allowed to control or influence the selection of teachers in this school, for the reason that religious teaching is *not* a part of the curriculum of the schools.

"We have satisfied ourselves that Mr. Abbott is a general favorite with the students, and we have no reason to be dissatisfied with the progress they have made under his instruction. Hoping that we have been misinformed as to your reason for action, which action would certainly be an inexcusable outrage to this age of civilization and intelligence, and that you will see your way clear to retain Mr. Abbott in his present position, we have the honor to remain,

"Yours, etc."

Three petitions, each worded practically as above, have been circulated in the Huntington Beach Union High School district during the past few days, and the fact that the papers are signed by almost ninety-nine per cent of those accosted is ample evidence of the sentiment of the community in the matter of permitting religion to further interfere with public affairs. It is doubtful if a petition of similar importance ever received fewer refusals to sign. Every religious denomination in the city is represented, each in goodly numbers, to say nothing of the names of those who have no connection with the churches.

[*The News* stands pat on the question of giving every body a square deal. We subscribe to no particular religious belief, being strictly in the newspaper business. Space is given Professor Abbott's communication for the reason that the editor has a personal knowledge of many instances wherein he has been attacked through his religious belief by people who can discover nothing to say against him personally.—EDITOR.]

Editor News:—The article published in the last issue of your paper, stating briefly the facts relative to the action of the school board in virtually deposing me from my position as principal of the Union High School for the coming year, has aroused such wide-spread interest and provoked so much discussion that I am constrained to write this article, not in the spirit of vindictiveness, but to present the matter in its true light and to correct the erroneous reports and impressions which have and may be made.

I have been charged with being a Christian Scientist. I plead guilty to the charge and am willing to receive my sentence at the bar of intelligent, unbiased public opinion. It is further charged that, because I am a Christian Scientist, my moral influence is not right in the school and community; but that on the contrary the tenets of my faith would, if generally lived and practised, undermine the very foundation of the moral structure. The first part of the statement, being personal in character, I will not discuss. I am content to leave the determination of that matter to the community, who know what my life has been. The second allegation, that the belief of Christian Science is subversive of morality, calls for an answer. Space will not permit of an exhaustive discussion of the subject. I will simply refute two or three erroneous statements which have been made.

First, may I ask what is morality? Who sets up the standard? Can any individual or any number of individuals do it? Have even those grand organizations the churches, which have done so much in establishing Christian civilization throughout the world, authority for legislating a moral code? It must be admitted that the record of events at least goes to prove that they cannot agree. Some contend that the Ten Commandments are the only authoritative moral code. To this Christian Scientists assent. The first command in that immortal decalogue is the bulwark of their creed. These commandments, supplemented with the new commandment given by the great Teacher of Nazareth, constitute their moral guide.

Here let me say that Christian Scientists do not presume to be able to tell any man what is right for him to do. The immutable Word of God, as exemplified in the life of Christ, is the only authority which cannot be questioned. Each individual has the moral right to interpret that Word for himself. I have no moral right enter the mentality of another and force upon him my opinions or secular views. Hence, Christian Science does not allow its adherents to urge their faith upon other people. Those who accept that Science do so because they find in it that which appeals to their reason and satisfies their individual needs.

Digitized by Google

It has been said that Christian Scientists do not believe in nor use the Bible. In all kindness I will say that this is a most absurd statement. The Bible is the foundation of their faith, and apart from its teachings this Science could have no claim for recognition. I may say without successful contradiction that Christian Scientists study the Bible more thoughtfully and critically than the adherents of any other creed. I know whereof I speak, having within the past twenty years been a member of three different churches. It has also been charged that Scientists do not believe in the divinity of Christ.

Those who make this statement certainly have not investigated Christian Science, or they would know the charge to be false. I quote from the tenets of Christian Science: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life. We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image or likeness" (Science and Health, p. 497). This statement ought to stop all further controversy on that point.

It has been said that Scientists believe more in the life of Christ than in his death. They believe in both. The sweet influences emanating from his intercourse with men, his life example, the deeds he performed and the words of truth he uttered, as well as the dramatic episode of his tragic death,—each has its place in the divine purpose of that life. It is not for Christian Scientists to say which is the greater or more important. Divine wisdom will take care of that problem.

I pass from the ethical side of this subject to that phase which more directly bears upon the matter at issue. The real question is, Should a Christian Scientist be allowed to teach in the public schools? Why not ask another question: Should a Methodist, or a Baptist, or a Congregationalist, or a Catholic be allowed this privilege? Whatever answer is given to the second question must be given to the first, or we at once make our public schools sectarian; and nothing will more surely demoralize these schools than sectarianism. The laws establishing our public school system wisely eliminated everything of a sectarian character. No teacher has a right to teach his religion in the schools. There he should be, as far as his teaching goes, neither Methodist, nor Baptist, nor Catholic, nor Christian Scientist. He should be a *man* in the truest sense of the term, with a mind broad enough to recognize good and truth everywhere, and unbiased enough to accredit every individual with the right to the same privileges which he may demand for himself. Any person posing as an instructor of youth who cannot measure up to these standards has no place in the schoolroom.

I regret exceedingly all that has occurred, especially in view of the fact that nothing whatever in the work of the school has given occasion for it. No mention or even allusion has ever been made in the school to the subject of Methodism or Congregationalism or Christian Science, for the reasons above stated. Perfect harmony has prevailed among the faculty and no friction whatever has existed between the teachers and students.

While I deplore this unfortunate affair, for which I am in no way responsible, I cannot refrain from expressing my profound appreciation of the wave of public sentiment which has supported a great and vital principle. I am glad that personality has had little to do with it. In closing let me say that I stand for the largest possible religious freedom, accrediting all denominations with the same rights and privileges that I demand for myself. Any view narrower than this is un-American to say the least.

S. M. ABBOTT.

["Don" in the *Albany* (N. Y.) *Journal*.]

Inasmuch as legislation is now proposed to compel every poor devil to have a doctor when he falls ill, I suppose the next step will be to compel us to have a clergyman. Surely the axiom that the condition and future of one's soul is more important than the condition and future of one's body will not be antagonized. If, then, we are about to have a law enforcing attendance by a physician whenever any of us feels a pain in his stomach or his chest, why not prescribe that a doctor of divinity must make a visitation when we are inclined to smash any of the Ten Commandments?

Now I would like to inquire if people are not to be allowed to die, even if they happen to be members of the sect known under the title to which I continue to take vigorous exception? I have never heard that the Christian Scientists, so called, pretend that they can prevent death absolutely. When they do set up any dogma of that character, it will be time for them to receive rebuke and legislation at the hands of our distinguished coroner and his coadjutors in the Legislature—not before. Some people take quinine and regard it as a panacea. Other people hate quinine and would not touch it under any circumstances. Personally, I look upon that drug as most injurious, and I would not touch it, even if ordered to do so by a doctor. If I have a right to decline to touch quinine, and I have rejoiced certainly in the thought that I enjoy that liberty, why have I not an equal right to refuse to touch asafedita or "Carter's Little Pills"? What the Christian Scientist maintains, as I understand the matter, is that disease is a fiction of the imagination. In that he goes too far, according to my judgment; but if he does, remedial legislation can go too far also, and it is dangerous.

The thing that crowds the churches of this sect that looks to Mrs. Eddy is knowledge of "cures" which have been effected, certainly, without the use of medicine. I have not seen any evidence that these followers of the New England lady pretend that they are immortal; nor have I ever been convinced that any more of them die of disease, in proportion, than die among other denominations or among folks who swear by their doctors or by their drugs and medicaments. I am not a believer myself in the doctrine that illness is a fiction of the brain, but I do admit to counting among my friends one man who lives in happiness with a wife and three lovely little children under the age of seven, and who has not had a doctor inside of his house for about eight years. Knowledge of cases of that nature has ceased to be exceptional, since this sect counts its adherents by the million. Neither the man to whom I allude, nor his estimable wife, nor the tots either, has been ill for one day throughout the period above mentioned. How do you account for it? It is folly, in my judgment, as I say, to talk about disease being a phantasm only—but the fact that these estimable people, and many others, get on so well without drugs or doctors—that is not a phantasm. To the contrary, I regard it as a very extraordinary phenomenon, which is entitled to receive the respectful and considerate attention of all thinking citizens.

["Don" is misinformed in believing that Christian Scientists maintain "that disease is a fiction of the imagination," but he is entirely correct as to the individual rights of every citizen, and we thank him for his manly stand in behalf of personal liberty.—EDITOR *Sentinel*.]

[A. Willis Paine in the *Los Angeles* (Cal.) *Herald*.]

More than forty years ago Mrs. Eddy proclaimed a religious doctrine, based wholly on the teachings and practices of Jesus, which has ameliorated the sufferings of unnumbered thousands of people and made a marked

Digitized by Google

change in the doctrinal beliefs of every religious denomination. While many may not be willing to admit the fact, it is nevertheless true that in every church materialism is on the wane and religionists are becoming more spiritual, which is largely due to her teachings. During all this time she has defended her understanding of the truth against terrible opposition. Not only has she astonished the religious world by her positive knowledge of spiritual things, but she has also set the scientific world to thinking. Her statements were so unlike the current theories that bigoted and unthinking people ridiculed them and flippantly passed them from tongue to tongue as something to make merry over. But men of great minds found in them food for profound thought.

When Mrs. Eddy stated that matter was nothing beyond an image in mortal mind and devoid of sensation or intelligence, the thoughtless laughed, but she saw something they did not see, she knew something they did not know. Since she unreservedly declared the allness of Mind and the nothingness of matter, many of the physical scientists have abandoned the atomic theory. Mrs. Eddy said forty years ago that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). Professor Fiske, in his writings, declares that there is no matter apart from consciousness; and numerous other philosophers who were once materialists coincide with his views.

[W. C. Williams in the *Baltimore News*.]

"Medicus" published an article in the *News* stating that Christian Science destroys the belief in microbes, and is destroying the foundation of public health. I do not think he meant that disease germs were the foundation of health, but from his "point of view" the belief in them and the fear of them were necessary to health. "Medicus" is entitled to his point of view, but Christian Science is also entitled to its view-point, when thousands of its adherents are proving every day, to themselves and to others, that the real man is the spiritual man, the God-reflected man; that the image and likeness of God is in reality man. Can the image of God contain tuberculosis and epidemic-producing germs? Then in reality, taking the God-made man as the reality, microbes do not exist. This is a Christian Science standpoint—a metaphysical one. Christian Scientists do not claim that this is the point of view of physicists; it cannot be so long as they believe in the dominance of the physical. It should be understood that Christian Scientists concede the unreal man to be very much in evidence. There is no mortal entirely free from some one or more fears and beliefs that control him more or less, and make some or all diseases very real to him; but when he knows that in truth they are unreal, he begins to control these manifestations through this knowledge, and, gradually putting off the old man, he grows into the new man's inheritance of health.

This is not mere theory, as hundreds of thousands can testify who have been healed and who are proving it step by step, and a large number of whom have been healed after having been declared incurable by *materia medica*. In one place alone where many tuberculosis victims (so called) are sent, usually as a last hope, when their hope has died they have turned to Christian Science, and hundreds have been permanently cured and to-day thank God that they have found out the nothingness of microbes.

Judge no man by his relations, whatever criticism we pass upon his companions; relations, like features, are thrust upon us, but companions, like clothes, are largely a matter of choice.—GAIL HAMILTON.

THE LECTURES.

NORTH YAKIMA, WASH.

A large number gathered at the theater last evening [May 9] to hear the lecture on Christian Science by Rev. Arthur R. Vosburgh of Rochester, N. Y. Dr. Granville Lowther introduced the speaker, saying in part,—

Mankind has endeavored in all ages of time to express what it has understood to be true in religion and philosophy, and the latest expressions have been the highest and best. We welcome that which gives us any contribution to the great fund of human knowledge. I have not yet accepted all that Christian Science teaches, but there is so much of beauty, so much that is apparently true, so much that is uplifting and helpful, that I hope for its success.

Yakima Herald.

MANITOWOC, WIS.

Before an audience that filled every part of the lower floor of the Opera House last evening [April 18], Judge Septimus J. Hanna, of Colorado Springs, Col., delivered a lecture on Christian Science that was listened to with rapt attention by all present. Attorney L. J. Nash introduced the speaker, and spoke in part as follows:—

All the congregations in this city are practically in the same work. They are all struggling to bring the world to higher ideals. Some have one method, some have another, but the great inspirer of all is and always will be the great Nazarene. This is a suggestion that is coming to mean more and more. The world, after all, will be saved not by political movements, not by reform measures, although these may have their place and serve their purpose, but by the great interdenominational work that the churches, the pulpits, and the lectureships of the world are doing, along with the schools and the universities, to make better men and better women. It is the life we live, it is the life that is inspiring that after all will save the world; and nothing else can do it.

The News.

'GRAVENHAGE, NETHERLANDS.

On Monday evening, May 6, Mr. Bicknell Young from Chicago delivered a strong and impressive lecture on Christian Science in Diligentia Hall, under the auspices of First Church of Christ, Scientist, before a highly attentive and appreciative audience. The lecturer was introduced in Dutch by Jhr. A. W. den Beer Poortugael, Captain of Artillery, who in the main spoke as follows:—

It is wrong to consider Christian Science a new religion or a new sort of religion. It is rather the return to the original understanding of that religion we all call ours, the Christian religion lived and practised by Jesus Christ. During the ages this understanding has for the greater part been lost, and thereby religion has lost its former power, no more of the "signs following," signs given by Jesus and his followers as a natural result of their scientific understanding of the truth of being. We have been used to calling these signs "miracles," because we did not understand them, because we could not place them within the range of our religious thoughts of mere faith, without understanding. Christian Science leads us back to spiritual heights, whence we get a clearer view, an understanding of things we never before understood, an answer to the many seeming contradictions, and the healing of sickness as well as of sin, as a logical outcome of our faith. It is all this that makes Christian Science to us a practical religion for every-day need, a religion not only of words but of deeds.

Correspondence.

DURHAM, N. H.

At the Unitarian church yesterday afternoon [May 19] there was a large attendance of believers and those perhaps who have not reached that point, who went there to hear Judge William G. Ewing of Chicago deliver an address on Christian Science. Mr. Charles D. Smith of Gloucester, Mass., introduced the lecturer of the afternoon, saying in part.—

It is a truism to all of us, if we were to reflect for a moment, that we are each of us seeking and striving and struggling—for what? For wealth? For fame? For the gratification of ambition? Not at all: for peace, for happiness, for contentment; and none, nor all combined, of these mortal things will give us that contentment, that rest, that peace, that happiness; but we can find it by recognizing and laying hold of the power and the might of the truth of the infinitude of the divine Mind, which is able to heal sin and all disease, able to pick us up, as it were, out of the clay and place us upon a solid foundation. This is what I believe that we can all find; not at once, not in a day, but we can, like Paul at Damascus, have our eyes instantly opened, and then be free to work out our own salvation with fear and trembling. There is bread enough in our Father's house, and we need not feed on the dry husks, for there is a store that cannot be diminished; and He offers it to you and me and to every child of the infinite.

Foster's Daily.

EXIRA, IA.

Judge Septimus J. Hanna's lecture on "Christian Science: the Religion of the Bible," at the M. E. church last Thursday evening [April 25] was a masterful presentation of the subject and was listened to very attentively. Judge Hanna could scarcely have left any doubt in the minds of those present, that Christian Science does accord with the Bible, notwithstanding the persistency with which many of their critics declare to the contrary. The speaker was very ably introduced by Mrs. Dena Statzel, assistant principal of the Exira school, in the following words:—

My Friends:—In coming before you to-night in this capacity I shall address my remarks to those of you who, like myself, are not Christian Scientists; but although not one of them, I come to this lecture with a mind entirely free from prejudice, and it is this attitude that each one of you must assume in order to pass true judgment upon the subject presented to you. How often in listening to discussions on Christian Science we hear this remark: "I don't know anything about Christian Science and I don't wish to." The person who makes such a statement stands self-convicted of two charges—ignorance and lack of reason. Either you must know something of Christian Science or you cannot in reason say you do not wish to know anything about it. It is your duty surely to give it a fair and impartial hearing before you pronounce sentence. Yes, more than a hearing, a thorough investigation and trial, for do not our law courts grant this to every person before sentence of condemnation is passed? Are we afraid of Christian Science? Is that the reason we do not want to know anything about it? If it is the truth, it will live without let or hindrance from you or me. If it is partly true, that part will live and forever, for truth is eternal. If it is false, it will die without your lifting a voice or finger against it, for error is self-destructive. Even the enemies of Christian Science acknowledge that it is a religion full of hope and optimism,—two elements of which the world has always stood in need, and most potent influences are they in the progress of the individual and therefore of the world.

And now to the Christian Scientists present let me say that I most highly appreciate the honor conferred upon me by your committee in inviting me to present to this audience Judge Hanna of Colorado Springs, to whom we will now listen, I am sure with pleasure, and I trust with unprejudiced minds.—*Audubon County Journal.*

TOLEDO, O.

Bicknell Young of Chicago delivered a lecture on Christian Science at the Valentine Theater yesterday [May 26], under the auspices of Second Church of Christ, Scientist. About sixteen hundred people were present. Mr. Harry E. King introduced the speaker and said,—

Your presence on this occasion evidences your personal interest in the important subject of Christian Science, the religion of Principle, progress, and performance. Accurate information concerning its tenets, teachings, and practice will, I am sure, result in a better understanding and broader sympathy between this new church and the older ones. Many good people entertain and express opinions adverse to Christian Science because they do not know the elevated and inspiring character of its teachings, the pure motives and high purposes of its adherents, and the harmonious and beneficent results achieved by this twentieth-century religion.

That educated and well-informed people should teach and practise the healing of the body solely in dependence upon divine power, has been and yet is regarded by many as incomprehensible, and as detrimental to if not destructive of the best interests of the individual citizen and the public in general. But this is no new doctrine. You all know it is taught by the Scriptures, both old and new, and was regarded and followed by the fathers of the church for from three hundred to four hundred years after the coming of Christ. History establishes that Augustine, Luther, Melancthon, Myconius, Richard Baxter, and many other of the Church's greatest leaders and most fearless reformers, believed, taught, and relied upon God's power to heal. Christian Science explains and emphasizes these neglected doctrines, and teaches the Principle upon which they are based. But this is only a part of its work. It demands of its followers purity of heart, sincerity of motive, and unselfish, helpful lives. It favors investigation, intelligent and candid discussion of its teachings and their application to all the affairs of life. That it has done and is doing good to thousands is no longer doubted by any one at all informed with respect to the actual facts. Therefore it is not strange that this subject is to-day attracting the attention of the civilized world.—*Toledo Press.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

AN AMENDED BY-LAW.

ARTICLE XXXIII.

MEETINGS.—SECT. 2. The Meetings of this Association in the United States shall be held triennially, and in alternate order, first in Boston, second in Chicago, third in New York city. A member shall not report what is said or done in these meetings.

The session of the General Association of Teachers may be held two days, closing daily not later than 6 P.M. The main topics for discussion are, *unity of action*, strict conformity to The Mother Church By-laws and to the contents of the chapter on Teaching Christian Science in Science and Health.

"HOW ONE MAN FOUND RELIEF."

THAT all the testimonials to the efficacy of Christian Science are not given in our Wednesday evening meetings and in our own periodicals is proved by the following letter, which we copy from the *Boston American* of June 24. The letter, with an editorial foot-note, follows:—

Editor Boston American:—After reading your excellent advice to a young man contemplating suicide, I felt constrained to write you my own experience. I am forty-seven years old, and for twenty years was the victim of drink, tobacco, and melancholia. Although I was considered a man of unusual abilities and possessed two college degrees, I would frequently find myself without a cent or place to stay in some strange city as a consequence of my sprees. Then I would make a brace and get into comfortable circumstances, only to repeat the same wretched performance. I lost friends, positions, money, family, hope, and was always contemplating suicide.

I am now happy, prosperous, with lots of friends, and entirely free from the evil habits I mentioned. This condition has existed less than a year. My family is reunited. Cause? Christian Science. Your correspondent would, I know, find relief from the same source.

Boston. TRAVELING SALESMAN.

[The *Boston American* omits the correspondent's name at his request. He has held responsible positions, and his name would be recognized by thousands of people.]

What greater boon could have been conferred upon this man than his restoration to his family, his friends, his position in society? Only those who have suffered as he did can know the full measure of his deliverance, but all can rejoice with him in his new-found heaven on earth. Thousands have had precisely the same experience as this man, and it is largely from the despairing and disheartened that the ranks of Christian Science have been recruited. The question is often asked, "Where do the Christian Scientists come from?" We can answer that all but a very few have come from beds of pain, from the very depths of despair, and from the desolation of wasted opportunity. Mrs. Eddy practically answers this question on page 382 of Science and Health as follows:—

"One whom I rescued from seeming spiritual oblivion, in which the senses had engulfed him, wrote to me: 'I should have died, but for the glorious Principle you teach, —supporting the power of Mind over the body and showing me the nothingness of the so-called pleasures and pains of sense. The treatises I had read and the medicines I had taken only abandoned me to more hopeless suffering and despair. Adherence to hygiene was useless. Mortal mind needed to be set right. The ailment was not bodily, but mental, and I was cured when I learned my way in Christian Science.'"

ARCHIBALD MCLELLAN.

SELF-PRESERVATION.

THE greater part of the organic functions of the body and of the productive forces of nature, as well as the bulk of all human planning and activity, point to race perpetuation as their end. All history may be said to be the story of the contributions which the nations have made to this enterprise, and biography but a commentary upon the different ideas which men have entertained respecting it.

The right to one's self is the basis of that liberty of self-preservation which is universally claimed and instinctively exercised, and this right is generally regarded as both natural and inviolable. Nevertheless, it is true that every stage and degree of subjection and enslavement may be found among those who are prompt to assert and ready to defend this liberty. Their conduct reveals the fact that, though they are entirely right in their desire for freedom and their assertion of it, they are wholly wrong in the sense of self; and here as elsewhere the teaching of Christian Science is of vital import, since it begets and supports that true self-recognition which is not only an abiding inspiration, but which furnishes a stable ground of choice and determination for every exigency and experience of life.

In so far as selfhood is identified with the physical body, self-preservation becomes a matter of struggle for sustenance and for place, akin to that of the animal world, and one needs but to look out into life to be convinced that consideration for this sense of physical selfhood, for material pleasures and satisfactions, is the dominant motive of mankind. The definite relation which the sense of self has to individual conduct and racial advance is thus perceived, as well as the significance of the very great emphasis which Christian Science lays upon the realization and declaration of man's selfhood in terms not of human sense, but of divine revelation.

Jesus taught that our present realization of being, "the life that now is," will be conserved and uplifted in the measure of our regard for our spiritual selfhood alone, and St. James goes so far as to define pure and undefiled religion as "the keeping of one's own self unspotted from the world." (Weymouth's translation.) He who has consideration for a lower self is at war with the interests of the higher, but he who has regard for the higher self conserves and advances the interests of the lower. Indeed it may be said that to have and to honor the true sense of self is to compass and to fulfil "the whole duty of man." "Christ, Truth, gives mortals temporary food and clothing until the material, transformed with the ideal, disappears" (Science and Health, p. 442).

Christian theology has failed to preserve this sense of spiritual selfhood intact. It has declared for it, but it has also declared for the reality of a material self, divinely planned, which, if it remain wilfully carnal, is to be preserved unto a life of ill, everlasting. This confusion reflecting selfhood is one of the most lamentable mistakes of theological belief, and Mrs. Eddy has rendered the Christian world a service whose value will be increasingly appreciated with the years, in again focusing thought upon the truth that the selfhood which is spiritual and godlike alone is real. "Truth," she declares, "should, and does, drive error out of all selfhood" (Science and Health, p. 538). In the light of this understanding, self-preservation is seen to be assured and attained only as we maintain right consciousness, and Jesus' immortal words, "Ye shall know the truth, and the truth shall make you free," come to have an added richness of meaning. Self-preservation is to be achieved in knowing selfhood for what it is.

TRUST.

To do Thy will is more than praise,
As words are less than deeds;
And simple trust can find Thy ways
We miss with chart of creeds.
WHITTIER.

THE prophet Nahum says, "The Lord is good, a stronghold in the day of trouble; and he knoweth them that trust in him." The word "trust" and its derivatives are used in the Bible nearly two hundred times, showing how largely trust in God figured in the experiences of "holy men of old." It is also noteworthy that the admonition to trust in God is frequently accompanied by a warning against trusting in materiality for safety when in danger, or for supply when in want, but the command is given to trust in God "at all times."

A refreshing instance of simple trust was chronicled recently in one of the leading Boston papers. It seems that a German emigrant who had arrived on these shores, accompanied by his two children, was about to be sent back to his native land because he had not the amount of money required by the immigration laws, and lacking this he was liable to become a public charge. His deportation was, however, delayed by the illness of one of his children, and while he was walking on the shore at the detention station, a roll of money, amounting to sixty-two dollars, was brought in by a wave to his very feet. The owner of the money was found; he had dropped it accidentally, as it seemed, from the deck of a vessel, but on learning of the poor man's plight he gladly gave the money to him. The newspaper tells that the one whose need was thus met, said "with deep religious fervor, 'God was good to me.'" The writer adds, "He told one of the immigration inspectors that any man who worked hard, and was honest to himself and his fellow-men, would be provided for by a higher power."

To Christian Scientists this experience is but another proof of the truth which they are learning from the study of their text-book. Time was when the waves of material belief threatened to overwhelm their uncertain sense of trust in divine power, but with their healing through Christian Science a new sense of trust in good was realized, and its tendrils laid hold upon the infinite. The experience quoted above shows that good results must always come from trusting God, but in the experience of mankind in general the difficulty is thus to trust. It is impossible for trust to find a foothold if material evidence is taken as real or final, and here it is that Science comes as a great light, revealing spiritual facts and thus bringing relief, not merely in exceptional cases but in every time of trouble. Too often are doubt and fear allowed to usurp the place of trust in good, but with a knowledge of the spiritual law which governs man, this trust becomes natural and inevitable. One who has learned how to swim is not afraid to trust himself to the water, although he might doubt his ability to reach a given point. In such a case the knowledge of man's relation to God—the source of all strength and intelligence—would supplement his skill, and give him restful confidence that he could accomplish the feat.

The understanding of higher law as revealed in Christian Science enables us to avail ourselves of all rightful opportunities—nay it makes these known to us when otherwise we should pass them by. In many cases people suffer for years, and like the woman healed by Christ Jesus they spend all their living in a vain effort to gain relief by material means. And yet all this time the spiritual law of healing is at hand, did they but know it. When they do know it their gratitude to God, and to the one through whom this law has been revealed to humanity, is boundless. Like the psalmist they can say, "O taste and see that the Lord is good; blessed is the man that trusteth in him."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

New York, N. Y., June 11, 1907.

My Dear Mrs. Eddy:—I am not one of your students,—just a woman who has come into Christian Science with my whole heart, because it answers all the longings of my life; and right now I want to send you my deepest, tenderest love.

Your grateful follower,
MARY RIGGS COLLINS.

[Telegram.]

Chicago, Ill., June 16, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Eighth Church of Christ, Scientist, of Chicago, sends love and greeting upon this the day of their opening services.
GRACE T. DAVIDSON.

Lovelace, N. C., June 8, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—I want to thank you for what you have done, and are doing, for all mankind. I am very thankful for the good I have received from reading your precious book, "Science and Health with Key to the Scriptures." I long to lose sight of self, and to follow you as you have followed Christ. I pray daily to love more and serve better. As I read the letters in the *Sentinel*, and learn of the grateful hearts that are pouring forth their love and praise to you, I see it is only the bread you have cast upon the waters that is returning to you. "She considereth a field, and buyeth it: with the fruit of her hands she planteth a vineyard. . . . Strength and honor are her clothing; and she shall rejoice in time to come. . . . Give her of the fruit of her hands; and let her own works praise her in the gates."

Yours in truth and love,
MRS. A. L. SOUTHER.

Boston, Mass., June 11, 1907.

Dear and Beloved Leader:—It was my privilege to attend the Communion service Sunday morning, and as I sat there and saw that vast auditorium filled, I thought if only you could be there to see the working of the "one Mind" that you have revealed to us! Law and order absolutely prevailed, there was no hurrying or lost energy, perfect harmony filled that grand structure. I likened it unto the building of the church where one stone was set upon another, and one upon another, and when it was completed it looked like one stone, no eye could detect a crevice or a niche; and thus The Mother Church of Christ, Scientist, and all that filled it were one with God's universe. Dear Leader, if it were not for your discovery and work, which have shown us the way, we would not have all this at this time, and it should be the means of fortifying and encouraging your followers to go and do likewise.

My heart goes out to you in gratitude for the manifold blessings that have come to me through your consecrated work. May God's light ever rest upon you is the wish of

Your student's student,
B. H. NORTON

City of Mexico, Mexico, June 5, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—The members of First Church of Christ, Scientist, City of Mexico, Mexico, in quarterly meeting assembled, have delegated to their Board of Directors the pleasurable task of sending to you their loving greetings and renewed assurances of faithful and loyal

Digitized by Google

support at this time. The dignity, forbearance, and love that you manifest surely serve as a noble example for all your followers in the path where the Master himself has walked. History is being made, and the monument that you are erecting will be far more enduring than stone or bronze. To-day your own followers rise up to call you blessed; to-morrow the nations will do likewise. These lines, however inadequate they may be, express somewhat our lasting love and gratitude.

Most affectionately and loyally,

A. L. VAN ANTWERP, MRS. EMMA CONTRIS,
S. W. RIDER, MRS. GRACE F. BARTO,
T. G. WESTON, *Board of Directors.*

Chelsea, Mass., June 10, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—As a church we wish to express to you our purpose to be always obedient, and to voice to you our loyalty and love. We desire to express our gratitude for what you have done for us. In following you we are realizing the truth and significance of your words in Science and Health, p. 96: "This material world is even now becoming the arena for conflicting forces. On one side there will be discord and dismay; on the other side there will be Science and peace." In this time of which you thus speak we are lifted up, having sufficient understanding to be calm and assured. We are thankful that you have told us and all men, if they will but hear, of the place of safety, and how we may gain the security, peace, and victory ever afforded by divine Principle. By the study of your writings we are learning how to do what in the Bible we are commanded to do, and we know that through Christian Science salvation has come.

Your ever grateful followers,
First Church of Christ, Scientist, Chelsea, Mass.
MRS. SUSAN R. K. HOYT, C.S.B.,
JOHN W. NUGENT,
JOHN L. WRIGHT, *First Reader,*
Committee.

Chicago, Ill., June 12, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—It is in deepest love and humility that I address you to-day. Would that I could convey to you the wealth of my gratitude for the boundless blessings which have been bestowed upon me since I realized my privilege of becoming a student and follower of your Christlike teachings. I appreciate somewhat of the suffering, the courage, and the sacrifice that prepared you to become the transparency to this age, for the reflection of God to mankind. I, too, have suffered, and have drunk deeply of the bitter cup of human experiences, mentally, physically, financially, in grief and sorrow and persecution; but the blessed teachings of Christian Science have healed me. I have cherished the hope that I might, some day, be found worthy to stand in your presence and tell you of my love and gratitude. I am realizing more clearly each day that I can be, and truly am, in your presence only as I practise and prove more of love and truth; the teachings of our Master, as you, our revered Leader, have revealed them to us. I know that I am in your presence when I am practically applying the words of your hymn,

> My prayer, some daily good to do
> To Thine, for Thee,—
> An off'ring pure of Love, whereto
> God leadeth me.

This is my daily striving, and the promise of "Peace, be still' to all human fears, to suffering of every sort" (Miscellaneous Writings, p. 307) is being fulfilled.

I know that you are "in the secret place of the most High;" that His truth is your "shield and buckler;" that "no evil shall befall thee," for He has given "his angels charge over thee." You may never read these lines, but I know that the unbounded love of one of the many hundreds of thousands of beneficiaries of Christian Science will reach you and be acceptable to you.

Reverently yours,
MRS. HARRIET A. WILE.

Seneca, Kan., June 14, 1907.

My Beloved Benefactor:—With an overflowing sense of gratitude, which has never for a moment left me since the time, nearly two years ago, when Christian Science rescued me from the graveyard of human hopes, I send you this small token of my appreciation of your great selfless love for mankind. Though I am to you unknown, you are my best friend—my greatest benefactor. Two years ago I was physically prostrated, mentally exhausted, and spiritually a derelict. Myself a physician and surgeon of more than twenty years' incessant practice, I could see no future but the doom of despair.

Christian Science was brought to my notice, and at first seemed "a far cry;" but having no other hope, I sought its help in earnestness and humility, with the result that within four months I joyfully proclaimed myself more than restored, for I was spiritually lifted above the best I had heretofore known in life, by a growing understanding of the great truth which your discovery reveals. In grateful acknowledgment of this priceless blessing, I thereupon withdrew from my professional connections, and discontinued my practice, having consecrated all that I am and all that I can do to the precious Cause of Christian Science.

In this, another season of persecution at the hands of them that have hated you without a cause, I beg you to accept my humble but loyal and courageous support.

Obediently,
ELMORE W. MURRAY, M.D.
First Reader of First Church of Christ, Scientist, Seneca, Kansas.

Baltimore, Md., June 17, 1907.

Mrs. Mary Baker Eddy, Concord, N. H.

Reverend and Most Revered Leader:—Deeply discerning and serene in her meekness, calm in this insolent hour of shamelessness and serpentine craft, bowing her anointed head to the axe of persecution, the unexampled Founder of Christian Science is making one of the holiest demonstrations of Christ.

Your wonderful course is enlightening mortal thought throughout America, Europe, and in the far-off islands of the seas. Towering above the highest in spiritual power and grandeur, what canonized saint, since the days of Christ, has been the pioneer of so vast, so fundamental a revelation, and so religious a reformation as Christian Science? Made a spectacle unto the world, your grand struggle with the crisis of error constrains the heartfelt sympathy for you of enlightened Christendom.

The sons and daughters of Christian Science behold in their sacred Leader the restorer of an uncompromising high spiritual discipline, not less than the loving mother strengthening the weak hands, confirming the feeble knees; full of sympathy, full of sweetness, full of gentleness, full of patience, full of allowances, full of longsuffering, and of that goodness which is the fruit of the Spirit.

The watch of your night is far spent.
The new-born day will right soon be upon us,
Fair as the new-born star that gilds the morn.

Reverently,
JOHN HENRY KEENE.

AMONG THE CHURCHES.

NEWARK, N. J.

The reunion of First and Second Churches of Christ, Scientist, of Newark, has been effected, and plans are being considered for the erection or purchase of a suitable church edifice.

OMAHA, NEB.

Preliminary plans have been made by Frederick W. Clarke, architect, for the new Christian Science church to be built at Twenty-fourth and St. Mary's Avenue, and to cost about sixty thousand dollars. These plans will be presented for consideration to the congregation in the near future, and will be explained in detail by the architect.

Omaha World Herald.

CHICAGO, ILL.

The initial services of the recently organized Eighth Church of Christ, Scientist, will be held to-morrow [June 16] in Bournique's Hall, 51 East Twenty-Third Street, between Cottage Grove and Calumet Avenues. Two services will be held—one at 10.45 in the morning and the other at 7.45 in the evening. Services will be held regularly thereafter at the same hours, and the testimony meetings, which are a feature of the Christian Science Church, will be held regularly on Wednesday evenings at eight o'clock. Bournique's Hall will comfortably accommodate about seven hundred and fifty, and it is expected that it will be filled from the beginning.—*The Inter Ocean.*

COLUMBUS, O.

The formal dedication of First Church of Christ, Scientist, was held Sunday morning, June 9, at half past ten. The exercises, although very simple in character, were very interesting. The first meeting of this congregation, consisting of seven persons, was held in December, 1895. The lot on Broad Street, where the church now stands, was purchased in October, 1901; the ground broken on Good Friday, 1903, and the church occupied Nov. 25, 1903. Each Saturday evening the indebtedness of that week was paid, leaving only the notes to be canceled. The last was recently paid in full, hence the dedication. There are now two hundred and twelve members of the church, with an average attendance of three hundred.

Columbus Evening Dispatch.

PHILADELPHIA, PA.

Record was made recently of the sale of the lot on the south side of Walnut Street, two hundred feet west of 40th Street, by Clarence H. Clark to John F. Braun, representing the First Church of Christ, Scientist, for thirty-eight thousand dollars. The lot, which measures one hundred and twenty-five by two hundred and fifteen feet and is assessed for thirty-five thousand dollars, will be transferred to the church as soon as the plans have been completed for the erection of a fine church building.

The committee to select an architect has not yet made a selection. Several Philadelphia and New York architects have prepared competitive plans for the building, which will probably cost upward of one hundred thousand dollars.

The Philadelphia Ledger.

AMESBURY, MASS.

First Church of Christ, Scientist, of Amesbury, Mass., is able to report growth and activity in all the departments of the church work. Great attention is being given to the distribution of literature, as this work is a strong factor in overcoming opposition. There is a great change of thought in this vicinity toward Christian Science and Christian Scientists.

Recently both Readers were invited, with the pastors of the other churches of the town, to attend a reception given by the First Universalist Church in honor of their retiring pastor. Later on, a similar invitation was received to attend a reception where a new pastor was to be welcomed to the same church. The chairman of the reception committee called upon the pastors of the various churches for short addresses of welcome; also invited the First Reader of First Church of Christ, Scientist, to assist in welcoming the newcomer, which she did in a most acceptable manner. A spirit of love pervaded the whole atmosphere.

Correspondence.

BALTIMORE, MD.

The greatly extended work of the committee on distribution of literature has necessitated the appointment of new members. We have now fourteen in all. Much interest and harmony have been manifested and the work has steadily grown. Literature has been distributed to jails, engine houses, clubs, etc., and to ten or more hospitals and other institutions. Subscriptions to the *Sentinel*, copies of Science and Health, "Miscellaneous Writings," and the other works of our Leader have also been distributed to libraries, engine houses, etc. The committee was pleased to hear from Mr. Hook, the warden of the jail, that a number of men are reading the literature. He not only places the periodicals in the library, but advises the men to read; he sends the *Sentinel* to the hospital each week, and asked for some short articles, such as reprints, to distribute among the men. We know that the truth is bound to bear fruit. It is interesting to note another instance of good being done. After sending one hundred numbers of a special copy of the *Sentinel* to prominent people of Cumberland, the committee heard of a man there who, after a beautiful case of healing, had succeeded, with several others interested in Science, in securing a Scientist from another part of the State to practise there and act as First Reader. This little band was anxious to interest the people of the town and were quite delighted to find that literature had been distributed at such an opportune time. We are striving to reflect wisdom in this important branch of the work and to know, as Science and Health says, that "Love designates and leads the way."

Correspondence.

[Written for the *Sentinel*.]

TRUST.

JEANNETTE A. BECKER.

FEAR thou not, my little one,
Tho' out upon the wold;
Thy Father's hand is near thee,
Thy trustful hand to hold.
The winds may blow, the lions roar,
The wild night-shadows hover o'er
Thy way of ceaseless striving;
Yet God is near, be not afraid,
The dawn is just arriving.

Trust on, belovéd; e'en as light
Comes gently thro' the air
So peace shall dawn on patient trust
In God's unfailing care.
Now, far across the shining way,
The Master walks at break of day,
And Love is never sleeping;
Be sure, dear heart, thy path is held
In God's most gracious keeping.

TESTIMONIES OF HEALING.

Feeling that the experiences attendant upon an accident which came to my little son of seven years may be helpful to some one struggling against fear of environment, I give this testimony. A year ago last July we were visiting in the country, the little boy being with my sister, two miles from my mother's home, where I was staying. At the time of the accident the child had gone to the barn, when he was suddenly attacked by a vicious hog. He retained enough self-possession to thrust his head and body into a straw-stack, while he kicked with all his strength. A boy heard his screams, gave the alarm, and with the help of my sister succeeded in driving the infuriated beast away, but not before the child had been badly bitten and bruised. My sister telephoned at once for a surgeon, and also sent for me. I arrived at the house ahead of the surgeon, who lived two miles away.

I had been a student of Christian Science for ten years, and the child had never known any other treatment. When the word came that he had been injured, my thought went out in gratitude to our Leader, who has revealed to us that Mind is omnipresent. I found the child surrounded by fears, tears, and excitement, but he was perfectly calm. I asked to be left alone with him, but soon the surgeon entered with my brother and sister, and insisted that the wounds be sewed up. I felt that it was entirely unnecessary, for I had no fear, but I was compelled to give in. The child resisted the chloroform to such an extent that the one who gave it was greatly affected by it. I was called on to stitch the bandages, the four people in attendance being too nervous to do it. The laws of *materia medica* respecting poison, pain, etc., were all promptly denied, and so real did the truth appear to my sense that it seemed utterly impossible the child should suffer. He lost no sleep, complained of no pain, had no fever, and ate a hearty supper. I had asked my brother to dismiss the physician, but he came again late in the evening, when my brother and sister corroborated my statements about no fever, pain, etc. I again asked that the physician might be dismissed, and I spent the whole night in declaring the truth, for the entire country-side had the news over their telephones and they all knew that I was a Scientist. The physician came again next day and undertook to dress the wounds, but the child would not allow him to do so. He became angry, and after a conference with my brother went away. I was told later that the physician must have charge of the case so long as I remained in that house. I had in the mean time written to a Christian Science practitioner for help.

It seemed very dark to human sense at this juncture, but the child was happy and free. Together we spent the day in studying the Lesson and reading the 3rd and 6th chapters of Daniel, and in the evening deliverance came. My brother came to our room and said kindly that he had decided to leave all responsibility to me, and that it was at the suggestion of the physician that this decision had been made. I telephoned for the physician, that I might talk kindly with him about our views, but he insisted upon recounting frightful stories about "blood poison," etc., and then said, "Now, in the face of all this, do you dare take the responsibility of your child?" I replied that I dared not leave the child to *materia medica*; that the cases of which he had spoken were only the result of fear and false belief; that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind,"—quoting from the Lesson-Sermon of that week. I can never forget the wonderful sustaining power of that Lesson, and a sense of gratitude for the faithful work of our Lesson committee came to me as never before. Christian Science at last had the field. When I dressed the wounds the child said, looking away, "I do not have to look at matter to see how well I am, do I, mamma?" The dressing was not done, however, any oftener than cleanliness demanded, and in one week from the time of the injury he romped as if nothing had happened. The family agreed that the child had not made one complaint through it all. My brother acknowledged that he had never seen anything like it, and that he would never again feel that I was unable to care for my boy. It seemed wonderful to them, and especially in view of the fact that a man in the neighborhood had been attacked in a similar manner and was a sufferer for many months as the result.

This experience with my only child has meant much to me in that a mother's fear was destroyed, and also the fear of mental environment, from which I had suffered much in the past. I am working to express my gratitude to God for our faithful and patient Leader and her labors for humanity, by better thinking, which means better living and better manifestation of healing.

CORA STEDDOM BARTLEMAY, Goshen, Ind.

Words fail to express my gratitude for the many blessings which I have received through Christian Science. I had trouble with my eyes for many years, and was obliged to wear glasses constantly, and the time came when I could not see very well even with them. I then consulted two prominent oculists in Boston, each one telling me that both eyes were seriously affected, and that the only help for me was to have an operation. In this hour of sorrow a friend asked me to try Christian Science. When I went to a Christian Science practitioner it was not considered safe for me to travel on the cars alone, as I could not read even the names on the cars or on the train boards at the stations. After two months' treatment I left off glasses, and have never worn them since. I can see to go anywhere; I have no pain in my eyes, which are now full, bright, and wide open. I do not sew very much, but I do considerable writing, and read coarse print. I know too that there is a gradual improvement.

I was also a sufferer from asthmatic trouble for fifteen years. By advice of my physician I moved from an inland town to be near salt water, but did not receive much benefit from the change. For four years previous to my coming to Science I was obliged to remain in the house most of the time during cold weather, but since my first treatment I have gone out in both cold and stormy weather. There was a steady improvement, and in a short time I was healed. There were certain localities where I could not go and remain even a few days without having an attack of this trouble, but since my healing I have visited one of those places with no symptom of the ailment. For more than twenty years I also had trouble with my heart, my physician saying that the trouble was organic, and he did not give any encouragement that I would be helped. At times it caused me much distress, and I was almost daily reminded of it, but I now praise God that I am healed. A painful lung trouble and a severe hoarseness were both healed in one treatment. Physicians had told me that I had several well-defined diseases, all of which were of several years' standing, but in a very short time they were healed through Christian Science.

God has greatly blessed me, both spiritually and physically, and with heartfelt love and gratitude I wish to render unto Him thanksgiving and praise. Divine Love has drawn me to Christian Science, and I know God as a present help in every time of need. His promises are very precious and they are for me. I have an increasing love for His Word as I understand it better. I desire

to do all I can to further the Cause of Christian Science, that others may know the power of Truth to make them free, and I wish to express my thankfulness to Mrs. Eddy for all of the blessings which have come to me through her teachings.—C. A. HARRINGTON, Somerville, Mass.

I first heard of Christian Science about twenty years ago, when "Science and Health with Key to the Scriptures" by Mrs. Eddy, was brought to me to read. After a few weeks I returned it to the owner, and said that some time I might be able to understand it, but I could not then. Once again the book was brought to me and again returned, though I always felt there was something in it which at some time I would understand. Seven years ago that time came; but I went to get the book—it was not brought to me. Then I realized that I had not really read it before—I had merely tried to find something in it that agreed with my own opinions and beliefs. Now I resolved to set them all aside, and to read it with a thought open to receive the truth. It is needless to say I found it, and now wonder how I ever existed without it. I have had many demonstrations of the power of this truth to overcome error in all phases of human experience, and I will tell of one where the healing was instantaneous. Before I came to Science a severe form of rheumatic trouble had caused me much suffering at intervals, so that one morning, when I found myself confronted with this problem, I knew what it was without a physician's diagnosis. I could not see a Christian Science practitioner until afternoon, and then was obliged to go to her office. As I could take the car at my door and ride to very near hers, ordinarily it was not much of a journey, but that day it seemed long and arduous. By the time I reached her I seemed to be in torture. I only said to her, "I have brought you a very sick woman." During the treatment every particle of pain left me, and I realized I was free, perfectly and instantaneously healed. I walked home, a distance of over a half mile, but the physical release was small compared to the beautiful spiritual realization of ever-present Love that came to me during that treatment.

I want to express my gratitude for our periodicals and Lesson-Sermons, and I know the best expression of gratitude to our Leader is in the daily desire to reflect more love and to follow more closely her wise guidance.
